“It was,” he agreed. “The whole villainous plan was very completely conceived and most efficiently carried out. But to return to our argument. The discovery that Stella had used a special form of candle left me in very little doubt that Barbara was the poisoner and that poisoned candles had been the medium used in both crimes. For we were now out of the region of mere hypothesis. We were dealing with genuine circumstantial evidence. But that evidence was still much too largely inferential to serve as the material for a prosecution. We still needed some facts of a definite and tangible kind; and as soon as you came back from your travels on the Southeastern Circuit, fresh facts began to accumulate. Passing over the proceedings of Wallingford and his follower and the infernal machine—all of which were encouraging, as offering corroborative evidence, but of no immediate assistance—the first really important accretion of evidence occurred in connection with our visit to the empty house in Hilborough Square.”

“Ha!” I exclaimed. “Then you did find something significant, in spite of your pessimistic tone at the time? I may say, Thorndyke, that I had a feeling that you went to that house with the definite expectation of finding some specific thing. Was I wrong?”

“No. You were quite right. I went there with the expectation of finding one thing and a faint hope of finding another; and both the expectation and the hope were justified by the event. My main purpose in that expedition was to obtain samples of the wallpaper from Monkhouse’s room, but I thought it just possible that the soot from the bedroom chimneys might yield some information. And it did.

“To begin with the wallpaper: the condition of the room made it easy to secure specimens. I tore off about a dozen pieces and wrote a number on each, to correspond with numbers that I marked on a rough sketch-plan of the room which I drew first. My expectation was that if—as I believed—arsenical candles had been burnt in that room, arsenic would have been deposited on all the walls, but in varying amounts, proportionate to the distance of the wall from the candle. The loose piece of paper on the wall by the bed was, of course, the real touchstone of the case, for if there were no arsenic in it, the theory of the arsenical candle would hardly be tenable. I therefore took the extra precaution of writing a full description of its position on the back of the piece and deposited it for greater safety in my letter-case.

“As soon as I reached home that day I spread out the torn fragment on the wide stage of a culture microscope and examined its outer surface with a strong top light. And the very first glance settled the question. The whole surface was spangled over with minute crystals, many of them hardly a ten-thousandth of an inch in diameter, sparkling in the strong light like diamonds and perfectly unmistakable; the characteristic octahedral crystals of arsenic acid.

“But distinctive as they were, I took nothing for granted. Snipping off a good-sized piece of the paper, I submitted it to the Marsh-Berzelius test and got a very pronounced arsenical mirror, which put the matter beyond any possible doubt or question. I may add that I tested all the other pieces and got an arsenic reaction from them all, varying, roughly, according to their distance from the table on which the candle stood.

“Thus the existence of the arsenical candle was no longer a matter of hypothesis or even of mere probability; it was virtually a demonstrated fact. The next question was, who put the arsenic into the candle? All the evidence, such as it was, pointed to Barbara. But there was not enough of it. No single fact connected her quite definitely with the candles, and it had to be admitted that they had passed through other hands than hers and that the candle-box was accessible to several people, especially during her absence. Clear evidence, then, was required to associate her—or someone else—with those
poisoned candles, and I had just a faint hope that such evidence might be forthcoming. This was how I reasoned:

“Here was a case of poisoning in which the poison was self-administered and the actual poisoner was absent. Consequently it was impossible to give a calculated dose on a given occasion, nor was it possible to estimate in advance the amount that would be necessary to produce the desired result. Since the poison was to be left within reach of the victim, to be taken from time to time, it would be necessary to leave a quantity considerably in excess of the amount actually required to produce death on any one occasion. It is probable that all the candles in the box were poisoned. In any case, most of them must have been; and as the box was filled to last for the whole intended time of Barbara’s absence, there would be a remainder of poisoned candles in the box when Monkhouse died. But the incident of the ‘faked’ medicine showed that the poisoner was fully alive to the possibility of an examination of the room. It was not likely that so cautious a criminal would leave such damning evidence as the arsenical candles in full view. For if, by chance, one of them had been lighted and the bearer had developed symptoms of poisoning, the murder would almost certainly have been out. In any case, we could assume that the poisoner would remove them and destroy them after putting ordinary candles in their place.

“But a candle is not a very easy thing to destroy. You can’t throw it down a sink, or smash it up and cast it into the rubbish-bin. It must be burnt; and owing to its inflammability, it must be burnt carefully and rather slowly; and if it contains a big charge of arsenic, the operator must take considerable precautions. And finally, these particular candles had to be burnt secretly.

“Having regard to these considerations, I decided that the only safe and practicable way to get rid of them was to burn them in a fireplace with the window wide open. This would have to be done at night when all the household was asleep, so as to be safe from interruption and discovery; and a screen would have to be put before the fireplace to prevent the glare from being visible through the open window. If there were a fire in the grate, so much the better. The candles could be cut up into small pieces and thrown into the fire one at a time.

“Of course the whole matter was speculative. There might have been no surplus candles, or if there were, they might have been taken out of the house and disposed of in some other way. But one could only act on the obvious probabilities and examine the chimneys, remembering that whereas a negative result would prove nothing for or against any particular person, a positive result would furnish very weighty evidence. Accordingly I collected samples of soot from the various bedroom chimneys and from that of Barbara’s boudoir, labelling each of them with the aid of the cards which you had left in the respective rooms.

“The results were, I think, quite conclusive. When I submitted the samples to analysis I found them all practically free from arsenic—disregarding the minute traces that one expects to find in ordinary soot—with one exception. The soot from Barbara’s bedroom chimney yielded, not mere traces, but an easily measurable quantity—much too large to have been attributable to the coal burnt in the grate.

“Thus, you see, so far as the murder of Monkhouse was concerned, there was a fairly conclusive case against Barbara. It left not a shadow of doubt in my mind that she was the guilty person. But you will also see that it was not a satisfactory case to take into court. The whole of the evidence was scientific and might have appeared rather unconvincing to the ordinary juryman, though it would have been convincing enough to the judge. I debated with myself whether I should communicate my discoveries to the police and leave them to decide for or against a prosecution, or whether I should keep silence and seek for further evidence. And finally I decided, for the present, to keep my own counsel. You will understand why.”

“Yes,” said I. “You suspected that Stella, too, had been poisoned.”

“Exactly. I had very little doubt of it. And you notice that in this case there was available evidence of a kind that would be quite convincing to a jury—evidence obtainable from an examination of the victim’s body. But here again I was disposed to adopt a waiting policy for three reasons.

“First, I should have liked to avoid the exhumation if possible. Second, if the exhumation were unavoidable, I was unwilling to apply for it until I was certain that arsenic would be found in the body; and third, although the proof that Stella had been poisoned would have strengthened the case enormously against Barbara, it would yet have added nothing to the evidence that a poisoned candle had been used.

“But the proof of the poisoned candle was the kernel of the case against Barbara. If I could prove that Stella had been poisoned by means of a candle, that would render the evidence absolutely irresistible. This I was not at present able to do. But I had some slight hopes that the deficiency might be made up, that some new facts might come into view if I waited. And, as there was nothing that called for immediate action, I decided to wait, and in due course, the deficiency was made up and the new facts did come into view.”

As he paused, I picked up Stella’s medallion and looked at it with a new and sombre interest. Holding it up before him, I said: “I am assuming, Thorndyke, that the new facts were in some way connected with this. Am I right?”

“Yes,” he replied, “you are entirely right. The connection between that charming little work and the evidence that sent that monster of wickedness to her death is one of the strangest and most impressive circumstances that has become known to me in the whole of my experience. It is no exaggeration to say that when you and Stella were working on that medallion, you were forging the last link in the chain of evidence that could have dragged the murderess to the gallows.”

He paused, and, having replenished my glass, took the medallion in his hand and looked at it thoughtfully. Then he
knocked out and refilled his pipe and I waited expectantly for the completion of this singular story.

---

**XVIII. — THE FINAL PROOF**

“WE now,” Thorndyke resumed, “enter the final stage of the inquiry. Hitherto we have dealt with purely scientific evidence which would have had to be communicated to the jury and which they would have had to take on trust with no convincing help from their own eyes. We had evidence, conclusive to ourselves, that Monkhouse had been murdered by means of a poisoned candle. But we could not produce the candle or any part of it. We had nothing visible or tangible to show to the jury to give them the feeling of confidence and firm conviction which they rightly demand when they have to decide an issue involving the life or death of the accused. It was this something that could be seen and handled that I sought, and sought in vain until that momentous evening when I called at your chambers to return your diary.

“I remember that as I entered the room and cast my eyes over the things that were spread out on the table, I received quite a shock. For the first glance showed me that, amongst those things were two objects that exactly fulfilled the conditions of the final test. There was the wax mould—a part, and the greater part, of one of the suspected candles; and there was the tress of hair—a portion of the body of the person suspected to have been poisoned. With these two objects it was possible to determine with absolute certainty whether that person had or had not been poisoned with arsenic, and if she had, whether the candle had or had not been the medium by which the poison was administered.”

“But,” I said, “you knew from the diary of the existence of the wax mould.”

“I knew that it had existed. But I naturally supposed that the cast had been taken and the mould destroyed years ago, though I had intended to ask you about it. However, here it was, miraculously preserved, against all probabilities, still awaiting completion. Of course, I recognized it instantly, and began to cast about in my mind for some means of making the necessary examination without disclosing my suspicions. For you will realize that I was unwilling to say anything to you about Stella’s death until the question was settled one way or the other. If the examination had shown no arsenic either in the candle or in the hair, it would not have been necessary to say anything to you at all.

“But while I was debating the matter, the problem solved itself. As soon as I came to look at Stella’s unfinished works, I saw that they cried aloud to be completed, and that Polton was the proper person to carry out the work. I made the suggestion, which I should have made in any case, and when you adopted it, I decided to say nothing but to apply the tests when the opportunity offered.”

“I am glad,” said I, “to hear you say that you would have made the suggestion in any case. It looked at first like a rather cold-blooded pretext to get possession of the things. But you were speaking of the hair. Can you depend on finding recognizable traces of arsenic in the hair of a person who has been poisoned?”

“Certainly, you can,” he replied. “The position is this: when arsenic is taken it becomes diffused throughout the whole body, including the blood, the bones and the skin. But as soon as a dose of arsenic is taken, the poison begins to be eliminated from the body, and, if no further dose is taken, the whole of the poison is thrown off in a comparatively short time until none remains in the tissues—with one exception. That exception is the epidermis, or outer skin, with its appendages—the finger and toe nails and the hair. These structures differ from all others in that, instead of growing interstitially and being alive throughout, they grow at a certain growing-point and then become practically dead structures. Thus a hair grows at the growing-point where the bulb joins the true skin. Each day a new piece of hair is produced at the living root, but when once it has come into being it grows no more, but is simply pushed up from below by the next portion. Thenceforward it undergoes no change, excepting that it gradually moves upwards as new portions are added at the root. It is virtually a dead, unchanging structure.

“Now suppose a person to take a considerable dose of arsenic. That arsenic becomes diffused throughout all the living tissues and is for a time deposited in them. The growing-point of the hair is a living tissue and of course the arsenic becomes deposited in it. Then the process of elimination begins and the arsenic is gradually removed from the living tissues. But in twenty-four hours, what was the growing-point of the hair has been pushed up about the fiftieth of an inch and is no longer a growing structure. It is losing its vitality. And as it ceases to be a living tissue it ceases to be affected by the process of elimination. Hence the arsenic which was deposited in it when it was a living tissue is never removed. It remains as a permanent constituent of that part of the hair, slowly moving up as the hair grows from below, until at last it is snapped off by the barber; or, if the owner is a long-haired woman, it continues to creep along until the hair is full-grown and drops out.”

“Then the arsenic remains always in the same spot?”

“Yes. It is a local deposit at a particular point in the hair. And this, Mayfield, is a most important fact, as you will see presently. For observe what follows. Hair grows at a uniform rate—roughly, a fiftieth of an inch in twenty-four hours. It is consequently possible, by measurement, to fix nearly exactly the age of any given point on a hair. Thus if we have a complete hair and we find at any point in it a deposit of arsenic, by measuring from that point to the root we can fix, within quite narrow limits, the date on which that dose of arsenic was taken.”

“But is it possible to do this?” I asked.

“Not in the case of a single hair,” he replied. “But in the case of a tress, in which all the hairs are of the same age, it is
perfectly possible. You will see the important bearing of this presently.

"To return now to my investigation. I had the bulk of a candle and a tress of Stella's hair. The questions to be settled were,

1. Was there arsenic in the candle? and
2. Had Stella been poisoned with arsenic?

"I began by trimming the wax mould in readiness for casting and then I made an analysis of the trimmings. The result was the discovery of considerable quantities of arsenic in the wax.

"That answered the first question. Next, as the tress of hair was larger than was required for your purpose, I ventured to sacrifice a portion of it for a preliminary test. That test also gave a positive result. The quantity of arsenic was, of course, very minute, but still it was measurable by the delicate methods that are possible in dealing with arsenic; and the amount that I found pointed either to one large dose or to repeated smaller ones.

"The two questions were now answered definitely. It was certain—and the certainty could be demonstrated to a jury—that Stella had been poisoned by arsenic, and that the arsenic had been administered by means of poisoned candles. The complete proof in this case lent added weight to the less complete proof in the case of Monkhouse; and the two cases served to corroborate one another in pointing to Barbara as the poisoner. For she was the common factor in the two cases. The other persons—Wallingford, Madeline and the others—who appeared in the Monkhouse case, made no appearance in the case of Stella; and the persons who were associated with Stella were not associated with Monkhouse. But Barbara was associated with both. And her absence from home was no answer to the charge if death was caused by the candles which she had admittedly supplied.

"But complete as the proof was, I wished, if possible, to make it yet more complete: to associate Barbara still more definitely with the crime. In the case of Monkhouse, it was clear that the poisoning always occurred when she was absent from home. But this was not so clear in the case of Stella. Your diary showed that Stella's relapses coincided pretty regularly with Barbara's absences; but it was not certain (though obviously probable) that the relapses coincided with the periods of poisoning. If it could be proved that they did coincide, that proof would furnish corroboration of the greatest possible weight. It would show that the two cases were parallel in all respects.

"But could it be proved? If the tress of Stella's hair had been at my disposal, I had no doubt that I could have decided the question. But the tress was yours, and it had to be preserved. Whatever was to be done must be done without destroying or injuring the hair, and I set myself the task of finding some practicable method. Eventually, I decided, without much hope of success, to try the X-rays. As arsenic is a fairly dense metal and the quantity of it in the deposits quite considerable, it seemed to me possible that it might increase the density of the hairs at those points sufficiently to affect the X-ray shadow. At any rate, I decided to give the method a trial.

"Accordingly, Polton and I set to work at it. First, in order to get the densest shadow possible, we made the tress up into a close cylinder, carefully arranging it so that all the cut ends were in exactly the same plane. Then we made a number of graduated exposures on 'process' plates, developing and intensifying with the object of getting the greatest possible degree of contrast. The result was unexpectedly successful. In the best negative, the shape of the tress was faintly visible and was soon to be crossed by a number of perfectly distinct pale bands. Those bands were the shadows of the deposits of arsenic. There could be no doubt on the subject. For, apart from the fact that there was nothing else that they could be, their appearance agreed exactly with what one would have expected. Each band presented a sharp, distinct edge towards the tips of the hairs and faded away imperceptibly towards the roots. The sharp edge corresponded to the sudden appearance of arsenic in the blood when the poisoning began. The gradual fading-away corresponded to the period of elimination when the poisoning had ceased and the quantity of arsenic in the blood was becoming less and less from day to day.

"Now, since hair grows at a known, uniform rate, it was possible to convert the distances between these arsenical bands into periods of time; not with perfect exactness, because the rate of growth varies slightly in different persons, but with sufficient exactness for our present purpose. As soon as I looked at those bands, I saw that they told the whole story. But let us follow the method of proof.

"Assuming the rate of growth to be one fiftieth of an inch in twenty-four hours—which was probably correct for a person of Stella's age—I measured off on the photograph seven inches and a quarter from the cut ends as representing the last year of her life. Of course, I did not know how close to the head the hair had been cut, but, judging by the bands, I assumed that it had been cut quite close to the skin—within a quarter of an inch."

"I happen to know that you were quite right," said I, "but I can't imagine how you arrived at your conclusion."

"It was quite a simple inference," he replied, "as you will see, presently. But to return to the photograph. Of the measured space of seven inches and a quarter I took a tracing on sheet celluloid, marking the sharp edges of the bands, the points at which the fading began and the points at which the band ceased to be visible. This tracing I transferred to paper ruled in tenths of an inch—a tenth of an inch representing five days—and I joined the points where the fading began and ended by a sloping line. I now had a diagram, or chart, which showed, with something approaching to accuracy, the duration of each administration of arsenic and the time which elapsed between the successive poisonings. This is the chart. The sloping lines show the fading of the bands."

He handed me a paper which he had just taken from a drawer and I looked at it curiously but with no great interest. As I returned it after a brief inspection I remarked: "It is quite clear and intelligible, but I don't quite see why you took the
considerable trouble of making it. Does it show anything that could not be stated in a few words?"

"Not by itself," he replied. "But you remember that I mentioned having made two other charts, one showing the fluctuations in Stella’s illness and the other showing Barbara’s absences from home during the same period. Here are those other two charts; and now, if you put the three together, your eye can take in at a glance a fact of fundamental importance; which is that the relapses, the absences and the poisonings all coincided in time. The periodicity is strikingly irregular; but it is identical in all three charts. I made these to hand to the jury, and I think they would have been quite convincing, since any juryman could check them by the dates given in evidence, and by inspection of the radiograph of the hair."

EXPLANATION OF THE CHARTS

CHART A shows the fluctuations in the illness of Stella Keene during the year preceding her death in October. Divided into intervals of five days.

CHART B shows the distribution of the arsenical bands in Stella Keene’s hair. The steep sides of the curves, towards the tips of the hairs, show the sudden appearance of the deposit, and the sloping sides, towards the roots of the hairs, represent its more gradual fading. Each of the narrow divisions represents five days’ growth.

CHART C shows the periods during which Barbara was absent from home, each absence being represented by a black column. Divided into intervals of five days.

I gazed at the three charts and was profoundly impressed by the convincing way in which they demonstrated the connection between Barbara’s movements and the results of her diabolical activities. But what impressed me still more was the amazing ingenuity with which Thorndyke had contrived to build up a case of the most deadly precision and completeness out of what seemed, even to my trained intelligence, no more than a few chance facts, apparently quite trivial and irrelevant.

"It seems," I said, "that, so far as you were concerned, the exhumation was really unnecessary."

"Quite," he replied. "It proved nothing that was not already certain. Still, the Commissioner was quite right. For the purposes of a trial, evidence obtained from the actual body of the victim is of immeasurably more weight than indirect scientific evidence, no matter how complete. An ordinary jurymen might have difficulty in realizing that the hair is part of the body and that proof of arsenical deposit in the hair is proof of arsenic in the body. But the mistake that he made, as events turned out, was in refusing to make the arrest until my statements had been confirmed by the autopsy and the analysis. That delay allowed the criminal to escape. Not that I complain. To me, personally, her suicide came as a blessed release from an almost intolerable position. But if I had been in his place, I would have taken no chances. She would have gone to trial and to the gallows."

"Yes," I admitted; "that was what justice demanded. But I cannot be thankful enough for the delay that let her escape. Fiend as she was, it would have been a frightful thing to have had to give the evidence that would have hanged her."

"It would," he agreed; "and the thought of it was a nightmare to me. However, we have escaped that; and after all, justice has been done."

We were silent for a few minutes, during which Thorndyke smoked his pipe with a certain air of attention as it he expected me to put some further questions. And, in fact, there were one or two questions that I wanted to have answered. I began with the simplest.

"I am still a little puzzled by some of the circumstances in this case. The infernal machine I happen to know to have been sent by Barbara, though I don’t understand why she sent it. But Wallingford’s proceedings are a complete mystery to me. What do you suppose induced him to keep a watch on you in that extraordinary fashion? And who was the man who shadowed him? There certainly was such a man, for I saw him, myself. And the same man had been shadowing Miss Norris. What do you make of it all?"

"One can only reason from past experiences," he replied. "It seems to be a rule that a person who has committed a crime cannot remain quiet and let things take their course. There appears to be an irresistible impulse to lay down false clues and create misleading appearances. It is always a mistake, unless the false clues are laid down in advance, and even then it is apt to fail and unexpectedly furnish a real clue.

"Now Barbara, with all her astonishing cleverness, made that mistake. She laid down a false clue in advance by her absences from home, and the trick certainly worked successfully at the inquest. But it was precisely those absences that put me on the track of the candle, which otherwise might have passed unsuspected. The faked medicine was another false clue which attracted my attention and added to my suspicion concerning the candle. Then, after the event came these other endeavours to mislead. They did neither harm nor good, as it happened, since I had already marked her down as the principal suspect. But if I had been in doubt, I should have followed up those clues and found her at the end of them.

"As to Wallingford, I imagine that she led him to believe that I was employed by you to fix the crime on him and that he
was advised to watch me and be ready to anticipate any move on my part; her actual object being to cause him to behave in such a manner as to attract suspicious attention. The function of the private detective—for that is what he must have been—would be to keep Wallingford's nerves—and Miss Norris', too—in such a state that they would appear anxious and terrified and tend to attract attention. The infernal machine was primarily intended, I think, to cast suspicion on one or both of them.

"That was what I inferred from the total absence of finger-prints and the flagrantly identifiable character of the pistol and the wool.

"But the greatest, the most fatal mistake that Barbara made was the one that is absolutely characteristic of the criminal. She repeated the procedure of a previous crime that had been successful. It was that repetition that was her undoing. Either crime, separately, might have been difficult to fix on her. As it was, each crime was proof of the other."

Once more we fell silent; and still Thorndyke had the air of expecting some further question from me. I looked at him nervously; for there was something that I wanted to ask and yet I hardly dared to put it into words. For, as I had looked at those charts, a horrid suspicion had taken hold of me. I feared to have it confirmed, and yet I could not let it rest. At last, I summoned courage enough to put the question.

"Thorndyke," I said, "I want you to tell me something. I expect you know what it is."

He looked up and nodded gravely.

"You mean about Stella?" said he.

"Yes. How long would she have lived if she had not been poisoned?"

He looked away for a few moments, and, impassive as his face was, I could see that he was deeply moved. At length he replied: "I was afraid you were going to ask me that. But since you have, I can only answer you honestly. So far as I can judge, but for that accursed ghoul, the poor girl might have been alive and well at this moment."

I stared at him in amazement. "Do you mean," I demanded, "that she was not really suffering from consumption at all?"

"That is what it amounts to," he replied. "There were signs of old tubercular trouble, but there was nothing recent. Evidently she had good powers of resistance, and the disease had not only become stationary, but was practically extinct. The old lesions had undergone complete repair, and there is no reason to suppose that any recurrence would have taken place under ordinary conditions."

"But," I exclaimed, hardly able to believe that the disaster had been so overwhelmingly complete, "what about the cough? I know that she always had a more or less troublesome cough."

"So had Monkhouse," he replied; "and so would anyone have had whose lungs were periodically irritated by inhaling particles of arsenious acid. But the tubercular mischief was quite limited and recovery must have commenced early. And Barbara, watching eagerly the symptoms of the disease which was to rid her of her rival, must have noted with despair the signs of commencing recovery and at last resolved to do for herself what nature was failing to do. Doubtless, the special method of poisoning was devised to imitate the symptoms of the disease; which it did well enough to deceive those whose minds were prepared by the antecedent illness to receive the suggestion. It was a horribly, fiendishly ingenious crime; calmly, callously devised and carried out to its appalling end with the most hideous efficiency."

After he had finished speaking, I remained gazing at him dumbly, stupefied, stunned by the realization of the enormity of this frightful thing that had befallen. He, too, seemed quite overcome, for he sat silently, grasping his extinct pipe and looking sternly and fixedly into the fire. At length he spoke, but without removing his gaze from the bright embers.

"I am trying, Mayfield," he said, gently, "to think of something to say to you. But there is nothing to say. The disaster is too complete, too irretrievable. This terrible woman has, so far, wrecked your life, and I recognize that you will carry the burden of your loss so long as you live. It would be a mere impertinence to utter futile and banal condolences. You know what I, your friend, am feeling and I need say no more of that; and I have too much confidence in your wisdom and courage to think of exhortations."

"But, though you have been robbed of the future that might have been, there is still a future that may be. It remains to you now only to shoulder your fardel and begin your pilgrimage anew; and if the road shall seem at first a dreary one, you need not travel it alone. You have friends; and one of them will think it a privilege to bear you company and try to hearten you by the way."

He held out his hand and I grasped it silently and with a full heart. And the closer friendship that was inaugurated in that hand-clasp has endured through the passing years, ever more precious and more helpful.

THE END
THE OVERSIGHT OF MR. POTTERMACK

PROLOGUE

THE afternoon of a sultry day near the end of July was beginning to merge into evening. The crimson eye of the declining sun peered out through chinks in a bank of slaty cloud as if taking a last look at the great level of land and water before retiring for the night; while already, in the soft, greenish grey of the eastern sky, the new-risen moon hung like a globe of pearl.

It was a solitary scene; desolate, if you will, or peaceful. On the one hand the quiet waters of a broad estuary; on the other a great stretch of marshes; and between them the sea wall, following faithfully the curves and indentations of the shore and fading away at either end into invisibility.

A great stillness brooded over the place. On the calm water, far out beyond the shallows, one or two coasting craft lay at anchor, and yet farther out a schooner and a couple of barges crept up on the flood tide. On the land side in the marshy meadows a few sheep grazed sedately, and in the ditch that bordered the sea wall the water-voles swam to and fro or sat on the banks and combed their hair. Sound there was none save the half-audible wash of the little waves upon the shore and now and again the querulous call of a sea-gull.

In strange contrast to the peaceful stillness that prevailed around was the aspect of the one human creature that was visible. Tragedy was written in every line of his figure; tragedy and fear and breathless haste. He was running—so far as it was possible to run among the rough stones and the high grass—at the foot of the sea wall on the seaward side; stumbling onward desperately, breathing hard, and constantly brushing away with his hand the sweat that streamed down his forehead into his eyes. At intervals he paused to scramble up the slope of the wall among the thistles and ragwort, and with infinite caution, to avoid even showing his head on the skyline, peered over the top backwards and forwards, but especially backwards where, in the far distance, the grey mass of a town loomed beyond the marshes.

There was no mystery about the man's movements. A glance at his clothing explained everything. For he was dressed in prison grey, branded with the broad arrow and still bearing the cell number. Obviously, he was an escaped convict.

Criminologists of certain Continental schools are able to give us with remarkable exactness the facial and other characteristics by which the criminal may be infallibly recognized. Possibly these convenient "stigmata" may actually occur in the criminals of those favoured regions. But in this backward country it is otherwise; and we have to admit the regrettable fact that the British criminal inconsiderately persists in being a good deal like other people. Not that the criminal class is, even here, distinguished by personal beauty or fine physique. The criminal is a low-grade man; but he is not markedly different from other low-grade men.

But the fugitive whose flight in the shelter of the sea wall we are watching did not conform even to the more generalized type. On the contrary, he was a definitely good-looking young man rather small and slight yet athletic and well-knit, with a face not only intelligent and refined but, despite his anxious and even terrified expression, suggestive of a courageous, resolute personality. Whatever had brought him to a convict prison, he was not of the rank and file of its inmates.

Presently, as he approached a bluff which concealed a stretch of the sea wall ahead, he slowed down into a quick walk, stooping slightly and peering forward cautiously to get a view of the shore beyond the promontory, until, as he reached the most projecting point of the wall, he paused for a moment and then crept stealthily forward, alert and watchful for any unexpected thing that might be lurking round the promontory.

Suddenly he stopped dead and then drew back a pace, craning up to peer over the high, rushy grass, and casting a glance of intense scrutiny along the stretch of shore that had come into view. After a few moments he again crept forward slowly and silently, still gazing intently along the shore and the face of the sea wall that was now visible for nearly a mile ahead. And still he could see nothing but that which had met his eyes as he crept round the bluff. He drew himself up and looked down at it with eager interest.

A little heap of clothes; evidently the shed raiment of a bather, as the completeness of the outfit testified. And in confirmation, just across the narrow strip of "saltlings", on the smooth expanse of muddy sand the prints of a pair of naked feet extended in a line towards the water. But where was the bather? There was only a single set of footprints, so that he must be still in the water or have come ashore farther down. Yet neither on the calm water nor on the open, solitary shore was any sign of him to be seen.

It was very strange. On that smooth water a man swimming would be a conspicuous object, and a naked man on that low, open shore would be still more conspicuous. The fugitive looked around with growing agitation. From the shore and the water his glance came back to the line of footprints; and now, for the first time, he noticed something very remarkable about them. They did not extend to the water. Starting from the edge of the saltlings, they took a straight line across the sand, every footprint deep and distinct, to within twenty yards of the water's edge; and there they ended abruptly. Between the last footprint and the little waves that broke on the shore was a space of sand perfectly smooth and untouched.

What could be the meaning of this? The fugitive gazed with knitted brows at that space of smooth sand; and even as he gazed, the explanation flashed upon him. The tide was now coming in, as he could see by the anchored vessels. But when these footprints were made, the tide was going out. The spot where the footprints ended was the spot where the bather had entered the water. Then—since the tide had gone out to the low-water mark and had risen again to nearly half-tide—some five hours must have passed since that man had walked down into the water.
All this flashed through the fugitive’s brain in a matter of seconds. In those seconds he realized that the priceless heap of clothing was derelict. As to what had become of the owner, he gave no thought but that in some mysterious way he had apparently vanished for good. Scrambling up the slope of the sea wall, he once more scanned the path on its summit in both directions; and still there was not a living soul in sight. Then he slid down, and breathlessly and with trembling hands stripped off the hated livery of dishonour and, not without a certain incongruous distaste, struggled into the derelict garments.

A good deal has been said—with somewhat obvious truth—about the influence of clothes upon the self-respect of the wearer. But surely there could be no more extreme instance than the present one, which, in less than one brief minute, transformed a manifest convict into a respectable artisan. The change took effect immediately. As the fugitive resumed his flight he still kept off the skylines; but he no longer hugged the base of the wall, he no longer crouched nor did he run. He walked upright out on the more or less level saltings, swinging along at a good pace but without excessive haste. And as he went he explored the pockets of the strange clothes to ascertain what bequests the late owner had made to him, and brought up at the first cast a pipe, a tobacco-pouch, and a box of matches. At the first he looked a little dubiously, but could not resist the temptation; and when he had dipped the mouthpiece in a little salt pool and scrubbed it with a handful of grass, he charged the bowl from the well-filled pouch, lighted it and smoked with an ecstasy of pleasure born of long deprivation.

Next, his eye began to travel over the abundant jetsam that the last spring-tide had strewn upon the saltings. He found a short length of old rope, and then he picked up from time to time a scrap of driftwood. Not that he wanted the fuel, but that a bundle of driftwood seemed a convincing addition to his make-up and would explain his presence on the shore if he should be seen. When he had made up a small bundle with the aid of the rope, he swung it over his shoulder and collected no more.

He still climbed up the wall now and again to keep a look-out for possible pursuers, and at length, in the course of one of these observations, he espied a stout plank set across the ditch and connected with a footpath that meandered away across the marshes. In an instant he decided to follow that path, whithersoever it might lead. With a last glance towards the town, he boldly stepped up to the top of the wall, crossed the path at its summit, descended the landward side, walked across the little bridge and strode away swiftly along the footpath across the marshes.

He was none too soon. At the moment when he stepped off the bridge, three men emerged from the waterside alley that led to the sea wall and began to move rapidly along the rough path. Two of them were prison warders, and the third, who trundled a bicycle, was a police patrol.

"Pity we didn't get the tip a bit sooner", grumbled one of the warders. "The daylight's going fast, and he's got a devil of a start."

"Still", said the constable cheerfully, "it isn't much of a place to hide in. The wall's a regular trap; sea one side and a deep ditch the other. We shall get him all right, or else the patrol from Clifton will. I expect he has started by now."

"What did you tell the sergeant when you spoke to him on the 'phone?"

"I told him there was a runaway coming along the wall. He said he would send a cyclist patrol along to meet us."

The warder grunted. "A cyclist might easily miss him if he was hiding in the grass or in the rushes by the ditch. But we must see that we don't miss him. Two of us had better take the two sides of the wall so as to get a clear view."

His suggestion was adopted at once. One warder climbed down and marched along the saltings, the other followed a sort of sheep-track by the side of the ditch, while the constable wheeled his bicycle along the top of the wall. In this way they advanced as quickly as was possible to the two men stumbling over the rough ground at the base of the wall, searching the steep sides, with their rank vegetation, for any trace of the lost sheep, and making as little noise as they could. So for over a mile they toiled on, scanning every foot of the rough ground as they passed but uttering no word. Each of the warders could see the constable on the path above, and thus the party was enabled to keep together.

Suddenly the warder on the saltings stopped dead and emitted a shout of triumph. Instantly the constable laid his bicycle on the path and slithered down the bank, while the other warder came scrambling over the wall, twittering with excitement. Then the three men gathered together and looked down at the little heap of clothes, from which the discoverer had already detached the jacket and was inspecting it.

"They're his duds all right", said he. "Of course, they couldn't be anybody else's. But here's his number. So that's that."

"Yes", agreed the other, "they're his clothes right enough. But the question is, Where's my nabs himself?"

They stepped over to the edge of the saltings and gazed at the line of footprints. By this time the rising tide had covered up the strip of smooth, unmarked sand and was already eating away the footprints, winch now led directly to the water's edge.

"Rum go", commented the constable, looking steadily over the waste of smooth water. "He isn't out there. If he was, you'd see him easily, even in this light. The water's as smooth as oil."

"Perhaps he's landed farther down", suggested the younger warder.

"What for?" demanded the constable.
"Might mean to cross the ditch and get away over the marshes."

The constable laughed scornfully. "What, in his birthday suit? I don't think. No, I reckon he had his reasons for taking to the water, and those reasons would probably be a barge sailing fairly close inshore. They'd have to take him on board, you know; and from my experience of bargees, I should say they'd probably give him a suit of togs and keep their mouths shut."

The elder warder looked meditatively across the water.

"Maybe you are right", said he, "but barges don't usually come in here very close. The fairway is right out the other side. And, for my part, I should be mighty sorry to start on a swim out to a sailing vessel."

"You might think differently if you'd just hopped out of the jug", the constable remarked as he lit a cigarette.

"Yes, I suppose I should be ready to take a bit of a risk. Well", he concluded, "if that was his lay, I hope he got picked up. I shouldn't like to think of the poor beggar drifting about the bottom of the river. He was a decent, civil little chap."

There was silence for a minute or two as the three men smoked reflectively. Then the constable proposed, as a matter of form, to cycle along the wall and make sure that the fugitive was not lurking farther down. But before he had time to start, a figure appeared in the distance, apparently mounted on a bicycle and advancing rapidly towards them. In a few minutes he arrived and dismounted on the path above them glancing down curiously at the jacket which the warder still held.

"Those his togs?" he asked.

"Yes", replied the constable. "I suppose you haven't seen a gent bathing anywhere along here?"

The newcomer shook his head. "No", said he. "I have patrolled the whole wall from Clifton to here and I haven't seen a soul excepting old Barnett, the shepherd."

The elder warder gathered up the rest of the clothes and handed them to his junior. "Well", he said, "we must take it that he's gone to sea. All that we can do is to get the Customs people to give us a passage on their launch to make the round of all the vessels anchored about here. And if we don't find him on any of them, we shall have to hand the case over to the police."

The three men climbed to the top of the wall and turned their faces towards the town; and the Clifton patrol, having turned his bicycle about, mounted expertly and pedalled away at a smart pace to get back to his station before the twilight merged into night.

At that very moment, the fugitive was stepping over a stile that gave access from the marshes to a narrow, tree-shaded lane. Here he paused for a few moments to fling away the bundle of driftwood into the hedge and refill and light his pipe. Then, with a springy step, he strode away into the gathering moonlit dusk.
CHAPTER I. — MR. POTTERMACK MAKES A DISCOVERY

A CONSCIENTIOUS desire on the part of the present historian to tell his story in a complete and workmanlike fashion from the very beginning raises the inevitable question. What was the beginning? Not always an easy question to answer offhand; for if we reflect upon certain episodes in our lives and try to track them to their beginnings, we are apt, on further cogitation, to discover behind those beginnings antecedents yet more remote which have played an indispensable part in the evolution of events.

As to this present history the whole train of cause and consequence might fairly be supposed to have been started by Mr. Pottermack's singular discovery in his garden. Yet, when we consider the matter more closely, we may doubt if that discovery would ever have been made if it had not been for the sun-dial. Certainly it would not have been made at that critical point in Mr. Pottermack's life; and if it had not—but we will not waste our energies on vain speculations. We will take the safe and simple course. We will begin with the sun-dial.

It stood, when Mr. Pottermack's eyes first beheld it, in a mason's yard at the outskirts of the town. It was obviously of some age, and therefore could not have been the production of Mr. Gallett, the owner of the yard; and standing amidst the almost garishly new monuments and blocks of freshly hewn stone, it had in its aspect something rather downfallen and forlorn. Now Mr. Pottermack had often had secret hankerings for a sun-dial. His big walled garden seemed to cry out for some central feature: and what more charming ornament could there be than a dial which like the flowers and trees amidst which it would stand lived and had its being solely by virtue of the golden sunshine?

Mr. Pottermack halted at the wide-open gate and looked at the dial (I use the word, for convenience to include the stone support). It was a graceful structure with a twisted shaft like that of a Norman column, a broad base and a square capital. It was nicely lichenised and weathered, and yet in quite good condition. Mr. Pottermack found something very prepossessing in its comely antiquity. It had a motto, too, inscribed on the sides of the capital; and when he had strode into the yard, and, circumnavigating the sun-dial, had read it, he was more than ever pleased. He liked the motto. It struck a sympathetic chord. Sole orto: spes: decedente pax. It might have been this town's oratorio. It stood, when Mr. Pottermack's eyes first beheld it, in a mason's yard at the outskirts of the town.

"Having a look at the old dial, Mr. Pottermack?" said the mason, crossing the yard and disposing himself for conversation. "Nice bit of carving, that, and wonderful well preserved. He's counted out a good many hours in his time, he has. Seventeen thirty-four. And ready to count out as many again. No wheels to go rusty. All done with a shutter. No wear and tear about a shutter. And never runs down and never wants winding up. There's points about a sun-dial."

"Where did it come from?"

"I took it from the garden of Apsley Manor House, what's being rebuilt and brought up to date. New owner told me to take it away. Hadn't any use for sun-dials in these days, he said. More hasn't anybody else. So I've got him on my hands. Wouldn't like him for your garden, I suppose? He's going cheap."

It appeared, on enquiry, that he was going ridiculously cheap. So cheap that Mr. Pottermack closed with the offer there and then,

"You will bring it along and fix it for me?" said he.

"I will, sir. Don't want much fixing. If you will settle where he is to stand, I'll bring him and set him up. But you'd better prepare the site. Dig well down into the subsoil and make a level surface. Then I can put a brick foundation and there will be no fear of his settling out of the upright."

That was how it began. And on the knife-edge of such trivial chances is human destiny balanced. From the mason's yard Mr. Pottermack sped homeward with springy step, visualizing the ground-plan of his garden as he went; and by the time that he let himself into his house by the front door within the rose-embowered porch he was ready to make a bee-line for the site of his proposed excavation.

He did not, however; for, as he opened the door, he became aware of voices in the adjacent room and his housekeeper came forth to inform him that Mrs. Bellard had called to see him, and was waiting within. Apparently the announcement was not unwelcome, for Mr. Pottermack's cheerfulness was in nowise clouded thereby. We might even go so far as to say that his countenance brightened.

Mrs. Bellard was obviously a widow. That is to say that she was arrayed in the hideous "weeds" with which, a generation ago, women used to make their persons revolting and insult the memory of the deceased. But she was obviously a widow. More obviously than is usual in these latter days. Nevertheless her sombre raiment was well-considered, tasteful and becoming; indeed the severity of her dress seemed rather to enhance her quiet, dignified comeliness. She greeted Mr. Pottermack with a frank smile, and as they shook hands she said in a singularly pleasant, musical voice:

"It is too bad of me to come worrying you like this. But you said I was to."

"Of course I did", was the hearty response; and as the lady produced from her basket a small tin box, he enquired: "Snails?"
"Snails", she replied; and they both laughed.

"I know", she continued, "it is very silly of me. I quite believe that, as you say, they die instantaneously when you drop them into boiling water. But I really can't bring myself to do it."

"Very natural, too", said Pottermack. "Why should you, when you have a fellow conchologist to do it for you? I will slaughter them this evening and extract them from their shells, and you shall have their empty residences to-morrow. Shall I leave them at your house?"

"You needn't trouble to do that. Give them to your housekeeper and I will call for them on my way home from the shops. But I really do impose on you most shamefully. You kill the poor little beasts, you clean out the shells, you find out their names and you leave me nothing to do but stick them on card, write their names under them, and put them in the cabinet. I feel a most horrid impostor when I show them at the Naturalists' Club as my own specimens."

"But, my dear Mrs. Bellard", protested Pottermack, "you are forgetting that you collect them, that you discover them in their secret haunts and drag them out to the light of day. That is the really scientific part of conchology. The preparation of the shells and their identification are mere journeyman's work. The real naturalist's job is the field work; and you are a positive genius in finding these minute shells—the pupas and cochlicopas and such like."

"Snails", she replied; and they all laughed. And, opening the little box, she exhibited her "catch" and recounted some of the thrilling incidents of the chase, to which Pottermack listened with eager interest. And as they chatted, but half seriously, an observer would have noted that they were obviously the best of friends, and might have suspected that the natural history researches were, perhaps, somewhat in the nature of a plausible and convenient pretext for enjoying a good deal of each other's society. These little precautions are sometimes necessary in a country district where people take an exaggerated interest in one another and tongues are apt to wag rather freely.

But a closer observer would have noted certain other facts. For instance, these two persons were curiously alike in one respect: they both looked older to the casual stranger than they appeared on closer inspection. At a first glance, Mr. Pottermack, spectacled, bearded, and grave, seemed not far short of fifty. But a more critical examination showed that first impression to be erroneous. The quick, easy movements and the supple strength that they implied in the rather small figure, as well as the brightness of the alert, attentive eyes behind the spectacles, suggested that the lines upon the face and the white powdering of the hair owed their existence to something other than the mere effluxion of time. So, too, with Mrs. Bellard. On a chance meeting she would have passed for a well-preserved middle-aged woman. But now, as she chatted smilingly with her friend, the years dropped from her until, despite the white hairs that gleamed among the brown and a faint hint of crow's-feet, she seemed almost girlish.

But there was something else: something really rather odd. Each of the two cronies seemed to have a way of furtively examining the other. There was nothing unfriendly or suspicious in these regards. Quite the contrary, indeed. But they conveyed a queer impression of curiosity and doubt, differently manifested, however, in each. In Mr. Pottermack's expression there was something expectant. He had the air of waiting for some anticipated word or action; but the expression vanished instantly when his companion looked in his direction. The widow's manner was different, but it had the same curious furtive quality. When Pottermack's attention was occupied, she would cast a steady glance at him; and then the lines would come back upon her forehead, her lips would set, and there would steal across her face a look at once sad, anxious, and puzzled. Especially puzzled. And if the direction of her glance had been followed, it would have been traced more particularly to his profile and his right ear. It is true that both these features were a little unusual. The profile was almost the conventional profile of the Greek sculptors—the nose continuing the line of the forehead with no appreciable notch—a character very seldom seen in real persons. As to the ear, it was a perfectly well-shaped, proportionate ear. It would have been of no interest to Lombroso. But it had one remarkable peculiarity: on its lobule was what doctors call a "diffuse naevoid" and common folk describe as a "port-wine mark". It was quite small, but very distinct; as if the lobule had been dipped into damson juice. Still, it hardly seemed to justify such anxious and puzzled consideration.

"What a dreadful pair of gossips we are!" Mrs. Bellard exclaimed, taking her basket up from the table. "I've been here half an hour by the clock, and I know I have been hindering you from some important work. You looked full of business as you came up the garden path."

"I have been full of business ever since—land and fresh-water mollusca. We have had a most instructive talk."

"So we have", she agreed, with a smile. "We are always instructive; especially you. But I must really take myself off now and leave you to your other business."

Mr. Pottermack held the door open for her and followed her down the hall to the garden path, delaying her for a few moments to fill her basket with roses from the porch. When he had let her out at the gate, he lingered to watch her as she walked away towards the village; noting how the dignified, matronly bearing seemed to contrast with the springy tread and youthful lisomness of movement.

As he turned away to re-enter the house he saw the postman approaching; but as he was not expecting any letters, and his mind was still occupied with his late visitor, he did not wait. Nor when, a minute later, he heard the characteristic knock, did he return to inspect the letter-box; which was, just as well in the circumstances. Instead, he made his way out by the back door into the large kitchen garden and orchard and followed the long, central path which brought him at length to a high red brick wall, in which was a door furnished with a knocker and flanked by an electric bell. This he opened with a
latchkey of the Yale pattern, and, having passed through, carefully shut it behind him.

He was now in what had probably been originally the orchard and kitchen garden of the old house in which he lived, but which had since been converted into a flower garden, though many of the old fruit trees still remained. It was a large oblong space, more than a quarter of an acre in extent, and enclosed on all sides by a massive old wall nearly seven feet high, in which were only two openings: the door by which he had just entered and another door at one side, also fitted with a Yale lock and guarded, in addition, by two bolts.

It was a pleasant place if quiet and seclusion were the chief desire of the occupant—as they apparently were, to judge by Mr. Pottermack’s arrangements. The central space was occupied by a large, smooth grass plot, surrounded by well-made paths, between which and the wall were wide flower borders. In one corner was a brick-built summer-house; quite a commodious affair, with a good tiled roof, a boarded floor, and space enough inside for a couple of armchairs and a fair-sized table. Against the wall opposite to the summer-house was a long shed or outhouse with glass lights in the roof, evidently a recently built structure and just a little unsightly—but that would be remedied when the yew hedge that had been planted before it grew high enough to screen it from view. This was the workshop, or rather a range of workshops; for Mr. Pottermack was a man of many occupations, and, being also a tidy, methodical man, he liked to keep the premises appertaining to those occupations separate.

On the present occasion he made his way to the end compartment, in which were kept the gardening tools and appliances, and having provided himself with a spade, a mallet, a long length of cord, and a half-dozen pointed stakes, walked out to the grass plot and looked about him. He was quite clear in his mind as to where the sun-dial was to stand, but it was necessary to fix the spot with precision. Hence the stakes and the measuring-line, which came into use when he had paced out the distances approximately and enabled him, at length, to drive a stake into the ground and thereby mark the exact spot which would be occupied by the centre of the dial.

From this centre, with the aid of the cord, he drew a circle some four yards in diameter and began at once to take up the turf, rolling it up tidily and setting it apart ready for relaying. And now he came to the real job. He had to dig right down to the subsoil. Well, how far down was that? He took off his coat, and, grasping the spade with a resolute air, gave a vigorous drive into the soil at the edge of the circle. That carried him through the garden mould down into a fine, yellowish, sandy loam, a small quantity of which came up on the spade. He noted its appearance with some interest but went on digging, opening up a shallow trench round the circumference of the circle.

By the time that he had made a second complete circuit and carried his trench to a depth of some eight inches, the circle was surrounded by a ring of the yellow loam, surprisingly bulky in proportion to the shallow cavity from which it had been derived. And once more his attention was attracted by its appearance. For Mr. Pottermack amongst his various occupations included occasionally that of sand-casting. Hitherto he had been in the habit of buying his casting-sand by the bag. But this loam, judging by the sharp impressions of his feet where he had trodden in it, was a perfect casting-sand, and to be had for the taking at his very door. By way of testing its cohesiveness, he took up a large handful and squeezed it tightly. When he opened his hand the mass remained hard and firm and showed the impressions of his fingers perfectly to the very creases of the skin.

Very pleased with his discovery, and resolving to secure a supply of the loam for his workshop, he resumed his digging, and presently came down to a stratum where the loam was quite dense and solid and came up on the spade in definite coherent lumps like pieces of a soft rock. This, he decided, was the true subsoil and was as deep as he need go; and having decided this, he proceeded to dig out the rest of the circle to the same depth.

The work was hard and, after a time, extremely monotonous. Still Mr. Pottermack laboured steadily with no tendency to slacking. But the monotony exhausted his attention, and while he worked on mechanically with unabated vigour his thoughts wandered away from his task; now in the direction of the sun-dial, and now—at, perhaps, rather more length—in that of his pretty neighbour and her spoils, which were still awaiting his attentions in the tin box.

He was getting near the centre of the circle when his spade cut through and brought up a piece of spongy, fungus-eaten wood. He glanced at it absently, and having flung it outside the circle, entered his spade at the same spot and gave a vigorous drive. As the spade met with more than usual resistance, he threw a little extra weight on it. And then, suddenly, the resistance gave way; the spade drove through, apparently into vacant space. Mr. Pottermack uttered a startled cry, and after an instant’s precarious balancing saved himself by a hair’s breadth from going through after it.

For a moment he was quite shaken—and no wonder. He had staggered back a pace or two and now stood, still grasping the spade, and gazing with horror at the black, yawning hole that had so nearly swallowed him up. But as, after all, it had not, he presently pulled himself together and began cautiously to investigate. A very little tentative probing with the spade made everything clear. The hole which he had uncovered was the mouth of an old well: one of those pernicious wells which have no protective coping but of which the opening, flush with the surface of the ground, is ordinarily closed by a hinged flap. The rotten timber that he had struck was part of this flap, and he could now see the rusty remains of the hinges. When the well had gone out of use, some one, with incredible folly, had simply covered it up by heaping earth on the closed flap.

Mr. Pottermack, having made these observations, proceeded methodically to clear away the soil until the entire mouth of the well was exposed. Then, going down on hands and knees, he approached, and cautiously advancing his head over the edge, peered down into the dark cavity. It was not quite dark, however, for though the slimy brick cylinder faded after a few feet into profound gloom, Mr. Pottermack could see, far down, as it seemed in the very bowels of the earth, a little circular spot of light on which was the dark silhouette of a tiny head. He picked up a pebble, and, holding it at the centre of the
opening, let it drop. After a brief interval the bright spot grew suddenly dim and the little head vanished: and after another brief interval there came up to his ear a hollow "plop" followed by a faint, sepulchral splash.

There was, then, water in the well; not that it mattered to him, as he was going to cover it up again. But he was a man with a healthy curiosity and he felt that he would like to know all about this well before he once more consigned it to oblivion. Walking across to the workshop, he entered the metalwork section and cast his eye around for a suitable sinker. Presently, in the "oddmments" drawer, he found a big iron clock-weight. It was heavier than was necessary, but he took it in default of anything more suitable, and going back to the well, he tied it to one end of the measuring-cord. The latter, being already marked in fathoms by means of a series of knots, required no further preparation. Lying full-length by the brink of the well, Mr. Pottermack dropped the weight over and let the cord slip through his hands, counting the knots as it ran out and moving it up and down as the weight neared the water.

The hollow splash for which he was listening came to his ear when the hand that grasped the cord was between the fourth and fifth knots. The depth, therefore, of the well to the surface of the water was about twenty-seven feet. He made a mental note of the number and then let the cord slip more rapidly through his hands. It was just after the seventh knot had passed that the tension of the cord suddenly relaxed, telling him that the weight now rested on the bottom. This gave a depth of sixteen feet of water and a total depth of about forty-three feet. And to think that, but for the merest chance, he would now have been down there where the clock-weight was resting!

With a slight shudder he rose, and, hauling up the cord, coiled it neatly and laid it down, with the weight still attached, a few feet away on the cleared ground. The question that he now had to settle was how far the existence of the well would interfere with the placing of the sun-dial. It did not seem to him that it interfered at all. On the contrary; the well had to be securely covered up in any case, and the sun-dial on top of the covering would make it safe for ever. For it happened that the position of the well coincided within a foot with the chosen site of the dial; which seemed quite an odd coincidence until one remembered that the position of both had probably been determined by identical sets of measurements, based on the ground-plan of the garden.

One thing, however, was obvious. Mr. Gallett would have to be informed of the discovery without delay, for something different from me proposed brickwork foundation would be required. Accordingly, Mr. Pottermack slipped on his coat, and, having sought out a hurdle and laid it over the well—for you can’t be too careful in such a case—set off without delay for the mason’s yard. As he opened the front door, he observed the letter still lying in the wire basket under the letter-slit. But he did not take it out. It could wait until he came back.

Mr. Gallett was deeply interested, but he was also a little regretful. The altered arrangements would cause delay and increase the cost of the job. He would want two biggish slabs of stone, which would take some time to prepare.

"But why cover the well at all?" said he. "A good well with sixteen feet of water in it is not to be sneezed at if you gets a hard frost and all the pipes is bunged up and busted."

But Mr. Pottermack shook his head. Like most town-bred men, he had rather a dislike to wells, and his own recent narrow escape had done nothing to diminish his prejudice. He would have no open well in his garden.

"The only question is", he concluded, "whether the sun-dial will be safe right over the well. Will a stone slab bear the weight?"

"Lor’ bless you", replied Gallett, "a good thick slab of flagstone would bear St. Paul’s Cathedral. And we are going to put two, one on top of the other to form a step; and the base of the dial itself a good two foot wide. It will be as strong as a house."

"And when do you think you’ll be able to fix it?"

Mr. Gallett reflected. "Let’s see. To-day’s Toos-day. It will take a full day to get them two slabs sawn off the block and trimmed to shape. Shall we say Friday?"

"Friday will do perfectly. There is really no hurry, though I shall be glad to get the well covered and made safe. But don’t put yourself out."

Mr. Gallett promised that he would not, and Pottermack then departed homeward to resume his labours.

As he re-entered his house, he picked the letter out of the letter-cage, and, holding it unopened in his hand, walked through to the garden. Emerging into the open air, he turned the letter over and glanced at the address; and in an instant a most remarkable change came over him. The quiet gaiety faded from his face and he stopped dead, gazing at the superscription with a frown of angry apprehension. Tearing open the envelope, he drew out the letter, unfolded it and glanced quickly through the contents. Apparently it was quite short, for, almost immediately, he refolded it, returned it to its envelope and slipped the latter into his pocket.

Passing through into the walled garden, he took off his coat, laid it down in the summer-house and fell to work on the excavation, extending the circle into a square and levelling the space around the well to make a bed for the stone slab. But all his enthusiasm had evaporated. He worked steadily and with care; but his usually cheerful face was gloomy and stern, and a certain faraway look in his eyes hinted that his thoughts were not on what he was doing but on something suggested by the ill-omened missive.

When the light failed, he replaced the hurdle, cleaned and put away the spade, and then went indoors with his coat on
his arm to wash and take his solitary supper; of which he made short work, eating and drinking mechanically and gazing before him with gloomy preoccupation. Supper being finished and cleared away, he called for a kettle of boiling water and a basin, and, taking from a cupboard a handled needle, a pair of fine forceps, and a sheet of blotting-paper, laid them on the table with Mrs. Bellard’s tin box. The latter he opened and very carefully transferred the imprisoned snails to the basin, which he then filled with boiling water; whereupon the unfortunate molluscs each emitted a stream of bubbles and shrank instantly into the recesses of its shell.

Having deposited the kettle in the fireplace, Mr. Pottermack drew a chair up to the table and seated himself with the basin before him and the blotting-paper at his right hand. But before beginning his work he drew forth the letter, straightened it out and, laying it on the table, read it through slowly. It bore no address and no signature; and though the envelope was addressed to Marcus Pottermack, Esq., it began, oddly enough, "Dear Jeff."

"I send you this little billy doo," it ran on, "with deep regret, which I know you will share. But it can't be helped. I had hoped that the last one would be in fact, the last one, whereas it turns out to have been the last but one. This is positively my final effort, so keep up your pecker. And it is only a small affair this time. A hundred—in notes, of course. Fivers are safest. I shall call at the usual place on Wednesday at 8 p.m. (in the gloaming, O! my darling!) This will give you time to hop up to town in the morning to collect the rhino. And mind I've got to have it. No need to dwell on unpleasant alternatives. Necessity knows no law. I am in a devil of a tight corner and you have got to help me out. So adieu until Wednesday."

Mr. Pottermack turned from the letter, and, taking up the mounted needle, with the other hand picked out of the basin a snail with a delicate yellow shell (Helix hortensis, var. arenicola and, regarding it reflectively, proceeded with expert care to extract the shrivelled body of the mollusc. But though his attention seemed to be concentrated on his task, his thoughts were far away, and his eyes strayed now and again to the letter at his side.

"I am in a devil of a tight corner," of course he was. The incurable plunger is always getting into tight corners. "And you have got to help me out!" Exactly. In effect, the money that you have earned by unstinted labour and saved by self-denial has got to be handed to me that I may drop it into the bottomless pit that swallows up the gambler's losings. "This is positively my final effort." Yes. So was the last one, and the one before that; and so would be the next, and the one that would follow it, and so on without end. Mr. Pottermack saw it all clearly; realized, as so many other sufferers have realized, that there is about a blackmailer something hopelessly elusive. No transaction with him has any finality. He has something to sell, and he sells it; but behold! even as the money passes the thing sold is back in the hand of the vendor, to be sold again and yet again. No covenant with him is binding; no agreement can be enforced. There can be no question of cutting a loss, for, no matter how drastic the sacrifice, it is no sooner made than the status quo ante reappears.

On these truths Mr. Pottermack cogitated gloomily and asked himself, as such victims often do, whether it would not have been better in the first place to tell this ruffian to go to the devil and do his worst. Yet that had hardly seemed practicable. For the fellow would probably have done his worst:—and his worst was so extremely bad. On the other hand, it was impossible that this state of affairs should be allowed to go on indefinitely. He was not by any means a rich man, though this parasite persisted in assuming that he was. At the present rate he would soon be sucked dry—reduced to stark poverty. And even then he would be no safer.

The intensity of his revolt against his intolerable position was emphasized by his very occupation. The woman for whom he was preparing these specimens was very dear to him. In any pictures that his fancy painted of the hoped-for future, hers was the principal figure. His fondest wish was to ask her to be his wife, and he felt a modest confidence that she would not say him nay. But how could he ask any woman to marry him while this vampire clung to his body? Marriage was not for him—a slave to-day, a pauper to-morrow, at the best; and at the worst—

The evening had lapsed into night by the time that all the specimens had been made presentable for the cabinet. It remained to write a little name-ticket for each with the aid, when necessary, of a handbook of the British Mollusca, and then to wrap each separate shell, with its ticket, in tissue paper and pack it tenderly in the small tin box. Thus was he occupied when his housekeeper, Mrs. Gadby, "reported off duty" and retired; and the clock in the hall was striking eleven when, having packed the last of the shells, he made the tin box into a neat little parcel with the consignee’s name legibly written on the cover.

The house was profoundly quiet. Usually Mr. Pottermack was deeply appreciative of the restful silence that settles down upon the haunts of men when darkness has fallen upon field and hedgerow and the village has gone to sleep. Very pleasant it was then to reach down from the bookshelves some trusty companion and draw the big easy-chair up to the fireplace, even though, as to-night, the night was warm and the grate empty. The force of habit did, indeed, even now, lead him to the bookshelves. But no book was taken down. He had no inclination for reading to-night. Neither had he any inclination for sleep. Instead, he lit a pipe and walked softly up and down the room, stem and gloomy of face, yet with a look of concentration as if he were considering a difficult problem.

Up and down, up and down he paced, hardly making a sound. And as the time passed, the expression of his face underwent a subtle change. It lost none of its sternness, but yet it seemed to clear, as if a solution of the problem were coming into sight.

The striking of the clock in the hall, proclaiming the end of the day, brought him to a halt. He glanced at his watch, knocked out his empty pipe, lit a candle and blew out the lamp. As he turned to pass out to the stairs, something in his expression seemed to hint at a conclusion reached. All the anxiety and bewilderment had passed out of his face. Stern it was still; but there had come into it a certain resolute calm; the calm of a man who has made up his mind.
CHAPTER II. — THE SECRET VISITOR

THE following morning found Mr. Pottermack in an undeniably restless mood. For a time he could settle down to no occupation, but strayed about the house and garden with an air of such gravity and abstraction that Mrs. Gadby looked at him askance and inwardly wondered what had come over her usually buoyant and cheerful employer.

One thing, however, was clear. He was not going to 'hop up to town'. Of the previous expeditions of that kind he had a vivid and unpleasant recollection; the big "bearer" cheque sheepishly pushed across the counter, the cashier's astonished glance at it, the careful examination of books, and then the great bundle of five-pound notes, which he counted, at the cashier's request, with burning cheeks; and his ignominious departure with the notes buttoned into an inside pocket and an uncomfortable suspicion in his mind that the ostentatiously unobservant cashier had guessed at once the nature of the transaction. Well, that experience was not going to be repeated on this occasion. There was going to be a change of procedure.

As he could fix his mind at nothing more definite, he decided to devote the day to a thorough clear-up of his workshops: a useful and necessary work, which had the added advantage of refreshing his memory as to the abiding-places of rarely used appliances and materials. And an excellent distraction he found it; so much so that several times, in the interest of rediscovering some long-forgotten tool or stock of material, he was able to forget for a while the critical interview that loomed before him.

So the day passed. The mid-day meal was consumed mechanically—under the furtive and disapproving observation of Mrs. Gadby—and dispatched with indecent haste. He was conscious of an inclination to lurk about the house on the chance of a brief gossip with his fair friend; but he resisted it, and, when he came in to tea, the housekeeper reported that the little package had been duly collected.

He lingered over his tea as if he were purposely consuming time, and when at last he rose from the table, he informed Mrs. Gadby that he had some important work to do and was under no circumstances to be disturbed. Then once more he retired to the walled garden, and having shut himself in, dropped the key into his pocket. He did not, however, resume his labours in the workshop. He merely called in there for an eight-inch steel bolt and a small electric lamp, both of which he bestowed in his pockets. Then he came out and walked slowly up and down the grass plot with his hands behind him and his chin on his breast as if immersed in thought, but glancing from time to time at his watch. At a quarter to eight he took off his spectacles and put them in his pocket, stepped across to the well, and picking up the hurdle that still lay over the dark cavity, carried it away and stood it against the wall. Then he softly unbolted the side gate, turned the handle of the latch, drew the gate open a bare inch, and, leaving it thus ajar, walked to the summer-house, and, entering it, sat down in one of the chairs.

His visitor, if deficient in some of the virtues, had at least that of punctuality; for the clock of the village church had barely finished striking the hour when the gate opened noiselessly and the watcher in the summer-house saw, through the gathering gloom, a large, portly man enter with stealthy step, close the gate silently behind him and softly shoot the upper bolt.

Pottermack rose as his visitor approached, and the two men met just outside the summer-house. There was a striking contrast between them in every respect, in build, in countenance, and in manner. The newcomer was a big, powerful man, heavy and distinctly over-fat, whose sly, shifty face—at present exhibiting an uneasy smile—showed evident traces of what is commonly miscalled "good living", especially as to the liquid element thereof; whereas his host, smallish, light, spare, with clean-cut features expressive of lively intelligence, preserved a stony calm as he looked steadily into his visitor's evasive eyes.

"Well, Jeff", the latter began in a deprecating tone, "you don't seem overjoyed to see me. Not an effusive welcome. Aren't you going to shake hands with an old pal?"

"It doesn't seem necessary", Pottermack replied coldly.

"Oh, very well", the other retorted. "Perhaps you'd like to kiss me instead". He sniggered foolishly, and, entering the summer-house, dropped into one of the armchairs and continued: "What about a mild refresher while we discuss our little business? Looks like being a dry job, to judge by your mug."

Without replying, Pottermack opened a small cupboard, and taking out a decanter, a siphon, and a tumbler, placed them on the table by his guest. It was not difficult to see that the latter had already fortified himself with one or two refreshers, mild or otherwise, but that was not Pottermack's affair. He was going to keep his own brain clear. The other might do as he pleased.

"Not going to join me, Jeff?" the visitor protested. "Oh, buck up, old chap! It's no use getting peevish about parting with a few pounds. You won't miss a little donation to help a pal out of a difficulty."

As Pottermack made no reply but sat down and gazed stonily before him, the other poured out half a tumblerful of whisky, filled up with soda, and took a substantial gulp. Then he, too, sat silent for a time, gazing out into the darkening garden. And gradually the smile faded from his face, leaving it sullen and a little anxious.

"So you've been digging up your lawn", he remarked presently. What's the game? Going to set up a flagstaff?"
"No. I am going to have a sun-dial there."

"A sun-dial, hey? Going to get your time on the cheap? Good. I like sun-dials. Do their job without ticking. Suppose you'll have a motto on it. Tempus fugit is the usual thing. Always appropriate, but especially so in the case of a man who has 'done time' and fugitted. It will help to remind you of olden days, 'the days that are no more.'" He finished with a mirthless cackle and cast a malignant glance at the silent and wooden-faced Pottermack. There was another interval of strained, uncomfortable silence, during which the visitor took periodic gulps from his tumbler and eyed his companion with sullen perplexity. At length, having finished his liquor, he set down the empty tumbler and turned towards Pottermack. "You got my letter, I suppose, as you left the gate ajar?"

"Yes", was the laconic reply.

"Been up to town to-day?"

"No."

"Well, I suppose you have got the money?"

"No, I have not."

The big man sat up stiffly and stared at his companion in dismay.

"But, damn it, man!" he exclaimed, "didn't I tell you it was urgent? I'm in a devil of a fix. I've got to pay that hundred tomorrow. Must pay it, you understand. I'm going up to town in the morning to pay. As I hadn't got the money myself, I've had to borrow it from—you know where; and I was looking to you to enable me to put it back at once. I must have that money to-morrow at the latest. You'd better run up to town in the morning and I'll meet you outside your bank."

Pottermack shook his head. "It can't be done, Lewson. You'll have to make some other arrangements."

Lewson stared at him in mingled amazement and fury. For a moment he was too astonished for speech. At length he burst out:

"Can't be done! What the devil do you mean? You've got the money in your bank and you are going to hand it over, or I'll know the reason why. What do you imagine you are going to do?"

"I am going", said Pottermack, "to hold you to your agreement, or at least to part of it. You demanded a sum of money—a large sum—as the price of your silence. It was to be a single payment, once for all, and I paid it. You promised solemnly to make no further demands; yet, within a couple of months, you did make further demands, and I paid again. Since then you have made demands at intervals, regardless of your solemn undertaking. Now this has got to stop. There must be an end to it, and this has got to be the end."

As he spoke, quietly but firmly, Lewson gazed at him as if he could not trust the evidence of his senses. This was quite a new Pottermack. At length, suppressing his anger, he replied in a conciliatory tone:

"Very well, Jeff. It shall be the end. Help me out just this time and you shall hear no more from me. I promise you that on my word of honour."

At this last word Pottermack smiled grimly. But he answered in the same quiet, resolute manner:

"It is no use, Lewson. You said that last time and the time before that, and, in fact, time after time. You have always sworn that each demand should be positively the last. And so you will go on, if I let you, until you have squeezed me dry."

On this Lewson threw off all disguise. Thrusting out his chin at Pottermack, he exclaimed furiously: "If you let me! And how do you think you are going to prevent me? You are quite right. I've got you, and I'm going to squeeze you, so now you know. And look here, young fellow, if that money isn't handed out to me to-morrow morning, something is going to happen. A very surprised gentleman at Scotland Yard will get a letter informing him that the late Jeffrey Brandon, runaway convict, is not the late J. B. but is alive and kicking, and that his present name and address is Marcus Pottermack, Esquire, of 'The Chestnuts', Borley, Bucks. How will that suit you?"

"It wouldn't suit me at all", Mr. Pottermack replied, with unruffled calm; "but before you do it, let me remind you of one or two facts. First, the run-away convict, once your closest friend, was to your knowledge an innocent man—"

"That's no affair of mine", Lewson interrupted. "He was a convict, and is one still. Besides, how do I know he was innocent? A jury of his fellow-countrymen found him guilty—"

"Don't talk rubbish, Lewson", Pottermack broke in impatiently. "There is no one here but ourselves. We both know that I didn't do those forgeries and we both know who did."

Lewson grinned as he reached out for the decanter and poured out another half-tumblerful of whisky. "If you knew who did it", he chuckled, "you must have been a blooming mug not to say."

"I didn't know then", Pottermack rejoined bitterly. "I thought you were a decent, honest fellow, fool that I was."

"Yes", Lewson agreed, with a low, cackling laugh, "you were a blooming mug and that's a fact. Well, well; we live and learn."

Still sniggering foolishly, he took a long pull at the tumbler, leering into the flushed, angry face that confronted him across the table. Suddenly Pottermack rose from his chair, and, striding out into the garden, halted some dozen paces away
and stood with his back to the summer-house, looking steadily across the lawn. It was now quite dark, though the moon showed dimly from time to time through a thinning of the overcast sky; but still, through the gloom, he could make out faintly the glimmer of lighter-coloured soil where it had been turned up to level the ground for the sun-dial. The well was invisible, but he knew exactly where the black cavity yawned, and his eye, locating the spot, rested on it with gloomy fixity.

His reverie was interrupted by Lewson's voice, now pitched in a more ingratiating key.

"Well, Jeff; thinking it over? That's right, old chap. No use getting pippy."

He paused, and as there was no reply he continued:

"Come now, dear boy, let's settle the business amicably as old pals should. Pity for you to go back to the jug when there's no need. You just help me out of this hole, and I will give you my solemn word of honour that it shall be the very last time. Won't that satisfy you?"

Pottermack turned his head slightly, and speaking over his shoulder, replied; "Your word of honour! The honour of a blackmailer, a thief and a liar. It isn't exactly what you would call a gilt-edged security."

"Well", the other retorted thickly, "gilt-edged or not, you had better take it and shell out. Now, what do you say?"

"I say", Pottermack replied with quiet decision, "that I am not going to give you another farthing on any condition whatever."

For several seconds Lewson gazed in silent dismay at the shadowy figure on the lawn. This final, definite refusal was a contingency that he had never dreamed of, and was utterly unprovided for, and it filled him, for the moment, with consternation. Then, suddenly, his dismay changed to fury. Starting up from his chair, he shouted huskily:

"Oh, you won't, won't you? We'll see about that! You'll either pay up or I'll give you the finest hammering that you've ever had in your life. When I've done with you, they'll want your finger-prints to find out who you are."

He paused to watch the effect of this terrifying proposal and to listen for a reply. Then, as the dim figure remained unmoved and no answer came, he bellowed: "D'you hear? Are you going to pay up or take a hammering?"

Pottermack turned his head slightly and replied in a quiet, almost a gentle tone: "I don't think I'm going to do either."

The reply and the quiet, unalarmed tone were not quite what Lewson had expected. Trusting to the moral effect of his greatly superior size and weight, he had bluffed confidently. Now it seemed that he had got to make good his threat, and the truth is that he was not eager for the fray. However, it had to be done, and done as impressively as possible. After pausing for another couple of seconds, he proceeded, with a formidable air (but unobserved by Pottermack, whose back was still turned to him), to take off his coat and fling it on the table, whence it slipped down on to the floor. Then, stepping outside the summer-house, he bent forward, and, with an intimidating roar, charged like an angry rhinoceros.

At the sound of his stamping feet Pottermack spun round and faced him, but then stood motionless until his assailant was within a yard of him, when he sprang lightly aside, and as the big, unwieldy bully lumbered past him, he followed him closely. As soon as Lewson could overcome the momentum of his charge, he halted and turned; and instantly a smart left-hander alighted on his cheek and a heavy right-hander impinged on his ribs just below the armpit. Furious with the pain, and utterly taken aback, he cursed and grunted, hitting out wildly with all the viciousness of mingled rage and fear for now he realized with amazement that he was hopelessly outclassed by his intended victim. Not one of his sledge-hammer blows took effect on that agile adversary, whereas his own person seemed to be but an unprotected target on which the stinging blows fell in endless and intolerable succession. Slowly at first, and then more quickly, he backed away from that terrific bombardment, followed inexorably by the calm and scientific Pottermack, who seemed to guide and direct his backward course as a skilful drover directs the movements of a refractory bullock.

Gradually the pair moved away from the vicinity of the summer-house across the dark lawn, the demoralized bully, breathing hard and sweating profusely, reduced to mere defence and evasion while his light-footed antagonist plied him unceasingly with feint or blow. Presently Lewson stumbled backward as his foot sank into the loose, heaped earth at the margin of the cleared space; but Pottermack did not press his advantage, renewing his attack only when Lewson had recovered his balance. Then the movement began again, growing faster as the big man became more and more terrified and his evasion passed into undissembled retreat; deviously and with many a zig-zag but always tending towards the centre of the cleared area. Suddenly Pottermack's tactics changed. The rapid succession of light blows ceased for an instant and he seemed to gather himself up as if for a decisive effort. There was a quick feint with the left; then his right fist shot out like lightning and drove straight on to the point of the other man's jaw, and as his teeth clicked together with an audible snap, Lewson dropped like a pole-axed ox, falling with his body from the waist upwards across the mouth of the well and his head on the brick edge, on which it struck with a sickening thud.

So he lay for a second or two until the limp trunk began to sag and the chin came forward on to the breast. Suddenly the head slipped off the brick edge and dropped into the cavity, shedding its cap and carrying the trunk with it. The heavy jerk started the rest of the body sliding forward, slowly at first, then with increasing swiftness until the feet rose for an instant, kicked at the farther edge and were gone. From the black pit issued vague, echoing murmurs, followed presently by a hollow, reverberating splash; and after that, silence.

It had been but a matter of seconds. Even as those cavernous echoes were muttering in the unseen depths, Pottermack's knuckles were still tingling from the final blow. From the moment when that blow had been struck he had made no move.
He had seen his enemy fall, had heard the impact of the head on the brick edge, and had stood looking down with grim composure on the body as it sagged, slid forward, and at last made its dreadful dive down into the depths of its sepulchre. But he had moved not a muscle. It was a horrible affair. But it had to be. Not he, but Lewson had made the decision.

As the last reverberations died away he approached the forbidding circle of blackness, and kneeling down at its edge, peered into the void. Of course, he could see nothing; and when he listened intently, not a sound came to his ear. From his pocket he brought out his little electric lamp and threw a beam of light down into the dark cavity. The effect was very strange and uncanny. He found himself looking down a tube of seemingly interminable length while from somewhere far away, down in the very bowels of the earth, a tiny spark of light glowed steadily. So even the last ripples had died away and all was still down in that underworld.

He replaced the lamp in his pocket, but nevertheless he remained kneeling by the well-mouth, resting on one hand, gazing down into the black void and unconsciously listening for some sound from below. Despite his outward composure, he was severely shaken. His heart still raced, his forehead was damp with sweat, his body and limbs were pervaded by a fine, nervous tremor.

Yet he was sensible of a feeling of relief. The dreadful thing that he had nervously tried to do, that he had looked forward to with shuddering horror, was done. And the doing of it might have been so much worse. He was relieved to feel the screw-bolt in his pocket—unused; to think that the body had slipped down into its grave without the need of any hideous dragging or thrusting. Almost, he began to persuade himself that it had been more or less of an accident. At any rate, it was over and done with. His merciless enemy was gone. The menace to his liberty, the constant fear that had haunted him were no more. At last—at long last—he was free.

Fear of discovery he had none; for Lewson, in his own interests, had insisted on strict secrecy as to their acquaintance with each other. In his own words, "he preferred to sit on his own nest-egg". Hence to all the world they were strangers, not necessarily even aware of each other's existence. And the blackmailer's stealthy arrival and his care in silently shutting the gate gave a guarantee that no one had seen him enter.

While these thoughts passed somewhat confusedly through his mind, he remained in the same posture; still unconsciously listening and still gazing, as if with a certain expectancy, into the black hole before him, or letting his eyes travel, now and again, round the dark garden. Presently an opening in the dense pall of cloud that obscured the sky uncovered the moon and flooded the garden with light. The transition from darkness to brilliant light—for it was full moon—was so sudden that Pottermack looked up with a nervous start, as though to see who had thrown the light on him; and in his overwrought state he even found something disquieting in the pale, bright disc with its queer, dim, impassive face that seemed to be looking down on him through the rent in the cloud like some secret watcher peeping from behind a curtain. He rose to his feet, and, drawing a deep breath, looked around him; and then his glance fell on something more real and more justly disquieting. From the edge of the grass to the brink of the well was a double track of footprints, meandering to and fro, zig-zagging hither and thither, but undeniably ending at the well.

Their appearance was sinister in the extreme. In the bright moonlight they stared up from the pale buff soil, and they shouted of tragedy. To the police eye they would have been the typical "signs of a struggle"; the tracks of two men facing one another and moving towards the well with, presently, a single track coming away from it. No one could mistake the meaning of those tracks; nothing could explain them away—especially in view of what was at the bottom of the well.

The first glance at those tracks gave Pottermack a severe shock. But he recovered from it in a moment. For they were mere transitory marks that could be obliterated in a minute or two by a few strokes of a rake and a few sweeps of a besom; and meanwhile he stooped over them, examining them with a curious interest not unmixed with a certain vague uneasiness. They were very remarkable impressions. He had already noted the peculiar quality of this loamy soil; its extraordinary suitability for making casting-moulds. And here was a most striking illustration of this property. The prints of his own feet were so perfect that the very brads in his soles were quite clear and distinct, while as to Lewson's, they were positively ridiculous. Every detail of the rubber soles and the circular rubber heels came out as sharply as if the impressions had been taken in moulding-wax. There was the prancing horse of Kent—the soles were of the Invicta brand and practically new—with the appropriate legend and the manufacturers' name, and in the central star-shaped space of the heels was the perfect impression of the screw. No doubt the singular sharpness of the prints was due to the fact that a heavy shower in the previous night had brought the loam to that particular state of dampness that the professional moulder seeks to produce with his watering-pot.

However, interesting as the prints were to the mechanic's eye, the sooner they were got rid of the better. Thus reflecting, Pottermack strode away towards the workshop in quest of a rake and a besom; and he was, in fact, reaching out to grasp the handle of the door when he stopped dead and stood for some seconds rigid and still with outstretched arm and dropped jaw. For in that moment a thought which had, no doubt, been stirring in his subconscious mind had come to the surface, and for the first time the chill of real terror came over him. Suddenly he realized that he had no monopoly of this remarkable loam. It was the soil of the neighbourhood—and incidentally of the little lane that led from the town and passed along beside his wall. In that lane there must be a single track of footprints—big, staring footprints, and every one of them as good as a signature of James Lewson—leading from the town and stopping at his gate!

After a few moments of horror-stricken reflection he darted into the tool-house and brought out a short ladder. His first impulse had been to open the gate and peer out, but an instant's reflection had shown him the folly of exposing himself to the risk of being seen—especially at the very gate to which the tracks led. He now carried the ladder across to an old pear
tree which thrust its branches over the wall, and, planting it silently where the foliage was densest, crept softly up and listened awhile. As no sound of footsteps was audible, and as the moon had for the moment retired behind the bank of cloud, he cautiously advanced his head over the wall and looked down into the lane. It was too dark to see far in either direction, but apparently there was no one about; and as the country quiet was unbroken by any sound, he ventured to crane farther forward to inspect the path below.

The light was very dim; but even so he could make out faintly a single track of footprints—large footprints, widely spaced, the footprints of a tall man. But even as he was peering down at them through the darkness, trying to distinguish in the vaguely seen shapes some recognizable features, the moon burst forth again and the light became almost as that of broad day. Instantly the half-seen shapes started up with a horrid distinctness that made him catch his breath. There was the preposterous prancing horse with the legend "Invicta", there was the makers’ name, actually legible from the height of the wall, and there were the circular heels with their raised central stars and the very screws clearly visible even to their slots!

Pottermack was profoundly alarmed. But he was not a panicky man. There, in those footprints, was evidence enough to hang him. But he was not hanged yet; and he did not mean to be, if the unpleasantness could be avoided. Perched on the ladder, with his eyes riveted on the tracks of the man who had come to "squeeze" him, he reviewed the situation with cool concentration, and considered the best way to deal with it.

The obvious thing was to go out and trample on those footprints until they were quite obliterated. But to this plan there were several objections. In the first place, those enormous impressions would take a deal of trampling out. Walking over them once would be quite useless, for his own feet were comparatively small, and even a fragment of one of Lewson’s footprints would be easily recognizable. Moreover, the trampling process would involve the leaving of his own footprints in evidence; which might be disastrous if it should happen—as it easily might—that Lewson had been seen starting along the footpath. For this path, unfrequented as it was, turned off from the main road at the outskirts of the town where wayfarers were numerous enough. The reason that it was unfrequented was that it led only to a wood and a stretch of heath which were more easily approached by a by-road. Finally, he himself might quite possibly be seen performing the trampling operations, and that would never do. In short, the trampling scheme was not practicable at all.

But what alternative was there? Something must be done. Very soon the man would be missed and there would be a search for him; and as things stood there was a set of tracks ready to guide the searchers from the town to his—Pottermack’s—very gate. And inside the gate was the open well. Clearly, something must be done, and done at once. But what?

As he asked himself this question again and again he was half-consciously noting the conditions. Hitherto, no one had seen Lewson’s footprints at this part of the path. That was evident from the fact that there were no other fresh footprints—none that trod on Lewson’s. Then, in half an hour at the most, the shadow of the wall would be thrown over the path and the tracks would then be quite inconspicuous. And, again, it was now past nine o’clock and his neighbours were early folk. It was extremely unlikely that any one would pass along that path until the morning. So there was still time. But time for what?

One excellent plan occurred to him, but, alas! he had not the means to carry it out. If only he had possession of Lewson’s shoes he could put them on, slip out at the gate and continue the tracks to some distant spot well out of his neighbourhood. That would be a perfect solution of the problem. But Lewson’s shoes had vanished for ever from human ken—at least, he hoped they had. So that plan was impracticable.

And yet, was it? As he put the question to himself his whole demeanour changed. He stood up on his perch with a new eagerness in his face; the eagerness of a man who has struck a brilliant idea. For that was what he had done. This excellent plan, which yielded the perfect solution, was practicable after all. Lewson’s shoes were indeed beyond his reach. But he had a fine assortment of Lewson’s footprints. Now footprints are made by the soles of shoes. That is the normal process. But by the exercise of a little ingenuity the process could be reversed; shoe-soles could be made from footprints.

He descended the ladder, thinking hard; and as the cloud once more closed over the moon, he fetched the hurdle and placed it carefully over the mouth of the well. Then he walked slowly towards the workshop—avoiding the now invaluable footprints—shaping his plan as he went.
CHAPTER III. — MR. POTTERMACK GOES A-SUGARING

THE efficient workman saves a vast amount of time by so planning out his job in advance that intervals of waiting are eliminated. Now Mr. Pottermack was an eminently methodical man and he was very sensible that, in the existing circumstances, time was precious. Accordingly, although his plan was but roughly sketched out in his mind, he proceeded forthwith to execute that part of it which could be clearly visualized, filling in the further details mentally as he worked.

The first thing to be done was, obviously, to convert the perishable, ephemeral footprints, which a light shower would destroy, into solid, durable models. To this end, he fetched from the workshop the tin of fine plaster of Paris which he kept for making small or delicate moulds. By the aid of his little lamp he selected a specially deep and perfect impression of Lewson's right foot, and into this he lightly dusted the fine powder, continuing the process until the surface was covered with an even layer of about half an inch thick. This he pressed down very gently with the flat end of the lamp, and then went in search of a suitable impression of the left foot, which he treated in like manner. He next selected a second pair of prints, but instead of dusting the dry plaster into them he merely dropped into each a pinch of water, and made for identifying it. His reason for thus varying the method was that he was doubtful whether it was possible to pour liquid plaster into a loam mould (for that was what the footprint actually was) without disturbing the surface and injuring the pattern.

Returning to the workshop, he mixed a good-sized bowl of plaster, stirring and beating the creamy liquid with a large spoon. Still stirring, he carried it out, and, going first to the prints which contained the dry plaster, he carefully ladled into them with the spoon small quantities of the liquid plaster until they were well filled. By this time the liquid was growing appreciably thicker and more suitable for the unprotected prints, to which he accordingly hastened, and proceeded quickly, but with extreme care, to fill them until the now rapidly thickening plaster was well heaped up above the surface.

He had now at least, a quarter of an hour to wait while the plaster was setting, but this he occupied in cleaning out the bowl and spoon ready for the next mixing, placing the brush and plaster tools in readiness and pouring out a sauceful of soap-size. When he had made these preparations, he filled a small jug with water, and making his way to the first two impressions, poured the water on to them to make up for that which would have been absorbed by the dry plaster underneath. In the second pair of impressions, which he ventured to test by a light touch of the finger, the plaster was already quite solid, and he was strongly tempted to raise them and see what luck he had had; but he resisted the temptation and went back to the workshop, leaving them to harden completely.

All this time, although he had given the closest attention to what he was doing, his mind had been working actively, and already the sketch-plan was beginning to shape into a complete and detailed scheme; for he had suddenly remembered a supply of sheet gutta-percha which he had unearthed when he turned out the workshop, and this discovery disposed of what had been his chief difficulty. Now, in readiness for a later stage of his work, he lighted his Primus stove, and having filled a good-sized saucepan with water, placed it on the stove to heat. This consumed the rest of the time that he had allotted for the darkening of the plaster, and he now went forth with no little anxiety to see what the casts were like. For they were the really essential element of his plan on which success or failure depended. If he could get a perfect reproduction of the footprints, the rest of his task, troublesome as it promised to be, would be plain sailing.

Very gingerly he insinuated his finger under one of the casts of the second pair and gently turned it over. And then, as he threw the light of his lamp on it, all his misgivings vanished in respect of that foot—the right. The aspect of the cast was positively ridiculous. It was just the sole of a shoe: snow-white, but otherwise completely realistic, and perfect in every detail and marking, even to the maker's name. And the second cast was equally good; so his special precautions had been unnecessary. Nevertheless, he went on to the first pair, and they proved to be, if anything, sharper and cleaner, more free from adherent particles of earth than the others. With a sigh of relief he picked up the four casts and bore them tenderly to the workshop, where he deposited them on the bench. There, under the bright electric light, their appearance was even more striking. But he did not stop to gloat. He could do that while he was working.

The first proceeding was to trim off the ragged edges with a scraper, and then came the process of "sizing"—painting with a boiled solution of soft soap—which also cleaned away the adherent particles of loam. When the soap had soaked in and "stopped" the surface, the surplus was washed away under the tap, and then, with a soft brush, an infinitesimal coating of olive oil was applied. The casts were now ready for the next stage—the making of the moulds. First, Pottermack filled a shallow tray with loam from the garden, striking the surface level with a straight-edge. On this surface the two best casts were laid, sole upwards, and pressed down until they were slightly embedded. Then came the mixing of another bowl of plaster, and this was "gauged" extra stiff in order that it should set quickly and set hard. By the time this had been poured on—rapidly, but with infinite care to avoid bubbles, which would have marred the perfection of the moulds—the water in the saucepan was boiling. Having cleaned out the bowl and spoon, Pottermack fetched the pieces of gutta-percha from their drawer and dropped them into the saucepan, replacing the lid. Then he put on his spectacles, extinguished the lamp, switched off the light, and, passing out of the workshop, walked quickly towards the house.

As he let himself out of the walled garden and closed the door behind him, he had a strange feeling as of one awakening from a dream. The familiar orchard and kitchen garden through which he was now passing, and the lighted windows of the house which twinkled through the trees, brought him back to the realities of his quiet, usually uneventful life and made the tragic interlude of the past hour seem incredible and unreal. He pondered on it with a sort of dull surprise as he walked up the long path; on all that had happened since he had last walked along it a few hours ago. How changed since then was his
world—and himself! Then, he was an innocent man over whom yet hung the menace of the convict prison. Now, that menace was lifted, but he was an innocent man no more. Legally—technically, he put it to himself—he was a murderer; and the menace of the prison was exchanged for that of the rope. But there was this difference: the one had been an abiding menace that had been with him for the term of his life; the other was a temporary peril from which, when he had once freed himself, he would be free for ever.

His appearance in the house was hailed by Mrs. Gadby with a sigh of relief. It seemed that she had made a special effort in the matter of supper and had feared lest her trouble should be wasted after all. Very complacently she inducted him into the dining-room and awaited, with confidence born of much experience, his appreciative comments.

"Why, bless my soul, Mrs. Gadby!" he exclaimed, gazing at the display on the table, "it's a regular banquet! Roses, too! And do I see a bottle under that shawl?"

Mrs. Gadby smilingly raised the shawl, revealing a small wooden tub in which a bottle of white wine stood embedded in ice. "I thought", she explained, "that a glass of Chablis would go rather well with the lobster."

"Rather well!" exclaimed Pottermack. "I should think it will. But why these extraordinary festivities?"

"Well, sir", said Mrs. Gadby, "you haven't seemed to be quite yourself the last day or two. Not in your usual spirits. So I thought a nice little supper and a glass of wine might pick you up a bit."

"And so it will, I am sure", affirmed Pottermack. "To-morrow you will find me as lively as a cricket and as gay as a lark. And, by the way, Mrs. Gadby, don't clear the table to-night. I am going out sugaring presently, and as I may be late getting back I shall probably be ready for another little meal before turning in. And of course you won't bolt the door—but I expect you will have gone to bed before I start."

Mrs. Gadby acknowledged these instructions and retired in sedate triumph. Particularly gratified was she at the evident satisfaction with which her employer had regarded the Chablis. A happy thought of hers, that had been. In which she was right in general though mistaken in one particular. For it was not the wine that had brought that look of satisfaction to Pottermack's face. It was the ice. Mrs. Gadby's kindly forethought had disposed of the last of his difficulties.

Before sitting down to supper, he ran up to his bedroom, ostensibly for the necessary wash and brush up; but first he visited a spacious cupboard from the ground floor of which he presently took a pair of over-shoes that he was accustomed to wear in very rainy or snowy weather. Their upper parts were of strong waterproof cloth and their soles of balata, cemented on to leather inner soles. He had, in fact, cemented them on himself when the original soles had worn through, and he still had, in the workshop, a large tin nearly full of the cement. He now inspected the soles critically, and when, after having washed and made himself tidy, he went down to the dining-room, he carried the over-shoes down with him and slipped them out of sight under the table.

Although he was pretty sharp-set after his strenuous and laborious evening, he made but a hasty meal; for time was precious and he could dispose of the balance of the feast when he had finished his task. Rising from the table, he picked up the over-shoes, and, stealing softly out into the garden, laid them down beside the path. Then he stole back to the dining-room, whence he walked briskly to the kitchen and tapped at the door.

"Good-night, Mrs. Gadby", he called out cheerfully. "I shall be starting when I've got my traps together. Leave everything as it is in the dining-room so that I can have a snack when I come in. Good-night!"

"Good-night, sir", the housekeeper responded cordially, presenting a smiling countenance at the door, "and good luck with the moths, though, sir, that they don't seem to me worth all the trouble of catching them."

"Ah, Mrs. Gadby", said Pottermack, "but you see you are not a naturalist. You would think better of the moths, I expect, if they were good to eat". With this and a chuckle, in which the housekeeper joined, he turned away and went forth into the garden, where, having picked up the over-shoes, he made his way up the long path to the door of the walled garden. As he unlocked the door and let himself into the enclosure, he was again sensible of a change of atmosphere. The vision of that fatal combat rose before him with horror vividness and once more he felt the menace of the rope hanging over him. He went to the ladder and looked over the wall to see if any new tracks had appeared on the path to tell of some wayfarer who might hereafter become a witness. But the path was shrouded in darkness so profound that he could not even see the tracks that he knew were there; so he descended, and, crossing the lawn by the well—where some unaccountable impulse led him to stop for a while and listen—re-entered the workshop, switched on the light and laid the over-shoes on the bench.

First, he assured himself by a touch that the saucepan was still hot. Then he turned his attention to the moulds. They were as hard as stone, and, as he had made them thick and solid, he ventured to use some little force in trying to separate them from the casts; but all his efforts failed. Then, since he could not prise them open with a knife for fear of marking them, he filled a bucket with water and in this immersed each of the moulds with its adherent cast, when, after a few seconds' soaking, they came apart quite easily.

He stood for a few moments with the cast of the right foot in one hand and its mould in the other, looking at them with a sort of amused surprise. They were so absurdly realistic in spite of their staring whiteness. The cast was simply a white shoe-sole; the mould an exact reproduction of the original footprint; and both were preposterously complete, not only in respect of the actual pattern and lettering but even of the little trivial accidental characters such as a clean cut—probably made by a sharp stone—across the neck of the prancing horse and a tiny angular fragment of gravel which had become embedded in the rubber heel. However, this was no time for contemplation. The important fact was that both the moulds
appeared to be quite perfect. If the rest of the operations should be as successful, he would be in a fair way of winning through this present danger to find a permanent security.

He began with the right mould. Having first poured into it a little of the hot water from the saucepan, to take the chill off the surface, he laid it on a carefully folded towel, spread on the bench. Then with a pair of tongs he picked out of the saucepan one of the pieces of gutta-percha—now quite soft and plastic—and laid it in the mould, which it filled completely, with some overlap. As it was, at the moment, too hot to work comfortably with the fingers, he pressed it into the mould with a wet file-handle, replacing this as soon as possible with the infinitely more efficient thumb. It was a somewhat tedious process, for every part of the surface had to be pressed into the mould so that no detail should be missed; but it was not until the hardening of the gutta-percha as it cooled rendered further manipulation useless that Pottermack laid it aside as finished and proceeded to operate in like manner on the other mould.

When both moulds were filled, he immersed them in the cold water in the bucket in order to cool and harden the gutta-percha more quickly, and leaving them there, he turned his attention to the over-shoes. The important question was as to their size. How did they compare with Lewson’s shoes? He had assumed that they were as nearly as possible alike in size, but now, when he placed one of the over-shoes, sole upwards, beside the corresponding cast, he felt some misgivings. However, a few careful measurements with a tape-measure reassured him. The over-shoes were a trifle larger—an eighth of an inch wider and nearly a quarter of an inch longer than the casts, so that there would be a sixteenth overlap at the sides and an eighth at the toe and heel. That would be of no importance; or if it were, he could pare off the overlap.

Much encouraged, he fell to work on the over-shoes. He knew all about batata soles. The present ones—which were of one piece with the flat heels—he had stuck on with a powerful fusible cement. All that he had to do now was to warm them cautiously over the Primus stove until the cement was softened and then peel them off; and when he had done this, there were the flat leather soles, covered with the sticky cement, all ready for the attachment of the gutta-percha “squeezes.”

There was still one possible snag ahead. The squeezes might have stuck to the moulds; for gutta-percha is a sticky material when hot. However, the moulds had been saturated with water and usually gutta-percha will not stick to a wet surface, so he hoped for the best. Nevertheless it was with some anxiety that he fished one of the moulds out of the bucket, and, grasping an overlapping edge of the squeeze with a pair of flat-nosed pliers, gave a cautious and tentative pull. As it showed no sign of yielding, he shifted to another part of the overlap and made gentle traction on that, with no better result. He then tried the piece of overlap that projected beyond the toe, and here he had better luck; for, as he gave a firm, steady pull, the squeeze separated visibly from the mould, and, with a little coaxing, came out bodily.

Pottermack turned it over eagerly to see what result his labours had yielded, and as his glance fell on the smooth, brown surface he breathed a sigh of deep satisfaction. He could have asked for no better result. The squeeze had not failed at a single point. There was the horse with the little gash in its neck, the inscription and the makers’ mark; the circular heel with its sunk, five-pointed star, the little marks of wear, and the central screw showing its slot quite distinctly. Even the little grain of embedded gravel was there. The impression was perfect. He had never seen the soles of Lewson’s shoes, but he knew now exactly what they looked like. For here before him was an absolutely faithful facsimile.

Handling it with infinite tenderness—for gutta-percha, when once softened, is slow to harden completely—he replaced it in the bucket, and taking out the other mould, repeated the extracting operation with the same patient care and with a similar happy result. It remained now only to pare off the overlap round the edges, shave off with a sharp knife one or two slight projections on the upper surface and wipe the latter perfectly dry. When this was done, the soles were ready for fixing on the over-shoes.

Placing the invaluable tin of cement on the bench near the Primus, Pottermack proceeded to warm the sole of one of the over-shoes over the flame. Then, scooping out a lump of tough cement, he transferred it to the warmed sole and spread it out evenly with a hot spatula. The next operation was more delicate and rather risky; for the upper surface of the gutta-percha sole had to be coated with cement without warming the mass of the sole enough to endanger the impression on its under surface. However, by loading the spatula with melted cement and wiping it swiftly over the surface, the perilous operation was completed without mishap. And now came the final stage. Fixing the over-shoe in the bench-vice, and once more passing the hot spatula over its cemented sole, Pottermack picked up the gutta-percha sole and carefully placed it in position on the over-shoe, adjusting it so that the overlaps at the sides and the toe were practically equal, the larger overlap at the heel being—by reason of the thickness of the latter—of no consequence.

When the second shoe had been dealt with in a similar manner and with a like success, and the pair placed on the bench, soles upward, to cool and harden, Pottermack emptied the bucket, and, carrying it in his hand, stole out of the workshop and made his way out of the walled garden into the orchard, where he advanced cautiously along the path. Presently the house came into view and he saw with satisfaction that the lower part was in darkness whereas lights were visible at two of the upper windows—those of the respective bedrooms of Mrs. Gadby and the maid. Thereupon he walked forward boldly, let himself silently into the house and tiptoed to the dining-room, where, having closed the door, he proceeded at once to transfer the ice and the ice-cold water from the tub to the bucket. Then, in the same silent manner, he went out into the garden, softly closing the door after him, and took his way back to the workshop.

Here his first proceeding was to take down from a shelf a large, deep porcelain dish, such as photographers use. This he placed on the bench and poured into it the iced water from the bucket. Then, taking up the shoes, one at a time, he lowered them slowly and carefully, soles downward, into the iced water and finished by packing the ice round them. And there he left them to cool and harden completely while he attended to one or two other important matters.
The first of these was the line of tell-tale footprints leading to the well. They had served their invaluable purpose and now it was time to get rid of them; which he did forthwith with the aid of a rake and a hard broom. Then there must be one or two footprints outside the gate that would need to be obliterated. He took the broom and rake, and, crossing to the gate, listened awhile, then softly opened it, listened again and peered out. Having satisfied himself that there was no one in sight, he stooped to scrutinize the ground and finally went down on his hands and knees. Sure enough, there were four footprints that told the story much too plainly for safety; two diverging from the main track towards the gate and two more pointing directly towards it. Their existence was a little disquieting at the first glance, for they might already have been seen; but a close scrutiny of the ground for signs of any more recent footprints reassured him. Evidently Lewson was the last person who had trodden that path. Having established this encouraging fact, Pottermack, still keeping inside his gate, passed the rake lightly over the four footprints and then smoothed the surface with the broom.

His preparations were now nearly complete. Re-closing the gate, he went back to the workshop to prepare his outfit. For though the 'sugaring' expedition was but a pretext, he intended to carry it through with completely convincing realism. On that realism it was quite conceivable that his future safety might depend. Accordingly he proceeded to pack the large rucksack that he usually carried on these expeditions with the necessary appliances: a store of collecting-boxes, the killing-jar, a supply of pins, the folding-net, an air-tight metal pot which he filled with pieces of rag previously dipped into the sugaring mixture and reeking of beer and rum, and an electric inspection-lamp. When he had packed it, he laid the net-stick by its side and then turned his attention to the shoes.

The gutta-percha soles were now quite cold and hard. He dried them carefully with a soft rag, and as he did so, the little surrounding overlap caught his eye. It seemed to be of no consequence. It was very unlikely that it would leave any mark on the ground, unless he should meet with an exceptionally soft patch. Still, there had been no overlap on Lewson’s shoes, and it was better to be on the safe side. Thus reflecting, he took from the tool-rack a shoemaker’s knife, and having given it a rub or two on the emery board, neatly shaved away the overlap on each sole to a steep bevel. Now the impression would be perfect no matter what kind of ground he met with.

This was the finishing touch, and he was now ready to go forth. Slipping his arms through the straps of the rucksack, he picked up the net-stick, took down from a peg his working apron, tucked the shoes under his arm, switched off the light and went out, crossing the lawn direct to the side gate. Here he spread the apron on the ground, and, stepping on to it, listened for a few moments and then softly opened the gate. Having taken a cautious peep out to assure himself that there was no one in sight, he slipped on and fastened the over-shoes, and, taking the inspection-lamp from the rucksack, dropped the battery into his coat pocket and hooked the bull’s-eye into a button-hole. Then, throwing the light for an instant on the path and marking the correct spot by his eye, he stepped out sideways, planting his right foot on the smoothly swept ground a pace in front of the last impression of Lewson’s left foot.

Steadying himself with the net-stick, he pulled the gate to until the latch clicked; then he put down his left foot a good pace in advance and set forth on his pilgrimage, carefully adapting the length of his stride to match, as well as he could judge, that of his long-legged predecessor.

The country was profoundly quiet, and, though the moon peeped out now and again, the night was for the most part so dark that he had occasionally to switch on his lamp to make sure that he was keeping to the path. The state of affairs, however, that these occasional flashes revealed was highly encouraging, for though the beaten surface of the path showed numerous traces of human feet, these were mostly faint and ill-defined, and none of them looked very recent. They suggested that few wayfarers used this path, and that the very striking tracks that he was laying down might remain undisturbed and plainly visible for many days unless a heavy rain should fall and wash them away.

So Pottermack trudged on, stepping out with conscious effort and keeping his attention fixed on the regulation of his stride. About half a mile from home the path entered a small wood, and here the aid of the lamp was needed continuously. Here, too, the sodden state of the path caused Pottermack to congratulate himself on his wise caution in shaving off the overlaps. For in this soft earth they would have shown distinctly and might have attracted undesirable notice—that is, if any one should give the footprints more than the passing glance that would suffice for recognition; which was in the highest degree unlikely.

Presently the path emerged from the wood and meandered across a rough common, covered with gorse and heather. Eventually, as Pottermack knew, it joined, nearly at a right angle, a by-road, which in its turn opened on the main London road. Here, he decided, the tracks could plausibly be lost; and as he drew near to the neighbourhood of the by-road he kept a sharp look-out for some indication of its whereabouts. At length he made out dimly a gate which he recognized as marking a little bridge across the roadside ditch. At once he stepped off the path into the heather, and, after walking on some twenty paces, halted, and unfastening the over-shoes, slipped them off. Then he took off the rucksack, turned out its contents, and having stowed the shoes at the bottom, repacked it and put it on again.

Hitherto he had not met or seen a soul since he started, and he was rather anxious not to meet any one until he was clear of this neighbourhood. His recent activities had perhaps made him a little over-conscious. Still, this was the night of the disappearance and here the tracks faded into the heather. If he were seen hereabouts, he might hereafter be questioned as to whether he had seen the missing man. No great harm in that, perhaps; but he had the feeling that it were much better for him not to be associated with the affair in any way. There were all sorts of possible snags. For instance, how did he get here without leaving any footprints on the path by which he would naturally have come? From which it will be seen that, if conscience was not making a coward of Mr. Pottermack, it was at least a little unduly stimulating his imagination. And yet
it was as well to err on the right side.

Turning back, he strode on through the heather until he came once more to the path, which he crossed by a long jump that landed him in the heather on the farther side. He now struck across the common, making for a detached coppice that formed an outlier of the wood. As soon as he reached it he fell to work without delay on the completion of his programme, pinning the pieces of sugared rag on the trunks of half a dozen trees. Usually he gave the moths ample time to find the bait and assemble round it. But to-night, with that incriminating pair of shoes in his rucksack, his methods were more summary. By the time that he had pinned on the last rag, one or two moths had begun to flutter round the first, easily visible in the darkness by the uncanny, phosphorescent glow of their eyes. Pottermack unfolded his net, and, screwing it on to the stick switched on his lamp and proceeded to make one or two captures, transferring the captives from the net to the killing-jar, and, after the necessary interval, thence to the collecting-boxes.

He was not feeling avaricious to-night. He wanted to get home and bring his task definitely to an end. He was even disposed to resent the indecent way in which the moths began to swarm round the rags. They seemed to be inviting him to make a night of it, as they were doing amidst the fumes of the rum. But he was not to be tempted. When he had pinned a dozen specimens in his collecting-box and put a few more in the lethal jar, he considered that he had done enough to account plausibly for his nocturnal expedition. Thereupon he packed up, and, leaving the lepidopterous revelers to the joys of intoxication, he turned away and strode off briskly in the direction of the by-road, carrying the net still screwed to the stick. A few minutes’ rough walking brought him to the road, down which he turned in the direction of the town. In another ten minutes he reached the outskirts of the town and the road on which his house fronted. At this late hour it was as deserted as the country; indeed in its whole length he encountered but a single person—a jovial constable who greeted him with an indulgent smile as he fixed a twinkling eye on the butterfly net, and, having playfully enquired what Mr. Pottermack had got in that bag, hoped that he had had good sport, and wished him good-night. So Pottermack went on his way, faintly amused at the flutter into which the constable’s facetious question had put him. For if it had chanced that the guardian of the law had been a stranger and had insisted on examining the bag, nothing could have been more apparently innocent than its contents. But the guilty man finds it hard to avoid projecting into the minds of others the secret knowledge that his own mind harbours.

When Pottermack at last let himself in at his front door and secured it with bolt and chain, he breathed a sigh of relief. The horrible chapter was closed. Tomorrow he could clear away the last souvenirs of that hideous scene in the garden and then, in the peace and security of his new life, try to forget the price that he had paid for it. So he reflected as he carried the tub to the scullery and drew into it enough water to account for the vanished ice; as he washed at the sink, as he sat at the table consuming the arrears of his supper, and as, at length, he went up to bed, carrying the rucksack with him.
CHAPTER IV. — THE PLACING OF THE SUN-DIAL

WHEN, after breakfast on the following morning, Mr. Pottermack betook himself, rucksack in hand, to the walled garden, he experienced, as he closed the door behind him and glanced round the enclosure, curiously mixed feelings. He was still shaken by the terrific events of the previous night, and, in his disturbed state, disposed to be pessimistic and vaguely apprehensive. Not that he regretted what he had done. Lewson had elected to make his life insupportable, and a man who does that, does it at his own risk. So Pottermack argued, and he reviewed the circumstances without the slightest twinge of remorse. Repugnant as the deed had been to him, and horrible as it had been in the doing—for he was by temperament a humane and kindly man—he had no sense of guilt. He had merely the feeling that he had been forced to do something extremely unpleasant.

When, however, he came to review the new circumstances, he was conscious of a vague uneasiness. Considered in advance, the making away with Lewson had been a dreadful necessity, accepted for the sake of the peace and security that it would purchase. But had that security been attained? The blackmailer, indeed, had gone for ever with his threats and his exactions. But that thing in the well—It was actually possible that Lewson dead might prove more formidable even than Lewson living. It was true that everything seemed to be quite safe and secret. He, Pottermack, had taken every possible precaution. But supposing that he had forgotten something; that he had overlooked some small but vital detail. It was quite conceivable. The thing had frequently happened. The annals of crime, and especially of murder, were full of fatal oversights.

So Mr. Pottermack cogitated as, having picked up the apron, he made his way to the workshop, where he set to work at once on the tasks that remained to be done. First he dealt with the shoes. As it would have been difficult and was quite unnecessary to remove the gutta-percha soles, he simply shaved off the heels, heated the surface and then stuck on the original soles of balata.

Next he broke up the plaster moulds and casts into small fragments, which he carried out in the bucket and shot down the well. Those, he reflected with a sense of relief as he replaced the hurdle, were the last visible traces of the tragedy; but even as he turned away from the well, he saw that they were not. For, glancing at the summer-house, he observed the decanter, the siphon, and the tumbler still on the table. Of course, to no eye but his was there anything suspicious or unusual in their presence there. But the sight of them affected him disagreeably. Not only were they a vivid and unpleasant reminder of events which he wished to forget. They revived the doubts that had tended to fade away under the exhilarating influence of work. For here was something that he had overlooked. A thing of no importance, indeed, but still a detail that he had forgotten. Trivial as the oversight was, he felt his confidence in his foresight shaken.

He walked to the summer-house, and, setting down the bucket outside, entered and proceeded to clear away these traces. Opening the cupboard, he caught up the siphon and the decanter and stepped behind the table to put them on the shelves. As he did so, he felt something soft under his foot, and when he had closed the cupboard door he looked down to see what it was. And then his heart seemed to stand still. For the thing under his foot was a coat—and it was not his coat.

There is a very curious phenomenon which we may describe as deferred visual sensation. We see something which is plainly before our eyes, but yet, owing to mental preoccupation, we are unaware of it. The image is duly registered on the retina; the retina passes on its record to the brain; but there the impression remains latent until some association brings it to the surface of consciousness.

Now, this was what had happened to Pottermack. In the moment in which his glance fell on the coat there started up before him the vision of a bulky figure flourishing its fists and staggering backwards towards the well—the figure of a man in shirt-sleeves. In spite of the darkness, he had seen that figure quite distinctly; he even recalled that the shirt-sleeves were of a dark grey. But so intense had been his preoccupation with the dreadful business of the moment that the detail, physically seen, had passed into his memory without conscious recognition.

He was literally appalled. Here, already, was a second oversight; and this time it was one of vital importance. Had any one who knew Lewson been present when the coat was discovered, recognition would have been almost certain; for the material was of a strikingly conspicuous and distinctive pattern. Then the murder would have been out, and all his ingenious precautions against discovery would have risen up to testify to his guilt.

All his confidence, all of the sense of security that he had felt on his return home on the previous night, had evaporated in an instant. Two obvious things he had forgotten, and one of them might have been fatal. Indeed, there were three; for he had been within an ace of overlooking those incriminating footprints that might have led the searchers to his very gate. Was it possible that there was yet some other important fact that he had failed to take into account? He realized that it was very possible indeed; that it might easily be that he should add yet another instance to the abundant records of murderers who, covering up their tracks with elaborate ingenuity, have yet left damning evidence plain for any investigator to see.

He picked up the coat, and, rolling it up loosely, considered what he should do with it. His first impulse was to drop it in the well. But he rejected the idea for several reasons. It would certainly float, and might possibly be seen by the mason when the sun-dial was fixed, especially if he should throw a light down. And then, if the well should, after all, be searched, the presence of a separate coat would be against the suggestion of accident. And it would be quite easy to burn it in the rubbish destructor. Moreover, in rolling the coat he had become aware of a bulky object in one of the pockets which recalled certain statements that Lewson had made. In the end, he tucked the coat under his arm and, catching up the
bucket, took his way back to the workshop.

It was significant of Pottermack's state of mind that as soon as he was inside he locked the door; notwithstanding that he was alone in the walled garden and that both the gates were securely fastened. Moreover, before he began his inspection he unlocked a large drawer and left it open with the key in the lock, ready to thrust the coat out of sight in a moment. Then he unrolled the coat on the bench, and, putting his hand into the inside breast pocket, drew out a leather wallet. It bulged with papers of various kinds, mostly bills and letters, but to these Pottermack gave no attention. The one item in the contents that interested him was a compact bundle of banknotes. There were twenty of them, all five-pound notes, as he ascertained by going through the bundle; a hundred pounds in all—the exact sum that had been demanded of him. In fact, these notes were understudies of his expected contribution. They had been "borrowed" by Lewson out of the current cash to meet some sudden call, and his, Pottermack's, notes were to have been either paid in place of them or to have enabled Lewson to make good his loan in the morning.

It seemed a queer proceeding, and to Mr. Pottermack it was not very intelligible. But the motive was no concern of his; what was his concern was the train of consequences that would be set going. The obvious fact was that the little branch bank of which Lewson had had sole charge was now minus a hundred pounds in five-pound notes. That fact must inevitably come to light within a day or two; most probably this very day. Then the hue and cry would be out for the missing manager.

Well, that was all to the good. There would certainly be a hot search for Lewson. But the searchers would not be seeking the body of a murdered man. They would be on the look-out for an exceedingly live gentleman with a bundle of stolen notes in his pocket. As he considered the almost inevitable course of events, Pottermack's spirits rose appreciably. The borrowing of those notes had been most fortunate for him, for it turned what would have been an unaccountable disappearance into a perfectly accountable flight. It seemed an incredibly stupid proceeding, for if Pottermack had paid up, the borrowing would have been unnecessary; if he had not paid up, the "loan" could not have been made good. However, stupid or not, it had been done; and in the doing it Lewson had, for the first and last time, rendered his victim a real service.

When he had inspected the notes, Pottermack replaced them in the wallet, returned the latter to the pocket whence it had come, rolled up the coat and bestowed it in the drawer, which he closed and locked. The consumption of it in the rubbish destructor could be postponed for a time; and perhaps it might not come to that at all. For the finding of the notes had, to a great extent, restored Pottermack's confidence; and already there had appeared in his mind the germ of an idea—vague and formless at present—that the notes, and perhaps even the coat, might yet have further useful offices to perform.

As he had now completed his tasks and cleared away—as he hoped—the last traces of the previous night's doings, he thought it time that he should show himself to Mrs. Gadby in his normal, everyday aspect. Accordingly he took the rucksack, a setting-board, and a few other necessary appliances and made his way to the house, where he established himself in the dining-room at a table by the window and occupied the time in setting the moths which he had captured on the previous night. They were but a poor collection, with an unconscionable proportion of duplicates, but Pottermack pinned them all out impartially—even the damaged ones—on the setting-board. It was their number, not their quality, that would produce the necessary moral effect on Mrs. Gadby when she came in to lay the table for his mid-day dinner. So he worked away placidly with an outward air of complete absorption in his task; but all the while there kept recurring in his mind, like some infernal refrain, the disturbing question: Was there even now something that he had forgotten: something that his eye had missed but that other eyes might detect?

In the afternoon he strolled round to Mr. Gallett's yard to see if all was going well in regard to the preparations for setting up the sun-dial. He was anxious that there should be no delay, for though the presence of the dial would afford him no added security, he had an unreasonable feeling that the fixing of it would close the horrible incident. And he did very much want that sinister black hole hidden from sight for ever. Great therefore, was his relief when he discovered Mr. Gallett and two of his men in the very act of loading a low cart with what was obviously the material for the job.

The jovial mason greeted him with a smile and a nod. "All ready, you see, Mr. Pottermack", said he, indicating the dial-pillar, now swathed in a canvas wrapping, and slapping one of the stone slabs that stood on edge by its side. "Could almost have done it to-day, but it's getting a bit late and we've got one or two other jobs to finish up here. But we'll have him round by nine o'clock to-morrow morning, if that will do."

It would do admirably, Mr. Pottermack assured him, adding: "You will have to bring it in at the side gate. Do you know whereabouts that is?"

"I can't say as I do exactly", replied Gallett. "But I'll bring him to the front gate and then you can show me where he is to go."

To this Pottermack agreed, and they then strolled together to the gate, where Mr. Gallett halted, and, having looked up and down the street with a precautionary air, said in what he meant to be a low tone:

"Rummy report going round the town. Have you heard anything of it?"

"No", replied Pottermack, all agog in a moment.

"What is it?"

"Why, they say that the manager of Perkins's Bank has hopped it. That's what they say, and I fancy there must be
something in it, because I went there this morning to pay in a cheque and I found the place closed. Give me a rare turn, because I've got an account there. So I rang the bell and the caretaker he come and tells me that Mr. Lewson wasn't able to attend to-day but that there would be some one there later to carry on till he came back. And so there was, for I went round a couple of hours later and found the place open and business going on as usual. There was a youngish fellow at the counter, but there was an elderly gent—rather a foxy-looking customer—who seemed to be smelling round, taking down the books and looking into the drawers and cupboards. Looks a bit queer, don't you think?"

"It really does", Pottermack admitted. "The fact of the bank not being open at the usual time suggests that Mr. Lewisham __"

"Lewson is his name", Mr. Gallett corrected.

"Mr. Lewson. It suggests that he had absented himself without giving notice, which is really rather a remarkable thing for a manager to do."  

"It is", said Gallett; "particularly as he lived on the premises."  

"Did he, indeed?" exclaimed Pottermack. "That makes it still more remarkable. Quite mysterious, in fact."

"Very mysterious", said Gallett. "Looks as if he had mizzled; and if he has, why, he probably didn't go away with his pockets empty."

Pottermack shook his head gravely. "Still", he urged, "it is early to raise suspicions. He may possibly have been detained somewhere. He was at the bank yesterday?"

"Oh, yes; and seen in the town yesterday evening. Old Keeling, the postman, saw him about half-past seven and wished him good-night. Says he saw him turn into the footpath that leads through Potter's Wood."

"Ha", said Pottermack. "Well, he may have lost his way in the wood, or been taken ill. Who knows? It is best not to jump at conclusions too hastily."

With this and a friendly nod he turned out of the yard and took his way homeward, cogitating profoundly. Events were moving even more quickly than he had anticipated, but they were moving in the right direction. Nevertheless, he recognized with something like a shudder how near he had been to disaster. But for the chance moonbeam that had lighted up the footprints in his garden, he would have overlooked those other tell-tale tracks outside. And again he asked himself uneasily if there could be something else that he had overlooked. He was tempted to take a walk into the country in the direction of the wood to see if there were yet any signs of a search; for, by Gallett's report, it appeared that the direction in which Lewson had gone, and even his route, was already known. But prudence bade him keep aloof and show no more than a stranger's interest in the affair. Accordingly he went straight home; and since in his restless state he could not settle down to read, he betook himself to his workshop and spent the rest of the day in sharpening chisels and plane-irons and doing other useful, time-consuming jobs.

True to his word, Mr. Gallett appeared on the following morning almost on the stroke of nine. Pottermack himself opened the door to him and at once conducted him through the house out into the orchard and thence to the walled garden. It was not without a certain vague apprehensiveness that he unlocked the gate and admitted his visitor, for since that fatal night no eye but his had looked on that enclosure. It is true that on this very morning he had made a careful tour of inspection and had satisfied himself that nothing was visible that all the world might not see. Nevertheless, he was conscious of a distinct sense of discomfort as he let the mason in, and still more when he led him to the well.

"So this is where you want him planted?" said Mr. Gallett, stepping up to the brink of the well and looking down it reflectively. "It do seem a pity for to bung up a good well. And you say there's a tidy depth of water in him."

"Yes", said Pottermack; "a fair depth. But it's a long way down to it."

"So 'tis, seemingly", Gallett agreed. "The bucket would take a bit of histing up". As he spoke, he felt in his pocket and drew out a folded newspaper, and from another pocket he produced a box of matches. In leisurely fashion he tore off a sheet of the paper, struck a match, and, lighting a corner of the paper, let it fall, craning over to watch its descent. Pottermack also craned over, with his heart in his mouth, staring breathlessly at the flaming mass as it sank slowly, lighting up the slimy walls of the well, growing smaller and fainter as it descended, while a smaller, fainter spark rose from the depths to meet it. At length they met and were in an instant extinguished; and Pottermack breathed again. What a mercy he had not thrown the coat down!

"We'll have to bung up the earth a bit", said Mr. Gallett, "for the slabs to bed on. Don't want 'em to rest on the brickwork of the well or they may settle out of the level after a time. And if you've got a spade handy, we may as well do it now, 'cause we can't get to the side gate for a few minutes. There's a gent out there a-takin' photographs of the ground."

"Of the ground!" gasped Pottermack.

"Ay. The path, you know. Seems as there's some footmarks there—pretty plain ones they looked to me without a-photographin' of em. Well, it's them footmarks as he's a-takin'."

"But what for?" demanded Pottermack.

"Ah", said Mr. Gallett. "There you are. I don't know, but I've got my ideas. I see the police inspector a-watchin' of him—all on the broad grin he was too—and I suspect it's got something to do with that bank manager that I was tellin' you
"Ah, Mr. Lewis?"

"Lewson is his name. There's no news of him and he was seen coming this way on Wednesday night. Why, he must have passed this very gate."

"Dear me!" exclaimed Pottermack. "And as to his reasons for going away so suddenly. Is anything,—er,—?"

"Well, no," replied Gallett. "Nothing is known for certain. Of course, the bank people don't let on. But there's some talk in the town about some cash that is missing. May be all bunkum, though it's what you'd expect. Now, about that spade. Shall I call in my men or can we do it ourselves?"

Pottermack decided that they could do it themselves, and, having produced a couple of spades, he fell to work under Gallett's direction, raising a low platform for the stone slabs to rest on. A few minutes' work saw it finished to the mason's satisfaction, and all was now ready for the fixing of the dial.

"I wonder if that photographer chap has finished", said Mr. Gallett. "Shall we go and have a look?"

This was what Pottermack had been bursting to do, though he had heroically suppressed his curiosity; and even now he strolled indifferently to the gate and held it open for the mason to go out first.

"There he is", said Gallett, "and blow me if he isn't a-takin' of 'em all the way along. What can he be doing that for? The cove had only got two feet."

Mr. Pottermack looked out and was no less surprised than the worthy mason. But he did not share the latter's purely impersonal interest. On the contrary, what he saw occasioned certain uncomfortable stirrings in the depths of his consciousness. Some little distance up the path a spectacled youth of sage and sober aspect had set up a tripod to which a rather large camera of the box type was attached by a goose-neck bracket. The lens was directed towards the ground, and when the young man had made his exposure by means of a wire release, he opened a portfolio and made a mark or entry of some kind on what looked like a folded map. Then he turned a key on the camera, and, lifting it with its tripod, walked away briskly for some twenty or thirty yards, when he halted, fixed the tripod and repeated the operation. It really was a most astonishing performance.

"Well", said Mr. Gallett, "he's finished here, at any rate, so we can get on with our business now. I'll just run round and fetch the cart along."

He sauntered away towards the road, and Pottermack, left alone, resumed his observation of the photographer. The proceedings of that mysterious individual puzzled him not a little. Apparently he was taking a sample footprint about every twenty yards, no doubt selecting specially distinct impressions. But to what purpose? One or two photographs would have been understandable as permanent records of marks that a heavy shower might wash away and that would, in any case, soon disappear. But a series, running to a hundred or more, could have no ordinary utility. And, yet it was not possible that that solemn young man could be taking all this trouble without some definite object. Now, what could that object be?

Pottermack was profoundly puzzled. Moreover, he was more than a little disturbed. Hitherto his chief anxiety had been lest the footprints should never be observed. Then he would have had all his trouble for nothing, and those invaluable tracks, leading suspicion far away from his own neighbourhood to an unascertainable destination, would have been lost. Well, there was no fear of that now. The footprints had not only been observed and identified, they were going to be submitted to minute scrutiny. He had not bargained for that. He had laid down his tracks expecting them to be scanned by the police or the members of a search party, to whom they would have been perfectly convincing. But how would they look in a photograph? Pottermack knew that photographs have an uncanny way of bringing out features that are invisible to the eye. Now could there be any such features in those counterfeit footprints? He could not imagine any. But then why was this young man taking all those photographs? With his secret knowledge of the real facts, Pottermack could not shake off an unreasoning fear that his ruse had been already discovered, or at least suspected.

His cogitations were interrupted by the arrival of the cart, which was halted and backed up against his gateway. Then there came the laying down of planks to enable the larger slab to be trundled on rollers to the edge of the platform. Pottermack stood by, anxious and restless, inwardly anathematizing the conscientious mason as he tried the surface of the platform again and again with his level. At last he was satisfied. Then the big base slab was brought on edge to the platform, adjusted with minute care and finally let down slowly into its place; and as it dropped the last inch with a gentle thud, Pottermack drew a deep breath and felt as if a weight, greater far than that of the slab, had been lifted from his heart.

In the remaining operations he had to feign an interest that he ought to have felt but did not. For him, the big base slab was what mattered. It shut that dreadful, yawning, black hole from his sight, as he hoped, for ever. The rest was mere accessory detail. But, as it would not do for him to let this appear, he assumed an earnest and critical attitude, particularly when it came to the setting up of the pillar on the centre of the upper slab.

"Now then", said Mr. Gallett as he spread out a thin bed of mortar on the marked centre, "how will you have him? Will you have the plinth parallel to the base or diagonal?"

"Oh, parallel, I think", replied Pottermack; "and I should like to have the word 'spes' on the eastern side, which will bring the word 'pax' to the western."

Mr. Gallett looked slightly dubious. "If you was thinking of setting him to the right time", said he, "you won't do it that
way. You'll have to unscrew the dial-plate from the lead bed and have him fixed correct to time. But never mind about him now. We're a-dealing with the stone pillar."

"Yes", said Pottermack, "but I was considering the inscription. That is the way in which it was meant to be placed, I think"; and here he explained the significance of the motto.

"There now", said Mr. Gallett, "see what it is to be a scholar. And you're quite right too, sir: you can see by the way the lichen grew on it that this here 'sole orto' was the north side. So we'll put him round to the north again, and then I expect the dial will be about right, if you aren't partickler to a quarter of an hour or so."

Accordingly the pillar was set up in its place and centred with elaborate care. Then, when the level of the slabs had been tested and a few slight adjustments made, the pillar was tried on all sides with the plumb-line and corrected to a hair's breadth.

"There you are, Mr. Pottermack", said Mr. Gallett, as he put the last touch to the mortar joint and stepped back to view the general effect of his work; "see that he isn't disturbed until the mortar has had time to set and he won't want touching again for a century or two. And an uncommon nice finish he'll give to the garden when you get a bit of smooth turf round him and a few flowers."

"Yes", said Pottermack, "you've made an extremely neat job of it, Mr. Gallett, and I'm very much obliged to you. When I get the turf laid and the flower borders set out, you must drop in and have a look at it."

The gratified mason, having suitably acknowledged these commendations of his work, gathered up his tools and appliances and departed with his myrmidons. Pottermack followed them out into the lane and watched the cart as it retired, obliteratoring the footprints which had given him so much occupation. When it had gone, he strolled up the path in the direction in which the photographer had gone, unconsciously keeping to the edge and noting with a sort of odd self-complacency the striking distinctness of the impressions of his gutta-percha soles. The mysterious operator was now out of sight, but he, too, had left his traces on the path, and these Pottermack studied with mingled curiosity and uneasiness. It was easy to see, by the marks of the tripod, which footprints had been photographed, and it was evident that care had been taken to select the sharpest and most perfect impressions. Pottermack had noticed, when he first looked out of the gate with Mr. Gallett, that the tripod had been set up exactly opposite the gateway and that the three marks surrounded the particularly fine impression that he had made when he stepped out sideways on to the smooth-swept path.

On these facts he reflected as he sauntered back to the gate, and entering, closed it behind him. What could be that photographer's object in his laborious proceeding? Who could it be that had set him to work? And what was it possible for a photograph to show that the eye might fail to see? These were the questions that he turned over uncomfortably in his mind and to which he could find no answer. Then his glance fell on the dial, resting immovable on its massive base, covering up the only visible reminder of the past, standing there to guard for ever his secret from the eyes of man. And at the sight of it he was comforted. With an effort he shook off his apprehensions and summoned his courage afresh. After all, what was there to fear? What could these photographs show that was not plainly visible? Nothing. There was nothing to show. The footprints were, it is true, counterfeits in a sense. But they were not imitations in the sense that a forged writing is an imitation. They were mechanical reproductions, necessarily true in every particular. In fact, they were actually Lewson's own footprints, though it happened that other feet than his were in the shoes. No. Nothing could be discovered for the simple reason that there was nothing to discover.

So Mr. Pottermack, with restored tranquillity and confidence, betook himself to the summer-house, and sitting down, looked out upon the garden and let his thoughts dwell upon what it should be when the little island of stone should be girt by a plot of emerald turf. As he sat, two sides of the sun-dial were visible to him, and on them he read the words "decedente pax". He repeated them to himself, drawing from them a new confidence and encouragement. Why should it not be so? The storms that had scattered the hopes of his youth had surely blown themselves out. His evil genius, who had first betrayed him and then threatened to destroy utterly his hardly earned prosperity and security; who had cast him into the depths and had fastened upon him when he struggled to the surface; the evil genius, the active cause of all his misfortunes, was gone for ever and would certainly trouble him no more.

Then why should the autumn of his life not be an Indian summer of peace and tranquil happiness? Why not?
"AND that", said Mr. Stalker, picking up a well-worn attache-case and opening it on his knees, "finishes our little business and relieves you of my society."

"Say 'deprives'," Thorndyke corrected. "That is, if you must really go."

"That is very delicate of you, doctor", Stalker replied as he stuffed a bundle of documents into the attache-case; "and, by the way, it isn't quite the finish. There is another small matter which I had nearly forgotten; something that my nephew, Harold, asked me to hand to you. You have heard me speak of Harold—my sister's boy?"

"The inventive genius? Yes, I remember your telling me about him."

"Well, he asked me to pass this on to you; thought it might interest you."

He took from his case a flat disc which looked like a closely rolled coil of paper tape, secured with a rubber band, and passed it to Thorndyke, who took it, and, unrolling a few inches, glanced at it with a slightly puzzled smile.

"What is it?" he asked.

"I had better explain", replied Stalker. "You see, Harold has invented a recording camera which will take small photographs in a series and mark each one with its serial number, so that there can be no mistake about the sequence. It is a box camera and it takes quite a big roll of film, with a capacity of something like five hundred exposures. And the mechanism not only marks each negative with its number but also shows the number which is being exposed on a little dial on the outside of the camera. Quite a useful instrument, I should think, for certain purposes, though I can't, at the moment, think of a case to which it would be applicable."

"I can imagine certain cases, however", said Thorndyke, "in which it would be quite valuable. But with regard to these particular photographs?"

"They are, as you see, a series of footprints—the footprints of a man who absconded from a country bank and has not been seen since."

"But why did Harold take so many? There must be about a couple of hundred on this strip."

Stalker chuckled. "I don't think", said he, "that we need go far for the reason. Harold had got a camera that would take a numbered series and he had never had a chance to try it. Now here was an undoubted series of footprints on a footpath and they were those of an absconding man. It was a chance to show what the camera would do, and he took it. He professes to believe that these photographs might furnish an important clue to an investigator like yourself. But, of course, that is all nonsense. He just wanted to try his new camera. Still, he did the job quite thoroughly. He took a twenty-five inch ordnance map with him and marked each exposure on it, showing the exact position of that particular footprint. He made an exposure about every twenty yards. You will see, if you look at the map. I have the three sheets here. He told me to give them to you with the photographs, so that you could examine them together if you wanted to—which I imagine you won't. Of course, the information they give is quite valueless. One or two photographs would have shown all that there was to show."

"I wouldn't say that", Thorndyke dissented. "The application of the method to the present case is, I must admit, not at all evident. One or two photographs would have been enough for simple identification. But I can imagine a case in which it might be of the highest importance to be able to prove that a man did actually follow a particular route, especially if a time factor were also available."

"Which it is, approximately, in the present instance. But it was already known that the man went that way at that time, so all this elaborate detail is merely flogging a dead horse. The problem is not which way did he go, but where is he now? Not that we care a great deal. He only took a hundred pounds with him—so far as we know at present—so the Bank is not particularly interested in him. Nor am I, officially, though I must confess to some curiosity about him. There are some rather odd features in the case. I am quite sorry that we can't afford to call you in to investigate them."

"I expect you are more competent than I am", said Thorndyke. "Banking affairs are rather out of my province."

"It isn't the banking aspect that I am thinking of", replied Stalker. "Our own accountants can deal with that. But there are some other queer features, and about one of them I am a little uncomfortable. It seems to suggest a miscarriage of justice in another case. But I mustn't take up your time with irrelevant gossip."

"But indeed you must", Thorndyke rejoined. "If you have got a queer case, I want to hear it. Remember, I live by queer cases."

"It is rather a long story", objected Stalker, evidently bursting to tell it nevertheless.

"So much the better", said Thorndyke. "We will have a bottle of wine and make an entertainment of it."

He retired from the room and presently reappeared with a bottle of Chambertin and a couple of glasses; and having, filled the latter, he provided himself with a writing-pad, resumed his armchair and disposed himself to listen at his ease.

"I had better begin", said Stalker, "with an account of this present affair. The man who has absconded is a certain James
Lewson, who was the manager of a little branch of Perkins's Bank down at Borley. He ran it by himself, living on the premises and being looked after by the caretaker's wife. It is quite a small affair—just a nucleus with an eye for the future, for Meux's do most of the business at Borley, such as it is—and easily run by one man; and everything has gone on quite smoothly there until last Wednesday week. On that day Lewson went out at about a quarter-past seven in the evening. The caretaker saw him go out at the back gate and thought that he looked as if he had been drinking, and on that account he sat up until past twelve o'clock to see him in safely. But he never came home, and as he had not returned by the morning, the caretaker telegraphed up to headquarters.

"Now I happened to be there when the telegram arrived—for I am still on the board of directors and do a bit of work there—and I suggested that old Jewsbury should go down to see what had been happening and take a young man with him to do the routine work while he was going through the books. And as Harold was the only one that could be spared, he was told off for the job. Of course, he fell in with it joyfully, for he thought he saw a possible chance of giving his camera a trial. Accordingly, down he went, with the camera in his trunk, all agog to find a series of some kind that wanted photographing. As soon as they arrived, Jewsbury saw at a glance that some of the cash was missing—a hundred pounds in five-pound Bank of England notes."

"And the keys?" asked Thorndyke.

"The safe key was missing too. But that had been anticipated, so Jewsbury had been provided with a master-key. The other keys were in the safe."

"Well, as soon as the robbery was discovered, Jewsbury had a talk with the caretaker and the police inspector, who had called to see him. From the caretaker, a steady old retired police sergeant, Jewsbury gathered that Lewson had been going to the bad for some time, taking a good deal more whisky than was good for him. But we needn't go into that. The police inspector reported that Lewson had been seen at about seven-thirty—that is, within a quarter of an hour of his leaving the bank—turning into a footpath that leads out into the country and eventually to the main London road. The inspector had examined the path and found on it a track of very distinct and characteristic footprints, which he was able to identify as Lewson's, not only by the description given by the caretaker, who usually cleaned Lewson's shoes, but by one or two fairly clear footprints in the garden near the back gate, by which Lewson went out. Thereupon, he returned to the footpath and followed the tracks out into the country, through a wood and across a heath until he came to a place where Lewson had left the path and gone off through the heather; and there, of course all traces of him were lost. The inspector went on and searched a by-road and went on to the London road, but not a single trace of him could he discover. At that point where he stepped off the footpath into the heather James Lewson vanished into thin air."

"Where is the railway station?" Thorndyke asked.

"In the town. There is a little branch station by the London road, but it is certain that Lewson did not go there, for there were no passengers at all on that evening. He must have gone off along the road on foot."

"Now, as soon as Harold heard of those footprints, he decided that his chance had come. The footprints would soon be trodden out or washed away by rain, and they ought to be recorded permanently. That was his view."

"And a perfectly sound one, too," remarked Thorndyke.

"Quite. But there was no need for a couple of hundred repetitions."

"Apparently not", Thorndyke agreed, "though it is impossible to be certain even of that. At any rate, a superabundance of evidence is a good deal better than a deficiency."

"Well, that is what Harold thought, or pretended to think, and in effect, he nipped off to the Post Office and got the large-scale ordnance maps that contained his field of operations. Then on the following morning he set to work, leaving Jewsbury to carry on. He began by photographing a pair of the footprints in the garden—they are numbers 1 and 2—and marking them on the map. Then he went off to the footpath and took a photograph about every twenty yards, selecting the most distinct footprints and writing down the number of the exposure on the map at the exact spot on which it was made. And so he followed the track into the country, through the wood, across the heath to what we may call the vanishing point. Number 197 is the last footprint that Lewson made before he turned off into the heather.

"So much for Harold and his doings. Now we come to the queer features of the case, and the first of them is the amount taken. A hundred pounds! Can you imagine a sane man, with a salary of six hundred a year, absconding with such a sum? The equivalent of two months' salary. The thing seems incredible. And why a hundred pounds only? Why didn't he take, at least, the whole of the avaiable cash? It is incomprehensible. And in a few days his monthly salary would have been due. Why didn't he wait to collect that?

"But there is a partial explanation. Only the explanation is more incomprehensible than what it explains. By the evening post on the day on which Jewsbury arrived a letter was delivered, addressed to Lewson, and, under the circumstances, Jewsbury felt justified in opening it. Its contents were to this effect:

"DEAR LEWSON,—I expected you to come round last night, as you promised, to settle up. As you didn't come and have not written, I think it necessary to tell you plainly that this can't be allowed to go on. If the amount (£97 13s 4d.) is not paid within the next forty-eight hours, I shall have to take measures that will be unpleasant to both of us.—Yours faithfully,

"LEWIS BATEMAN
"Now this letter seemed to explain the small amount taken. It suggested that Lewson was being pressed for payment and that, as he had not got the wherewith to pay, he had taken the amount out of the cash, trusting to be able to replace it before the periodical audit. But if so, why had he not paid Bateman? And why had he absconded? The letter only deepens the mystery."

"Is it an ascertained fact that he had not the wherewithal to pay?"

"I think I may say that it is. His own current account at the bank showed a balance of about thirty shillings and he had no deposit account. Looking over his account, Jewsbury noticed that he seemed to spend the whole of his income and was often overdrawn at the end of the month.

"But this letter brought into view another queer feature of the case. On enquiring of the police inspector, Jewsbury found that the man, Bateman, is a member of a firm of outside brokers who have offices in Moorgate Street. Bateman lives at Borley, and he and Lewson seemed to have been on more or less friendly terms. Accordingly, Jewsbury and the inspector called on him, and, under some pressure, he disclosed the nature of Lewson's dealing with his firm. It appeared that Lewson was a regular 'operator,' and that he was singularly unfortunate in his speculations and that he had a fatal habit of carrying over when he ought to have cut his loss and got out. As a result, he dropped quite large sums of money from time to time, and had lost heavily during the last few months. On the transactions of the last twelve months, Bateman reckoned—he hadn't his books with him, of course, at Borley—that Lewson had dropped over six hundred pounds; and in addition, he happened to know that Lewson had been plunging and losing on the turf.

"Now, where did Lewson get all this money? His account shows no income beyond his salary, and the debit side shows only his ordinary domestic expenditure. There are a good many cash drafts, some of which may have represented betting losses, but they couldn't represent the big sums that he lost through the bucket shop."

"He didn't pay the brokers by cheque, then?"

"No. Always in notes—five-pound notes; not that there is anything abnormal in that. As a bank manager, he would naturally wish to keep these transactions secret. It is the amount that creates the mystery. He spent the whole of his income in a normal though extravagant fashion, and he dropped over six hundred pounds in addition. Now, where did he get that six hundred pounds?"

"Is it certain that he had no outside source of income?" Thorndyke asked.

"Obviously he had. But since there is no sign of it on the credit side of his account, he must have received it in cash; which is a mighty queer circumstance when you consider the amount. Jewsbury is convinced that he must have been carrying on some kind of embezzlement, and I don't see what other explanation there can be. But if so, it has been done with extraordinary skill. Jewsbury has been through the books with the utmost rigour and with this suspicion in his mind, but he can't discover the slightest trace of any falsification. And mind you, Jewsbury is a first-class accountant and as sharp as a needle. So that is how the matter stands, and I must confess that I can make nothing of it."

Mr. Stalker paused, and, with a profoundly reflective air, took a sip from his glass, which Thorndyke had just refilled. The latter waited for some time with an expectant eye upon his guest and at length remarked: "You were saying something about a miscarriage of justice."

"So I was", said Stalker. "But that is another story—unless it is a part of this story, which I begin to be afraid it is. However, you shall judge. I should like to hear what you think. It carries us back some fifteen years; that was before I took up the 'Griffin' company, and I was then assistant manager of Perkins', at the Cornhill office. About that time it was discovered that quite a long series of forgeries had been committed. They were very skilfully done and very cleverly managed, evidently by somebody who knew what customers' accounts it would be safe to operate on. It was found that a number of forged bearer cheques had been presented and paid over the counter; and it was further found that nearly all of them had been presented and paid at the counter of one man, a young fellow named Jeffrey Brandon. As soon as the discovery was made it was decided—seeing that the forger was almost certainly an employee of the bank—to muster the staff and invite them all to turn out their pockets. And this was done on the following morning. When they had all arrived, and before the bank opened, they were mustered in the hall and the position of affairs explained to them; whereupon all of them, without being invited, expressed the wish to be searched. Accordingly, a detective officer who was in attendance searched each of them in turn, without any result. Then the detective suggested that the offence coats, which most of them used and which were hanging in the lobby, should be fetched by the detective and the porter and searched in the presence of their owners. This also was done. Each man identified his own coat, and the detective searched it in his presence. All went well until we came to nearly the last coat—that belonging to Jeffrey Brandon and identified by him as his. When the detective put his hand into the inside breast pocket, he found in it a letter-case; and on opening this and turning out its contents, he discovered in an inner compartment three bearer cheques. They were payable to three different—presumably fictitious—persons and were endorsed in the names of the payees in three apparently different handwritings.

"On the production of those cheques, Brandon showed the utmost astonishment. He admitted that the letter-case was his, but denied any knowledge of the cheques, declaring that they must have been put into the case by someone else—presumably the forger—while the coat was hanging in the lobby. Of course, this could not be accepted. No one but the senior staff knew even of the discovery of the forgery—at least, that was our belief at the time. And the search had been sprung on the staff without a moment's warning. Furthermore, there was the fact that nearly all the forged cheques had been paid at Brandon's counter. What followed was inevitable. Brandon was kept under observation at the bank until the
ostensible drawers of the cheques had been communicated with by telegram or telephone; and when they had all denied having drawn any such cheques, he was arrested and charged before a magistrate. Of course, he was committed for trial; and when he was put in the dock at the Old Bailey the only defence he had to offer was a complete denial of any knowledge of the cheques and a repetition of his statement that they must have been put into his pocket by some other person for the purpose of incriminating him. It was not a very convincing defence, and it is not surprising that the jury would not accept it."

"And yet", Thorndyke remarked, "it was the only defence that was possible if he was innocent. And there was nothing inherently improbable in it."

"No. That was what I felt; and when he was found guilty and sentenced to five years' penal servitude, I was decidedly unhappy about the affair. For Brandon was a nice, bright, prepossessing youngster, and there was nothing whatever against him but this charge. And, later, I was made still more uncomfortable when I had reason to believe that the discovery of the forgeries had in some way become known, on the day before the search, to some members of the junior staff. So that what Brandon had said might easily have been true.

"However, that is the old story. And now as to its connection with the present one. Brandon had one specially intimate friend at the bank, and that friend's name was James Lewson. Now, we have never had anything against Lewson in all these years, or he would never have been a branch manager. But, from what we know of him now, he is, at least, an unscrupulous rascal and, if Jewsbury is right, he is an embezzler and a thief. I can't rid myself of a horrible suspicion that James Lewson put those forged cheques into Brandon's pocket."

"If he did", said Thorndyke, "hanging would be a great deal too good for him."

"I quite agree with you", Stalker declared emphatically. "It would have been a dastardly crime. But I can't help suspecting him very gravely. I recall the look of absolute amazement on poor Brandon's face when those cheques were produced. It impressed me deeply at the time, but the recollection of it impresses me still more now. If Brandon was innocent, it was a truly shocking affair. It won't bear thinking of."

"No", Thorndyke agreed. "There is no tragedy more dreadful than the conviction of an innocent man. By the way, do you know what became of Brandon?"

"Indeed I do", replied Stalker. "The poor fellow is beyond the reach of any possible reparation, even if his innocence could be proved. He died in an attempt to escape from prison. I remember the circumstances only too clearly. Soon after his conviction he was sent to the convict prison at Colport. There, while he was working outside with a gang, he slipped past the civil guard and made off along the sea wall. He got quite a good start while they were searching for him in the wrong direction, but at last they picked up his tracks and set off in pursuit. And presently, on the seaward face of the wall, they found his clothes and the marks of his feet where he had walked out across the mud to the sea. They assumed that he had swum out to some passing vessel, and that is probably what he tried to do. But no tidings of him could be obtained from any of the anchored vessels or those that had passed up or down. Then, about six weeks later, the mystery was solved; for his body was found on the mud in a creek some miles farther down."

"About six weeks later", Thorndyke repeated. "What time of year was it?"

"He was found about the middle of August. Yes, I know what you are thinking. But, really, the question of identity hardly arose, although, no doubt, the corpse was examined as far as was possible. Still, the obvious facts were enough. A naked man was missing and the body of a nude man was found just where it was expected to wash ashore. I think we may take it that the body was Brandon's body. I only wish I could think otherwise."

"Yes", said Thorndyke. "It is a melancholy end to what sounds like a very tragic story. But I am afraid you are right. The body was almost certainly his."

"I think so", agreed Stalker. "And now, I hope I haven't taken up your time for nothing. You will admit that this Lewson case has some rather queer features."

"It certainly has", said Thorndyke. "It is most anomalous and puzzling from beginning to end."

"I suppose", said Stalker, "it would be hardly fair to ask for a few comments?"

"Why not?" demanded Thorndyke. "This is an entertainment, not a professional conference. If you want my views on the case, you are welcome to them and I may say, in the first place, that I do not find myself quite in agreement with Jewsbury in regard to the embezzlement—of which, you notice, he can find no evidence. To me there is a strong suggestion of some outside source of income. We note that Lewson paid these large sums of money in cash—in five-pound notes. Now that may have been for secrecy. But where did he get all those notes? He paid no cheques into his account. He couldn't have stolen the notes from the bank's cash. There is a distinct suggestion that he received the money in the same form in which he paid it away. And his conduct on this occasion supports that view. He just baldly took a hundred pounds out of cash—in five-pound notes—to meet a sudden urgent call. One feels that he must have expected to be able to replace it almost at once. The idea that a man of his experience should have committed a simple, crude robbery like this is untenable. And then there is the amount: taken, almost certainly, for this specific purpose. The irresistible suggestion is that he merely borrowed this money in the confident expectation of obtaining the wherewith to put it back before it should be missed.

"Then there is the singular suggestion of a change of purpose. Apparently he started out to pay Bateman. Then why did he not pay him? He had the money. Instead, he suddenly turns off and walks out into the country. Why this change of
plan? What had happened in the interval to cause him to change his plans in this remarkable manner? Had he discovered that he would not be able to replace the money? Even that would not explain his proceedings, for the natural thing would have been to return to the bank and put the notes back.

"Again, if he intended to abscond, why go away across the country on foot? He could easily have taken the train to town and disappeared there. But the idea of his absconding with that small amount of money is difficult to accept: and yet he undoubtedly did walk out into the country. And he has disappeared in a manner which is rather remarkable when one considers how easy a solitary pedestrian is to trace in the country. There is even something rather odd in his leaving the footpath and plunging into the heather, which must have been very inconvenient walking for a fugitive. Taking the case as a whole, I feel that I cannot accept the idea that he simply absconded with stolen money. Why he suddenly changed his plans and made off I am unable to guess, but I am certain that behind his extraordinary proceedings there is something more than meets the eye."

"That is precisely my feeling," said Stalker, and the more so now that I have heard your summing-up of the case. I don't believe the man set out from home with the idea of absconding. I suspect that something happened after he left the house; that he got some sudden scare that sent him off into the country in that singular fashion. And now I must really take myself off. It has been a great pleasure to talk this case over with you. What about those things of Harold's? Shall I relieve you of them, now that you have seen them?"

"No," replied Thorndyke. "Leave them with me for the present. I should like to look them over before I hand them back."

"You don't imagine that Harold is right, do you? That these footprints may yield a clue to the man's disappearance?"

"No. I was not thinking of them in relation to the present case, but in regard to their general evidential bearing. As you know, I have given a great deal of attention and study to footprints. They sometimes yield a surprising amount of information, and as they can be accurately reproduced in the form of plaster casts, or even photographs, they can be produced in court and shown to the judge and the jury, who are thus able to observe for themselves instead of having to rely on the mere statements of witnesses.

"But footprints, as one meets with them in practice, have this peculiarity: that, although they are made in a series, they have to be examined separately as individual things. If we try to examine them on the ground as a series, we have to walk from one to another and trust largely to memory. But in these photographs of Harold's we can take in a whole series at a glance and compare any one specimen with any other. So what I propose to do is to look over these photographs and see if, apart from the individual characters which identify a footprint, there are any periodic or recurring characters which would make it worth while to use a camera of this type in practice. I want to ascertain, in fact, whether a consecutive series of footprints is anything more than a number of repetitions of a given footprint."

"I see. Of course, this is not a continuous series. There are long intervals."

"Yes. That is a disadvantage. Still, it is a series of a kind."

"True. And the maps?"

"I may as well keep them too. They show the distances between the successive footprints, which may be relevant, since the intervals are not all equal."

"Very well", said Stalker, picking up his attache-case. "I admire your enthusiasm and the trouble you take, and I will tell Harold how seriously you take his productions. He will be deeply gratified."

"It was very good of him to send them, and you must thank him for me."

The two men shook hands, and when Thorndyke had escorted his guest to the landing and watched him disappear down the stairs, he returned to his chambers, closing the "oak" behind him and thereby excluding himself from the outer world.
CHAPTER VI. — DR. THORNDYKE BECOMES INQUISITIVE

TEMPERAMENTALLY, Dr. John Thorndyke presented a peculiarity which, at the first glance, seemed to involve a contradiction. He was an eminently friendly man; courteous, kindly and even genial in his intercourse with his fellow-creatures. Nor was his suave, amicable manner in any way artificial or consciously assumed. To every man his attitude of mind was instinctively friendly, and if he did not suffer fools gladly, he could, on occasion, endure them with almost inexhaustible patience.

And yet, with all his pleasant exterior and his really kindly nature, he was at heart a confirmed solitary. Of all company, his own thoughts were to him the most acceptable. After all, his case was not singular. To every intellectual man, solitude is not only a necessity, it is the condition to which his mental qualities are subject; and the man who cannot endure his own sole society has usually excellent reasons for his objection to it.

Hence, when Thorndyke closed the massive outer door and connected the bell-push with the laboratory floor above, there might have been detected in his manner a certain restfulness. He had enjoyed Stalker's visit. Particularly had he enjoyed the "queer case", which was to him what a problem is to an ardent chess player. But still, that was only speculation, whereas with the aid of Harold's photographs he hoped to settle one or two doubtful points relating to the characters of footprints which had from time to time arisen in his mind, and thereby to extend his actual knowledge.

With a leisurely and thoughtful air he moved a few things on the table to make a clear space, took out from a cupboard a surveyor's boxwood scale, a pair of needle-pointed spring dividers, a set of paper-weights, a note-block, and a simple microscope (formed of a watchmaker's doublet mounted on three legs) which he used for examining documents. Then he laid the three sheets of the ordnance map in their proper sequence on the table, with the roll of photographs by their side, drew up a chair and sat down to his task.

He began by running his eye along the path traversed by the fugitive, which was plainly marked by a row of dots, each dot having above it a microscopic number. Dots and numbers had originally been marked with a sharp-pointed pencil, but they had subsequently been inked in with red ink and a fine-pointed pen. From the maps he turned his attention to the photographs, unraveling a length of about nine inches and fixing the strip with a paper-weight at each end. The strip itself was an inch wide, and each photograph was an inch and a half long, and every one of the little oblongs contained the image of a footprint which occupied almost its entire length and which measured—as Thorndyke ascertained by taking the dimensions with his dividers—one inch and three-eighths. Small as the photographs were, they were microscopically sharp in definition, having evidently been taken with a lens of very fine quality; and in the corner of each picture was a minute number in white, which stood out clearly against the rather dark background.

Sliding the little microscope over one of the prints, Thorndyke examined it with slightly amused interest. For a fugitive's footprint it was a frank absurdity, so strikingly conspicuous and characteristic was it. If Mr. Lewson had had his name printed large upon the soles of his shoes he could hardly have given more assistance to his pursuers. The impression was that of a rubber sole on which, near the toe, was a framed label containing the makers' name, J. Dell and Co. Behind this was a panel, occupied by a prancing horse, and the Kentish motto, "Invicta", beneath the panel, implied that this was the prancing horse of Kent. The circular rubber heel was less distinctive, though even this was a little unusual, for its central device was a five-pointed star, whereas most star-pattern heels present six points. But not only were all the details of the pattern distinctly visible; even the little accidental markings, due to wear and damage, could be plainly made out. For instance, a little ridge could be seen across the horse's neck, corresponding to a cut or split in the rubber sole, and a tiny speck on the heel, which seemed to represent a particle of gravel embedded in the rubber.

When he had made an exhaustive examination of the one photograph, he went back to numbers 1 and 2 which represented the footprints near the back gate of the bank, and which were not for his purpose part of the series. After a brief inspection of them, he placed one of the paper-weights on them, and, by means of another, exposed about eighteen inches of the strip. Next, he drew a vertical line down the middle of the note-block, dividing it into two parts, which he headed respectively "Right" and "Left". Then he began his comparative study with a careful examination of number 3, the first print photographed on the footprint.

Having finished with number 3, which was a right foot, he wrote down the number at the top of the "Right" column, in the middle of the space. Then he passed to number 5—the next right foot—and having examined it, wrote down its number. Next, he took, with the dividers, the distance between the dots marked 3 and 5 on the map, and, transferring the dividers to the boxwood scale, took off the distance in yards—forty-three yards—and wrote this down on the note-block opposite and at the left side of the number 5. From 5 he passed on to 7, 9, 11, 13, and so on, following the right foot along the strip until he had dealt with a couple of yards (the total length of the strip was a little over twenty-four feet), occasionally turning back to verify his comparisons, writing down the numbers in the middle of the column with the distances opposite to them on the left and jotting down in the space at the right a few brief notes embodying his observations. Then he returned to the beginning of the strip and dealt with the prints of the left foot in the same manner and for the same distance along the strip.

One would not have regarded it as a thrilling occupation. Indeed there was rather a suggestion of monotony in the endless recurrence of examination, comparison, and measurements of things which appeared to be merely mechanical repetitions of one another. Nor did the brief and scanty jottings in the "notes" column suggest that this tedious procedure
was yielding any great wealth of information. Nevertheless, Thorndyke continued to work at his task methodically, attentively, and without any symptoms of boredom, until he had dealt with nearly half of the strip. But at this point his manner underwent a sudden and remarkable change. Hitherto he had carried on his work with the placid air of one who is engaged on a mildly interesting piece of routine work. Now he sat up stiffly, gazing at the strip of photographs before him with a frown of perplexity, even of incredulity. With intense attention, he re-examined the last half-dozen prints that he had dealt with; then, taking a right foot as a starting-point, he followed the strip rapidly, taking no measurements and making no notes, until he reached the end, where he found a slip of paper pasted to the strip and bearing the note: "Footprints cease here. Track turned off to left into heather. Length of foot, 12 inches. Length of stride from heel to heel, 34 inches."

Having rapidly copied this note on to his block, Thorndyke resumed his examination with eager interest. Returning to the starting-point, he again examined a print of the left foot and then followed its successive prints to the final one at the end of the strip. Again he came back to the starting-point; but now, taking this as a centre, he began to move backwards and forwards, at first taking a dozen prints in each direction, then, by degrees, reducing the distance of his excursions until he came down to a single print of the right foot—a specially clear impression, marked with the number 93. This he again examined through the little microscope with the most intense scrutiny. Then, with a like concentrated attention, he examined first the preceding right-foot print, 91, and then the succeeding one, 95. Finally, he turned to the map to locate number 93, which he found near the middle of a wall—apparently the enclosing wall of a large garden or plantation—and exactly opposite a gate in that wall.

From this moment Thorndyke's interest in his original investigations seemed to become extinct. The little microscope, the scale, even the photographs themselves, were neglected and unnoticed, while he sat with his eyes fixed on the map—yet seeming to look through it rather than at it—evidently immersed in profound thought. For a long time he sat thus, immovable as a seated statue. At length he rose from his chair, and, mechanically filling his pipe, began slowly to pace up and down the room, and to any observer who knew him, had there been one, the intense gravity of his expression, the slight frown, the compressed lips, the downcast eyes, as well as the unlighted pipe that he grasped in his hand, would have testified that some problem of more than common intricacy was being turned over in his mind and its factors sorted out and collated.

He had been pacing the room for nearly half an hour when a key was softly inserted into the latch of the outer door. The door opened and closed quietly, and then a gentle tap on the knocker of the inner door heralded the entry of a small gentleman of somewhat clerical aspect and uncommon crinkliness of countenance, who greeted Thorndyke with a deprecating smile.

"I hope, sir," said he, "that I am not disturbing you, but I thought that I had better remind you that you have not had any supper."

"Dear me!" exclaimed Thorndyke. "What a memory you have, Polton. And to think that I, who am really the interested party, should have overlooked the fact. Well, what do you propose?"

Polton glanced at the table with a sympathetic eye. "You won't want your things disturbed, I expect, if you have got a job on hand. I had better put your supper in the little laboratory. It won't take more than five minutes."

"That will do admirably," said Thorndyke. "And, by the way, I think that adjourned inquest at Aylesbury is the day after to-morrow, isn't it?"

"Yes, sir, Thursday. I fixed the letter on the appointment board."

"Well, as there is nothing pressing on Friday, I think I will stay the night there and come back on Friday evening if nothing urgent turns up in the interval."

"Yes, sir. Will you want anything special in the research case?"

"I shall not take the research case," replied Thorndyke; "in fact, I don't know that I want anything excepting the one-inch ordnance map, unless I take that stick of yours."

Polton's face brightened. "I wish you would, sir," he said persuasively. "You have never tried it since I made it, and I am sure you will find it a most useful instrument."

"I am sure I shall", said Thorndyke; "and perhaps I might as well take the little telephoto camera, if you will have it charged."

"I will charge it to-night, sir, and overhaul the stick. And your supper will be ready in five minutes."

With this Polton disappeared as silently as he had come, leaving his principal to his meditations.

On the following Friday morning, at about half-past ten. Dr. John Thorndyke might have been seen—if there had been any one to see him, which there was not—seated in a first-class smoking-compartment in the Aylesbury to London train. But he was evidently not going to London, for, as the train slowed down on approaching Borley station, he pocketed the folded ordnance map which he had been studying, stood up and took his stick down from the rack.

Now this stick was the only blot on Thorndyke's appearance. Apart from it his "turn-out" was entirely satisfactory and appropriate to his country surroundings without being either rustic or sporting. But that stick, with a tweed suit and a soft hat, struck a note of deepest discord. With a frock-coat and a top-hat it might have passed, though even then it would have
called for a Falstaffian bearer. But as a country stick it really wouldn’t do at all.

In the first place it was offensively straight—as straight as a length of metal tube. It was of an uncomely thickness, a full inch in diameter. As to the material, it might, by an exceedingly bad judge, have been mistaken for ebony. In fact, it was, as to its surface, strongly reminiscent of optician’s black enamel. And the handle was no better. Of the same funereal hue and an unreasonable thickness, it had the stark mechanical regularity of an elbow-joint on a gas pipe, and, to make it worse, its end was finished by a sort of terminal cap. Moreover, on looking down the shaft of the stick, a close observer would have detected, about fifteen inches from the handle, a fine transverse crack, suggestive of a concealed joint. A sharp-eyed rural constable would have “spotted” it at a glance as a walking-stick gun; and he would have been wrong.

However, despite its aesthetic shortcomings, Thorndyke seemed to set some store by it, for he lifted it from the rack with evident care, and with the manner of lifting something heavier than an ordinary walking-stick; and when he stepped forth from the station, instead of holding it by its unlovely handle with its ferrule on the ground, he carried it "at the trail", grasping it by its middle.

On leaving the station precincts, Thorndyke set forth with the confident air of one who is on familiar ground, though, as a matter of fact, he had never been in the district before; but he had that power, which comes by practice, of memorizing a map that makes unvisited regions familiar and is apt to cause astonishment to the aboriginal inhabitants. Swinging along at an easy but rapid pace, he presently entered a quiet, semi-suburban road which he followed for a quarter of a mile, looking about him keenly, and identifying the features of the map as he went. At length he came to a kissing-gate which gave access to a footpath, and, turning into this, he strode away along the path, looking closely at its surface and once stopping and retracing his steps for a few yards to examine his own footprints.

A few hundred yards farther on he crossed another road, more definitely rural in character, and noted at the corner a pleasant-looking house of some age, standing back behind a well-kept garden, its front entrance sheltered by a wooden porch which was now almost hidden by a mass of climbing roses. The side wall of the garden abutted on the footpath and extended along it for a distance that suggested somewhat extensive grounds. At this point he reduced his pace to a slow walk, scrutinizing the ground—on which he could detect, even now, occasional fragmentary traces of the familiar footprints of Harold’s photographs—and noting how, since crossing the road, he had passed completely out of the last vestiges of the town into the open country.

He had traversed rather more than half the length of the wall when he came to a green-painted wooden gate, before which he halted for a few moments. There were, however, no features of interest to note beyond the facts that its loop handle was unprovided with a latch and that it was secured with a Yale lock. But as he stood looking at it with a deeply reflective air, he was aware of a sound proceeding from within—a pleasant sound, though curiously out of key with his own thoughts—the sound of some one whistling, very skilfully and melodiously, the old-fashioned air, "Alice, where art thou?"

He smiled grimly, keenly appreciative of the whimsical incongruity of these cheerful, innocent strains with the circumstances that had brought him thither; then he turned away and walked slowly to the end of the wall where it was joined by another, which enclosed the end of the grounds. Here he halted and looked along the path towards a wood which was visible in the distance; then, turning, he looked back along the way by which he had come. In neither direction was there any one in sight, and Thorndyke noted that he had not met a single person since he had passed through the kissing-gate. Apparently this path was quite extraordinarily unfrequented.

Having made this observation, Thorndyke stepped off the path and walked a few paces along the end wall—which abutted on a field—to a spot where an apple tree in the grounds rose above the summit. Here he stopped, and, having glanced up at the wall—which was nearly seven feet high—grasped the uncomely stick with both hands, one on either side of the concealed joint, and gave a sharp twist. Immediately the stick became divided into two parts, the lower of which—that bearing the ferrule—Thorndyke stood against the wall. It could now be seen that the upper part terminated in a blackened brass half-cylinder, the flat face of which was occupied by a little circular glass window, and when Thorndyke had unscrewed the cap from the end of the handle, the latter was seen to be a metal tube, within which was another little glass window—the eye-piece. In effect, Polton’s hideous walking-stick was a disguised periscope.

Taking up a position close to the wall, Thorndyke slowly raised the periscope until its end stood an inch or so above the top of the wall, with the little window looking into the enclosure. The eye-piece being now at a convenient level, he applied his eye to it, and immediately had the sensation of looking through a circular hole in the wall. Through this aperture (which was, of course, the aperture of the object-glass above him, reflected by a pair of prisms) he looked into a large garden, enclosed on all sides by the high wall and having apparently only two doors or gates, the one at the side, which he had already seen, and another which appeared to open into another garden nearer the house, and which, like the side gate, seemed to be fitted with a night-latch of the Yale type. On one side, partly concealed by a half-grown yew hedge, was a long, low building which, by the windows in its roof, appeared to be some kind of workshop; and by rotating the periscope it was possible to catch a glimpse of part of what seemed to be a summer-house in the corner opposite the workshop. Otherwise, excepting a narrow flower border and a few fruit trees ranged along the wall, the whole of the enclosure was occupied by a large lawn, the wide expanse of which was broken only by a sundial beside which, at the moment, a man was standing and on a man and sundial, Thorndyke, after his swift preliminary survey, concentrated his attention.

The stone pillar of the dial was obviously ancient. Equally obviously the stone base on which it stood was brand new. Moreover, the part of the lawn immediately surrounding the base was yellow and faded as if it had been recently raised and relaid. The manifest inference was that the dial had but lately been placed in its present position; and this inference was
supported by the occupation in which the man was engaged. On the stone base stood a Windsor chair, the seat of which bore one or two tools and a pair of spectacles. Thorndyke noted the spectacles with interest, observing that they had "curl sides" and were therefore habitually worn; and since they had been discarded while their owner consulted a book that he held, it seemed to follow that he must be near-sighted.

As Thorndyke watched, the man closed the book and laid it on the chair, when by its shape and size, its scarlet back and apple-green sides, it was easily recognizable as Whitaker's Almanack. Having laid down the book, the man drew out his watch, and, holding it in his hand, approached the pillar and grasped the gnomon of the dial; and now Thorndyke could see that the dial-plate had been unfixed from its bed, for it moved visibly as the gnomon was grasped. The nature of the operation was now quite clear. The man was re-setting the dial. He had taken out the Equation of Time from Whitaker and was now adjusting the dial-plate by means of his watch to show the correct Apparent Solar Time.

At this point—leaving the man standing beside the pillar, watch in hand—Thorndyke picked up the detached portion of the stick, and stepping along the wall, glanced up and down the path. So far as he could see—nearly a quarter of a mile in each direction—he had the path to himself; and, noting with some surprise and no little interest the remarkable paucity of wayfarers, he returned to his post and resumed his observations.

The man had now put away his watch and taken up a hammer and bradawl. Thorndyke noted the workmanlike character of the former—a rather heavy ball-pane hammer such as engineers use—and when the bradawl was inserted into one of the screw-holes of the dial-plate and driven home into the lead bed with a single tap, he observed the deftness with which the gentle, calculated blow was delivered with the rather ponderous tool. So, too, with the driving of the screw; it was done with the unmistakable ease and readiness of the skilled workman.

Having rapidly made these observations, Thorndyke drew from his hip pocket the little camera and opened it, setting the focus by the scale to the assumed distance—about sixty feet—fixing the wire release and setting the shutter to half a second—the shortest exposure that was advisable with a telephoto lens. Another peep through the periscope showed the man in the act of again inserting the bradawl, and, incidentally, presenting a well-lighted right profile; whereupon Thorndyke raised the camera and placed it on the top of the wall with the wire release hanging down and the lens pointed, as well as he could judge, at the sun-dial. Then, as the man poised the hammer preparatory to striking, he pressed the button of the release and immediately took down the camera and changed the film.

Once more he went to the corner of the wall and looked up and down the path. This time a man was visible—apparently a labourer—coming from the direction of the town. But he was a long distance away and was advancing at a pace so leisurely that Thorndyke decided to complete his business, if possible, before he should arrive. A glance through the periscope showed the man in the garden driving another screw. When he had driven it home, he stepped round the pillar to deal with the screws on the other side. As he inserted the bradawl and balanced the hammer, presenting now his left profile, Thorndyke lifted the camera to the top of the wall, made the exposure, took down the camera, and having changed the film, closed it and put it in his pocket. Then he joined up the two parts of the stick, fixed the cap on the eye-piece and came out on to the path, turning towards the town to meet the labourer. But the latter had now disappeared, having apparently turned into the road on which the house fronted. Having the path once more to himself, Thorndyke walked along it to the gate, where he paused and rapped on it smartly with his knuckles.

After a short interval, during which he repeated the summons, the gate was opened a few inches and the man whom he had seen within looked out with an air of slightly irritable enquiry.

"I must apologize for disturbing you", Thorndyke said with disarming suavity, "but I heard some one within, and there was no one about from whom I could make my enquiry."

"You are not disturbing me in the least", the other replied, not less suavely. "I shall be most happy to give you any information that I can. What was the enquiry that you wished to make?"

As he asked the question, the stranger stepped out on the path, drawing the gate to after him, and looked inquisitively at Thorndyke.

"I wanted to know", the latter replied, "whether this footpath leads to a wood—Potter's Wood, I think it is called. You see, I am a stranger to this neighbourhood."

On this the man seemed to look at him with heightened interest as he replied:

"Yes, it leads through the wood about half a mile farther on."

"And where does it lead to eventually?"

"It crosses a patch of heath and joins a by-road that runs from the town to the main London road. Was that where you wanted to go?"

"No", replied Thorndyke. "It is the path itself that I am concerned with. The fact is, I am making a sort of informal inspection in connection with the case of a man who disappeared a short time ago—the manager of a local branch of Perkins's Bank. I understand that he was last seen walking along this path."

"Ah", said the other, "I remember the affair. And is he still missing?"

"Yes. He has never been seen or heard of since he started along this path. What is the wood like? Is it a place in which a man might lose himself?"
The other shook his head. "No, it is only a small wood. A sound and sober man could not get lost in it. Of course, if a man were taken ill and strayed into the wood, he might die and lie hidden for months. Has the wood been searched?"

"I really can't say. It ought to have been."

"I thought", said the stranger, "that you might, perhaps, be connected with the police."

"No", replied Thorndyke. "I am a lawyer and I look after some of the affairs of the bank. One of the directors mentioned this disappearance to me a few days ago, and as I happened to be in the neighbourhood to-day, I thought I would come and take a look round. Perhaps you could show me where we are on my map. It is a little confusing to a stranger."

He drew out the folded map and handed it to his new acquaintance, who took it and pored over it as if he found it difficult to decipher. As he did so, Thorndyke took the opportunity to look him over with the most searching scrutiny; his face, his hair, his spectacles, his hands and his feet; and when he had inspected the left side of the face which was the one presented to him—he crossed as if to take over the man's right shoulder and examined the face from that side.

"This dotted line seems to be the footpath", said the stranger, tracing it with the point of a pencil. "This black dot must be my house, and here is the wood with the dotted line running through it. I think that is quite clear."

"Perfectly clear, thank you", said Thorndyke, as the other handed him back the map. "I am very greatly obliged to you and I must again apologize for having disturbed you."

"Not at all", the stranger returned genially; "and I hope your inspection may be successful."

Thorndyke thanked him again, and with mutual bows they separated, the one retiring into his domain, the other setting forth in the direction of the wood.

For some minutes Thorndyke continued to walk at a rapid pace along the path. Only when a sharp turn carried him out of sight of the walled garden did he halt to jot down in his note-book a brief summary of his observations while they were fresh in his mind. Not that the notes were really necessary, for, even as he had made those observations, the significance of the facts that they supplied became apparent. Now, as he walked, he turned them over again and again.

What had he observed? Nothing very sensational, to be sure. He had seen a man who had recently set up in his garden a pillar dial on a broad stone base. The dial was old, but the base was new and seemed to have been specially constructed for its present purpose. The garden in which it had been set up was completely enclosed, was extremely secluded, was remote from its own or any other house, and was very thoroughly secured against any possible intrusion by two locked gates. The man himself was a skilled workman, or at least a very handy man; ingenious and resourceful, too, for he could time a sundial, a thing that not every handy man could do. Then he appeared to have some kind of workshop of a size suggesting good accommodation and facilities for work, and this workshop was in a secluded situation, very secure from observation. But in these facts there would seem to be nothing remarkable; only they were in singular harmony with certain other facts—very remarkable facts indeed—that Thorndyke had gleaned from an examination of Harold's absurd photographs.

And there was the man himself, and especially his spectacles. When Thorndyke had seen those spectacles lying on the chair while their owner drove in the screws, looked at his watch, and scrutinized the shadow on the dial, he had naturally assumed that the man was near-sighted; that he had taken off his "distance" glasses to get the advantage of his near sight for the near work. But when the man appeared at the gate, it was immediately evident that he was not near-sighted. The spectacles were convex bi-focal glasses, with an upper half of nearly plain glass and a lower segment distinctly convex, suited for long sight or "old sight". A near-sighted man could not have seen through them. But neither did their owner seem to need them, since he had taken them off just when they should have been most useful—for near work. Moreover, when Thorndyke had presented the map, the man had looked at it, not through the lower "reading" segment, but through the weak, upper, "distance" segment. In short, the man did not need those spectacles at all. So far from being a convenience, they were a positive inconvenience. Then, why did he wear them? Why had he put them on to come to the gate? There could be only one answer. People who wear useless and inconvenient spectacles do so in order to alter their appearance; as a species of disguise, in fact. Then it seemed as if this man had some reason for wishing to conceal his identity. But what could that reason be?

As to his appearance, he was a decidedly good-looking man, with an alert, intelligent face that was in harmony with his speech and bearing. His mouth and chin were concealed by a moustache and a short beard, but his nose was rather handsome and very striking, for it was of that rare type which is seen in the classical Greek sculptures. His ears were both well-shaped, but one of them—the right—was somewhat disfigured by a small "port-wine mark", which stained the lobule a deep purple. But it was quite small and really inconspicuous.

This was the sum of Thorndyke's observations, to which may be added that the man appeared to be prematurely grey and that his face, despite its cheerful geniality, had that indefinable character that may be detected in the faces of men who have passed through long periods of stress and mental suffering. Only one datum remained unascertained, and Thorndyke added it to his collection when, having traversed the wood and the heath, he returned to the town by way of the by-road. Encountering a postman on his round, he stopped him and enquired:

"I wonder if you can tell me who is living at 'The Chestnuts' now? You know the house I mean. It stands at the corner—"

"Oh, I know 'The Chestnuts,' sir. Colonel Barnett used to live there. But he went away nigh upon two years ago, and, after it had been empty for a month or two, it was bought by the gentleman who lives there now, Mr. Pottermack."
"That is a queer name”, said Thorndyke. "How does he spell it?"

"P.o.t.t.e.r.m.a.c.k", the postman replied. "Marcus Pottermack, Esq. It is a queer name, sir. I've never met with it before. But he is a very pleasant gentleman, all the same."

Thorndyke thanked the postman for his information, on which he pondered as he made his way to the station. It was a very queer name. In fact, there was about it something rather artificial; something that was not entirely out of character with the unwanted spectacles.
CHAPTER VII. — THE CRIMINAL RECORDS

ON each of the two men who parted at the gate the brief interview produced its appropriate effects; in each it generated a certain train of thought which, later, manifested itself in certain actions. In Mr. Pottermack, as he softly opened the gate to listen to the retreating footsteps, once even venturing to peep out at the tall figure that was striding away up the path, the encounter was productive of a dim uneasiness, a slight disturbance of the sense of security that had been growing on him since the night of the tragedy. For the first few days thereafter he had been on wires. All seemed to be going well, but he was constantly haunted by that ever-recurring question, "Was there anything vital that he had overlooked?"

The mysterious photographer, too, had been a disturbing element, occasioning anxious speculations on the motive or purpose of his inexplicable proceedings and on the possibility of something being brought to light by the photographs that was beyond the scope of human vision. But as the days had passed with no whisper of suspicion, as the local excitement died down and the incident faded into oblivion, his fears subsided, and by degrees he settled down into a feeling of comfortable security.

And after all, why not? In the first few days his own secret knowledge had prevented him from seeing the affair in its true perspective. But now, looking at it calmly with the eyes of those who had not that knowledge, what did Lewson’s disappearance amount to? It was a matter of no importance at all. A disreputable rascal had absconded with a hundred pounds that did not belong to him. He had disappeared and no one knew whither he had gone. Nor did any one particularly care. Doubtless the police would keep a look-out for him; but he was only a minor delinquent, and they would assuredly make no extraordinary efforts to trace him.

So Mr. Pottermack argued, and quite justly; and thus arguing came by degrees to the comfortable conclusion that the incident was closed and that he might now take up again the thread of his peaceful life, secure alike from the menace of the law and the abiding fear of impoverishment and treachery.

It was this new and pleasant feeling of security that had been disturbed by his encounter with the strange lawyer. Not that he was seriously alarmed. The man seemed harmless enough. He was not, apparently, making any real investigations but just a casual inspection of the neighbourhood, prompted, as it appeared, by a not very lively curiosity. And as a tracker he seemed to be of no account, since he could not even find his position on a one-inch map.

But for all that, the incident was slightly disquieting. Pottermack had assumed that the Lewson affair was closed. But now it seemed that it was not closed. And it was a curious coincidence that this man should have knocked at his gate, should have selected him for these enquiries. No doubt it was but chance; but still, there was the coincidence. Again, there was the man himself. He had seemed foolish about the map. But he did not look at all like a foolish man. On the contrary, his whole aspect and bearing had a suggestion of power, of acute intellect and quiet strength of character. As Pottermack recalled his appearance and manner he found himself asking again and again: Was there anything behind this seemingly chance encounter? Had this lawyer seen those photographs, and if so, had he found in them anything more than met the eye? Could he have had any special reason for knocking at this particular gate? And what on earth could he be doing with that walking-stick gun?

Reflections such as these pervaded Mr. Pottermack’s consciousness as he went about his various occupations. They did not seriously disturb his peace of mind, but still they did create a certain degree of unrest, and this presently revived in his mind certain plans which he had considered and rejected; plans for further establishing his security by shifting the field of possible inquiry yet farther from his own neighbourhood.

On Thorndyke the effects of the meeting were quite different. He had come doubting if a certain surmise that he had formed could possibly be correct. He had gone away with his doubts dispelled and his surmise converted into definite belief. The only unsolved question that remained in his mind was, "Who was Marcus Pottermack?" The answer that suggested itself was improbable in the extreme. But it was the only one that he could produce, and if it were wrong he was at the end of his unassisted resources.

The first necessity, therefore, was to eliminate the improbable—or else to confirm it. Then he would know where he stood and could consider what action he would take. Accordingly he began by working up the scanty material that he had collected. The photographs, when developed and enlarged by Polton, yielded two very fair portraits of Mr. Pottermack showing clearly the right and left profiles respectively; and while Polton was dealing with these, his principal made a systematic, but not very hopeful, inspection of the map in search of possible finger-prints. He had made a mental note of the way in which Pottermack had held the map, and even of the spots which his finger-tips had touched, and on these he now began cautiously to operate with two fine powders, a black and a white, applying each to its appropriate background.

The results were poor enough, but yet they were better than he had expected. Pottermack had held the map in his left hand, the better to manipulate the pencil with which he pointed, and his thumb had been planted on a green patch which represented a wood. Here the white powder settled and showed a print which, poor as it was, would present no difficulties to the experts and which would be more distinct in a photograph, as the background would then appear darker. The prints of the finger-tips which the black powder brought out on the white background were more imperfect and were further confused by the black lettering. Still, Thorndyke had them all carefully photographed and enlarged to twice the natural size, and, having blocked out on the negative the surrounding lettering (to avoid giving any information that might be better withheld), had prints made and mounted on card.
With these in his letter-case and the two portraits in his pocket, he set forth one morning for New Scotland Yard, proposing to seek the assistance of his old friend, Mr. Superintendent Miller, or, if he should not be available, that of the officer in charge of criminal records. However, it happened fortunately that the Superintendent was in his office, and thither Thorndyke, having sent in his card, was presently conducted.

"Well, doctor", said Miller, shaking hands heartily, "here you are, gravelled as usual. Now what sort of mess do you want us to help you out of?"

Thorndyke produced his letter-case, and, extracting the photographs, handed them to the Superintendent.

"Here", he said, "are three finger-prints; apparently the thumb and first two fingers of the left hand."

"Ha", said Miller, inspecting the three photographs critically. "Why 'apparently'?"

"I mean", explained Thorndyke, "that that was what I inferred from their position on the original document."

"Which seems to have been a map", remarked Miller, with a faint grin. "Well, I expect you know. Shall I take it that they are the thumb and index and middle finger of the left hand?"

"I think you may", said Thorndyke.

"I think I may", agreed Miller; "and now the question is: What about it? I suppose you want us to tell you whose finger-prints they are; and you want to gammon us that you don't know already. And I suppose—as I see you have been faking the negative—that you don't want to give us any information?"

"In effect", replied Thorndyke, "you have, with your usual acuteness, diagnosed the position exactly. I don't much want to give any details, but I will tell you this much. If my suspicions are correct, these are the finger-prints of a man who has been dead some years."

"Dead!" exclaimed Miller. "Good Lord, doctor, what a vindictive man you are! But you don't suppose that we follow the criminal class into the next world, do you?"

"I have been assuming that you don't destroy records. If you do, you are unlike any government officials that I have ever met. But I hope I was right."

"In the main, you were. We don't keep the whole set of documents of a dead man, but we have a set of skeleton files on which the personal documents—the finger-prints, photographs and description—are preserved. So I expect we shall be able to tell you what you want to know."

"I am sorry", said Thorndyke, "that they are such wretchedly poor prints. You don't think that they are too imperfect to identify, I hope."

Miller inspected the photographs afresh. "I don't see much amiss with them", said he. "You can't expect a crook to go about with a roller and inking-plate in his pocket so as to give you nice sharp prints. These are better than a good many that our people have to work from. And besides, there are three digits from one hand. That gives you part of the formula straight away. No, the experts won't make any trouble about these. But supposing these prints are not on the file?"

"Then we shall take it that I suspected the wrong man."

"Quite so. But, if I am not mistaken, your concern is to prove whose finger-prints they are in order that you can say whose finger-prints they are not. Now, supposing that we don't find them on the files of the dead men, would it help you if we tried the current files—the records of the crooks who are still in business? Or would you rather not?"

"If it would not be giving you too much trouble", said Thorndyke, "I should be very much obliged if you would."

"No trouble at all", said Miller, adding with a sly smile: "only it occurred to me that it might be embarrassing to you if we found your respected client's finger-prints on the live register".

"That would be a highly interesting development," said Thorndyke, "though I don't think it a likely one. But it is just as well to exhaust the possibilities."

"Quite", agreed Miller; and thereupon he wrote the brief particulars on a slip of paper which he put into an envelope with the photographs, and, having rung a bell, handed the envelope to the messenger who appeared in response to the summons.

"I don't suppose we shall have to keep you waiting very long", said the Superintendent. "They have an extraordinarily ingenious system of filing. Out of all the thousands of finger-prints that they have, they can pounce on the one that is wanted in the course of a few minutes. It seems incredible, and yet it is essentially simple—just a matter of classification and ringing the changes on different combinations of types."

"You are speaking of completely legible prints?" suggested Thorndyke.

"Yes, the sort of prints that we get sent in from local prisons for identification of a man who has been arrested under a false name. Of course, when we get a single imperfect print found by the police at a place where a crime has been committed, a bit more time has to be spent. Then we have not only got to place the print, but we've got to make mighty sure that it is the right one, because an arrest and a prosecution hangs on it. You don't want to arrest a man and then, when you come to take his finger-prints properly, find that they are the wrong ones. So, in the case of an imperfect print, you
have got to do some careful ridge-tracing and counting and systematic checking of individual ridge-characters, such as bifurcations and islands. But, even so, they don’t take so very long over it. The practised eye picks out at a glance details that an unpractised eye can hardly recognize even when they are pointed out.”

The Superintendent was proceeding to dilate, with professional enthusiasm, on the wonders of finger-print technique and the efficiency of the Department when his eulogies were confirmed by the entrance of an officer carrying a sheaf of papers and Thorndyke's photographs, which he delivered into Miller's hands.

"Well, doctor", said the Superintendent, after a brief glance at the documents, "here is your information. Jeffrey Brandon is the name of the late lamented. Will that do for you?"

"Yes", replied Thorndyke, "that is the name I expected to hear."

"Good", said Miller. "I see they have kept the whole of his papers for some reason. I will just glance through them while you are doing Thomas Didymus with the finger-prints. But it is quite obvious, if you compare your photographs with the rolled impressions, that the ridge-patterns are identical."

He handed Thorndyke the finger-print sheet, to which were attached the photograph and personal description, and sat down at the table to look over the other documents, while Thorndyke walked over to the window to get a better light. But he did not concern himself with the finger-prints beyond a very brief inspection. It was the photograph that interested him. It showed, on the same print, a right profile and a full face; of which he concentrated his attention on the former. A rather remarkable profile it was, strikingly handsome and curiously classical in outline, rather recalling the head of Antinous in the British Museum. Thorndyke examined it minutely, and then—his back being turned to Miller—he drew from his waistcoat pocket the right profile of Mr. Pottermack and placed it beside the prison photograph.

A single glance made it clear that the two photographs represented the same face. Though one showed a clean-shaven young man with the full lips and strong, rounded chin completely revealed, while the other was a portrait of a bearded, spectacled, middle-aged man, yet they were unmistakably the same. The remarkable nose and brow and the shapely ear were identical in the two photographs; and in both, the lobe of the ear was marked at its tip by a dark spot.

From the photograph he turned to the description. Not that it was necessary to seek further proof; and he did, in fact, merely glance through the particulars. But that rapid glance gathered fresh confirmation. "Height 5 feet 6 inches, hair chestnut, eyes darkish grey, small port-wine mark on lobe of right ear", etc. All the details of Jeffrey Brandon's personal characteristics applied perfectly to Mr. Marcus Pottermack.

"I don't quite see", said Miller, as he took the papers from Thorndyke and laid them on the others, "why they kept all these documents. The conviction doesn't look to me very satisfactory—I don't like these cases where the prosecution has all its eggs in one basket, with the possible chance that they may be bad eggs; and it was a devil of a sentence for a first offence. But as the poor beggar is dead, and no reconsideration of either the conviction or the sentence is possible, there doesn't seem much object in preserving the records. Still, there may have been some reason at the time."

In his own mind, Thorndyke was of opinion that there might have been a very good reason. But he did not communicate this opinion. He had obtained the information that he had sought and was not at all desirous of troubling still waters; and his experience having taught him that Mr. Superintendent Miller was an exceedingly "noticing" gentleman, he thought it best to avoid further discussion and take his departure, after having expressed his appreciation of the assistance that he had received.

Nevertheless, for some time after he had gone, the Superintendent remained wrapped in profound thought; and that his cogitations were in some way concerned with the departed visitor would have been suggested by the circumstance that he sauntered to the window and looked down with a speculative eye on that visitor as he strode across the courtyard towards the Whitehall gate.

Meanwhile Thorndyke's mind was no less busy. As he wended his way Templewards he reviewed the situation in all its bearings. The wildly improbable had turned out to be true. He had made a prodigiously long shot and he had hit the mark: which was gratifying inasmuch as it justified a previous rather hypothetical train of reasoning. Marcus Pottermack, Esq., was undoubtedly the late Jeffrey Brandon. There was now no question about that. The only question that remained was what was to be done in the matter; and that question would have been easier to decide if he had been in possession of more facts. He had heard Mr. Stalker's opinion of the conviction, based on intimate knowledge of the circumstances, and he had heard that of the Superintendent, based on an immense experience of prosecutions. He was inclined to agree with them both; and the more so inasmuch as he had certain knowledge which they had not.

In the end, he decided to take no action at present, but to keep a watchful eye for further developments.
CHAPTER VIII. — MR. POTTERMACK SEEKS ADVENTURE

IN the last chapter it was stated that one of the effects of Thorndyke's appearance at the side gate of "The Chestnuts", Borley, was to revive in the mind of its tenant certain projects which had been considered and rejected. But perhaps the word "rejected" overstates the case. For the continued existence in a locked drawer in Mr. Pottermack's workshop of a coat which "had once been James Lewson's and a bundle of twenty five-pound notes implied a purpose which had been abandoned only conditionally and subject to possible reconsideration.

Again and again, as the destructor which stood in the corner beyond the tool-shed smoked and flared as he fed it with combustible rubbish, had he been on the point of flinging into it the coat and the banknotes and thereby reducing to unrecognizable ash the last visible traces of the tragedy. And every time his hand had been stayed by the thought that possibly, in some circumstances as yet unforeseen, these mementoes of that night of horror might yet be made to play a useful part. So, not without many a twinge of uneasiness, he had let these incriminating objects lie hidden in the locked drawer. And now, as it seemed to him, the circumstances had arisen in which some of them, at least, might be turned to account.

What were those circumstances? Simply the state of mind of the strange lawyer. To the people of Borley, including the police, Lewson was a man who had absconded and vanished. His tracks had shown him striking out across country towards the London road. Those tracks, it is true, broke off short on the heath and had not reappeared elsewhere, but no one doubted that he had gone clear away from the vicinity of Borley and was now in hiding at a safe distance from his old haunts. The natives of the district had never given Mr. Pottermack a moment's anxiety. But with this lawyer the case was different. The disturbing thing about him was that his curiosity, tepid as it was, concerned itself, not with the man who had vanished but with the locality from which he disappeared. But curiosity of that kind, Mr. Pottermack felt, was a thing that was not to be encouraged. On the contrary, it had better be diverted into a more wholesome channel. In short, the time had come when it would be desirable that James Lewson should make his appearance, if only by proxy, in some district as far removed as possible from the neighbourhood of "The Chestnuts", Borley.

So it came about that Mr. Pottermack prepared to set forth along that perilous track beaten smooth by the feet of those who do not know when to let well alone.

For some days after having come to his decision in general terms he was at a loss for a detailed plan. Somehow, the stolen notes had got to be put into circulation. But not by him. The numbers of those notes were known, and, as soon as they began to circulate, some, at least, of them would be identified and would be rigorously traced. The problem was how to get rid of them in a plausible manner without appearing in the transaction; and for some time he could think of no better plan than that of simply dropping them in a quiet London street, a plan which he summarily rejected as not meeting the necessities of the case. The fruitful suggestion eventually came from a newsboy who was roaring "Egbert Bruce's Finals!" outside the station. In an instant, Mr. Pottermack realized that here was the perfect plan, and having purchased a paper, took it home to extract the details on which he proposed to base his strategic scheme.

The "finals" related to a somewhat unselect race-meeting which was to take place in a couple of days' time at Ilingham in Surrey, a place conveniently accessible from Borley and yet remote enough to render it unlikely that he would be seen there by any of his fellow-townsmen. Not that his presence there would be in any way suspicious or incriminating, but, still, the less people knew about his movements the better.

On the appointed day he set forth betimes, neatly but suitably dressed and all agog for the adventure, tame though it promised to be if it worked according to plan. To Mrs. Gadby he had explained—quite truthfully—that he was going to London; and if she had wanted confirmation of the statement, it could have been supplied by sundry natives of the town with whom he exchanged greetings on the platform as he waited for the London train.

But despite his geniality, he made a point of selecting an empty first-class compartment and shutting himself in. He had no hankering for human companionship. For, beneath the exhilaration engendered by this little adventure was an appreciable tinge of nervousness. No foreseeable contingency threatened his safety; but it is an undeniable fact that a man who carries, buttoned up in his inside breast pocket, twenty stolen banknotes, of which the numbers are known to the police, and of his possession of which he could give no credible account, is not without some reason for nervousness. And that was Mr. Pottermack's position. Just before starting, he had disinterred the whole bundle of those fatal notes and stuffed them into a compartment of the letter-case which he usually carried in his breast pocket. He had also hunted up another letter-case, aged, outworn and shabby, into which he had put a half-dozen ten-shilling notes for the day's expenses and stowed it in the outside hip pocket of his jacket.

As soon as the train had fairly started, he proceeded to make certain rearrangements related to his plan of campaign. Taking out the two letter-wallets—which we may distinguish as the inner and the outer—he laid them on the seat beside him. From the inner wallet he took out five of the stolen notes and placed them loosely in a compartment of the other wallet with their ends projecting so that they were plainly visible when it was open; and from the outer wallet he transferred four of the ten-shilling notes to the inner (he had paid for his ticket in silver). Then he returned the two wallets to their respective pockets and buttoned up his coat.

From Marylebone Station he walked to Baker Street, where he took a train for Waterloo and arrived to find the great station filled with a seething crowd of racegoers. Not, on the whole, a prepossessing crowd, though all sorts and conditions
of men were represented. But Mr. Pottermack was not hypercritical. At the over-smart, horsey persons, the raffish sporting men with race-glasses slung over their shoulders, the men of mystery with handbags or leather satchels, he glanced with benevolent interest. They had their uses in the economy of nature—in fact, he hoped to make use of some of them himself. So tolerant, indeed, was he that he even greeted with a kindly smile the notices pasted up urging passengers to beware of pickpockets. For in that respect his condition was unique. In spite of the wallet in his outside pocket, he enjoyed complete immunity; and as he joined the queue at the booking-office window, he reflected with grim amusement that, of all that throng, he was probably the only person who had come expressly to have his pocket picked.

As he approached the window he drew the wallet from his outside pocket, and, opening it, inspected its interior with an air of indecision, took out one of the banknotes, put it back, and, finally dipping into the other compartment, fished out a ten-shilling note. Holding this in one hand and the open wallet in the other, he at last came opposite the window, where he purchased his ticket and moved on to make way for a large, red-faced man who seemed to be in a hurry. As he walked on slowly towards the barrier, pocketing the wallet as he went, the crowd surged impatiently past him; but watching that crowd as it swept on ahead, he could see no sign of the red-faced man. That gentleman's hurry seemed suddenly to have evaporated, and it was only when Pottermack was entering his carriage and turned to look back that he observed his roseate friend immediately behind him. Instantly he entered the nearly full compartment, and as he took his seat he was careful to leave a vacant place on his right hand; and when the red-faced man, closely following him, plumped down into the vacant space and at once began to exercise his elbows, he smiled inwardly with the satisfaction of the fortunate angler who "sees his quill or cork down sink". In short, he felt a comfortable certainty that he had "got a bite."

It was now a matter of deep regret to him that he had neglected to provide himself at the bookstall with something to read. A newspaper would have been so helpful to his friend on the right. However, the deficiency was made up to a practicable extent by a couple of men who faced each other from the two corners to his left, and who, having spread a small rug across their joint knees, were good enough to give a demonstration for the benefit of the company at large of the immemorial three-card trick. Towards them Pottermack craned with an expression of eager interest that aroused in them an unjustified optimism. With intense concentration the operator continued over and over again to perform dummy turns, and the professional "mug", who sat opposite to Pottermack, continued with blatant perversity to spot the obviously wrong card every time, and pay up his losses with groans of surprise, while the fourth confederate, on Pottermack's left, nudged him from time to time and solicited in a whisper his opinion as to which was really the right card. It is needless to say that his opinion turned out invariably to be correct, but still he resisted the whispered entreaties of his neighbour to try his luck "seeing that he was such a duffer at spotting 'em". Under other circumstances he would have invested the ten-shilling note for the sake of publicity. As things were, he did not dare to touch the wallet, or even put his hand to the pocket wherein it reposed. Premature discovery would have been fatal.

As the train sped on and consumed the miles of the short journey, the operator's invitations to Pottermack to try his luck became more urgent and less polite; until at length, as the destination drew near, they degenerated into mere obscenity and epithets of contempt. At length the train slowed down at the platform. Ever one stood up and all together tried to squeeze through the narrow doorway, Pottermack himself emerging with unexpected velocity, propelled by a vigorous shove. At the same moment his hat was lightly flicked off his head and fell among the feet of the crowd. He would have stooped to recover it, but the necessity was forestalled by an expert kick which sent it soaring aloft; and hardly had it descended when it rose again and yet again until, having taken its erratic flight over the fence, it came at last to rest in the station-master's garden. By the time it had been retrieved with the aid of the sympathetic station-master, the last of the passengers had filed through the barrier and Pottermack brought up the extreme rear like a belated straggler.

As soon as he had had time to recover from these agitating experiences his thoughts flew to the wallet and he thrust his hand into his outside pocket. To his unspeakable surprise, the wallet was still there. As he made the discovery he was aware of a pang of disappointment, even of a sense of injury. He had put his trust in the red-faced man, and behold! that rubicund impostor had betrayed him. It looked as if this plan of his was not so easy as it had appeared.

But when he came to the turnstile of the enclosure and drew out the wallet to extract the ten-shilling note—and incidentally to display its other contents—he realized that he had done the red-faced man an injustice. The ten-shilling note, indeed, was there, tucked away at the bottom of its compartment, but otherwise the wallet was empty. Pottermack could hardly believe his eyes. For a few moments he stood staring at it in astonishment until an impatient poke in the back and an imperative command to "pass along, please", recalled him to the present proceedings, when he swept up and pocketed his change and strode away into the enclosure, meditating respectfully on the skill and tact of his red-faced acquaintance and wishing that he had made the discovery sooner. For, now, the wallet would need to be recharged for the benefit of the next artist. This he could have done easily in the empty station, but in the crowd which surrounded him the matter presented difficulties. He could not do it unobserved, and it would appear a somewhat odd proceeding—especially to the eye of a plain-clothes policeman. There must be a good number of those useful officials in the crowd, and it was of vital importance that he should not attract the attention of any of them.

He looked round in some bewilderment, seeking a secluded spot in which he could refill the outer wallet unnoticed. A vain quest! Every part of the enclosure, excepting the actual course, was filled with a seething multitude, varying in density but all-pervading. Here and there a closely packed mass indicated some juggler, mountebank, thimble artist, or card expert, and some distance away a Punch and Judy show rose above the heads of the crowd, the sound of its drum and Pan's pipes and the unmistakable voice of the hero penetrating the general hubbub. Towards this exhibition Pottermack was directing his course when shouts of laughter proceeding from the interior of a small but dense crowd suggested that
something amusing was happening there; whereupon Pottermack, renouncing the delights of Punch and Judy, began cautiously to elbow his way towards the centre of attraction.

At this moment a bell rang in the distance, and instantly the whole crowd was in motion, surging towards the course. And then began a most singular hurly-burly in Pottermack's immediate neighbourhood. An unseen foot trod heavily on his toes, and at the same moment he received a violent shove that sent him staggering to the right against a seedy-looking person who thumped him in the ribs and sent him reeling back to the left. Before he could recover his balance some one butted him in the back with such violence that he flew forward and impinged heavily on a small man in a straw hat—very much in it, in fact, for it had been banged down right over his eyes—who was beginning to protest angrily when some unseen force from behind propelled him towards Pottermack and another violent collision occurred. Thereafter Pottermack had but a confused consciousness of being pushed, pulled, thumped, pinched, and generally hustled until his head swam. And then, quite suddenly, the crowd streamed away towards the course and Pottermack was left alone with the straw-hatted man, who stood a few yards away, struggling to extract himself from his hat and at the same time feverishly searching his pockets. By the well-known process of suggestion, this latter action communicated itself to Mr. Pottermack, who proceeded to make a hasty survey of his own pockets, which resulted in the discovery that, though the inside wallet, securely buttoned in, was still intact, the outside, empty one had this time disappeared, and most of his small change with it.

Strange are the inconsistencies of the human mind. But a little while ago he had been willing to make a free gift of that wallet to his red-faced fellow-traveller. Now that it was gone he was quite appreciably annoyed. He had planned to revalue it with a fresh consignment to be planted in a desirable quarter, and its loss left him with the necessity of making some other plausible arrangements, and at the moment he could not think of any. To put the notes loose in his pocket seemed to be but inviting failure, for, to the sense of touch from without, the pocket would appear to be empty.

As he was thus cogitating, he caught the eye of the straw-hatted gentleman fixed upon him with unmistakable and undissembled suspicion. This was unpleasant, but one must make allowances. The man was, no doubt, rather upset. With a genial smile, Mr. Pottermack approached the stranger and expressed the rather optimistic hope that he had not suffered any loss; but the only reply that his enquiry elicited was an inarticulate grunt.

"They have been through my pockets", said Mr. Pottermack cheerfully, "but I am glad to say that they took nothing of any value."

"Ha", said the straw-hatted gentleman.

"Yes", pursued Pottermack, "they must have found me rather disappointing."

"Oh", said the other in a tone of sour indifference.

"Yes", said Pottermack, "all they got from me was an empty letter-case and a little loose silver."

"Ah", said the straw-hatted man.

"I hope", Pottermack repeated, beginning slightly to lose patience, "that you have not lost anything of considerable value."

For a moment or two the other made no reply. At length, fixing a baleful eye on Pottermack, he answered with significant emphasis: "If you want to know what they took, you’d better ask them"; and with this he turned away.

Pottermack also turned away—in the opposite direction, and some inward voice whispered to him that it were well to evacuate the neighbourhood of the man in the straw hat.

He strolled away, gradually increasing his pace, until he reached the outskirts of the crowd that had gathered at the margin of the course. By a sound of cheering he judged that some ridiculous horses were careering along somewhere beyond the range of his vision. But they were of no interest to him. They did, however, furnish him with a pretext for diving into the crowd and struggling towards the source of the noise, and this he did, regardless of the unseemly comments that he provoked and the thumps and prods that he received in his progress. When, as it seemed, he had become immovably embedded, he drew a deep breath and turned to look back. For a few blissful moments he believed that he had affected a masterly retreat and escaped finally from his suspicious fellow-victim; but suddenly there emerged into view a too-familiar battered straw hat, moving slowly through the resisting multitude, and moving in a bee-line in his direction.

Then it was that Mr. Pottermack became seized with sudden panic. And no wonder. His previous experiences of the law had taught him that mere innocence is of no avail; and now, simply to be charged involved the risk of recognition and inevitably return to a convict prison. But apart from that, his position was one of extreme peril. On his person at this very moment were fifteen stolen notes of which he could give no account, but which connected him with that thing that reposed under the sun-dial. At the best, those notes might fairly send him to penal servitude; at the worst, to the gallows.

It is therefore no matter for surprise that the sight of that ominous straw hat sent a sudden chill down his spine. But Mr. Pottermack was no coward. Unseen as the danger was, he kept his nerve and made no outward sign of the terror that was clutching at his heart. Calmly he continued to work his way through the crowd, glancing back now and again to note his distance from that relentless hat, and ever looking for a chance to get rid of those fatal notes. For, if once he could get clear of those, he would be ready to face with courage and composure the lesser risk. But no chance ever came. Openly to jettison the notes in the midst of the crowd would have been fatal. He would have been instantly written down a detected and pursued pickpocket.
While his mind was busy with these considerations his body was being skilfully piloted along the line of least resistance in the crowd. Now and again he made excursions into the less dense regions on the outskirts, thereby securing a gain in distance, only to plunge once more into the thick of the throng in the faint hope of being lost sight of. But this hope was never realized. On the whole, he maintained his distance from his pursuer and even slightly increased it. Sometimes for the space of a minute or more the absurd sleuth was lost to his view; but just as his hopes were beginning to revive, that accursed hat would make its reappearance and reduce him, if not to despair, at least to the most acute anxiety.

In the course of one of his excursions into the thinner part of the crowd, he noticed that, some distance ahead, a bold curve of the course brought it comparatively near to the entrance to the enclosure. He could see a steady stream of people still pouring in through the entrance turnstile, but that which gave exit from the ground was practically free. No one seemed to be leaving the enclosure at present, so the way out was quite unobstructed. Noting this fact with a new hope, he plunged once more into the dense crowd and set a course through it nearly parallel to the railings. When he had worked his way to a point nearly opposite to the entrance, he looked back to ascertain the whereabouts of his follower. The straw-hatted man was plainly visible, tightly jammed in the thickest part of the crowd and apparently not on amicable terms with his immediate neighbours. Pottermack decided that this was his chance and proceeded to take it. Skilfully extricating himself from the throng, he walked briskly towards the gates and made for the exit turnstile. As there was no one else leaving the ground, he passed unhindered, pausing only for a moment to take a quick glance back. But what he saw in that glance was by no means reassuring. The straw-hatted man was, indeed, still tightly jammed in the thick of the crowd; but at his side was a policeman to whom he appeared to be making a statement as he pointed excitedly towards the turnstile. And both informer and constable seemed to be watching his departure.

Pottermack waited to see no more. Striding away from the entrance, he came to a road on which was a signpost pointing to the station. The railway being the obvious means of escape, he turned in the opposite direction, which apparently led into the country. A short distance along the road, he encountered an aged man, engaged in trimming the hedge, who officiously wished him good-afternoon and whom he secretly anathematized for being there. A little farther on, round a sharp turn in the road, he came to a stile which gave access to a little-used footpath which crossed a small meadow. Vaulting over the stile, he set out along the footpath at a sharp walk. His impulse was to run, but he restrained it, realizing that a running man would attract attention where a mere walker might pass unobserved, or at least unnoticed. However, he quickly came to the farther side of the meadow, where another stile gave on a narrow by-lane. Here Pottermack paused for a moment, doubtful which way to turn; but the fugitive's instinct to get as far as possible from the pursuers decided the question. He turned in the direction that led away from the race-course.

Walking quickly along the lane for a minute or two, he came to a sudden turn and saw that, a short distance ahead, the lane opened into a road. At the same moment there rose among a group of elms on his right the tower of a church; and here the hedgerow gave place to a brick wall, broken by a wicket-gate, through which he looked into a green and pleasant churchyard. The road before him he surmised to be the one that he had left by the stile, and his surmise received most alarming confirmation. For, even at the very moment when he was entering the wicket, two figures walked rapidly across the end of the lane. One of them was a tall, military-looking man who swung along with easy but enormous strides; the other, who kept up with him with difficulty, was a small man in a battered straw hat.

With a gasp of horror, Pottermack darted in through the wicket and looked round wildly for possible cover. Then he saw that the church door was open, and, impelled, possibly, by some vague idea of sanctuary, bolted in. For a moment he stood at the threshold looking into the peaceful, silent interior, forgetting in his agitation even to take off his hat. There was no one in the church; but immediately confronting the intruder, securely bolted to a stone column, was a small iron-bound chest. On its front were painted the words "Poor Box", and above it, an inscription on a board informed Mr. Pottermack that "The Lord loveth a Cheerful Giver."

Well, He had one that time. No sooner had Mr. Pottermack's eyes lighted on that box than he had whipped out his wallet and extracted the notes. With trembling fingers he folded them up in twos and threes and poked them through the slit; and when the final pair—as if protesting against his extravagant munificence—stuck in the opening and refused to go in, he adroitly persuaded them with a penny, which he pushed through and dropped in by way of an additional thank-offering. As that penny dropped down with a faint, papery rustle, he put away his wallet and drew a deep breath. Mr. Pottermack was his own man again.

Of course, there was the straw-hatted man. But now that those incriminating notes were gone, so great was the revulsion that he could truly say, in the words of the late S. Pepys—or at least in a polite paraphrase of them—that he "valued him not a straw". The entire conditions were changed. But as he turned with a new buoyancy of spirit to leave the church, there came to him a sudden recollection of the red-faced man's skill and ingenuity which caused him to thrust his hands into his pockets. And it was just as well that he did, for he brought up from his left-hand coat pocket a battered silver pencil-holder that was certainly not his and that advertised the identity of its legitimate owner by three initial letters legibly engraved on its flat end.

On this—having flung the pencil-holder out through the porch doorway into the high grass of the churchyard—he turned back into the building and made a systematic survey of his pockets, emptying each one in turn on to the cushioned seat of a pew. When he had ascertained beyond all doubt that none of them contained any article of property other than his own, he went forth with a light heart and retraced his steps through the wicket out into the lane, and, turning to the right, walked on towards the road. It had been his intention to return along it to the station, but when he came out of the lane, he found himself at the entrance to a village street and quite near to a comfortable-looking inn which hung out the sign of "The
Farmer's Boy”. The sight of the homely hostelry reminded him that it was now well past his usual luncheon hour and made him aware of a fine, healthy appetite.

It appeared, on enquiry, that there was a cold sirloin in cut and a nice, quiet parlour in which to consume it. Pottermack smiled with anticipatory gusto at the report and gave his orders; and within a few minutes found himself in the parlour aforesaid, seated at a table covered with a clean white cloth on which was an abundant sample of the sirloin, a hunk of bread, a slab of cheese, a plate of biscuits and a jovial, pot-bellied brown jug crowned with a cap of foam.

Mr. Pottermack enjoyed his lunch amazingly. The beef was excellent, the beer was of the best, and their combined effect was further to raise his spirits and lower his estimate of the straw-hatted man. He realized now that his initial panic had been due to those ill-omened notes; to the fact that a false charge might reveal the material for a real one of infinitely greater gravity. Now that he was clear of them, the fact that he was a man of substance and known position would be a sufficient answer to any mere casual suspicion. His confidence was completely restored, and he even speculated with detached interest on the possible chance of encountering his pursuers on his way back to the station.

He had finished the beef to the last morsel and was regarding with tepid interest the slab of high-complexioned cheese when the door opened and revealed two figures at the threshold, both of whom halted with their eyes fixed on him intently. After a moment's inspection, the shorter—who wore a battered straw hat—pointed to him and affirmed in impressive tones:

"That's the man."

On this, the taller stranger took a couple of steps forward and said, as if repeating a formula: "I am a police officer” (it was a perfectly unnecessary statement. No one could have supposed that he was anything else). "This—er—gentleman informs me that you picked his pocket."

"Does he really?" said Pottermack, regarding him with mild surprise and pouring himself out another glass of beer.

"Yes, he does; and the question is, what have you got to say about it? It is my duty to caution you—"

"Not at all", said Pottermack. "The question is, what has he got to say about it? Has he given you any particulars?"

"No. He says you picked his pocket. That's all."

"Did he see me pick his pocket?"

The officer turned to the accuser. "Did you?" he asked.

"No, of course I didn't", snapped the other. "Pickpockets don't usually let you see what they are up to."

"Did he feel me pick his pocket?" Pottermack asked, with the air of a cross-examining counsel.

"Did you?" the officer asked, looking dubiously at the accuser.

"How could I," protested the latter, "when I was being pulled and shoved and hustled in the crowd?"

"Ha", said Pottermack, taking a sip of beer. "He didn't see me pick his pocket, he didn't feel me pick his pocket. Now, how did he arrive at the conclusion that I did pick his pocket?"

The officer turned almost threateningly on the accuser.

"How did you?" he demanded.

"Well", stammered the straw-hatted man, "there was a gang of pickpockets and he was among them."

"But so were you", retorted Pottermack. "How do I know that you didn't pick my pocket? Somebody did."

"Oh!" said the officer. "Had your pocket picked too? What did they take of yours?"

"Mighty little—just a few oddments of small change. I kept my coat buttoned."

There was a slightly embarrassed silence, during which the officer, not for the first time, ran an appraising eye over the accused. His experience of pickpockets was extensive and peculiar, but it did not include any persons of Pottermack's type. He turned and directed a dubious and enquiring look at the accuser.

"Well", said the latter, "here he is. Aren't you going to take him into custody?"

"Not unless you can give me something to go on", replied the officer. "The station inspector wouldn't accept a charge of this sort."

"At any rate", said the accuser, "I suppose you will take his name and address?"

The officer grinned sardonically at the artless suggestion but agreed that it might be as well, and produced a large, funereal note-book.

"What is your name?" he asked.

"Marcus Pottermack", the owner of that name replied, adding "my address is 'The Chestnuts' Borley, Buckinghamshire."

The officer wrote down these particulars, and then closing the note-book, put it away with a very definite air of finality, remarking: "That's about all that we can do at present". But this did not at all meet the views of the straw-hatted man, who
protested plaintively:

"And you mean to say that you are going to let him walk off with my gold watch and my note-case with five pounds in it? You are not even going to search him?"

"You can't search people who haven’t been charged", the officer growled; but here Pottermack interposed.

"There is no need", he said suavely, "for you to be hampered by mere technical difficulties. I know it is quite irregular, but if it would give you any satisfaction just to run through my pockets, I haven't the slightest objection."

The officer was obviously relieved. "Of course, sir, if you volunteer that is a different matter, and it would clear things up."

Accordingly, Pottermack rose and presented himself for the operation, while the straw-hatted man approached and watched with devouring eyes. The officer began with the wallet, noted the initials, M. P., on the cover, opened and considered the orderly arrangement of the stamps, cards and other contents; took out a visiting-card, read it and put it back, and finally laid the wallet on the table. Then he explored all the other pockets systematically and thoroughly, depositing the treasure trove from each on the table beside the wallet. When he had finished, he thanked Mr. Pottermack for his help, and turning to the accuser, demanded gruffly: "Well, are you satisfied now?"

"I should be better satisfied", the other man answered, "if I had got back my watch and my note-case. But I suppose he passed them on to one of his confederates."

Then the officer lost patience. "Look here", said he, "you are behaving like a fool. You come to a race-meeting, like a blooming mug, with a gold watch sticking out, asking for trouble, and when you get what you asked for, you let the crooks hop off with the goods while you go dandering about after a perfectly respectable gentleman. You bring me trapesing out here on a wild goose chase, and when it turns out that there isn't any wild goose, you make silly, insulting remarks. You ought to have more sense at your age. Now, I'll just take your name and address and then you'd better clear off."

Once more he produced the Black Maria note-book, and when he had entered the particulars he dismissed the straw-hatted man, who slunk off, dejected but still muttering.

Left alone with the late accused, the officer became genially and politely apologetic. But Pottermack would have none of his apologies. The affair had gone off to his complete satisfaction, and, in spite of some rather half-hearted protests, he insisted on celebrating the happy conclusion by the replenishment of the brown jug. Finally, the accused and the minion of the law emerged from the inn together and took their way back along the road to the station, beguiling the time by amicable converse on the subject of crooks and their ways and the peculiar mentality of the straw-hatted man.

It was a triumphant end to what had threatened to be a most disastrous incident. But yet, when he came to consider it at leisure, Pottermack was by no means satisfied. The expedition had been a failure, and he now wished, heartily, that he had left well alone and simply burnt the notes. His intention had been to distribute them in small parcels among various pickpockets, whereby they would have been thrown into circulation with the certainty that it would have been impossible to trace them. That scheme had failed utterly. There they were, fifteen stolen notes, in the poor-box of Illingham church. When the reverend incumbent found them, he would certainly be surprised, and, no doubt, gratified. Of course, he would pay them into his bank; and then the murder would be out. The munificent gift would resolve itself into the dump of a hunted and hard-pressed pickpocket; and Mr. Pottermack's name and address was in the note-book of the plain-clothes constable.

Of course, there was no means of connecting him directly with the dump. But there was the unfortunate coincidence that both he and the stolen notes were connected with Borley, Buckinghamshire. That coincidence could hardly fail to be noticed; and, added to his known proximity to the church, it might create a very awkward situation. In short, Mr. Pottermack had brought his pigs to the wrong market. He had planned to remove the area of investigation from his own neighbourhood to one at a safe and comfortable distance; instead of which, he had laid down a clue leading straight to his own door.

It was a lamentable affair. As he sat in the homeward train with an unread evening paper on his knee, he found himself recalling the refrain of the old revivalist hymn and asking himself "Oh, what shall the harvest be?"
CHAPTER IX. — PROVIDENCE INTERVENES

In his capacity of medico-legal adviser to the "Griffin" Life Assurance Company, Thorndyke saw a good deal of Mr. Stalker, who, in addition to his connection with Perkins's Bank, held the post of Managing Director of the "Griffin". For if the Bank had not rarely any occasion to seek Thorndyke's advice, the Assurance Office was almost daily confronted with problems which called for expert guidance. It thus happened that, about three weeks after the date of the Illingham Races, Thorndyke looked in at Mr. Stalker's office in response to a telephone message to discuss the discrepancies between a proposal form and the medical evidence given at an inquest on the late proposer. The matter of this discussion does not concern us and need not be detailed here. It occupied some considerable time, and when Thorndyke had stated his conclusions, he rose to take his departure. As he turned towards the door, Mr. Stalker held up a detaining hand.

"By the way, doctor", said he, "I think you were rather interested in that curious case of disappearance that I told you about—one of our branch managers, you may remember."

"I remember", said Thorndyke; "James Lewson of your Borley branch."

"That's the man", Stalker assented, adding: "I believe you keep a card index in your head."

"And the best place to keep it", retorted Thorndyke. "But what about Lewson? Has he been run to earth?"

"No; but the notes that he took with him have. You remember that he went off with a hundred pounds—twenty five-pound notes, of all of which we were able to ascertain the numbers. Now, the numbers of those notes were at once given to the police, who circulated the information in all the likely quarters and kept a sharp look-out for their appearance. Yet in all this time, up to a week or two ago, there was not a sign of one of them. Then a most odd thing happened. The whole lot of them made their appearance almost simultaneously."

"Very remarkable", commented Thorndyke.

"Very", agreed Stalker. "But there is something still more queer about the affair. Of course, each note, as it was reported, was rigorously traced. As a rule there was no difficulty—up to a certain point. And at that point the trail broke off short, and that point was the possession of the note by a person known to the police. In every case in which tracing was possible, the trail led back to an unquestionable crook."

"And were the crooks unable to say where they got the notes?"

"Oh, not at all. They were able, in every case, to give the most lucid and convincing accounts of the way in which they came into possession of the notes. Only, unfortunately, not one of them could give 'a local habitation and a name.' They had all received the notes from total strangers."

"They probably had", said Thorndyke, "without the stranger's concurrence."

"Exactly. But you see the oddity of the affair—at least, I expect you do. Remember that, although the individual notes were reported at different times, on tracing them to their origin it looks almost as if the whole of them had come into circulation on the same day; about three weeks ago. Now, what does that suggest to you?"

"The obvious suggestion", replied Thorndyke, "seems to be that Lewson had been robbed; that some fortunate thief had managed to relieve him of the whole consignment at one coup. The only other explanation—and it is far less probable—is that Lewson deliberately jettisoned an incriminating cargo."

"Yes", Stalker agreed doubtfully, "that is a possibility; but, as you say, it is very much less probable. For if he had simply thrown them away, there would be no reason why they should have been so invariably traceable to a member of the criminal class; and surely, out of the whole lot, there would have been one or two honest persons who would admit to having found them. No, I feel pretty certain that Lewson has been robbed, and if he has, he must be in a mighty poor way. One is almost tempted to feel sorry for him."

"He has certainly made a terrible hash of his affairs", said Thorndyke; and with this, the subject having been exhausted, he picked up his hat and stick and took his departure.

But as he wended his way back to the Temple he cogitated profoundly on what Stalker had told him; and very surprised would Mr. Stalker have been if he could have been let into the matter of those cogitations. For, as to what had really happened, Thorndyke could make an approximate guess, though guesses were not very satisfying to a man of his exact habit of mind. But he had been expecting those notes to reappear, and he had expected that when they did reappear it would prove impossible to trace them to their real source.

Nevertheless, though events had befallen, so to speak, according to plan, he speculated curiously on the possible circumstances that had determined the issue of the whole consignment at once; and on arrival at his chambers he made certain notes in his private shorthand which he bestowed in a small portfolio labelled "James Lewson", which, in its turn, reposed, safely under lock and key, in the cabinet in which he kept his confidential documents.

Meanwhile, Mr. Pottermack was passing through a period of tribulation and gnawing anxiety. Again and again did he curse the folly that had impelled him, when everything seemed to have settled down so comfortably, to launch those notes into the world to start a fresh train of trouble. Again and again did he follow in imagination what appeared to be the inevitable course of events. With horrid vividness did his fancy reconstruct the scenes of that calamitous comedy; the
astonished parson lifting the treasure with incredulous joy from the poor-box; the local bank manager carrying the notes round to the police station; the plain-clothes constable triumphantly producing his note-book and pointing to the significant word "Borley"; and finally, the wooden-faced detective officer confronting him in his dining-room and asking embarrassing questions. Sometimes his imagination went farther, and, becoming morbid, pictured Mr. Gallett, the mason, volunteering evidence, with a resulting exploration of the whole. But this was only when he was unusually depressed.

In his more optimistic moods he presented the other side of the case. If enquiries were made, he would, naturally, deny all knowledge of the notes. And who was to contradict him? There was not a particle of evidence that could connect him with them directly—at least, he believed there was not. But still, deep down in his consciousness was the knowledge that he was connected with them; that he had taken them from the dead man's pocket and he had dumped them in the church. And Mr. Pottermack was no more immune than the rest of us from the truth that "conscience does make cowards of us all."

So, in those troublous times, by day and by night, in his walks abroad and in his solitude at home, he lived in a state of continual apprehension. The fat was in the fire and he waited with constantly strained ears to catch the sound of its sizzling; and though, as the days and then the weeks went by and no sound of sizzling became audible, the acuteness of his anxiety wore off, still his peace of mind was gone utterly and he walked in the shadow of dangers unknown and incalculable. And so he might have gone on indefinitely but for one of those trivial chances that have befallen most of us and that sometimes produce results so absurdly disproportionate to their own insignificance.

The occasion of this fortunate chance was a long, solitary walk through the beautiful Buckinghamshire lanes. Of late, in his disturbed state of mind, which yielded neither to the charms of his garden nor the allurements of his workshop, Mr. Pottermack had developed into an inveterate pedestrian; and on this particular day he had taken a long round, which brought him at length, tired and hungry, to the town of Aylesbury, where, at a frowsy restaurant in a bystreet, he sat him down to rest and feed. It was a frugal meal that he ordered, for with the joy of living had gone his zest for food. Indeed, to such depths of despondency had he sunk that he actually scandalized the foreign proprietor by asking for a glass of water.

Now, it happened that on an adjacent chair was an evening paper. It was weeks old, badly crumpled and none too clean. Almost automatically, Mr. Pottermack reached out for it, laid it on the table beside him and smoothed out its crumpled pages. Not that he had any hankering for news; but, like most of us, he had contracted the pernicious habit of miscellaneous reading—which is often but an idle substitute for thought—and he scanned the ill-printed columns in mere boredom. He was not in the least interested in the Hackney Man who had kicked a cat and been fined forty shillings. No doubt it served him right—and the cat too, perhaps—but it was no affair of his, Pottermack's. Nevertheless he let an inattentive eye ramble aimlessly up and down the page, lightly scanning the trivial vulgarities that headed the paragraphs, while in the background of his consciousness, hovering, as it were, about the threshold, lurked the everlasting theme of those accursed notes.

Suddenly his roving eye came to a dead stop, for it had alighted on the word "Illingham". With suddenly sharpened attention, he turned back to the heading and read:

'Sacrilege in a Surrey Church'

'A robbery of a kind that is now becoming increasingly common occurred late in the afternoon of last Tuesday at the picturesque and venerable church of Illingham. This was the day of the races on the adjacent course, and it is believed that the outrage was committed by some of the doubtful characters who are always to be found at race-meetings. At any rate, when the sexton entered to close the church in the evening, he found that the lid of the poor-box had been wrenched open, and, of course, the contents, whatever they may have been, abstracted. The rector is greatly distressed at the occurrence, not on account of what has been stolen—for he remarked, with a pensive smile, that the loss is probably limited to the cost of repairing the box—but because he holds strong opinions on the duty of a clergyman to leave his church open for private prayer and meditation, and he fears that he may be compelled to close it in future, at least on race-days.'

Mr. Pottermack read this paragraph through, first with ravenous haste and then again, slowly and with the minutest attention. It was incredible. He could hardly believe the evidence of his eyes. Yet there it was, a clear and unmistakable message, of which the marvellous significance was to be grasped by him alone of all the world. Providence—which is reported to make some queer selections for its favourites—had stepped in and mercifully repaired his error.

In a moment he was a new man, or rather the old man restored. For he was saved. Now could he go abroad with a confident step and look the world in the face. Now could he take his ease at home in peace and security; could return with gusto to his garden and know once more the joys of labour in his workshop. With a fresh zest he fell to upon the remainder of his meal. He even electrified the proprietor by calling for coffee and a green Chartreuse. And when he at length went forth refreshed, to take the road homeward, he seemed to walk upon air.
CHAPTER X.—A RETROSPECT

THE fortunate ending of the great note adventure, which had at one time looked so threatening, had a profound effect on Mr. Pottermack's state of mind, and through this on his subsequent actions. Wherever the notes might be circulating, they were, he felt confident, well out of his neighbourhood; and since they had all fallen into the hands of thieves, he was equally confident that they would prove untraceable. So far as he was concerned, they had served their purpose. The field of inquiry concerning Lewson's disappearance was now shifted from Borley to the localities in which those notes had made their appearance.

Thus, to Mr. Pottermack it appeared that he was finally rid of Lewson, alive or dead. The incident was closed. He could now consign the whole horrible affair to oblivion, forget it if he could, or at least remember it only as a hideous experience which he had passed through and finished with, just as he might remember certain other experiences which belonged to the unhappy past. Now he might give his whole attention to the future. He was still a comparatively young man, despite the grizzled hair upon his temples. And Fortune was deeply in his debt. It was time that he began to collect from her some of the arrears.

Now, whenever Mr. Pottermack let his thoughts stray into the future, the picture that his fancy painted was wont to present a certain constant deviation from the present. It was not that the surroundings were different. Still in imagination he saw himself rambling through the lovely Buckinghamshire lanes, busying himself in his workshop or whiling away the pleasant hours in the walled garden among his flowers and his fruit trees. But in those pictures of the sunny future that was to indemnify him for the gloomy past there were always two figures; and one of them was that of the comely, gracious young widow who had already brought so much sunshine into his rather solitary life.

During the last few strenuous weeks he had seen little of her, indeed he had hardly seen her at all. Now that he could put behind him for ever the events that had filled those weeks, now that he was free from the haunting menace of the blackmailer's incalculable actions and could settle down to a stable life with his future in his own hands, the time had arrived when he might begin to mould that future in accordance with his heart's desire.

Thus reflecting on the afternoon following his visit to Aylesbury, he proceeded to make the first move. Having smartened himself up in a modest way, he took down from his shelves a favourite volume to serve as a pretext for a call, and set forth with it in his pocket towards the quiet lane on the fringe of the town wherein Mrs. Alice Bellard had her habitation. And a very pleasant habitation it was, though, indeed, it was no more than an old-fashioned country cottage, built to supply the simple needs of some rural worker or village craftsman. But houses, like dogs, have a way of reflecting the personalities of their owners; and this little dwelling, modest as it was, conveyed to the beholder a subtle sense of industry, of ordered care, and a somewhat fastidious taste.

Pottermack stood for a few moments with his hand on the little wooden gate, looking up with an appreciative eye at the ripe red brickwork, the golden tiles of the roof, and the little stone tablet with the initials of the first owners and the date, 1761. Then he opened the latch and walked slowly up the path. Through the open window came the sound of a piano rendering, with no little skill and feeling, one of Chopin's preludes. He waited at the door, listening, until the final notes of the piece were played, when he turned and rapped out a flourish on the brightly burnished brass knocker.

Almost immediately the door opened, revealing a girl of about sixteen, who greeted him with a friendly smile, and forthwith, without question or comment inducted him to the sitting-room, where Mrs. Bellard had just risen from the piano-stool.

"I am afraid", said he, as they shook hands, "that I am interrupting your playing—in fact, I know I am. I was half inclined to wait out in the garden and enjoy your performance without disturbing you."

"That would have been foolish of you", she replied, "when there is a nice, comfortable armchair in which you can sit and smoke your pipe and listen at your ease—if you want to."

"I do, most certainly", said he. "But first, lest I should forget it, let me hand you this book. I mentioned it to you once—'The Harvest of a Quiet Eye'. It is by a nice old west country parson and I think you will like it."

"I am sure I shall if you do", she said. "We seem to agree in most things."

"So we do", assented Pottermack, "even to our favourite brands of snail. Which reminds me that the pleasures of the chase seem to have been rather neglected of late."

"Yes, I have been quite busy lately furnishing up the house. But I have nearly finished. In a few days I shall have everything straight and tidy, and then a-snailling we will go."

"We will", he agreed, "and if we find that we are exhausting the subject of molluscs, we might, perhaps, give a passing thought to the question of beetles. They are practically inexhaustible and they are not so hackneyed as butterflies and moths, and not so troublesome to keep. And they are really very beautiful and interesting creatures."

"I suppose they are", she said a little doubtfully, "when you have got over your prejudice against their undeniable tendency to crawliness. But I am afraid you will have to do the slaughtering. I really couldn't kill the poor little wretches."

"Oh, I will do that cheerfully", said Pottermack, "if you will make the captures."
"Very well; then, on that understanding I will consider the beetle question. And now, would you really like me to play to you a little?"

"I should like it immensely. I seem to hear so little music nowadays, and you play so delightfully. But are you sure you don't mind?"

She laughed softly as she sat down at the piano. "Mind, indeed!" she exclaimed. "Did you ever know a musician who wasn't only too delighted to play to a sympathetic listener? It is the whole joy and reward of the art. Now, you just sit in that chair and fill your pipe, and I will play to you some of the things that I like playing to myself and that you have got to like too."

Obediently Pottermack seated himself in the easy-chair and reflectively filled his pipe while he watched the skilful hands moving gracefully with effortless precision over the keyboard. At first she kept to regular pianoforte music, mostly that of Chopin: one or two of the shorter nocturnes, a prelude and a polonaise, and a couple of Mendelssohn's "Lieder". But presently she began to ramble away REMINISCENTLY among all sorts of unconventional trifles: old-fashioned songs, country dances, scraps of church music, and even one or two time-honoured hymn tunes. And as she played these simple melodies, softly, tastefully, and with infinite feeling, she glanced curiously from time to time at her visitor until, seeing he was no longer looking at her but was gazing dreamily out of the window, she let her eyes rest steadily on his face. There was something very curious in that long, steady look; a strange mingling of sadness, of pity and tenderness and of yearning affection with a certain vague anxiety as if something in his face was puzzling her. The eyes that dwelt on him with such soft regard yet seemed to ask a question.

And Pottermack, sitting motionless as a statue, grasping his unlighted pipe, let the simple, homespun melodies filter into his soul and deliver their message of remembrance. His thoughts were at once near and far away; near to the woman at his side, yet far away from the quiet room and the sunlit garden on which his eyes seemed to rest. Let us for a while leave him to his reverie, and if we may not follow his thoughts, at least—in order that we may the better enter into the inwardness of this history—transport ourselves into the scenes that memory is calling up before his eyes.

Fifteen years ago there was no such person as Marcus Pottermack. The sober, middle-aged man, greyheaded, bearded, spectacled, who sits dreaming in the widow's parlour, was a handsome, sprightly youth of twenty-two—Jeffrey Brandon by name—who, with his shapely, clean-shaven face and his striking Grecian nose, had the look and manner of a young Olympian. And his personality matched his appearance. Amiable and kindly by nature, with a gay and buoyant temperament that commended him alike to friends and strangers, his keen intelligence, his industry and energy promised well for his worldly success in the future.

Young as he was, he had been, at this time, engaged for two years. And here again he was more than commonly fortunate. It was not merely that the maiden of his choice was comely, sweet-natured, clever and accomplished; or that she was a girl of character and spirit; or even that she had certain modest expectations. The essence of the good fortune lay in the fact that Jeffrey Brandon and Alice Bentley were not merely lovers; they were staunch friends and sympathetic companions, with so many interests in common that it was incredible that they should ever tire of each other's society.

One of their chief interests—perhaps the greatest—was music. They were both enthusiasts. But whereas Jeffrey's accomplishments went no farther than a good ear, a pleasant baritone voice and the power of singing a part at sight, Alice was really a musician. Her skill at the piano was of the professional class; she was a fair organist, and in addition she had a good and well-trained contralto voice. Naturally enough, it happened that they drifted into the choir of the little friendly Evangelical church that they attended together, and this gave them a new and delightful occupation. Now and again Alice would take a service at the organ; and then there were practice nights and preparations for special services, musical festivals or informal sacred concerts which kept them busy with the activities that they both loved. And so their lives ran on, serenely, peacefully, filled with quiet enjoyment of the satisfying present, with the promise of a yet more happy future when they should be married and in full possession of each other.

And then, in a moment, the whole fabric of their happiness collapsed like a house of cards. As if in an incomprehensible nightmare, the elements of that tragedy unfolded: the amazing accusation, the still more amazing discovery; the trial at the Old Bailey Sessions, the conviction, the sentence; the bitter, despairing farewell, and, last of all, the frowning portals of the convict prison.

Of course, Alice Bentley scouted the idea of her lover's guilt. She roundly declared that the whole affair was a plot, a wicked and foolish miscarriage of justice, and she announced her intention of meeting him at the prison gate when he should be set free, to claim him as her promised husband, that she might try to make up to him by her devotion and sympathy what he had suffered from the world's injustice. And when it was coldly pointed out to her that he had had a fair trial and had been found guilty by a jury of his fellow-countrymen, she broke away indignantly and thereafter withdrew herself from the society of these fair-weather friends.

Meanwhile, the unfortunate Jeffrey, meditating in his prison cell, had come with no less resolution to his decision. In so far as was possible he would bear the burden of his misfortune alone. Deeply, passionately as he loved the dear girl who, almost alone of all the world, still believed in his innocence, he must cast her out of his life for ever. He gloried in her loyalty, but he could not accept her sacrifice. Alice—his Alice—should never marry a convict. For that was what he was: a convicted thief and forger; and nothing but a miracle could alter his position. The fact that he was innocent was beside the mark, since his innocence was known only to himself and one other—the nameless villain who had set this infamous trap for him. To all the rest of the world he was a guilty man; and the world was right according to the known facts. He had had
a fair trial, a perfectly fair trial. The prosecution had not been vindictive, the judge had summed up fairly, and the jury had found him guilty; and the jury had been right. On the evidence before them, they could have found no other verdict. He had no complaint against them. No one could have guessed that all the evidence was false and illusory. From which it followed that he must go through life stamped as a convicted thief, and as such could never be a possible husband for Alice Bentley.

But he realized very clearly that Alice, certain as she was of his innocence, would utterly refuse to accept this view. To her he was a martyr, and as such she would proclaim him before all the world. On his release, she would insist on the restoration of the status quo ante. Of that he felt certain; and hour after hour, in his abundant solitude, he sought vainly a solution of the problem. How should he meet her demand? Letters he knew would be useless. She would wait for the day of his release, and then—The prospect of having, after all, to refuse her love, to repudiate her loyalty, was one that wrung his heart to contemplate.

And then, in the most unforeseen way, the problem was solved. His escape from the gang was totally unpromulgated. He just saw a chance, when the attention of the civil guard was relaxed, and took it instantly. When he found the absent bather's clothes upon the shore and hastily assumed them in place of his prison suit, he suspected that the bather was already dead, and the report which he read in the next day's paper confirmed this belief. But during the next few weeks, as he tramped across country to Liverpool—subsisting, not without qualms, on the little money that he had found in the unknown bather's pockets, eked out by an occasional odd job—he watched the papers eagerly for further news. For six long weeks he found nothing either to alarm or reassure him. Indeed, it was not until he had secured a job as deck-hand on an American tramp steamer and was on the point of departure that he learned the welcome tidings. On the very night before the ship was due to sail, he was sitting in the forecastle, watching an evening paper that was passing round from hand to hand, when the man who was reading it held it towards him, pointing with a grimy forefinger to a particular paragraph.

"I call that damned hard luck, I do", said he. "Just you read it, mate, and see what you think of it."

Jeffrey took the paper, and, glancing at the indicated paragraph, suddenly sat up with a start. It was the report of an inquest on the body of a man who had been found drowned; which body had been identified as that of Jeffrey Brandon, a convict who had recently escaped from Colport Gaol. He read it through slowly, and then, with an inarticulate mumble, handed the paper back to his sympathetic messmate. For some minutes he sat dazed, hardly able to realize this sudden change in his condition. That the bather's body would, sooner or later, be found he had never doubted. But he had expected that the finding of it and its identification would solve the mystery of his escape and immediately give rise to a hue and cry. Never had he dreamed that the body could be identified as his.

But now that this incredible thing had happened, he would be simply written off and forgotten. He was free. And not only was he free; Alice was free too. Now he would quietly pass out of her life without bitterness or misunderstanding; not forgotten, indeed, but cherished only, in the years to come, with loving remembrance.

Nevertheless, when at daybreak on the morrow the good ship Potomac of New Orleans crossed the Mersey bar, the new deck-hand, Joe Watson, looked back at the receding land with a heavy heart and a moistening eye. The world was all before him. But it was an empty world. All that could make life gracious and desirable was slipping away farther with each turn of the propeller, and a waste of waters was stretching out between him and his heart's desire.

His life in America need not be followed in detail. He was of the type that almost inevitably prospers in that country. Energetic, industrious, handy, ready to put his heart into any job that offered; an excellent accountant with a sound knowledge of banking business and general finance, he was not long in finding a position in which he could prove his worth. And he had undeniably good luck. Within a year of his landing, almost penniless, he had managed, by hard work and the most drastic economy, to scrape together a tiny nest-egg of capital. Then he met with a young American, nearly as poor as himself but of the stuff of which millionaires are made; a man of inexhaustible energy, quick, shrewd and resolute, and possessed by a devouring ambition to be rich. But notwithstanding his avidity for wealth, Joseph Walden was singularly free from the vices of his class. He looked to become rich by work, good management, thrift, and a reputation for straight dealing. He was a man of strict integrity, and, if a little blunt and outspoken, was still a good friend and a pleasant companion.

With his shrewd judgment, Walden saw at once that his new friend would make an ideal collaborator in a business venture. Each had special qualifications that the other lacked, and the two together would form a highly efficient combination. Accordingly the two young men pooled forces and embarked under the style and title of the Walden Pottermack Company. (Jeffrey had abandoned the name of Joe Watson on coming ashore, and, moved by some whimsical sentiment, had adopted as his godparent the ship which had carried him away to freedom and the new life. With a slight variation of spelling, he was now Marcus Pottermack.)

For some time the new firm struggled on under all the difficulties that attend insufficient capital. But the two partners held together in absolute unison. They neglected no chances, they spared no effort, they accepted willingly the barest profits, and they practised thrift to the point of penury. And slowly the tension of poverty relaxed. The little snowball of their capital began to grow, imperceptibly at first, but then with a constantly increasing acceleration—for wealth, like population, tends to increase by geometrical progression. In a year or two the struggles were over and the Company was a well-established concern. A few more years and the snowball had rolled up to quite impressive dimensions. The Walden Pottermack Company had become a leading business house, and the partners men of respectable substance.

It was at this point that the difference between the two men began to make itself apparent. To the American, the
established prosperity of the firm meant the attainment of the threshold of big business with the prospect of really big money. His fixed intention was to push the success for all that it was worth, to march on to greater and yet greater things, even unto millionaire-hood. Pottermack, on the other hand, began to feel that he had enough. Great wealth held out no allurements for him. Nor did he, like Walden, enjoy the sport of winning and piling it up. At first he had worked hard for a mere livelihood, then for a competence that should presently enable him to live his own life. And now, as he counted up his savings, it seemed to him that he had achieved his end. With what he had he could purchase all that he desired and that was purchasable.

It was not purchasable in America. Grateful as he was to the country that had sheltered him and taken him to her heart as one of her own sons, yet he found himself from time to time turning a wistful eye towards the land beyond the great ocean. More and more, as the time went on, he was conscious of a hankering for things that America could not give; for the sweet English countryside, the immemorial villages with their ancient churches, their oast-houses and thatched barns, for all the lingering remains of an older civilization.

And there was another element of unrest. All through the years the image of Alice had never ceased to haunt him. At first it was but as the cherished memory of a loved one who had died and passed out of his life for ever. But as the years ran on there came a subtle change. Gradually he began to think of their separation, not as something final and irretrievable but as admitting in a vague and shadowy way of the idea of reunion this side of the grave. It was very nebulous and indefinite, but it clung to him persistently, and ever the idea grew more definite. The circumstances were, indeed, changed utterly. When he left her, he was a convict, infamous in the eyes of all the world. But the convict, Jeffrey Brandon, was dead and forgotten, whereas he, Marcus Pottermack, was a man of position and repute. The case was entirely altered.

So he would argue with himself in moments of expansiveness. And then he would cast away his dreams, chiding himself for his folly and telling himself that doubtless, she had long since married and settled down, that dead he was and dead he must remain, and not seek to rise again like some unquiet spirit to trouble the living.

Nevertheless, the leaven continued to work, and the end of it was that Mr. Pottermack wound up his business affairs and made arrangements for his retirement. His partner regretfully agreed to take over his interest in the company—which he did on terms that were not merely just but generous—and thus his commercial life came to an end. A week or two later he took his passage for England.

Now, nebulous and shadowy as his ideas had been with reference to Alice, partaking rather of the nature of day-dreams than of thoughts implying any settled purpose, no sooner had he landed in the Old Country than he became possessed by a craving, at least to hear of her, to make certain that she was still alive, if possible to see her. He could not conceal from himself some faint hope that she might still be unmarried. And if she were—well, then it would be time for him to consider what he would do.

His first proceeding was to establish himself in lodgings in the old neighbourhood, where he spent his days loitering about the streets that she had been used to frequent. On Sundays he attended the church with scrupulous regularity, modestly occupying a back seat and lingering in the porch as the congregation filed out. Many familiar faces he noted, changed more or less by the passage of time; but no one recognized in the grey-haired, bearded, spectacled stranger the handsome youth whom they had known in the years gone by. Indeed, how should they, when that youth had died, cut off in the midst of his career of crime?

He would have liked to make some discreet enquiries, but no enquiries would have been discreet. Above all things, it was necessary for him to preserve his character as a stranger from America. And so he could do no more than keep his vigil in the streets and at the church, watching with hungry eyes for the beloved face—and watching in vain.

And then at last, after weeks of patient searching with ever-dwindling hope, he had his reward. It was on Easter Sunday, a day which had, in old times, been kept as the chief musical festival of the year. Apparently the custom was still maintained, for the church was unusually full and there was evidently a special choir. Mr. Pottermack's hopes revived, though he braced himself for another disappointment. Surely, he thought, if she ever comes to this church, she will come to-day.

And this time he was not disappointed. He had not long been seated on the modest bench near the door when a woman, soberly dressed in black, entered and walked past him up the aisle, where she paused for a few moments looking about her somewhat with the air of a stranger. He knew her in a moment by her figure, her gait, and the poise of her head. But if he had had any doubt, it would have been instantly dispelled when she entered a pew, and, before sitting down, glanced back quickly at the people behind her.

For Pottermack it was a tremendous moment. It was as if he were looking on the face of one risen from the dead. For some minutes after she had sat down and become hidden from his sight by the people behind her he felt dazed and half-incredulous of the wonderful vision that he had seen. But as the effects of the shock passed, he began to consider the present position. That single instantaneous glance had shown him that she had aged a little more than the lapse of time accounted for. She looked graver than of old, perhaps even a thought sombre, and something matronly and middle-aged in the fashion of her dress made disquieting suggestions.

When the long service was ended, Pottermack waited on his bench watching her come down the aisle and noting that she neither spoke to nor seemed to recognize any one. As soon as she had passed his bench, he rose and joined the throng behind her. His intention was to follow her and discover, if possible, where she lived. But as they came into the crowded
porch he heard an elderly woman exclaim in a markedly loud tone:

"Why, surely it is Miss Bentley!"

"Yes", was the reply in the well-remembered voice. "At least, I was Miss Bentley when you knew me. Nowadays I am Mrs. Bellard."

Pottermack, standing close behind her and staring at a notice-board, drew a deep breath. Only in that moment of bitter disappointment did he realize how much he had hoped.

"Oh, indeed", said the loud-spoken woman. "Mrs. Bennett—it was Bennett that you said?"

"No, Bellard—B.e.l.l.a.r.d."

"Oh, Bellard. Yes. And so you are married. I have often wondered what became of you when you stopped coming to the church after—er—all those years ago. I hope your good husband is well."

"I lost my husband four years ago", Mrs. Bellard replied in a somewhat dry, matter-of-fact tone.

Pottermack's heart gave a bound and he listened harder than ever.

"Dear, dear!" exclaimed the other woman. "What a dreadfully sad thing! And are there any children?"

"No; no children."

"Ah, indeed. But perhaps it is as well, though it must be lonely for you. Are you living in London?"

"No", replied Mrs. Bellard, "I have only just come up for the week-end. I live at Borley in Buckinghamshire—not far from Aylesbury."

"Do you? It must be frightfully dull for you living alone right down in the country. I do hope you have found comfortable lodgings."

Mrs. Bellard laughed softly. "You are pitying me more than you need, Mrs. Goodman. I am not dull at all, and I don't have to live in lodgings. I have a house to myself. It is only a very small one, but it is big enough and it is my own; so I am secure of a shelter for the rest of my life."

Here the two women drifted out of distinct ear-shot, though their voices continued to be audible as they walked away, for they both spoke in raised tones, Mrs. Goodman being, apparently, a little dull of hearing. But Pottermack had heard enough. Drawing out his pocket-book, he carefully entered the name and the address, such as it was, glancing at the notice-board as if he were copying some particulars from it. Then he emerged from the porch and walked after the two women; and when they separated, he followed Mrs. Bellard at a discreet distance, not that he now had any curiosity as to her present place of abode, but merely that he might pleasure his eyes with the sight of her trim figure tripping Youthfully along the dull suburban street.

Mr. Pottermack's joy and triumph were tempered with a certain curiosity, especially with regard to the late Mr. Bellard. But his cogitations were not permitted to hinder the necessary action. Having no time-table, it being Sunday, he made his way to Marylebone Station to get a list of the week-day trains; and at that station he presented himself on the following morning at an unearthly hour, suitcase in hand, to catch the first train to Borley. Arrived at the little town, he at once took a room at the Railway Inn, from whence he was able conveniently to issue forth and stroll down the station approach as each of the London trains came in.

It was late in the afternoon when, among the small crowd of passengers who came out of the station, he saw her, stepping forward briskly and carrying a good-sized handbag. He turned, and, walking back slowly up the approach, let her pass him and draw a good distance ahead. He kept her in sight without difficulty in the sparsely peopled streets until, at the outskirts of the town, she turned into a quiet by-lane and disappeared. Thereupon he quickened his pace and entered the lane just in time to see her opening the garden gate of a pleasant-looking cottage, at the open door of which a youthful maidservant stood, greeting her with a welcoming grin. Pottermack walked slowly past the little house, noting the name, "Lavender Cottage", painted on the gate, and went on to the top of the lane, where he turned and retraced his steps, indulging himself as he passed the second time with a long and approving look at the shrine which held the object of his worship.

On his return to the inn he proceeded to make enquiries as to a reliable house-agent, in response to which he was given, not only the name of a recommended agent but certain other more valuable information. For the landlord, interested in a prospective new resident, was questioning Pottermack as to the class of house that he was seeking when the landlady interposed.

"What about 'The Chestnuts,' Tom, where Colonel Barnett used to live? That's empty and for sale—been empty for months. And it's a good house though rather out-of-the-way. Perhaps that might suit this gentleman."

Further details convinced Mr. Pottermack that it would, and the upshot was that on the very next day, after a careful inspection, the deposit was paid to the agents, Messrs. Hook and Walker, and a local solicitor was instructed to carry out the conveyance. Within a week the principal builder of the town had sent in his estimates for repairs and decoration, and Mr. Pottermack was wrestling with the problem of household furnishing amidst a veritable library of catalogues.

But these activities did not distract him from his ultimate object. Realizing that, as a stranger to the town, his chance of
getting a regular introduction to Mrs. Bellard was infinitely remote, he decided to waive the conventions and take a short-cut. But the vital question was, would she recognize him? It was a question that perplexed him profoundly and that he debated endlessly without reaching any conclusion. Of course, under normal circumstances there would be no question at all. Obviously, in spite of his beard, his spectacles, and his grey hair, she would recognize him instantly. But the circumstances were very far from normal. To her, he was a person who had died some fifteen years ago. And the news of his death would have come to her, not as a mere rumour or vague report, but as an ascertained fact. He had been found dead and identified by those who knew him well. She could never have had a moment’s doubt that he was dead.

How, then, would she react to the conflict between her knowledge and the evidence of her senses? Which of the two alternate possibilities would she accept? That a dead man might come to life again or that one human being might bear so miraculous a resemblance to another? He could form no opinion. But of one thing he felt confident. She would certainly be deeply impressed by the resemblance, and that state of mind would easily cover anything unconventional in the manner of their meeting.

His plan was simple to crudeness. At odd times, in the intervals of his labours, he made it his business to pass the entrance of the lane—Malthouse Lane was its name—from whence he could see her house. For several days no opportunity presented itself. But one morning, a little more than a week after his arrival, on glancing up the lane, he perceived a manifestly feminine hat above the shrubs in her garden. Thereupon he turned boldly into the little thoroughfare and walked on until he was opposite the cottage, when he could see her, equipped with gardening gloves and a rather juvenile fork, tidying up the borders. Unobserved by her, he stepped up to the wooden palings, and, lifting his hat, enquired apologetically if she could inform him whether, if he followed the lane, he would come to the Aylesbury road.

At the first sound of his voice she started up and gazed at him with an expression of the utmost astonishment; nor was her astonishment diminished when she looked at his face. For an appreciable time she stood quite still and rigid, with her eyes fixed on him and her lips parted as if she had seen a spectre. After an interval, Pottermack—who was more or less prepared, though his heart was thumping almost audibly—repeated his question, with apologies for intruding on her; whereupon, recovering herself with an effort, she came across to the palings and began to give him some directions in a breathless, agitated voice, while the gloved hand that she rested on the palings trembled visibly.

Pottermack listened deferentially and then ventured to explain his position: that he was a stranger, about to settle in the district and anxious to make himself acquainted with his new surroundings. As this was received quite graciously, he went on to comment in admiring terms on the appearance of the cottage and its happy situation in this pleasant leafy lane. Through this channel they drifted into amicable conversation concerning the town and the surrounding country, and as they talked—Pottermack designedly keeping his face partially turned away from her—she continued to watch him with a devouring gaze and with a curious expression of bewilderment and incredulity mingled with something reminiscent, far away and dreamy. Finally, encouraged by his success, Pottermack proceeded to expound the embryonic state of his household, and enquired if by any chance she happened to know of a reliable middle-aged woman who would take charge of it.

"How many are you in family?" Mrs. Bellard asked with ill-concealed eagerness.

"My entire family", he replied, "is covered by one rather shabby hat."

"Then you ought to have no difficulty in finding a housekeeper. I do, in fact", she continued, "know of a woman who might suit you, a middle-aged widow named Gadby—quite a Dickens name, isn’t it? I know very little about her abilities, but I do know that she is a pleasant, good-natured, and highly respectable woman. If you like, and will give me your address, I will send her to see you."

Mr. Pottermack jumped at the offer, and having written down his name and his address at the inn (at the former of which she glanced with eager curiosity) he thanked her warmly, and, wishing her good-morning with a flourish of the shabby hat, went on his way rejoicing. That same evening, Mrs. Gadby called at the inn and was promptly engaged; and a very fortunate transaction the engagement proved. For, not only did she turn out to be an incomparable servant, but she constituted herself a link between her employer and her patroness. Not that the link was extremely necessary, for whenever Pottermack chanced to meet Mrs. Bellard—and it was surprising how often it happened—she greeted him frankly as an acknowledged acquaintance; so that gradually—and not so very gradually either—their footing as acquaintances ripened into that of friends. And so, as the weeks passed and their friendship grew up into a pleasant, sympathetic intimacy, Mr. Pottermack felt that all was going well and that the time was at hand when he should collect some of the arrears that were outstanding in his account with Fortune.

But Fortune had not done with him yet. The card that she held up her sleeve was played a few weeks after he had entered into occupation of his new house and was beginning to be comfortably settled. He was standing by the counter of a shop where he had made some purchases when he became aware of some person standing behind him and somewhat to his left. He could not see the person excepting as a vague shadow, but he had the feeling that he was being closely scrutinized. It was not a pleasant feeling, for, altered as he was, some inopportune recognition was always possible; and when the person moved from the left side to the right, Mr. Pottermack began to grow distinctly apprehensive. His right ear bore a little purple birthmark that was highly distinctive, and the movement of the unknown observer associated itself very disagreeably in his mind with this mark. After enduring the scrutiny for some time with growing uneasiness, he turned and glanced at the face of the scrutinizer. Then he received a very distinct shock, but at the same time was a little reassured. For the stranger was not a stranger at all, but his old friend and fellow-clerk, James Lewson.
Involuntarily his face must have given some sign of recognition, but this he instantly suppressed. He had no fear of his old friend, but still, he had renounced his old identity and had no intention of acknowledging it. He had entered on a new life with a new personality. Accordingly, after a brief glance, as indifferent as he could make it, he turned back to the counter and concluded his business. And Lewson, for his part, made no outward sign of recognition, so that Pottermack began to hope that he had merely noticed an odd resemblance, without any suspicion of actual identity. After all, that was what one would expect, seeing that the Jeffrey Brandon whom he resembled had been dead nearly fifteen years.

But when he left the shop and went his way through the streets on other business, he soon discovered that Lewson was shadowing him closely. Once or twice he put the matter to the test by doubling back or darting through obscure passages and by-ways; and when he still found Lewson doggedly clinging to his skirts, he had to accept the conviction that he had been recognized and deal with the position to the best of his discretion. Accordingly, he made straight for home; but instead of entering by the front door, he took the path that skirted the long wall of his garden and let himself in by the small side gate, which he left unlatched behind him. A minute later, Lewson pushed it open and looked in then, seeing that the garden was unoccupied save by Pottermack, he entered and shut the gate.

"Well, Jeff", he said genially, as he faced Pottermack, "so here you are. A brand—or shall we say a Brandon—snatched from the burning. I always wondered if you had managed to do a mizzle, you are such an uncommonly downy bird."

Pottermack made a last, despairing effort. "Pardon me", said he, "but I fancy you must be mistaking me for——"

"Oh, rats", interrupted Lewson. "Won't do, old chap. Besides, I saw that you recognized me. No use pretending that you don't know your old pal, and certainly no use pretending that he doesn't know you."

Pottermack realised the unwelcome truth and, like a wise man, bowed to the inevitable.

"I suppose it isn't", he admitted, "and, for that matter, I don't know that there is any reason why I should. But you will understand that——"

"Oh, I understand well enough", said Lewson. "Don't imagine that I am offended. Naturally you are not out for digging up your old acquaintances, especially as you seem to have feathered your nest pretty well. Where have you been all these years?"

"In the States. I only came back a few weeks ago."

"Ah, you'd have been wiser to stay there. But I suppose you made a pile and have come home to spend it."

"Well, hardly a pile", said Pottermack, "but I have saved enough to live on in a quiet way. I am not expensive in my habits."

"Lucky beggar!" said Lewson, glancing around with greedy eyes. "Is this your own place?"

"Yes, I have just bought it and moved in. Got it remarkably cheap, too."

"Did you? Well, I say again, lucky beggar. It's quite a lordly little estate."

"Yes, I am very pleased with it. There's a good house and quite a lot of land, as you see. I hope to live very comfortably here."

"You ought to, if you don't get blown on; and you never need be if you are a wise man."

"No, I hope not", said Pottermack, a little uneasily. He had been looking at his old friend and was disagreeably impressed by the change that the years had wrought. He was by no means happy to know that his secret was shared with this unprepossessing stranger—for such he, virtually, was. But still he was totally unprepared for what was to follow.

"It was a lucky chance for me", remarked Lewson, "that I happened to drop in at that shop. Best morning's work that I have done for a long time."

"Indeed!" said Pottermack, looking a little puzzled.

"Yes. I reckon that chance was worth a thousand pounds to me."

"Was it really? I don't quite see how."

"Don't you?" demanded Lewson, with a sudden change of manner. "Then I'll explain. I presume you don't want the Scotland Yard people to know that you are alive and living here like a lord?"

"Naturally I don't."

"Of course you don't. And if you show a proper and liberal spirit towards your old pal, they are never likely to know."

"But", gasped Pottermack, "I don't think I quite understand what you mean."

"You are devilish thick-headed if you don't", said Lewson. "Then I'll put in a nutshell. You hand me over a thousand pounds and I give you a solemn undertaking to keep my mouth shut for ever."

"And if I don't?"

"Then I hop off to Scotland Yard and earn a small gratuity by giving them the straight tip."

Pottermack recoiled from him in horror. He was thunderstruck. It was appalling to find that this man, whom he had
known as an apparently decent youth, had sunk so low. He had actually descended to blackmail—the lowest, the meanest, and the shabbiest of crimes. But it was not the blackmail alone that filled Pottermack's soul with loathing of the wretch who stood before him. In the moment in which Lewson made his demand, Pottermack knew the name of the villain who had forged those cheques and had set the dastardly trap in which he, Pottermack, was, in effect, still held.

For some moments he was too much shocked to reply. When at length he did, it was merely to settle the terms of the transaction. He had no choice. He realized that this was no empty threat. The gleam of malice in Lewson's eye was unmistakable. It expressed the inveterate hatred that a thoroughly base man feels towards one on whom he has inflicted an unforgivable injury.

"Will a crossed cheque do for you?" he asked.

"Good Lord! no!" was the reply; "nor an open one either. No cheques for me. Hard cash is what I should prefer, but as that might be difficult to manage I'll take it in notes—five-pound notes."

"What, a thousand pounds!" exclaimed Pottermack. "What on earth will the people at the bank think?"

Lewson sniggered. "What would they think, old chap, if I turned up with an open cheque for a thousand pounds? Wouldn't they take an interest in the endorsement? No, dear boy, you get the notes—fivers, mind. They know you. And look here, Jeff. This is a strictly private transaction. Neither of us wants it to leak out. It will be much safer for us both if we remain tee-total strangers. If we should meet anywhere, you needn't take off your hat. I shan't. We don't know one another. I don't even know your name. By the way, what is your name?"

"Marcus Pottermack."

"God, what a name! However, I'll forget it if I can. You agree with me?"

"Certainly", replied Pottermack with unmistakable sincerity. "But where and how am I to hand you over the money?"

"I was coming to that", said Lewson. "I will come along here and collect it on Thursday night—that will give you time to get the notes. I shall come after dark, about nine o'clock. You had better leave this gate unlatched, and then, if I see that the coast is clear, I can pop in unobserved. Will that do?"

Pottermack nodded. "But there is one thing more, Lewson", said he. "This is a single, final transaction. I pay you a thousand pounds to purchase your silence and secrecy for ever!"

"That is so. In saecula saeculorum."

"There will be no further demands?"

"Certainly not", Lewson replied indignantly. "Do you think I don't know what a square deal is? I've given you my solemn promise and you can trust me to keep it."

Pottermack pursued the matter no farther; and as the calamitous business was now concluded, he softly opened the gate, and, having ascertained that no one was in sight, he let his visitor out and watched the big burly figure swaggering townwards along the little path that bordered his wall.

Closing the gate, he turned back into the garden, his heart filled with bitterness and despair. His dream was at an end. Never, while this horse-leech hung on to him, could he ask Alice Bellard to be his wife. For his prophetic soul told him only too truly that this was but a beginning; that the blackmailer would come again and again and yet again, always to go away still holding the thing that he had sold.

And so it befell; and so the pitiless extortion might have gone on to its end in the ruin and impoverishment of the victim but for the timely appearance of the sundial in Mr. Gallett's yard.
CHAPTER XI. — MR. POTTERMACK'S DILEMMA

THE sound of the piano faded away in a gradual diminuendo and at last stopped. A brief interval of silence followed.

Then Mr. Pottermack, withdrawing his gaze from the infinite distance beyond the garden, turned to look at his hostess and found her regarding him with a slightly quizzical smile.

"You haven't lit your pipe after all, Mr. Pottermack", said she.

"No", he replied. "My savage breast was so effectually soothed by your music that tobacco would have been superfluous. Besides, my pipe would have gone out. It always does when my attention is very completely occupied."

"And was it? I almost thought you were dozing."

"I was dreaming", said he; "day-dreaming; but wide awake and listening. It is curious," he continued after a pause, "what power music has to awaken associations. There is nothing like it, excepting, perhaps, scents. Music and odours, things utterly unlike anything but themselves, seem to have a power of arousing dormant memories that is quite lacking in representative things such as pictures and statues."

"So it would seem", said Mrs. Bellard, "that I have been, in a fashion, performing the function of an opium pipe in successful competition with the tobacco article. But it is too late to mend matters now. I can hear Anne approaching with the tea-things."

Almost as she spoke, the door opened and the maid entered, carrying a tray with anxious care, and proceeded to set out the tea-things with the manner of one performing a solemn rite. When she had gone and the tea was poured out, Mrs. Bellard resumed the conversation.

"I began to think you had struck me off your visiting list. What have you been doing with yourself all this time?"

"Well", Pottermack replied evasively—for, obviously, he could not go into details—"I have been a good deal occupied. There have been a lot of things to do; the sun-dial, for instance. I told you about the sun-dial, didn't I?"

"Yes, but that was a long time ago. You said you were going to show it to me when it was set up, but you never have. You haven't even shown it to Mrs. Gadby. She is quite hurt about it."

"Dear me!" exclaimed Mr. Pottermack; "how self-centred we old bachelors get! But this neglect must be remedied at once. When can you come and see it? Could you come round and have tea with me tomorrow?"

"Yes, I should like to; but I can't come very early. Will a quarter to five do?"

"Of course it will. We can have tea first and then make a leisurely survey of the sun-dial and the various other things that I have to show you."

Thus the arrangement was made, very much to Mr. Pottermack's satisfaction, for it enabled him to postpone to the morrow a certain very momentous question which he had thought of raising this very afternoon, but which now appeared a little inopportune. For a delicate question must be approached cautiously through suitable channels, and no such means of approach had presented themselves or seemed likely to. Accordingly, relieved of the necessity of looking for an opening, Mr. Pottermack was able to give his whole attention to making himself agreeable, and eventually took his departure in the best of spirits, looking forward with confidence to the prospects of the morrow.

The tea, as arranged by Mrs. Gadby in the pleasant dining-room of 'The Chestnuts', was a triumphant success. It would have been an even greater success if the fair visitor had happened to have been on short commons for the preceding week. But the preposterous abundance at least furnished the occasion of mirth, besides serving as an outlet for Mrs. Gadby's feelings of regard and admiration towards the guest and a demonstration of welcome.

"It is really very nice of her", said Mrs. Bellard, glancing smilingly round the loaded table, "and tactful too. It is a compliment to us both. It implies that she has cause to be grateful to me for introducing her here, and you are that cause. I expect she has a pretty comfortable time."

"I hope so", said Pottermack. "I have, thanks to her and to you. And she keeps the house in the most perfect order. Would you like to look over it presently?"

"Naturally I should. Did you ever meet a woman who was not devoured by curiosity in regard to a bachelor's household arrangements? But I am really more interested in the part of the premises that is outside Mrs. Gadby's domain; the part that reflects your own personality. I want especially to see your workshop. Am I to be allowed to?"

"Undoubtedly you are; in fact, if we have finished, as it seems we have, you shall be introduced to it forthwith."

They rose, and, passing out at the back door, walked together up the long path through the kitchen garden and orchard until they came to the gate of the walled garden, which Pottermack unlocked with his Yale key.

"This is very impressive and mysterious", said Mrs. Bellard as the gate closed and the spring-latch snapped. "I am quite proud to be admitted into this holy of holies. It is a delightful garden", she continued, letting her eyes travel round the great oblong enclosure, "so perfectly peaceful and quiet and remote. Here one is cut off from all the world, which is rather restful at times."
Mr. Pottermack agreed, and reflected that the present was one of those times. "When I want to be alone", he remarked, "I like to be definitely alone and secure from interruption."

"Well, you are secure enough here, shut in from the sight of any human eye. Why, you might commit a murder and no one would be any the wiser."

"So I might", agreed Mr. Pottermack, rather taken aback. "I hadn't thought of that advantage, and, of course, you understand that the place wasn't laid out with that purpose in view. What do you think of the sun-dial?"

"I was just looking at it and thinking what a charming finish it gives to the garden. It is delightful, and will be still more so when the new stone has weathered down to the tone of the old. And I think you told me that there is a well underneath. That adds a sort of deliciously horrible interest to it."

"Why horrible?" Pottermack enquired uncomfortably.

"Oh, don't you think wells are rather gruesome things? I do. There is one in my garden, and it gives me the creeps whenever I lower the bucket and watch it sinking down, down that black hole and vanishing into the bowels of the earth."

"Yes", said Pottermack, "I have that feeling myself. Probably most town-bred people have. And they are really rather dangerous, especially when they are unguarded as this one was. That was why I took the opportunity to cover it up."

By this time they were close up to the dial, and Mrs. Bellard walked round it to read the motto. "Why do they always write these things in Latin?" she asked.

"Partly for the sake of brevity", he replied. "Here are five Latin words. The equivalent in English is: 'At the rising of the sun, hope: at the going down thereof, peace.'"

"It is a beautiful motto", she said, looking wistfully and a little sadly at the stone pillar. "The first part is what we all know by experience; the second is what we pray for to compensate us for the sorrows and disillusionments of the years that come between. But now let us go and look at the workshop."

Pottermack conducted her behind the yew hedge into the range of well-lighted workrooms, where he exhibited, not without a touch of pride, his very complete outfit. But the fair widow's enthusiastic interest in the tools and appliances rather surprised him; for women are apt to look on the instruments of masculine handicraft with a slightly supercilious eye. No general survey satisfied her. He had to display his "plant" in detail and explain and demonstrate the use of each appliance: the joiner's bench with its quick-grip vice; the metal-work bench with its anvil and stakes and the big brazing-jet; the miniature forge, the lathe, the emery-wheel, and the bench-drill. She examined them all with the closest attention and with a singularly intelligent grasp of their purposes and modes of action. Pottermack became so absorbed in the pleasure of exhibiting his treasures that, for the moment, he almost forgot his main purpose.

"I am glad I have seen the place where you work", she said, as they came out into the garden. "Now I can picture you to myself among your workshop gods, busy and happy. You are happy when you are working there, aren't you?"

She asked with so much concern that Pottermack was fain to reply:

"Every workman, I think, is happy when he is working. Of course, I mean a skilled man, working with his hands and his brain, creating something, even if it is only a simple thing. Yes, I am happy when I am doing a job, especially if it is a little difficult."

"I understand; for a little extra planning and thought. But are you, in general, a happy man? Do you find life pleasant? You always seem very cheerful and yet sometimes I wonder if you really enjoy life."

Pottermack reflected a few moments. "You are thinking", said he, "of my solitary and apparently friendless state, though I am not friendless at all, seeing that I have you—the dearest and kindest friend that a man could wish for. But in a sense you are right. My life is an incomplete affair, and these activities of mine, pleasant as they are, serve but as makethis to fill a blank. But it could easily be made complete. A word from you would be enough. If you were my wife there would be nothing left in the world for me to covet. I should be a perfectly happy man."

He paused and looked at her, and was a little disconcerted to see that her eyes had filled and that she was looking down with an evident expression of distress. As she made no answer, he continued, more eagerly:

"Why should it not be, Alice? We are the very best of friends—really devoted and affectionate friends. We like the same things and the same ways of life. We have the same interests, the same pleasures. We should try to make one another happy, and I am sure we should succeed. Won't you say the word, dear, and let us join hands to go our ways together for the rest of our lives?"

She turned and looked in his face with brimming eyes and laid her hand on his arm.

"Dear friend", she said, "dearest Marcus, I would say yes, joyfully, thankfully, if only it were possible. I have given you my friendship, my most loving friendship, and that is all I have to give. It is impossible for me to be your wife."

Pottermack gazed at her in dismay. "But", he asked huskily, "why is it impossible? What hinders?"

"My husband hinders", she replied in a low voice.

"Your husband!" gasped Pottermack.
"Yes. You have believed, as every one here believes, that I am a widow. I am not. My husband is still alive. I cannot and will not live with him or even acknowledge him. But he lives, to inflict one more injury on me by standing between you and me. Come", she continued, as Pottermack, numb with amazement, gazed at her in silence, "let us go and sit down in the summer-house and I will tell you the whole pitiful story."

She walked across the lawn, and Pottermack accompanied her with half-unconscious reluctance. Since that fatal night he had made little use of the summer-house. Its associations repelled him. Even now he would, by choice, have avoided it; and it was with a certain vague discomfort that he saw his beloved friend seat herself in the chair that had stood vacant since that night when Lewson had sat in it.

"I will tell you my story", she began, "from the time when I was a girl, or perhaps I should say a young woman. At that time I was engaged to a young man named Jeffrey Brandon. We were devotedly attached to each other. As to Jeffrey, I need say no more than that you are—allowing for the difference of age—quite extraordinarily like him; like in features, in voice, in tastes, and in nature. If Jeffrey had been alive now, he would have been exactly like you. That is what attracted me to you from the first.

"We were extremely happy—perfectly happy—in our mutual affection, and we were all-sufficient to one another. I thought myself the most fortunate of girls, and so I was; for we were only waiting until I should come into a small property that was likely to fall to me shortly, when we should have had enough to marry upon comfortably. And then, in a moment, our happiness was shattered utterly. A most dreadful thing happened. A series of forgeries was discovered at the bank where Jeffrey was employed. Suspicion was made to fall upon him. He was prosecuted, convicted—on false evidence, of course—and sentenced to a term of penal servitude.

"As soon as he was convicted, he formally released me from our engagement, but I need not say that I had no intention of giving him up. However, the question never arose. Poor Jeffrey escaped from prison, and in trying to swim out to some ship in the river was drowned. Later, his body was recovered and taken to the prison, where an inquest was held. I went down, and by special permission attended the funeral and laid a wreath on the grave in the prison cemetery. And that was the end of my romance.

"When Jeffrey died, I made up my mind that I was a spinster for life; and so I ought to have been. But things fell out otherwise. Besides me, Jeffrey had one intimate friend, a fellow-clerk at the bank named James Lewson. Of course, I knew him fairly intimately, and after Jeffrey's conviction I saw a good deal of him. Indeed, we became quite friendly—which we had hardly been before—by reason of the firm belief that he expressed in Jeffrey's innocence. Every one else took the poor boy's guilt for granted, so, naturally, I was drawn to the one loyal friend. Then, when Jeffrey died and was lost to me for ever, he took every opportunity of offering me comfort and consolation; and he did it so tactfully, was so filled with grief for our lost friend and so eager to talk of him and keep his memory green between us, that we became greater friends than ever.

"After a time, his friendship took on a more affectionate and demonstrative character, and finally he asked me plainly to marry him. Of course, I said no; in fact, I was rather shocked at the proposal, for I still felt that I belonged to Jeffrey. But he was quietly persistent. He took no offence, but he did not pretend to accept my refusal as final. Especially he urged on me that Jeffrey would have wished that I should not be left to go through life alone, but that I should be cherished and protected by his own loyal and devoted friend.

"Gradually his arguments overcame my repugnance to the idea of the marriage, though it was still distasteful to me, and when he asked for my consent as a recognition and reward of his loyalty to Jeffrey, I at last gave way. It appeared ungrateful to go on refusing him; and after all, nothing seemed to matter much now that Jeffrey was gone. The end of it was that we were married just before he started to take up an appointment in a branch of the bank at Leeds.

"It was not long before the disillusionment came, and when it did come, I was astonished that I could have been so deceived. Very soon I began to realize that it was not love of me that had made him such a persistent suitor. It was the knowledge that he had gathered of the little fortune that was coming to him. His greediness for money was incredible; and yet he was utterly unable to hold it. It ran through his hands like water. He had a fair salary, but yet we were always poor and usually in debt. For he was an inveterate gambler—a gambler of that hopeless type that must inevitably lose. He usually did lose at once, for he was a reckless plunger, but if by chance he made a coup, he immediately plunged with his winnings and lost them. It was no wonder that he was always in difficulties.

"When, at last, my little property came to me, he was deeply disappointed; for it was tied up securely in the form of a trust, and my uncle, who is a solicitor, was the managing trustee. And a very careful trustee he was, and not at all well impressed by my husband. James Lewson had hoped to get control of the entire capital, instead of which he had to apply to me for money when he was in difficulties and I had to manage my trustee as best I could. But in spite of this, most of the income that I received went to pay my husband's debts and losses.

"Meanwhile our relations grew more and more unsatisfactory. The disappointment due to the trust, and the irritation at having to ask me for money and explain the reasons for his need of it, made him sullen and morose, and even, at times, coarsely abusive. But there was something more. From the first I had been dismayed at his freedom in the matter of drink. But the habit grew upon him rapidly, and it was in connection with this that the climax of our disagreement came about and led to our separation.

"I understand that drink has different effects on different types of men. On James Lewson its effects began with the loss
of all traces of refinement and a tendency to coarse facetiousness. The next stage was that of noisy swagger and boasting, and then he soon became quarrelsome and even brutal. There were one or two occasions when he threatened to become actually violent. Now it happened more than once that, when he had drunk himself into a state of boastful exaltation, he spoke of Jeffrey in a tone of such disrespect and even contempt that I had to leave the room to avoid an open, vulgar quarrel. But on the final occasion he went much farther. He began by jeering at my infatuation for 'that nincompoop,' as he called him, and when I, naturally, became furiously angry and was walking out of the room, he called me back, and, laughing in my face, actually boasted to me—to me!—that his was the master mind that had planned and carried out the forgeries and then set up that mug, Jeff,' as the man of straw for the lawyers to knock down.

"I was absolutely thunderstruck. At first I thought that it was mere drunken fooling. But then he went on to give corroborative details, chuckling with idiotic self-complacency, until at last I realized that it was true; that this fuddled brute was the dastardly traitor who had sent my Jeffrey to his death.

"Then I left him. At once I packed a small suitcase and went out and took a room at an hotel in the town. The next day I returned and had an interview with him. He was mightily flustered and apologetic. He remembered quite well what he had said, but tried to persuade me that it was a mere drunken joke and that it was all a fabrication, invented to annoy me. But I knew better. In the interval I had thought matters over, and I saw how perfectly his confession explained everything and agreed with what I now knew of him; his insatiable greed for money, his unscrupulousness, his wild gambling, and the reckless way in which he contracted debts. I brushed aside his explanations and denials and presented my ultimatum, of which the terms were these:

"We should separate at once and completely, and henceforth be as total strangers, not recognizing one another if we should ever meet. I should take my mother's maiden name, Bellard, and assume the status of a widow. He should refrain from molesting me or claiming any sort of acquaintance or relationship with me.

"If he agreed to these terms, I undertook to pay him a quarterly allowance and to take no action in respect of what I had learned. If he refused, I should instruct my uncle to commence proceedings to obtain a judicial separation and I should state in open court all that I knew. I should communicate these facts to the directors of the bank; and if, in my uncle's opinion, any prosecution were possible—for perjury or any other offence connected with the forgeries—I should instruct him to prosecute.

"My ultimatum took him aback completely. At first he tried to bluster, then he became pathetic and tried to wheedle. But in the end, when he saw that I was not to be moved from my resolution, he gave way. I could see that my threats had scared him badly, though, in fact, I don't believe that I could have done anything. But perhaps he knew better. There may have been some other matters of which I had no knowledge. At any rate, he agreed, with the one stipulation, that the quarterly allowance should be paid in notes and not by a cheque.

"As soon as I had settled the terms of the separation I moved to Aylesbury, where my mother's people had lived, and stayed there in lodgings while I looked for a small, cheap house. At length I found the cottage at Borley, and there I have lived ever since, as comfortably as my rather straitened means would let me. For, of course, the allowance has been rather a strain, though I have paid it cheerfully as the price of my freedom; and I may say that James Lewson has kept to the terms of our agreement with one exception—an exception that I expected. He has not been satisfied with the allowance. From time to time, and with increasing frequency, he has applied for loans—which, of course, meant gifts—to help him out of some temporary difficulty; and sometimes—but not always—I have been weak enough to supply him.

"But I was not to be left completely in peace. When I had been settled in Borley for about a year, I received a letter from him informing me that 'by a strange coincidence' he had been appointed to the managership of the Borley branch of the Bank. Of course, I knew that it was no coincidence at all. He had engineered the transfer himself."

"With what object, do you suppose?" asked Pottermack.

"It may have been mere malice", she replied, "just to cause me annoyance without breaking the terms of the agreement. But my impression is that it was done with the deliberate purpose of keeping me in a state of nervous unrest so that I should be the more easily prevailed on to comply with his applications for money. At any rate, those applications became more frequent and more urgent after he came to live here, and once he threw out a hint about calling at my house for an answer. But I put a stop to that at once."

"Did you ever meet him in Borley?" Pottermack asked.

"Yes, once or twice. But I passed him in the street without a glance of recognition and he made no attempt to molest me. I think he had a wholesome fear of me. And, of course, I kept out of his way as much as I could. But it was an immense relief to me when he went away. You heard of his disappearance, I suppose? It was the talk of the town at the time."

"Oh yes", replied Pottermack. "My friend, Mr. Gallett, the mason, was the first to announce the discovery. But I little thought when I heard of it how much it meant to you—and to me. What do you suppose has become of him?"

"I can't imagine. It is a most mysterious affair. There is no reason that I can think of why he should have absconded at all. I can only suppose that he had done something which he expected to be found out but which has not come to light. Perhaps the most mysterious thing about it is that he has never applied to me for money. He would know quite well that I should at least have sent him his allowance, and that he could depend on me not to betray him, profoundly as I detest him."
Mr. Pottermack cogitated anxiously. He loathed the idea of deceiving this noble, loyal-hearted woman. Yet what could he do? He was committed irrevocably to a certain line of action, and in committing himself he had unconsciously committed her. He had embarked on a course of deception and had no choice but to follow it. And with regard to the future, he could honestly assure himself that whatever made for his happiness would make for hers.

"Do you think he may have gone abroad?" he asked.

"It is impossible to say," she replied. "I have no reason to suppose he has, excepting his extraordinary silence."

"It is even possible", Pottermack suggested in a slightly husky voice, "that he may be dead."

"Yes", she admitted, "that is possible, and it would certainly account for his silence. But is it any use guessing?"

"I was only thinking", said Pottermack, "that if he should happen to have died, that would—er—dispose of our difficulties."

"Not unless we knew that he was dead. On the contrary. If he should have died and his death should remain undiscovered, or, what is the same thing, if he should have died without having been identified, then I should be bound to him beyond any possible hope of release."

Pottermack drew a deep breath, and unconsciously his glance fell on the sun-dial.

"But", he asked in a low tone, "if it should ever become known as an ascertained fact that he was dead? Then, dear Alice, would you say yes?"

"But have I not said it already?" she exclaimed. "Did I not tell you that, if I were free, I would gladly, thankfully take you for my husband? Then, if that is not enough, I say it again. Not that it is of much use to say it, seeing that there is no reason to suppose that he is dead or likely to die. I only wish there were. It may sound callous to express such a wish, but it would be mere hypocrisy to pretend to any other feeling. He ruined poor Jeffrey's life and he has ruined mine."

"I wouldn't say that", Pottermack protested gently. "The sands of your life have yet a long time to run. There is still time for us both to salvage some happy years from the wreckage of the past."

"So there is", she agreed. "I was wrong. It is only a part of my life that has been utterly spoiled. And if you, too, have been through stormy weather—as I, somehow, think you have—we must join forces and help one another with the salvage work. But we shall have to be content to be friends, since marriage is out of our reach."

"My dear", said Pottermack, "if you say that you would be willing to have me for your husband that is all I ask."

They went forth from the summer-house and walked slowly, hand in hand, round the old garden; and Pottermack, anxious to conceal his bitter disappointment, chatted cheerfully about his fruit trees and the flowers that he meant to plant in the sunny borders. Very soon they seemed to be back on the old footing, only with a new note of affection and intimacy which made itself evident when Pottermack, with his hand on the latch of the gate, drew his companion to him and kissed her before they passed through together into the orchard.

He walked with her back to the cottage and said good-bye at the little wooden gate.

"I hope, dear", she whispered, as she held his hand for a moment, "that you are not very, very disappointed."

"I am not thinking of disappointments", he replied cheerily. "I am gloating over the blessings that I enjoy already and hoping that Fortune may have something to add to them later on."

But despite his assumed cheeriness of manner, Mr. Pottermack took his way homeward in a profoundly depressed state of mind. The dream of settled happiness that had haunted him for years, vague and unreal at first but ever growing more definite and vivid, had been shattered in the very moment when it seemed to have become a reality. He thought bitterly of the later years in America when his purpose of seeking his lost love had been forming, almost unrecognized by himself as a thing actually intended; of his long search in London with its ultimate triumph; of the patient pursuit of the beloved object to this place and the purchase of his house; of the long untiring effort, always bringing him nearer and nearer to success. And then, when he seemed to have conquered every difficulty, to have his treasure within his very grasp, behold an obstacle undreamed of and apparently insuperable.

It was maddening; and the most exasperating feature of it was that the obstacle was of his own creating. Like most men who have committed a fatal blunder, Mr. Pottermack was impelled to chew the bitter cud of the might-have-been. If he had only known! How easy it would have been to arrange things suitably! Looking back, he now saw how unnecessary had been all that laborious business of the gutta-percha soles. It had been the result of mere panic. He could see that now. And he could have met the conditions so much more simply and satisfactorily. Supposing he had just made a few footprints in the soft earth leading to the well—he could have done that with the plaster casts—flung down the coat by the brink and gone out on the following morning and informed the police. There would have been no risk of suspicion. Why should there have been? He would have told a perfectly convincing story. He could have related how he had gone out in the evening, leaving his gate unlocked, had returned in the dark and found it ajar; had discovered in the morning strange footprints and a coat, suggesting that some stranger had strayed into the garden and, in the darkness, had fallen down the well. It would have been a perfectly natural and straightforward story. Nobody would have doubted it or connected him with the accident. Then the well would have been emptied, the body recovered and the incident closed for ever.

As it was, the situation was one of exasperating irony. He was in a dilemma from which there seemed to be no escape. He alone, of all the world, knew that Alice Bellard was free to marry him; and that knowledge he must carry locked up in his breast for the remainder of his life.
CHAPTER XII. — THE UNDERSTUDY

READERS who have followed this history to its present stage will have realized by this time that Mr. Pottermack was a gentleman of uncommon tenacity of purpose. To the weaker vessels the sudden appearance of an apparently insuperable obstacle is the occasion for abandoning hope and throwing up the sponge. But Mr. Pottermack was of a tougher fibre. To him a difficulty was not a matter for wringing of hands but for active search for a solution.

Hence it happened that the black despair that enveloped and pervaded him after his proposal to Alice Bellard soon began to disperse under the influence of his natural resiliency. From profitless reflections on the might-have-been he turned to the consideration of the may-be. He began to examine the obstacle critically, not as a final extinguisher of his hopes, but as a problem to be dealt with.

Now what did that problem amount to? He, Marcus Pottermack, desired to marry Alice Bellard. That had been the darling wish and purpose of his life and he had no intention of abandoning it. She, on her side, wished to marry him, but she believed that her husband was still alive. He, Pottermack, knew that the said husband was dead, but he could not disclose his knowledge. Yet until the fact of the husband's death was disclosed, the marriage was impossible and must remain so for ever. For there is this unsatisfactory peculiarity about a dead man: that it is hopeless to look forward to the possibility of his dying. Thus the problem, put in a nutshell, amounted to this: that James Lewson, being dead de facto, had got to be made dead de jure.

But how was this to be done? It is hardly necessary to say that, at first, a number of wild-cat schemes floated through Mr. Pottermack's mind, though they found no lodgment there. For instance, he actually considered the feasibility of dismounting the sun-dial, fishing up the body and planting it in some place where it might be found. Of course, the plan was physically impossible even if he could have faced the horrors of its execution.

Then he turned his attention to the now invaluable coat. He conceived the idea of depositing it at the edge of a cliff or on the brink of a river or dock. But this would not have served the required purpose. Doubtless it would have raised a suspicion that the owner was dead. But suspicion was of no use. Absolute certainty was what was needed to turn the wife into a widow. In connection with this idea, he studied the law relating to Presumption of Death; but when he learned that, about 1850, the Court of Queen's Bench had refused to presume the death of a person who was known to have been alive in the year 1027, he decided that the staying power of the law was considerably greater than his own and finally abandoned the idea.

Nevertheless his resolution remained unshaken. Somehow James Lewson would have to be given the proper, recognized status of a dead man. Though no practicable scheme presented itself, the problem was ever present in his mind. By day and by night, in his work in the garden, in his walks through the quiet lanes, even in the fair widow's pleasant sitting-room, his thoughts were constantly busy with the vain search for some solution; and so they might have continued indefinitely but for a chance circumstance that supplied him with a new suggestion. And even then, the suggestion was so indirect and so little related to the nature of his problem that he had nearly missed it.

From time to time, Mr. Pottermack was in the habit of paying a visit to London for the purpose of making various purchases, particularly of tools and materials. On one of these occasions, happening to be in the neighbourhood of Covent Garden, and realizing suddenly that the day was Friday, it occurred to him to, look in at the auction rooms in King Street, hard by and see what was going. For the Friday sales of "miscellaneous property" are of special interest to those who use tools, appliances, or scientific instruments, and Pottermack had on one or two previous occasions picked up some very useful bargains.

But this time he seemed to have drawn a blank; for when he ran his eye over the catalogue which was fixed to the doorpost he found, to his disgust, that the principal feature was "The valuable collection brought together by a well-known Egyptologist, lately deceased". He was on the point of turning away when he noticed, near the end of the catalogue, "another property" consisting of a quantity of model-maker's tools and appliances; whereupon he entered the office, and, having provided himself with a catalogue, made his way to the inner room where the tools were on view. These he looked over critically, marking here and there a "Lot" which might be worth buying if it should go cheaply enough. Then, having finished his actual business, he proceeded rather aimlessly to browse round the room, catalogue in hand, glancing at the various items of the Egyptologist's collection.

There is always something impressive about the relics of Ancient Egypt. Their vast antiquity, the evidence that they present of strange knowledge and a rather uncanny skill, with suggestions of a state of mind by no means primitive, yet utterly unlike our own, gives them a certain weird quality that makes itself felt by most observers. Pottermack was distinctly aware of it. As he looked over the collection of venerable objects—the ushabti figures, the wooden head-rests, the pre-dynastic painted vases, the jar-sealings, the flint implements and copper tools and weapons—he had the feeling that the place was unworthy of them. Particularly in regard to the wooden and stone steles, the portrait statuettes, the canopic jars and other pious memorials of the dead, did he feel that their presence here, offered for sale in the public market, was an affront to their sacred character. As to the coffins, and above all the mummys, their exposure here seemed to him positively indecent. Here were the actual bodies of deceased ladies and gentlemen, persons of rank and station in their day, as the inscriptions testified, catalogued as mere curios, with the auctioneer's ticket pasted on their very coffins or even on their funeral vesture.
Mr. Pottermack halted by a large open box into which a much-damaged mummy had been crammed and lay, partly doubled up, amidst a litter of broken wood. The ticket, stuck on the linen bandage in which the body was swathed, marked it as "Lot 15"; and reference to the catalogue elicited the further particulars: "Mummy of an official with portions of wooden coffin (a.f.)", while a label attached to the mummy identified the deceased as "Khama-Heru, a libationer of the 19th or 20th dynasty."

Mr. Pottermack stood by the box, looking down distastefully, almost resentfully, at the shapeless figure, wrapped in its bulky swathings, and looking like a gigantic rag doll that had been bundled into a rubbish-box. That great rag doll had once been a respected attendant at feasts and solemn ceremonials. Presently it would be put up "with all faults" and probably knocked down for a few shillings to some speculative curio dealer. And as he reflected thus, the words of Sir Thomas Browne floated through his mind: "The Egyptian mummies which Time or Cambyses hath spared, Avarice now consumeth". Vain, indeed, were the efforts of the pious Mizraim to achieve even physical immortality.

He had turned away and was beginning to move slowly towards the door. And then, suddenly, in a moment of time, two separate ideas, apparently unrelated, linked themselves together and evolved a third. And a very strange one that newly evolved idea was. Mr. Pottermack was quite startled. As it flashed into his mind, he stopped dead, and then, retracing his steps, halted once more beside the box. But now, as he looked down on the great rag doll that had once been Khama-Heru, no distaste or resentment was in his eye, but rather an eager curiosity that estimated and measured and sought for details. He inspected critically the fracture where the brittle corpse had been doubled up to jam it in the box; the spot where part of a shrivelled nose peeped through a hole in the rotten linen. The history of this thing interested him no more. What it had been was no concern of his. Its importance to him was in what it was now. It was a dead body—a dead human body; the body of a man; of a tall man, so far as he could judge.

He made a pencil mark on his catalogue opposite Lot 15, and then, having glanced at his watch, walked out into King Street, there to pace up and down until it should be time for the auction to begin; and meanwhile to try to fashion this startling but rather nebulous idea into a more definite shape; to decide, in short, the part which the late Khama-Heru could be given to play in his slightly involved affairs.

The actual acquirement of the gruesome relic presented no difficulties. It is true that the auctioneer made some conscientious efforts to invest Lot 15 with some semblance of value. But his plausible suggestions as to the "trifling restorations" that might be necessary aroused no enthusiasm. He had to start the bidding himself—at ten shillings; and at fifteen the hammer descended to confirm Mr. Pottermack in the lawful possession of a deceased libationer. Thereupon the money was handed in and the box handed out, and when it had its lid nailed on and a length of cord tied round it, it was conveyed out to the pavement, whence it was presently transferred to the roof of a cab and in due course transported to Marylebone Station to await the next train to Borley.

The advent of Khama-Heru, deceased, to 'The Chestnuts', Borley, inaugurated a radical change in Mr. Pottermack's habits and mental state. Gone was the restless indecision that had kept him mooning about, thinking everlastingly and getting nothing done. Now, his mind was, in a measure, at rest. He had a job, and if all the details of that job were not yet clear to him, still he could, as in any other job, get on with the part that he knew while he was planning out the remainder.

The first problem was to dispose of the box—and of the occupant when he should emerge. In the first place, it had been conveyed through the side gate to the workshop, where it at present reposed. But this would never do, especially when the emergence should take place. For, of late, Alice Bellard had taken to bringing him little commissions and sitting by him in the workshop babbling cheerfully while he carried them out. Which was exceedingly pleasant. But two is company, and, assuredly, Khama-Heru would have made a very undesirable third. And there was another point. At present, in his box with the fragments of the coffin and the auctioneer's ticket, K.-H. was harmless enough; a mere fifteen shillings' worth of miscellaneous property. But after a few "trifling restorations" (of a rather different kind from those contemplated by the auctioneer) the said K.-H. would present a highly compromising appearance. Arrangements would have to be made for keeping him in strict retirement.

The conditions were met fairly well by emptying the tool-house. The roller and the lawn-mower could rest safely outside under a tarpaulin, and the garden tools could be stowed at the end of the metal-shop. When this had been done and the tool-house door fitted with a really safe lock, Pottermack dragged the box thither; and having taken off the lid, strengthened it, and fitted it with a pair of stout hinges and a good lever lock, he felt that he had made things secure for the present. The tool-house was furnished with a long bench for the storage of flower-pots, and, as it was lighted only by a window in the roof, he would be able to work there conveniently and safe from observation.

His first proceeding was to unroll the mummy, to unwind the countless yards of rotten linen bandage with which it had been covered. He wanted to see what the mummy itself was like and whether it was complete. But when he had got all the wrappings off and looked at the thing as it lay on the bench, he was appalled at its appearance. In its wrappings it had been gruesome enough—a great, horrible rag doll; but divested of those wrappings it was ghastly. For now it revealed itself frankly for what it was—a dead man; dry, shrivelled, unnatural, but still undeniably the dead body of a man.

Pottermack stood by the bench gazing at it distastefully and with something of the compunction that he had felt in the auction room. But it was of no use being squeamish. He had bought the thing for a specific and most necessary purpose, and that purpose had got to be carried into effect. Gulping down his qualms, therefore, he set himself to make a systematic examination.

Apparently the body was quite complete. The abdomen looked a little queer, but probably that was due to the drying,
though there were unmistakable signs of its having been opened. Both legs were partially broken off at the hip-joints, just hanging on loosely by a few strings of dried flesh. But the bones seemed quite uninjured. The head was in the same condition as the legs, detached from the spine save for one or two strands of dry muscle, and at the moment rolled over on its side with its face turned towards Pottermack. And a grisly face it was; for despite the shrivelled nose, the papery eyes, the sunken eyes, and the horrid sardonic grin, it had a recognizable human expression. Looking at it with shuddering interest, Pottermack felt that he could form a fairly clear idea as to what Khama-Heru must have looked like when alive.

Careful measurement with a two-foot rule showed that the body was just under five feet nine inches in length. Allowing for shrinkage in drying, his height had probably been well over five feet ten; enough to make him a passable understudy for James Lewson. Unfortunately, there was no facial resemblance whatever, but this, Pottermack hoped, would be of no consequence. The dimensions were what really mattered. But, of course, the body was useless for Pottermack's purpose in its present rigid, brittle state, and the important question was how far it could be softened and rendered flexible. Pottermack decided to make a tentative experiment on one shoulder by leaving it for an hour or two under several thicknesses of wet rags; which he did, with results that were, on the whole, satisfactory. The moistened flesh and skin swelled up appreciably and took on a much more natural appearance, and the arm now moved freely at the shoulder-joint. But it was evident that this treatment must not be applied prematurely, or other, less desirable changes would set in. He accordingly allowed the moistened area to dry thoroughly and then put the mummy away in its box, there to remain hidden until the other preparations had been completed.

These were of two kinds. First, the understudy had to be provided with a "make-up" which would be perfectly convincing under somewhat rigorous conditions; and secondly, a suitable setting had to be found for the little drama in which the understudy should play his part. Both gave Mr. Pottermack considerable occupation.

In connection with the make-up, it happened most fortunately that he had preserved the copy of the local paper containing the announcement of the disappearance with the description of the missing man issued by the police. With native caution, Mr. Pottermack had used the paper to line a drawer, and he now drew it forth and studied its remarkably full details. The coat was in his possession; most fortunately, since it was of a conspicuous pattern and would have been almost impossible to duplicate. The other clothing—the pin-head worsted waistcoat and trousers, the plain grey cotton shirt, the collar, neck-tie, and underclothing—was all of a kind that could be easily matched from the description, aided in some cases by his own memory; and the shoes, which were described minutely, could be duplicated with ease at any large shoe-retailers, while as to the rubber soles, they were of a pattern that were turned out by the thousand.

Nevertheless, the outfit for the deceased gave him endless trouble and occasioned numerous visits to London. The clothing called for tactful manoeuvring, since it was obviously not for his own wear. The "Invicta" sole manufacturers had to be found through the directory, and the circular heels, with their five-pointed stars, involved a long and troublesome search; for most of the stars that he had even when the outer had been obtained the work was not at an end. For all the things were new. They had to be "conditioned" before they would be ready for the final act. The garments had to be worn, and worn roughly (in the garden and workshop, since their size made them entirely unrepresentable), to produce marks of wear and convincing creases. The shoes, when the soles had been stuck on and a knife-cut made across the neck of the horse on the right sole, had to be taken out for long nocturnal walks on rough roads, having been previously fitted with two pairs of inner cork soles to prevent them from dropping off. The underclothing would require to be marked, but this Pottermack prudently put off until the last moment. Still, all these preparatory activities took up a good deal of time and gave a considerable amount of trouble. Not that time was of any importance. There was no hurry. Now that Pottermack had a plan his mind was at rest.

Moreover, he had certain distractions, besides his frequent visits to Lavender Cottage. For, in addition to these preparations connected with the costume of the actor, there were others concerned with the scene of the drama. A suitable setting had to be found for James Lewson's next—and, as Pottermack devoutly hoped, final—appearance.

The place must of necessity be close at hand and ought to be on the line of Lewson's known route. This left, practically, the choice between the heath and the wood. The former he rejected as too exposed for his purpose and too much frequented to be perfectly convincing. Of the wood he knew little excepting that few persons seemed ever to enter it, probably for the reason that had led him to avoid it; that, owing to its neglected state, it was choked by almost impenetrable undergrowth.

Now he decided to explore it thoroughly, and since the path which meandered through it divided it into two nearly equal parts, he proposed to make a systematic exploration of each part separately.

He began with the part that lay to the left of the path, which was, if possible, less frequented than the other. Choosing a place where the undergrowth was least dense, he plunged in and began to burrow through the bushes, stooping low to avoid the matted twigs and branches and keeping an eye on a pocket-compass that he held in his left hand. It was a wearisome and uncomfortable mode of progression, and had the disadvantage that, doubled up as he was, he could see little but the compass and the ground at his feet. And it nearly brought him to disaster; for he had been blundering along thus for about ten minutes in as near to a straight line as was possible, when he suddenly found himself at the edge of what looked like a low cliff. Another step forward and he would have been over the brink.

He stopped short, and, straightening his back, drew aside the branches of the tall bushes and looked down. Beneath him was what had evidently been a gravel-pit; but it must have been disused for many years, for its floor was covered, not only with bushes but trees of quite a respectable size. It seemed to him that this place was worth a closer examination. And
since the pit had been produced by excavation, there must obviously be some passage-way to the bottom, up and down which the carts had passed when the gravel was being dug.

Accordingly he began to make his way cautiously along the brink, keeping a safe distance from the possibly crumbling edge. He had proceeded thus for a couple of hundred yards when he came to the edge of a sunken cart-track, and following this, soon reached the entrance. Walking down the rough track, in which the deep cart-ruts could still be made out, he reached the floor of the pit and paused to look around; but the trees that had grown up and the high bushes made it impossible to see across. He therefore embarked on a circumnavigation of the pit, wading through beds of tall nettles that grew luxuriantly right up to the cliff-like face of the gravel.

He had made nearly half the circuit of the pit when he perceived, some distance ahead, a large wooden gate which guarded the entrance to a tunnel or excavation of some kind. It had two leaves, in of which he could see, as he came nearer, a wicket which stood half open. Approaching and peering in through the opening, he found the cavity to be an artificial cave dug in the hard gravel, apparently to serve as a cart-shelter, for the floor was marked by a pair of wide ruts and the remains of a broken sway-bar lay close to one side.

Deeply interested in this excavation, Mr. Pottermack pulled open the wicket-gate—in the lock of which a rusty key still remained—and stepping in through the opening, looked critically around the interior. That it had been for many years disused, so far as its original purpose was concerned, followed from the state of the pit and the absence of any signs of recent digging. But yet the cave itself showed traces of comparatively recent occupation; and those traces threw considerable light on the character of the occupants. A sooty streak up one wall, fading away on the roof, and a heap of wood-ashes mixed with fragments of charcoal, told of not one fire but a series of fires lit on the same spot. Beside the long-extinct embers lay a rusty "billy", originally made from a bully-beef tin fitted with a wire handle; fragments of unsavoury rags and a pair of decayed boots spoke of changes of costume that could certainly not have been premature; while numbers of bird and rabbit bones strewn around hinted at petty poaching, with, perchance, a fortunate snatch now and again in the vicinity of a farmyard.

Mr. Pottermack viewed these relics of the unknown nomad with profound attention. Like most resourceful men, he was quick to take a suggestion. And here, in the pit, the cavern, and these unmistakable relics, was a ready-made story. His own scheme had hardly advanced beyond the stage of sketchy outline. He knew broadly what he intended, but the details had not yet been filled in. Now he could complete the sketch in such detail that nothing would remain but the bare execution; and even that had been robbed of its chief difficulties by the discovery of this cavern.

He paced slowly up and down the echoing chamber, letting his imagination picture the dramatic climax and congratulating himself on this fortunate discovery. How astonishingly well it all came together! The place and the circumstances might have been designed for the very purpose. No need now to puzzle out a plausible cause of death. The empty poison-bottle and the discharged pistol-bullet, which he had considered alternatively, could now be discarded. The cause of death would be obvious. He had nearly broken his own neck coming here in broad daylight. If he had come in the dark, he would have broken it to a certainty.

Then there were the vanished notes and the necessarily empty pockets—necessarily empty, since, as he did not know what they had contained, he would not dare to introduce contents. He had hoped that a reasonable inference would be drawn. But now no inference would be needed. Even the most guileless village constable, when he had seen those fowl and rabbit bones, would understand how deceased’s pockets came to be empty.

From reflections on the great denouement Pottermack recalled his thoughts to the practical details of procedure. He proposed forthwith to take over the reversion of the late resident’s tenancy. But he could not leave it in its present unguarded state. When the time came for him to occupy it he would require "the use and enjoyment of the said messuage and premises" in the strictest privacy. It would never do to have casual callers dropping in there in his absence. He must see how the place could be made secure.

Inspection of the entrance showed that the large gates were fastened on the inside by massive bars of wood thrust through great iron staples. Consequently, when the wicket-gate was locked the cave was absolutely secure from intrusion. The important question now was as to the lock of the wicket-gate. Was it possible to turn the key? A few strenuous wrenches answered the question in the negative. It is true that, by a strong effort, the rusty key could be made to turn backwards, but by no effort whatever could it be made to shoot the bolt. Key and lock were both encrusted with the rust of years.

There was only one thing to be done. The key must be taken away and scraped clean. Then, with the aid of oil or paraffin, it would probably be possible to make the lock work. By putting out all his strength, Pottermack managed to turn the key backwards far enough to enable him to pull it out of the lock; whereupon, having dropped it in his pocket, he retraced his steps to the entrance to the pit and walked up the sloping cart-track until it emerged on the level, when he halted, and having consulted his compass, set forth, holding it in his hand, and trying by means of the ruts to find the track along which the carts used to pass to and fro across the road.

As the matter was of considerable importance (since the cave was to be the scene of some momentous operations and it was necessary for him to be able to find his way to it with ease and certainty), he took his time over the survey, tracing the ruts until they faded away into the younger undergrowth, and thereafter identifying the overgrown track by the absence of large bushes or trees. From time to time he jotted down a note of the compass-bearing and sliced off with his knife a piece of bark from one of the larger branches of a bush or the trunk of a sapling, and so proceeded methodically, leaving an
inconspicuously blazed trail behind him until at last he came out on to the path. Here he paused and looked about him for a landmark, his natural caution restraining him from making an artificial mark; nor was this necessary, for exactly opposite to the point where he had emerged, a good-sized beech tree stood back only a few yards from the path.

Having taken a good look at the tree, that he might recognize it at the next visit, he pocketed his compass and started homewards, counting his paces as he went until he reached the place where the path entered the wood, when he halted and wrote down in his pocket-book the number of paces. That done, his exploration was finished for the time being. The rest of the day he devoted to cleaning the key, to drawing on a card a little sketch-map of his route from the notes in his pocket-book, and to one or two odd jobs connected with the great scheme.

We need not follow his proceedings in minute detail. On the following day, having furnished himself with the cleaned key, a small spanner, a bottle of paraffin mixed with oil, and one or two feathers, he returned to the cave, finding his way thither without difficulty by the aid of his map. There he made a determined attack on the rusty lock, oiling its interior parts freely and turning the key—also oiled—by means of the spanner. At length its corroded bolt shot out with a reluctant groan; and when this, too, had been oiled and shot back and forth a few times, Pottermack shut the wicket, locked it and carried off the key in his pocket, with the comfortable feeling that he now had a secure place in which the highly compromising final operations could be carried out in reasonable safety.

And now the time drew nigh for those final operations to be proceeded with. The costume was complete and its various items had been brought by wear and rough usage to a suitable condition. The waning summer hinted at the approach of autumn and the weather would presently be such as to render woodland expeditions, especially of a nocturnal kind, disagreeable and difficult. And then Pottermack, though not in any way hustled, was beginning to look forward a little eagerly to the end of this troublesome, secret business. He yearned to feel that the tableau was set and that he could wait quietly for the denouement. Also, he was getting to feel very strongly that he would be glad to be relieved of the society of Khama-Heru.

But meanwhile that ancient libationer became daily a more and more undesirable tenant. For the time had come for the course of treatment that should render him at once more convincing and more portable. His condition when first unrolled from his wrappings was that of a wooden effigy, hard and stiff as a board. In that state he could never be got into his clothes, nor could he be transported to the cave under the necessary conditions of secrecy; nor could he effectively impersonate the late James Lewson. The work that the embalmers had done so well would have to be undone. After all, he had had some four thousand years of physical immortality, so the embalmers' fees would not have been thrown away.

There was no difficulty about the treatment. Pottermack simply wrapped the mummy in several thicknesses of wet rag, poured a can of water over it, and, having enclosed it in an outer covering of tarpaulin, left it to macerate for forty-eight hours. When, at the end of that time, he uncovered it, he was at once encouraged and appalled. The last trace of the museum atmosphere was dissipated. It was a mummy no more but just an unburied corpse. The dry muscles had absorbed the moisture and swelled up to an unexpected bulk; the parchment-like skin had grown soft and sodden, and the skeleton hands had filled out and looked almost natural save for the queer, dirty orange colour of the fingernails. And even that, when Pottermack had observed it with a strong suspicion that it was an artificial stain, disappeared almost completely after a cautious application of chlorinated soda. In short, Khama-Heru seemed already to call aloud for the coroner. All, then, was going well so far. But Pottermack realized only too clearly that the part that was done was the easy part. The real difficulties had now to be faced; and when he considered those difficulties, when he reflected on the hideous risks that he would have to run, the awful consequences of a possible miscarriage of his plans, he stood aghast.

But still with unshaken resolution he set himself to plotting out the details of the next move.
CHAPTER XIII. — THE SETTING OF THE TABLEAU

THE task which confronted Mr. Pottermack in the immediate future involved a series of operations of greatly varying difficulty. The materials for the "tableau" had to be transported from the workshop and tool-house to the cave in the gravel-pit. Thither they would be conveyed in instalments and left safely under lock and key until they were all there, ready to be "assembled". In the case of the clothing, the conveyance would be attended by no difficulties and little risk. It could be done quite safely by daylight. But the instalments of Khama-Heru, particularly the larger ones, would have to be transported, not merely after dark, but so late as to make it practically certain that he would have the path and the wood to himself.

The latter fact had been evident from the beginning, and in view of it, Pottermack had provided himself with a night-marching compass (having a two-inch luminous dial and direction-pointer) and an electric lamp of the police pattern; so that he was now ready to begin; and as he had decided to convey the clothing first, he commenced operations by making a careful survey of the separate items and putting the necessary finishing touches to them.

It was now for the first time that he made a thorough examination of Lewson's coat and of the contents of the letter-case. And it was just as well that he did; for among those contents was a recent letter from Alice, refusing a "loan" (probably that letter had precipitated the catastrophe). It was unsigned and bore no address, but still it might have given trouble, even if no one but himself should have been able to identify the very characteristic handwriting. Accordingly he burned it forthwith and went still more carefully through the remaining papers; but there was nothing more that interested him. They consisted chiefly of tradesmen's bills, demands for money owing, notes of racing transactions, a letter from his broker, and a few visiting-cards—his own—all of which Pottermack returned to their receptacle. The other pockets contained only a handkerchief, marked "J. Lewson", a leather cigarette-case, and a loose key which looked like a safe key. The key he transferred to the trousers pocket, the cigarette-case he burned, and the handkerchief he retained as a guide to the next operation, that of marking the underclothing. This he did with great care, following his copy closely and placing the marks in accordance with the particulars in the police description, using a special ink of guaranteed durability.

When the "properties" were ready for removal he considered the question of time. This need not be a nocturnal expedition. There would be nothing suspicious in his appearance, and he had, in fact, during his exploration of the wood, not met or seen a single person. Still, it might be better to make his visit to the pit after dusk, when, even if he should be seen, he would not be recognized, and the nature of his proceedings there would not be clearly observable.

Accordingly he prepared for his start with the first instalment as the sun was getting low in the west. Lewson's coat he put on in lieu of his own, covering it with a roomy showerproof overcoat. The trousers and waistcoat he stowed neatly at the bottom of his rucksack with his moth-collecting kit and folding-net above them. Then, with the net-staff in his hand, he let himself out of the side gate just as the crimson disc of the sun began to dive behind a bank of slaty cloud.

The expedition was quite uneventful. He tramped along the path in the gloaming, a solitary figure in the evening landscape; he followed it into the wood and along to the now familiar beech tree; and in all the way he met not a soul. He turned off on the almost indistinguishable track, finding no need for his sketch-map and only glancing at the inconspicuous blazings on bush and sapling. By the time he reached the entrance to the pit, the dusk had closed in but even now there was light enough for him to find his way down the sloping cart-track, and even to note that apparently since his last visit, inasmuch as he had not noticed it before, a small tree had toppled over the edge of the cliff, bringing down with it a little avalanche of stones and gravel. He looked up and made a slight detour, picking his way cautiously among the fallen stones; and, preoccupied as he was, that fallen tree and those heaped and scattered stones started a train of thought of which he was hardly conscious at the time.

When he had shed Lewson's coat and by the light of a little, dim pocket-lamp unpacked the trousers and waistcoat, he threw them down in a corner at the back of the cave. Apprehensively he glanced round for some trace of recent visitors (though he knew there could have been none); then he extinguished the lamp, passed out through the wicket, shut the little gate, locked it, and, having pocketed the key, turned away with a sigh of relief. The first instalment was delivered. It wasn't much, but still, he had made a beginning.

On his way back through the wood he made use of the night-compass; not that he seemed greatly to need it, for he found his way with an ease that surprised him. But it was obviously a useful instrument and it was well that he should acquire experience in its management, for there were circumstances that might possibly arise in which it would be invaluable. It would be a fearsome experience to be lost at night in the wood—especially with one of the later instalments.

The easy success of this first expedition had a beneficial moral effect, and with each of the succeeding journeys the strangeness of the experience wore off more and more. Even in the twilight he threaded the blazed track through the wood quite readily without reference to the blazings; and the return in the dark, with the glowing compass in his hand, was hardly more difficult. Half a dozen of these evening jaunts found the entire costume—clothes, shoes, cap, socks, underclothing—stored under lock and key in the cave—waiting for the arrival of the wearer.

But now came the really formidable part of the undertaking, and as Pottermack contemplated those next few journeys he quailed. There was now no question of setting forth in the gloaming; these journeys would have to be made in the very dead of night. So he felt; and even as he yielded to the feeling as to something inevitable, he knew that the reason for it was largely psychological; that it was determined by his own mental state rather than by external circumstances. Admittedly, a
human head is an awkward thing to pack neatly in a rucksack. Still, it is of no great size. Its longest diameter, including the lower jaw, is no more than nine or ten inches. A half-quartern loaf and a bottle of beer would make a bigger bulge; yet with these, Pottermack would have gone abroad gaily, never dreaming of having his burden challenged.

He knew all this. And yet as he took up the head (it came off in his hands owing to the frayed-out condition of the softened muscle and ligament) a thrill of horror ran through him at the thought of that journey. The thing seemed to grin derisively in his face as he carried it from the tool-house to the workshop; and when he laid it down on the sheet of brown paper on the bench, the jaws fell open as if it were about to utter a yell.

He wrapped it up hastily and thrust it into the ruck-sack, and then, by way of feeble and futile precaution stuffed the sugaring-tin and collecting-box on top. With creeping flesh he slung the package on his back and, grasping the net-stick, went out across the garden to the gate. He was frankly terrified. When he had passed out of the gate, he stood for some seconds irresolute, unwilling to shut it behind him; and when at last he closed it softly, the click of the spring-latch shutting him out definitely gave him such a qualm that he could hardly resist the impulse to reopen the gate, or, at least, to leave the key in the lock ready for instant use.

Once started, he strode forward at a rapid pace, restraining himself by an effort from breaking into a run. It was a pitch-dark night, near to new moon and overcast as well; so dark that he could barely see the path in the open, and only a slightly intenser gloom told him when he had entered the wood. Here he began to count his paces and strain his eyes into the blackness ahead; for, anticipating some nervousness on this journey, he had taken the precaution when returning from the last to spread a sheet of newspaper at the foot of the beech tree (which formed his "departure" for the cart-track and the gravel-pit) and weight it with a large stone. For this patch of light on the dark background he looked eagerly as he stumbled forward, peering into utter blackness and feeling his way along the path with his feet; and when he had counted out the distance and still saw no sign of it, he halted, and, listening fearfully to the stealthy night sounds of the wood, looked anxiously both ahead and behind him.

Nothing whatever could be seen. But perhaps it was too dark for even a white object to show. Perhaps he had counted wrong, or possibly in his haste he had "stepped out" or "stepped short". Reluctantly he drew out his little pocket-lamp (he did not dare to use the powerful inspection-lamp, though he had it with him) and let its feeble glimmer travel around him. Somehow the trees and bushes looked unfamiliar; but doubtless everything would look unfamiliar in that deceptive glimmer. Still, he had begun to know this path pretty well, even by night. Eventually he turned back and slowly retraced his steps, throwing the dim lamplight on the path ahead. Presently, out of the greenish gloom with its bewildering shadows there sprang a spot of white; and hurrying forward, he recognized with a sigh of relief the sheet of paper lying at the foot of the beech.

From this point he had no more difficulty. Plunging forward into the cellar-like darkness, he went on confidently, guided by the trusty compass which glowed only the more brightly for the impenetrable gloom around. Now and again he stopped to let the swinging dial come to rest and to verify his position by a momentary flash of the lamp. Soon he felt the familiar ruts beneath his feet and came out into the mitigated obscurity of the open track; then, following it down the slope, found his way through the nettles under the cliff, over the remains of the avalanche, until he reached the gate of the cave. A few minutes more and he had discharged his ghastly cargo, locked it into its new abode, and started, free at last from his horrid incubus, on the homeward journey, noting with a certain exasperation how, now that it was of no consequence, he made his way through the wood almost as easily as he would have done by daylight.

But it had been a harrowing experience. Short as had been the journey and light the burden, he stumbled in at his gate as warily as if he had tramped a dozen miles with a sack of flour on his back. And yet it was but the first and by far the easiest of these midnight expeditions. He realized that clearly enough as he stole silently into the house while a neighbouring church clock struck two. There were three more instalments; and of the last one he would not allow himself to think.

But events seldom fall out precisely as we forecast them. The next two 'trips' gave Pottermack less trouble than had the first, though they were undeniably more risky. The safe conveyance of the first instalment gave him confidence, and the trifling, but disconcerting, hitch in finding the 'departure' mark suggested measures to prevent its repetition. Still, it was as well that he had transported the easiest load first, for the two succeeding ones made call enough on his courage and resolution. For whereas the head had merely created a conspicuous bulge in the rucksack, the legs refused to be concealed at all. Doubled up as completely as the softened muscles and ligaments permitted, each made an unshapely, elongated parcel over twenty inches in length, of which nearly half projected from the mouth of the rucksack.

However, the two journeys were made without any mishap. As on the previous occasions, Pottermack met nobody either on the path or in the wood, and this circumstance helped him to brace up his nerves for the conveyance of the final instalment. Indeed, the chance of his meeting any person at one or two in the morning in this place, which was unfrequented even by day, was infinitely remote. At those hours one could probably have walked the whole length of the town without encountering a single human being other than the constables on night duty; and it was certain that no constable would be prowling about the deserted countryside or groping his way through the wood.

So Pottermack argued, and reasonably enough; but still he shied at that last instalment. The headless trunk alone was some twenty-six inches long, and, with the attached arms, was a bulky mass. No disguise was possible in its conveyance. It would have to be put into a sack and frankly carried on his shoulder. Of course, if he met nobody, this was of no consequence apart from the inconvenience and exertion; and again he assured himself that he would meet nobody. There was nobody to meet. But still—well, there was no margin for the unexpected. The appearance of a man carrying a sack at
one o'clock in the morning was a good deal more than suspicious. No rural constable or keeper would let him pass. And a single glance into that sack—

However, it was useless to rack his nerves with disquieting suppositions. There was pretty certainly not a human creature abroad in the whole countryside, and at any rate the thing had got to be taken to the cave. Quivering with disgust and apprehension, he persuaded the limp torso into the sack that he had obtained for it, tied up the mouth, and, hoisting it on his shoulder, put out into the darkness.

As soon as he had closed the gate he set off at a quick walk. He had no inclination to run this time, for his burden was of a very substantial weight from the moisture that it had absorbed. From time to time he had to halt and transfer it from one shoulder to the other. He would have liked to put it down and rest for a few moments, but did not dare while he was in the open. An unconquerable terror urged him forward to the shelter of the wood and forbade him to slacken his pace, though his knees were trembling and the sweat trickled down his face. Yet he kept sufficient presence of mind to make sure of his 'departure', counting his paces from the entrance to the wood and showing the glimmer of his little lamp as his counting warned him of his approach to the beech tree. Soon its light fell on the sheet of paper, and, with a sigh of relief, he turned off the path into the old cart-track.

Once off the path, his extreme terror subsided and he followed the track confidently with only an occasional flash of his lamp to pick up a blaze on bush or tree and verify his direction. He even contemplated a brief rest, and he had, in fact, halted and was about to lower his burden from his shoulders when his ear seemed to catch a faint sound of movement somewhere within the wood. Instantly all his terrors revived. His limbs trembled and his hair seemed to stir under his cap as he stood stock-still with mouth agape, listening with almost agonized intentness.

Presently he heard the sound again; the sound of something moving through the undergrowth. And then it became quite distinct and clearly recognizable as footfalls—the footsteps of two persons at least, moving rather slowly and stealthily; and by the increasing distinctness of the sounds, it was evident that they were coming in his direction. The instant that he recognized this, Pottermack stole softly off the track into the dense wood until he came to a young beech tree, at the foot of which he silently deposited the sack, leaning it against the bole of the tree. Then in the same stealthy manner he crept away a dozen paces or so and again halted and listened. But now the sounds had unaccountably ceased; and to Pottermack the profound silence that had followed them was sinister and alarming. Suddenly there came to him distinctly a hoarse whisper:

"Joe, there's some one in the wood!"

Again the deathly silence descended. Then the sack, which must have been stood up insecurely, slipped from the bole of the tree and rolled over among the dead leaves.

"J'ear that?" came the hushed voice of the unseen whisperer.

Pottermack listened intently, craning forward in an effort to locate the owner of the voice. In fact, he craned a little too far and had to move one foot to recover his balance. But the toe of that foot caught against a straggling root and tripped him up, so that he staggered forward a couple of paces, not noisily, but still very audibly.

Instantly the silence of the wood was dissipated. A startled voice exclaimed: "Gawd! Look out!" and then Joseph and his companion took to undissembled flight, bursting through the undergrowth and crashing into the bushes like a couple of startled elephants. Pottermack made a noisy pretense of pursuit which accelerated the pace of the fugitives; then he stood still, listening with grateful ears to the hurried trampings as they gradually grew faint in the distance.

When they had nearly died away, he turned, and re-entering the dense wood, made his way, with the aid of the little lamp, towards the beech where he had put down the sack. But the beech was not exactly where he had supposed it to be, and it took him a couple of minutes of frantic searching to locate it. At last the feeble rays of his lamp fell on the slender trunk, and he hurried forward eagerly to retrieve his treasure. But when he reached the tree and cast the light of his lamp on the buttressed roots, the sack was nowhere to be seen. He gazed in astonishment at the roots and the ground beyond, but the sack was certainly not there. It was very strange. He had heard the sack fall over and roll off the roots, but it could not have rolled out of sight. Was it possible that the poachers, or whatever they were, could have picked it up and carried it away? That seemed quite impossible, for the voice had come from the opposite direction. And then the simple explanation dawned on him. This was the wrong tree.

As he realized this, his self-possession forsook him completely. With frantic haste he began to circle round, thrusting through the undergrowth, peering with starting eyes at the ground carpeted with last year's leaves on which the light fell from his lamp. Again and again a tall, slender trunk lured him on to a fresh disappointment. He seemed to be bewitched. The place appeared to be full of beech trees—as in fact it was, being a beech wood. And with each failure he became more wildly terrified and distraught. All sense of direction and position was gone. He was just blindly seeking an unknown tree in a pitch-dark wood.

Suddenly he realized the horrid truth. He was lost. He had no idea whatever as to his whereabouts. He could not even guess in which direction the track lay, and as to his hideous but precious burden, he might have strayed half a mile away from it. He stopped short and tried to pull himself together. This sort of thing would never do. He might wander on, at this rate, until daylight or topple unawares into the pit and break his neck. There was only one thing to be done. He must get back to the path and take a fresh departure.
As this simple solution occurred to him, his self-possession became somewhat restored and he was able to consider his position more calmly. Producing his compass and opening it, he stood quite still until the dial came to rest. Then he turned slowly, so as not to set it swinging again, until the luminous “lubber-line” pointed due west. He had only to keep it pointing in that direction and it would infallibly lead him to the path, which ran nearly north and south. So, with renewed confidence, he began to walk forward, keeping his eye fixed on that invaluable direction-line.

He had been walking thus some three or four minutes, progressing slowly of necessity since he had to push straight forward through the undergrowth, when he tripped over some bulky object and butted rather heavily into the trunk of a tree. Picking himself up, a little shaken by the impact, he snatched out his lamp and threw its light on the object over which he had stumbled. And then he could hardly repress a shout of joy.

It was the sack.

How differently do we view things under different circumstances. When Pottermack had started, the very touch of that sack with its damp, yielding inmate had sent shudders of loathing down his spine. Now he caught it up joyfully, he could almost have embraced it, and as he set forward in the new direction he steadied it fondly on his shoulder. For he had not only found the sack, he had recovered his position. A dozen paces to the north brought him to the spot from whence he had stepped off the track into the wood. Now he had but to turn east and resume his interrupted journey.

But the meeting with those two men had shaken his confidence. He stole on nervously along the cart-track, and when he reached the pit, he peered apprehensively into the darkness on every side, half expecting to detect some lurking figure watching him from among the high nettles. Only when he had at last deposited his burden in the cave and locked and tried the wicket was his mind even moderately at rest; and even then throughout the homeward journey his thoughts occupied themselves in picturing, with perverse ingenuity, all the mischances that might possibly have befallen him and that might yet lie in wait to defeat his plans in the very moment of their accomplishment.

He arrived home tired, shaken, and dispirited, inclined rather to let his thoughts dwell on the difficulties and dangers that lay ahead than to congratulate himself on those that he had surmounted. As he crept noiselessly up to bed and thought of the gruesome task that had yet to be accomplished, he resolved to give himself a day or two’s rest to steady his nerves before he embarked on it. But the following day saw a change of mind. Refreshed even by the short night’s sleep, as soon as he had risen he began to be possessed by a devouring anxiety to finish this horrible business and be done with it. Besides which, common sense told him that the presence of the body and the clothes in the cave constituted a very serious danger. If they should be discovered, very awkward enquiries might be set on foot, and at the best his scheme would be "blown on" and rendered impossible for ever after.

A long nap in the afternoon further revived him, and as the evening wore on he began to be impatient to get on the road. This time there were no special preparations to make and no risks in the actual journeys, either going or returning. The recollection of those two men occasioned some passing thoughts of means of defence, for they had obviously been out for no good, as their precipitate retreat showed. He even considered taking a revolver, but his thorough-going British dislike of lethal weapons, which his long residence in the States had accentuated rather than diminished, made him reject the idea.

The net-staff was quite a good weapon, especially in the dark; and, in fact, he was not particularly nervous about those men, or any others, so long as he bore no incriminating burden.

When at last he started, just after midnight, he carried the rucksack slung from his shoulders and the stout net-stick in his hand. But the former contained nothing but a bona fide collecting outfit, including the inspection-lamp, so even a police patrol had no terrors for him. Naturally, it followed that he neither met, saw, nor heard a single person either on the way or in the wood. Swinging easily along the now familiar way, he made his departure almost by instinct and threaded the cart-track with hardly a glance at the compass. And all too soon—as it seemed to him—he found himself at the gate of the cave with the last horrid task immediately confronting him.

It was even worse than he had expected, for he had never dared to let his imagination fill in all the dreadful details. But now, when he had locked himself in and hung the inspection-lamp on a nail in the gate so that a broad beam of light fell on the grisly heap, he stood, shivering and appalled, struggling to brace up his courage to begin. And at last he brought himself to the sticking point and fell to work.

We need not share his agonies. It was a loathly business. The dismembered parts had to be inducted separately into their garments, leaving the ‘assembling’ for a later stage; and the sheer physical difficulty of persuading those limp, flabby, unhelpful members into the closer-fitting articles of clothing was at once an aggravation and a distraction from the horror of the task. And with it all, it was necessary to keep the attention wide awake. For there must be no mistakes. A time would come when the clothing would be submitted to critical examination and the slightest error might rouse fatal suspicions. So Pottermack told himself as, with trembling fingers, he buttoned the waistcoat on the headless, legless torso; only to discover, as he fastened the last button, that he had forgotten the braces.

At length the actual clothing was completed. The legs, encased in underclothing, trousers, socks and shoes, lay on the floor, sprawling in hideous, unnatural contortion; the trunk, fully dressed even to collar and neck-tie, reposed on its back with its arms flung out and the brown, claw-like hands protruding from the sleeves; while, hard by, the head seemed to grin with sardonic amusement at the cloth cap that sat incongruously on its ancient cranium. All was now ready for the ‘assembling’.

This presented less difficulty, but the result was far from satisfactory. For no kind of fastening was permissible. The legs
were joined to the trunk by the trousers only, secured precariously by the braces. As to the head, it admitted of no junction, but would have to be placed in position as best it could. However, had as the 'assemblage' was, it would answer well enough if there were no premature discovery.

Having seen everything ready for the final act, Pottermack switched off the lamp and stood awhile to let his eyes grow accustomed to the darkness before he should venture outside. It was not a situation that was helpful to a man whose nerves were already on edge. All sorts of sinister suggestions awakened in his mind in connection with the ghastly figure that sprawled unseen within a few inches of his feet. And then he became acutely sensible of the sepulchral silence of the place; a silence which was yet penetrated by sounds from without, especially by the hootings of a company of owls, whose derisive "hoo-hoos" seemed particularly addressed to him with something of a menacing quality. At length, finding the suspense unbearable, he unlocked the wicket and looked out. By now his eyes had recovered from the glare of the lamp sufficiently for him to be able to see the nearer objects distinctly and to make out the shadowy mass of the cliff close at hand. He peered into the gloom on all sides and listened intently. Nothing seemed to be moving, nor could his ear detect aught but the natural sounds of the woods.

He turned back into the cave, and, guided by a momentary glimmer of his small lamp, carefully gathered up the limp, headless effigy and lifted it with infinite precaution not to disturb the insecure fastenings that held its parts together. Thus he carried it tenderly out through the wicket, and, stepping cautiously over the rough ground and through the rank vegetation, bore it to "the appointed place"—the place where the fallen tree and the scattered stones and gravel marked the site of the "avalanche". Here, close by the tree, he laid it down, and, having inspected it rapidly by the light of the lamp and made a few readjustments, he went back and fetched out the head. This he laid in position by what was left of the neck and supported it in the chosen posture by packing handfuls of gravel round it. When the arrangement was completed he threw the feeble glimmer of the lamp on it once more and looked it over quickly. Then, satisfied that its appearance was as convincing as he could make it, he gathered a few stones and laid them on it, sprinkled over it a handful or two of gravel, and, finally, pulled the high nettles down over it until it was almost hidden from view.

And with that, his task was finished. Now, all he had to do was to get clear of the neighbourhood and wait for whatever might happen. With a sigh of relief he turned away and re-entered the cave, for the last time, as he hoped. Shutting himself in once more, he made a thorough examination of the place by the light of the inspection-lamp to make sure that he had left no traces of his tenancy. The remains of the tramp's fire, the billy, and the fowl and rabbit bones, he left intact; and, having satisfied himself that there was nothing else, he slipped on his rucksack, picked up his net-stick and went out, leaving the wicket gate ajar with the key in the outside of the lock as he had found it.

Very different were his feelings this night as he wended homewards through the woods from what they had been on the night before. Now he cared not whom he might meet—though he was better pleased that he met nobody. His task was done. All the troublesome secrecy and scheming was over, and all the danger was at an end. His premises were purged of every relic of that night of horror and release. Now he could go back to his normal life and resume his normal occupations. And as to the future: at the worst, a premature discovery might expose the fraud and spoil his plans. But no one would connect him with the fraud. He had given no name to the auctioneer. If suspicion fell on any one, it would fall on the fugitive, James Lewson.

But it was infinitely unlikely that the fraud would be detected. And if it were not, if all went well, James Lewson would be given a decent, reasonable death, and, in due course, a suitable burial. And—again in due course—Alice Bellard would become Mrs. Pottermack.
CHAPTER XIV. — THE DISCOVERY

IT will not appear surprising that for some days after his final expedition Mr. Pottermack's thoughts were almost exclusively occupied by the product of that night's labour. Indeed, his interest in it was so absorbing that on the very next day he was impelled to pay it a visit of inspection. He did not, however, go down to the gravel-pit, but, approaching it from above, found his way easily to that part of the brink from which the tree had fallen, carrying the 'avalanche' with it. Here, going down on hands and knees, he crept to the extreme edge and peered over. There was not much to see. There lay the fallen tree, there was the great bed of nettles, and in the midst of it an obscure shape displaying at one end a pair of shoes and at the other, part of a shabby cap.

It was surprisingly inconspicuous. The tall nettles, which he had pulled down across it, concealed the face and broke the continuity of the figure so that its nature was not evident at the first glance. This was eminently satisfactory, for it multiplied the improbabilities of early discovery. It was unlikely that any one would come here at all, but if some person should chance to stray hither, still it was unlikely that the body would be observed.

Considerably reassured, Mr. Pottermack backed away from the insecure edge and went his way, and thereafter firmly resisted the strong impulse to repeat his visit. But, as we have said, that grim figure, though out of sight, was by no means out of mind; and for the next week or two Mr. Pottermack was uncomfortably on the qui vive for the rumour of discovery. But as the weeks went by and still the body lay undiscovered, his mind settled down more and more to a state of placid expectancy.

The summer came to an end with a month of steady rain that made the woods impossible for wayfarers despite the gravel soil. The autumn set in mild and damp. Hedgerow elms broke out into patches of yellow, and the bees in the wood, after a few tentative changes, burst out into a glory of scarlet and crimson and orange. But their glory was short-lived. A sudden sharp frost held them in its grip for a day or two; and when it lifted, the trees were bare. Their gay mantles had fallen to form a carpet for the earth at their feet.

Then came the autumn gales, driving the fallen leaves hither and thither, but sooner or later driving most of them into the gravel-pit, whence there was no escape. And there they accumulated in drifts and mounds, moving restlessly round their prison as the winds eddied beneath the cliffs, and piling up in sheltered places, smothering the nettles and flattening them down by their weight.

Once, at this time, Mr. Pottermack was moved to call on the disguised libationer. But when he crawled to the edge of the pit and looked down, the figure was invisible. Even the nettles were hidden. All that was to be seen was a great russet bank, embedding the fallen tree, and revealing to the expert eye a barely perceptible elongated prominence.

These months of waiting were to Pottermack full of peace and quiet happiness. He was not impatient. The future was rich in promise and it was not so far ahead but that it seemed well within reach. He had no present anxieties, for the danger of premature discovery was past, and every month that rolled away added its contribution of security as to the final result. So he went his way and lived his life, care-free and soberly cheerful.

There were, indeed, times when he was troubled with twinges of compunction with regard to his beloved friend, for whom these Titanic labours had been undertaken. For Alice Bellard was acutely aware of the unsatisfactory nature of their relationship. She realized that simple, almost conventional friendship is no sort of answer to passionate love, and she made it clear to Pottermack that it was an abiding grief to her that she had no more to give. He yearned to disillusion her; to let her share his confident hopes that all would yet be well. But how could he? It was unavoidable that, in deceiving all the world, he must deceive her.

But, in fact, he was not deceiving her. He was merely conveying to her the actual truth by an indirect and slightly illusory method. So he argued in regard to his ultimate purpose; and as to this intervening period—well, obviously he could not make her an accessory to his illegal actions. So he had to put up, as best he could, with her grateful acknowledgments of his patience and resignation, his cheerful acceptance of the inevitable; feasting all the time an arrant humbug as he realized how far he had been from any such acceptance.

Thus, in quiet content and with rising hopes, he watched the seasons pass; saw the countryside mantled with snow, heard "the ring of gliding steel" on icebound ponds and streams, and walked with smoking breath on the hard-frozen roads. And still, as the sands of time trickled out slowly, he waited, now hardly expectant and not at all impatient but rather disposed to favour a little further delay. But presently the winter drew off her forces reluctantly, like a defeated army, with rear guard actions of rain and howling gales. And then the days began to lengthen, the sunbeams to shed a sensible warmth; the birds ventured on tentative twitterings and the buds made it clear that they were getting ready for business. In short, the spring was close at hand; and with the coming of spring, Mr. Pottermack's fancy lightly turned to thoughts of inquests.

For the time had come. The long months of waiting had been all to the good. They had given the crude understudy time to mature, to assimilate itself to its setting and to take on the style of the principal actor. But the preparatory stage must not be unduly prolonged or it might defeat its own end. There might come a stage at which the transformation would be so complete as not only to prevent the detection of the imposture but to render identification even of the counterfeit impossible. Hence, as the spring sunshine brightened and the buds began to burst, Mr. Pottermack's expectancy revived, not untinged with anxiety. Hopefully his thoughts dwelt on primrose-gatherers and rambling juveniles in search of birds'
nests and eggs; and when still no news was heard from the gravel-pit, he began seriously to consider the abandonment of his purely passive attitude and the adoption of some active measures to bring about the discovery.

It was a difficult problem. The one thing that was quite clear to him was that he must on no account appear personally in the matter. He could not say exactly why. But he had that feeling, and probably he was right. But if he could not appear in it himself, how was the thing to be managed? That was the question that he put to himself a hundred times in a day, but to which he could find no answer. And as events fell out, no answer had, after all, to be found, for a contingency that he had never contemplated arose and solved his problem for him.

It happened that on a fine sunny day after a spell of wet he was moved to take a walk along the path through the wood, which he had not done for a week or two. He was conscious of a rather strong desire to pay a visit to the pit and see for himself how matters were progressing, but he had no intention of yielding to this weakness; for the nearer the discovery, the more necessary it was for him to keep well in the background. Accordingly he trudged on, propounding to himself again and again that seemingly unanswerable question, and meanwhile picking up half-unconsciously the old landmarks. He had approached within a few yards of the well-remembered 'departure' beech tree when he suddenly caught sight of a new feature that brought him instantly to a stand. Right across the path, cutting deep into the soft loam of the surface, was a pair of cart-ruts with a row of large hoof-marks between them. They were obviously quite fresh, and it was clear, by the depth and width of the ruts and by the number of hoof-prints and the fact that they pointed in both directions, that they had been made by more than one cart, or at least by more than one journey to and fro of a single cart.

As he was standing eagerly examining them and speculating on what they portended, a hollow rumbling on his right heralded the approach of an empty cart from the west. A few moments later it came into sight through an opening just beyond the beech, the carter, dismounted, leading his horse by the bridle. Seeing Pottermack, he touched his hat and civilly wished him good morning.

"Now, where might you be off to?" Pottermack enquired genially.

"To the old gravel-pit, sir," was the reply. "'Tis many a year since any gravel was dug there. But Mr. Barber he's a-makin' a lot of this here concreate stuff for to put into the foundations of the new houses what he's buildin', and he thought as it were foolishness to send for gravel to a distance when there's a-plenty close at hand. So we're a-openin' up the old pit."

"Where about is the pit?" asked Pottermack. "Is it far from here?"

"Far! Lor' bless yer, no, sir. Just a matter of a few hundred yards. If you like to walk along with me, I'll show you the place."

Pottermack accepted the offer promptly, and as the man started his horse with a friendly "gee-up", he walked alongside, following the new ruts down the familiar track—less familiar now that the great hoofs and the wide cart wheels had cleared an open space—until they came out at the top of the rough road that led down to the pit. Here Pottermack halted, wishing his friend "good morning", and stood watching the cart as it rumbled down the slope and skirted the floor of the pit towards a spot where a bright-coloured patch on the weathered 'face' showed the position of the new working.

Here Pottermack could see two men loosening the gravel with picks and two more shovelling the fallen stuff into a cart that was now nearly full. The place where they were at work was on the right side of the pit, as Pottermack stood, and nearly opposite to the cave, the gates of which he could see somewhat to his left. Standing there, he made a rapid mental note of the relative positions, and then, turning about, made his way back to the path, cogitating profoundly as he went.

How long would it be before one of those men made the momentous discovery? Or was it possible that they might miss it altogether? The British labourer is not by nature highly observant, nor has he an excessively active curiosity. Nearly the whole width of the pit separated them from the remains. No occasion need arise for them to stray away from the spot where their business lay. But it would be exasperating if they should work there for a week or two and then go away leaving the discovery still to be made.

However, it was of no use to be pessimistic. There was a fair probability that one of them would at least go round to the cave. Quite possibly it might again be put to its original use as a cart-shelter. For his part, he could do no more than wait upon the will of Fortune and meanwhile hold himself prepared for whatever might befall. But in spite of the latter discreet resolution, the discovery, when it came, rather took him by surprise. He was lingering luxuriously over his after-breakfast pipe some four or five days after his meeting with the carter, idly turning over the leaves of a new book, while his thoughts circled about the workers in the pit and balanced the chances of their stumbling upon that gruesome figure under the cliff, when a familiar knock at the front door dispelled his reverie in an instant and turned his thoughts to more pleasant topics. He had risen and was about to go to the door himself, but was anticipated by Mrs. Gadby, who, a few moments later, announced and ushered in Mrs. Bellard.

Pottermack advanced to greet her, but was instantly struck by something strange and disquieting in her appearance and manner. She stopped close by the door until the housekeeper's footsteps had died away, then, coining close to him, exclaimed almost in a whisper:

"Marcus, have you heard—about James, I mean?"

"James!" repeated Pottermack helplessly, his wits for the moment paralysed by the suddenness of the disclosure; then, pulling himself together with a violent effort, he asked: "You don't mean to say that fellow has turned up again?"

"Then you haven't heard. He is dead, Marcus. They found his body yesterday evening. The news is all over the town this
morning."

"My word!" exclaimed Pottermack. "This is news with a vengeance! Where was he found?"

"Quite near here. In a gravel-pit in Potter's Wood. He must have fallen into it the very night that he went away."

"Good gracious!" ejaculated Pottermack. "What an astonishing thing! Then he must have been lying there all these months! But—er—I suppose there is no doubt that it is Lewson's body?"

"Oh, not the least. Of course the body itself was quite unrecognizable. They say it actually dropped to pieces when they tried to pick it up. Isn't it horrible? But the police were able to identify it by the clothes and some letters and visiting-cards in the pockets. Otherwise there was practically nothing left but the bones. It makes me shudder to think of it."

"Yes", Pottermack admitted calmly, his self-possession being now restored, "it does sound rather unpleasant. But it might have been worse. He might have turned up alive. Now you are rid of him for good."

"Yes, I know", said she; "and I can't pretend that it isn't a great relief to know that he is dead. But still—what ought I to do, Marcus?"

"Do?" Pottermack repeated in astonishment.

"Yes. I feel that I ought to do something. After all, he was my husband."

"And a shocking bad husband at that. But I don't understand what you mean. What do you suppose you ought to do?"

"Well, don't you think that somebody—somebody belonging to him—ought to come forward to—to identify him?"

"But", exclaimed Pottermack, "you said that there is nothing left of him but his bones. Now, my dear, you know you can't identify his bones. You've never seen them. Besides, he has been identified already."

"Well, say, to acknowledge him."

"But, my dear Alice, why on earth should you acknowledge him, when you had, years ago, repudiated him, and even taken another name to avoid being in any way associated with him? No, no, my dear, you just keep quiet and let things take their course. This is one of those cases in which a still tongue shows a wise head. Think of all the scandal and gossip that you would start if you were to come forward and announce yourself as Mrs. Lewson. You would never be able to go on living here. I take it that no one in this place knows who you are?"

"Not a soul."

"And how many people altogether know that you were married to him?"

"Very few, and those practically all strangers. We lived a very solitary life at Leeds."

"Very well. Then the least said the soonest mended. Besides", he added, as another highly important consideration burst on him,"there is our future to think of. You are still willing to marry me, dear, aren't you?"

"Yes, Marcus, of course I am. But please don't let us talk about it now."

"I don't want to, my dear, but we have to settle this other matter. The position now is that we can get married whenever we please."

"Yes, there is no obstacle now."

"Then, Alice dearest, don't let us make obstacles. But we shall if we make known the fact that you were Lewson's wife. Just think of the position. Here were you and your husband in the same town, posing as total strangers. And here were you and I, intimate friends and generally looked upon almost as an engaged couple. Now, suppose that we marry in the reasonably near future. That alone would occasion a good deal of comment. But suppose that it should turn out that Lewson met his death by foul means. What do you imagine people would say then?"

"Good heavens!" exclaimed Alice. "I had never thought of that. Of course, people—or at any rate, some people—would say that we had conspired to get him out of the way. And really, that is what it would look like. I am glad I came and consulted you."

Pottermack drew a deep breath. So that danger was past. Not that it had been a very obvious danger. But instinct warned him—and it was a perfectly sound instinct—to avoid at all costs having his personality in any way connected with that of James Lewson. Now he would be able to watch the course of events at his ease, and to all appearance from the detached standpoint of a total stranger. Nor was Alice less relieved. Some obscure sense of loyalty had seemed to impel her to proclaim her relationship to the dead wastrel. But she was not unwilling to be convinced of her mistake; and when presently she went away, her heart was all the lighter for feeling herself excused from the necessity of laying bare to the public gaze the sordid details of her domestic tragedy.

When she was gone, Pottermack reflected on the situation and considered what he had better do. Caution conflicted with inclination. He was on the very tip-toe of curiosity, but yet he felt that he must show no undue interest in the affair. Nevertheless, it was desirable that he should know, if possible, what had really happened and what was going to be done about it. Accordingly he decided to go forth and perambulate the town and passively permit the local quidnuncs to supply him with the latest details.
He did not, however, add much to his knowledge excepting in one important respect, which was that the date of the inquest was already fixed. It was to take place at three o'clock in the afternoon on the next day but one; and having regard to the public interest in the case, the inquiry was to be held in the Town Hall. When he had ascertained this fact, and that the public would have free access to the hall during the proceedings, he went home and resolved to manifest no further interest in the case until those proceedings should open.

But the interval was one of intense though suppressed excitement. He could settle to nothing either in the workshop or in the garden. He could only seek relief in interminable tramps along the country roads. His mind seethed with mingled anxiety and hope. For the inquest was the final scene of this strange drama of which he was at once author and stage manager; and it was the goal of all his endeavours. If it went off successfully, James Lewson would be finished with for ever; he would be dead, buried, and duly registered at Somerset House; and Marcus Pottermack could murmur “Nunc dimittis” and go his way in peace.

Naturally enough, he was punctual, and more than punctual, in his attendance at the Town Hall on the appointed day, for he arrived at the entrance nearly half an hour before the time announced for the opening of the inquiry. However, he was not alone. There were others still more punctual and equally anxious to secure good places. In fact, there was quite a substantial crowd of early place-seekers which grew from moment to moment. But their punctuality failed to serve its purpose, since the main doors were still closed and a constable stationed in front of them barred all access. Some of them strayed into the little square or yard adjoining, apparently for the satisfaction of looking at the closed door of the mortuary on its farther side.

Pottermack circulated among the crowd, speaking to no one but listening to the disjointed scraps of conversation that came his way. His state of mind was very peculiar. He was acutely anxious, excited, and expectant. But behind these natural feelings he had a queer sense of aloofness, of superiority to these simple mortals around him, including the coroner and the police. For he knew all about it, whereas they would presently grope their way laboriously to a conclusion, and a wrong conclusion at that. He knew whose were the remains lying in the mortuary. He could have told them that they were about to mistake the scanty vestiges of a libation of the nineteenth or twentieth dynasty for the body of the late James Lewson. So it was that he listened with a sort of indulgent complacency to the eager discussions concerning the mysterious end of the deceased branch manager.

Presently a report began to circulate that a gentleman had been admitted to the mortuary by the sergeant and, as the crowd forthwith surged along in that direction, he allowed himself willingly to be carried with it. Arrived at the little square, the would-be spectators developed a regular gyratory movement down one side and up the other, being kept on the move by audible requests to “pass along, please”. In due course Pottermack came in sight of the mortuary door, now half open and guarded by a police-sergeant who struggled vainly to combine the incompatible qualities of majestic impassivity and a devouring curiosity as to what was going on inside.

At length Pottermack reached the point at which he could see in through the half-open door, and at the first glance his "superiority complex" underwent sudden dissolution. A tall man, whose back was partly turned towards him, held in his hand a shoe, the sole of which he was examining with concentrated attention. Pottermack stopped dead, gazing at him in consternation. Then the sergeant sang out his oft-repeated command and Pottermack was aware of increasing pressure from behind. But at the very instant when he was complying with the sergeant’s injunction to "pass along", the tall man turned his head to look out at the door and their eyes met. And at the sight of the man’s face Pottermack could have shrieked aloud.

It was the strange lawyer.

For some moments Pottermack’s faculties were completely paralysed by this apparition. He drifted on passively with the crowd in a state of numb dismay. Presently, however, as the effects of the shock passed off and his wits began to revive, some of his confidence revived with them. After all, what was there to be so alarmed about? The man was only a lawyer, and he had seemed harmless enough when they had talked together at the gate. True, he had seemed to be displaying an unholy interest in the soles of those shoes. But what of that? Those soles were all correct, even to the gash in the horse’s neck. They were, in fact, the most convincing and unassailable part of the make-up.

But, encourage himself as he would, the unexpected appearance of this lawyer had given his nerves a nasty jar. It suggested a number of rather disquieting questions. For instance, how came this man to turn up at this ‘psychological moment’ like a vulture sniffing from afar a dead camel in the desert? Why was he looking at those soles with such extraordinary interest? Was it possible that he had seen those photographs? And if so, might they have shown something that was invisible to the unaided eye?

These questions came crowding into Mr. Pottermack’s mind, each one more disquieting than the others. But always he came back to the most disquieting one of all. How, in the name of Beelzebub, came this lawyer to make his appearance in the Borley mortuary at this critical and most inopportune moment?

It was natural that Mr. Pottermack should ask himself this very pertinent question; for, in truth, it did appear a singular coincidence. And inasmuch as coincidences usually seem to demand some explanation, we may venture to pursue the question that the reader may attain to the enlightenment that was denied to Mr. Pottermack.
CHAPTER XV. — DR. THORNDYKE'S CURiosity IS AROUSED

THE repercussions of Mr. Pottermack's activities made themselves felt at a greater distance than he had bargained for. By the agency of an enterprising local reporter they became communicated to the daily press, and thereby to the world at large, including Number 5A King's Bench Walk, Inner Temple, London, E.C., and the principal occupant thereof. The actual purveyor of intelligence to the latter was Mr. Nathaniel Polton, and the communication took place in the afternoon of the day following the discovery. At this time Dr. Thorndyke was seated at the table with an open brief before him, jotting down a few suggestions for his colleague, Mr. Anstey, when to him entered Nathaniel Polton aforesaid, with a tray of tea-things in one hand and the evening paper in the other. Having set down the tray, he presented the paper, neatly folded into a small oblong, with a few introductory words.

"There is a rather curious case reported in the Evening Post, sir. Looks rather like something in our line. I thought you might be interested to see it, so I've brought you the paper."

"Very good of you, Polton", said Thorndyke, holding out his hand with slightly exaggerated eagerness. "Curious cases are always worth our attention."

Accordingly he proceeded to give his attention to the marked paragraph; but at the first glance at the heading, the interest which he had assumed out of courtesy to his henchman became real and intense. Polton noted the change, and his lined face crinkled up into a smile of satisfaction as he watched his employer reading the paragraph through with a concentration that, even to him, seemed hardly warranted by the matter. For, after all, there was no mystery about the affair, so far as he could see. It was just curious and rather gruesome. And Polton had a distinct liking for the gruesome. So, apparently, had the reporter, for he used that very word to lend attraction to his heading. Thus:—

'Gruesome discovery at Borley.'

'Yesterday afternoon some labourers who were digging gravel in a pit in Potter's Wood, Borley, near Aylesbury, made a shocking discovery. When going round the pit to inspect a disused cart-shelter, they were horrified at coming suddenly upon the much-decomposed body of a man lying at the foot of the perpendicular 'face,' down which he had apparently fallen some months previously. Later it was ascertained that the dead man is a certain James Lewson, the late manager of the local branch of Perkins's Bank, who disappeared mysteriously about nine months ago. An inquest on the body is to be held at the Town Hall, Borley, on Thursday next at 3 p.m., when the mystery of the disappearance and death will no doubt be elucidated.'

"A very singular case, Polton", said Thorndyke, as he returned the paper to its owner. "Thank you for drawing my attention to it."

"There doesn't seem to be any mystery as to how the man met his death", remarked Polton, cunningly throwing out this remark in the hope of eliciting some illuminating comments. "He seems to have just tumbled into the pit and broken his neck."

"That is what is suggested", Thorndyke agreed. But there are all sorts of other possibilities. It would be quite interesting to attend the inquest and hear the evidence."

"There is no reason why you shouldn't, sir", said Polton. "You've got no arrangements for Thursday that can't easily be put off."

"No, that is true", Thorndyke rejoined. "I must think it over and consider whether it would be worth giving up the time."

But he did not think it over, for the reason that he had already made up his mind. Even as he read the paragraph, it was clear to him that here was a case that called aloud for investigation.

The call was twofold. In the first place he was profoundly interested in all the circumstances surrounding the disappearance of James Lewson. In any event he would have wished to make his understanding of the case complete. But there was another and a more urgent reason for inquiry. Hitherto his attitude had been simply spectatorial. Neither as a citizen nor as an officer of the law had he felt called upon to interfere. Now it became incumbent on him to test the moral validity of his position; to ascertain whether that detached attitude was admissible in these new circumstances.

The discovery had taken him completely by surprise. Some developments he had rather expected. The appearance of the stolen notes, for instance, had not surprised him at all. It had seemed quite 'according to plan'; just a manoeuvre to shift the area of inquiry. But this new development admitted of no such explanation; for if it was an 'arrangement' of some kind, what could be the motive? There appeared to be none.

He was profoundly puzzled. If this was really James Lewson's body, then the whole of his elaborate scheme of reasoning was fallacious. But it was not fallacious. For it had led him to the conclusion that Mr. Marcus Pottermack was Jeffrey Brandon, deceased. And investigation had proved beyond a doubt that that conclusion was correct. But a hypothesis which, on being applied, yields a new truth—and one that is conditional upon its very terms—must be true. But again, if his reasoning was correct, this could not be Lewson's body.

But if it was not Lewson's body, whose body was it? And how came it to be dressed in Lewson's clothes—if they really were Lewson's clothes and not a carefully substituted make-up? It was here that the question of public policy arose. For
here was undoubtedly a dead person. If that person proved to be James Lewson, there was nothing more to be said. But if he were not James Lewson, then it became his, Thorndyke’s, duty as a citizen and a barrister to ascertain who he was and how his body came to be dressed in Lewson’s clothes; or, at least, to set going inquiries to that effect.

That evening he rapidly reviewed the material on which his reasoning had been based. Then, unrolling the strip of photographs, he selected a pair of the most distinct—showing a right and a left foot—and, with the aid of the little document microscope, made an enlarged drawing of each on squared paper to a scale of three inches to the foot, i.e. a quarter of the natural size. The drawings, however, were little more than outlines, showing none of the detail of the soles; but the dimensions were accurately rendered, excepting those of the screws which secured the heels, which were drawn disproportionately large and the position of the slots marked in with special care and exactness.

With these drawings in his pocket and the roll of photographs in his attache-case for reference if any unforeseen question should arise, Thorndyke started forth on the Thursday morning en route for Borley. He did not anticipate any difficulties. An inquest which he had attended at Aylesbury some months previously had made him acquainted with the coroner who would probably conduct this inquiry; but in any case, the production of his card would secure him the necessary facilities.

It turned out, however, that his acquaintance was to conduct the proceedings, though he had not yet arrived when Thorndyke presented himself at the Town Hall nearly an hour before the time when the inquest was due to open. But the police officer on duty, after a glance at his card, showed him up to the coroner’s room and provided him with a newspaper wherewith to while away the time of waiting; which Thorndyke made a show of reading, as a precaution against possible attempts at conversation, until the officer had retired, when he brought forth the two drawings and occupied himself in memorizing the dimensions and other salient characteristics of the footprints.

He had been waiting close upon twenty minutes when he heard a quick step upon the stair and the coroner entered the room with extended hand.

"How do you do, doctor?" he exclaimed, shaking Thorndyke's hand warmly. "This is indeed an unexpected pleasure. Have you come down to lend us a hand in solving the mystery?"

"Is there a mystery?" Thorndyke asked.

"Well, no, there isn’t", was the reply, "excepting how the poor fellow came to be wandering about the wood in the dark. But I take it, from your being here, that you are in some way interested or concerned in the case."

"Not in the case", replied Thorndyke. "Only in the body. And my interest in that is rather academic. I understand that it is known to have been lying exposed in the open for nine months. Now, I have never had an opportunity of inspecting a body that has been exposed completely in the open for so long. Accordingly, as I happened to be in the neighbourhood, I thought that I would ask your kind permission just to look it over and make a few notes as to its condition."

"I see; so that you may know exactly what a nine-months-old exposed body looks like, with a view to due future contingencies. But of course, my dear doctor, I shall be delighted to help you to this modest extent. Would you like to make your inspection now?"

"How will that suit you?"

"Perfectly. The jury will be going in to view the remains in about half an hour, but they won’t interfere with your proceedings. But you will probably be finished by then. Are you coming to the inquest?"

"I may as well, as I have nothing special to do for an hour or two; and the evidence may help me to amplify my notes."

"Very well", said the coroner, "then I will see that a chair is kept for you. And now I will tell Sergeant Tatnell to take you to the mortuary and see that you are not disturbed while you are making your notes."

Hereupon, the sergeant, being called in and given his instructions, took Thorndyke in custody and conducted him down a flight of stairs to a side door which opened on a small square, on the opposite side of which was the mortuary. A considerable crowd had already collected here, in front of the Town Hall and at the entrance of the square, and by its members Thorndyke’s emergence with the sergeant by no means passed unnoticed; and when the latter proceeded to unlock the mortuary door and admit the former, there was a general movement of the crowd into the square with a tendency to converge on the mortuary door.

The sergeant, having admitted Thorndyke, gazed at him hungrily as he pointed out the rather obvious whereabouts of the corpse and the clothing. Then, with evident reluctance, he retired, leaving the door half open and stationing himself on guard in a position which commanded an unobstructed view of the interior. Thorndyke would rather have had the door closed, but he realized the sergeant’s state of mind and viewed it not unsympathetically. And a spectator or two was of no consequence since he was merely making an inspection.

As the sergeant had obligingly explained, the body was in the open shell or coffin which rested on one of the tables, while the clothing was laid out on an adjoining table in a manner slightly reminiscent of a rummage sale or a stall in the Petticoat Lane Market. Having put down his attache-case, Thorndyke began his inspection with the clothing, and, bearing in mind the sergeant’s eye, which was following every movement, he first looked over the garments, one by one, until he came naturally to the shoes. These he inspected from various points of view, and when he had minutely examined the uppers he picked up the right shoe, and, turning it over, looked at the heel. And in the instant that his glance fell on it his question
was answered.

It was not Lewson’s shoe.

Putting it down, he picked up the left shoe and inspected it in the same manner. It gave the same answer as the right had done, and each confirmed the other with the force of cumulative evidence. These were not James Lewson’s shoes. There was no need to apply the measurements that he had marked on his diagrams. The single fact which he had elicited settled the matter.

It was quite a plain and obvious fact, too, though it had escaped the police for the simple reason that they were not looking for a discrepancy in the position of the screws. But it was absolutely conclusive. For the central screw by which a circular rubber heel is secured is of necessity a fixture. When once it is driven in, it remains immovable so long as the heel continues in position. For if the screw turns in the slightest degree, its hold is loosened, it unscrews from its hole and the heel comes off. But these heels had not come off. They were quite firmly attached, as Thorndyke ascertained by grasping them and as was proved by the extent to which they were worn down. Therefore the screws could not have moved. But yet their slots were at a totally different angle from the slots of the screws in Lewson’s shoes.

He was standing with the shoe in his hand when a sharply spoken command from the sergeant to "pass along, please" caused him half-unconsciously to turn his head. As he did so, he became aware of Mr. Pottermack gazing at him through the half-open door with an expression of something very like consternation. The glance was only momentary, for, even as their eyes met, Pottermack moved away in obedience to the sergeant’s command, reinforced by a vigorous vis a tergo applied by the spectators in his rear.

Thorndyke smiled grimly at the coincidence—which was hardly a coincidence at all—and then returned to the consideration of the shoes. He had thoroughly memorized his drawings, but still, his rigorously exact mind demanded verification. Accordingly he placed both shoes sole uppermost and—with his back to the sergeant—produced the drawings from his pocket for comparison with the shoes. Of course he had made no mistake. In the drawing of the right foot, the slot of the screw was at a right angle to the long axis of the shoe—in the position of the hands of a clock at a quarter to three; in the right shoe before him, the slot was oblique—in the position of the clock-hands at five minutes past seven. So with the left; in the drawing it was in the position of ten minutes to four; in the mortuary shoe it was in that of twenty minutes to two.

The proof was conclusive, and it justified Thorndyke’s forecast. For he had assumed that if the shoes on the discovered body were counterfeits, the one detail which the counterfeiter would overlook or neglect would be the position of the screw-slots; while, by the ordinary laws of probability, it was infinitely unlikely that the positions of the slots would happen to match in both feet by mere chance.

But, this point being settled, a more important one arose. If the shoes were not Lewson’s shoes, the body was probably not Lewson’s body. And if it were not, then it was the body of some other person; which conclusion would raise the further question. How was that body obtained? This was the vitally important issue, for it would appear that the having possession of a dead human body almost necessarily implies the previous perpetration of some highly criminal act.

So Thorndyke reflected, a little anxiously, as he stood by the open shell, looking down on the scanty remains of what had once been a man. His position was somewhat difficult, for, since he had never seen Lewson and knew nothing of his personal characteristics beyond his approximate age and what he had inferred from the footprints—that he was a man approaching six feet in height, which appeared to be also true of the body in the shell—he had no effective means of identification. Nevertheless, it was possible that a careful examination might bring into view some distinctive characters that would furnish a basis for further inquiry when the witnesses should presently be called.

Thus encouraging himself, he began to look over the gruesome occupant of the shell more critically. And now, as his eye travelled over it, he began to be conscious of an indefinite something in its aspect that was not quite congruous with the ostensible circumstances. It seemed to have wasted in a somewhat unusual manner. Then his attention was attracted by the very peculiar appearance of the toe-nails. They showed a distinct orange-yellow coloration which was obviously abnormal, and when he turned for comparison to the finger-nails, traces of the same unnatural color were detectable though much less distinct.

Here was a definite suggestion. Following it up, he turned his attention to the teeth, and at once the suggestion was confirmed. These were the teeth of no modern civilized European. The crowns of the molars, cusplets and ground down to a level surface, spoke of the gritty meal from a hand-quern and other refractory food-stuffs beyond the powers of degenerate civilized man. Still following the clue, Thorndyke peered into the nasal cavities, the entrance to which had been exposed by the almost complete disappearance of the nose. With the aid of a tiny pocket electric lamp, he was able to make out on both sides extensive fractures of the inner bones—the turbinates and ethmoid. In the language of the children’s game, he was ’getting warm’; and when he had made a close and prolonged examination of the little that was left of the abdomen, his last lingering doubts were set at rest.

He stood up, at length, with a grim but appreciative smile, and recapitulated his findings. Here was a body, found in a gravel-pit, clothed in the habiliments of one James Lewson. The toe and finger nails were stained with henna; the teeth were the characteristic teeth of somewhat primitive man; the ethmoid and turbinate bones were fractured in a manner incomprehensible in connection with any known natural agency but in precisely the manner in which they would have been damaged by the embalmer’s hook; there was not the faintest trace of any abdominal viscera, and there did appear to
be—though this was not certain, owing to the wasted condition of the remains—some signs of an incision in the abdominal wall; and finally, the hair showed evidence of chemical corrosion, not to be accounted for by any mere exposure to the weather. In short, this body displayed a group of distinctive features which, taken collectively, were characteristic of, and peculiar to, an Egyptian mummy; and that it was an Egyptian mummy he felt no doubt whatever.

He hailed the conclusion with a sigh of relief. He had come here prepared to intervene at the inquest and challenge the identity of the corpse if he had found any evidence of the perpetration of a crime. But he would have been profoundly reluctant to intervene. Now there was no need to intervene, since there was no reason to suppose that any crime had been committed. Possession of an Egyptian mummy does not imply any criminal act. Admittedly, these proceedings of Mr. Pottermack's were highly irregular. But that was a different matter. Allowance had to be made for special circumstances.

Nevertheless, Thorndyke was not a little puzzled. Acting on his invariable principle, he had disregarded the apparent absence of motive and had steadily pursued the visible facts. But now the question of motive arose as a separate problem. What could be the purpose that lay behind this quaint and ingenious personation of a dead man? Some motive there must have been, and a powerful motive too. Its strength could be measured by the enormous amount of patient and laborious preparation that the result must have entailed, to say nothing of the risk. What could that motive have been? It did not, apparently, arise out of the original circumstances. There must be something else that had not yet come into view. Perhaps the evidence at the inquest might throw some light upon it.

At any rate, no crime had been committed, and as to this dummy inquest, there was no harm in it. On the contrary, it was all to the good. For it would establish and put on record a fact which otherwise would have-gone unascertained and unrecorded, but which ought, on public grounds, to be duly certified and recorded.

As Thorndyke reached this comfortable conclusion, the sergeant announced the approach of the jury to view the body; whereupon he picked up his attache-case, and, emerging from the mortuary, made his way to the court-room and took possession of a chair which a constable was holding in reserve for him, close to that which was to be occupied by the coroner.
CHAPTER XVI. — EXIT KHAMA-HERU

HAVING taken his seat—and wished that it had been a little farther from the coroner's—Thorndyke glanced round the large court-room, noting the unusual number of spectators and estimating from it the intense local interest in the inquiry. And as his eye roamed round, it presently alighted on Mr. Pottermack, who had secured a seat in a favourable position near the front and was endeavouring, quite unsuccessfully, to appear unaware of Thorndyke's arrival. So unsuccessful, indeed, were his efforts that inevitably their eyes met, and then there was nothing for it but to acknowledge as graciously as he could the lawyer's friendly nod of recognition.

Pottermack's state of mind was one of agonized expectation. He struggled manfully enough to summon up some sort of confidence. He told himself that this fellow was only a lawyer, and that lawyers know nothing about bodies. Now, if he had been a doctor it might have been a different matter. But there was that accursed shoe. He had certainly looked at that as if he saw something unusual about it; and there was no reason why a lawyer shouldn't know something about shoes. Yet what could he have seen in it? There was nothing to see. It was a genuine shoe, and the soles and heels were unquestionably correct in every detail. He, Pottermack, could hardly have distinguished them from the originals himself.

So his feelings oscillated miserably between unreasonable hope and an all too reasonable alarm. He would have got up and gone out but that even his terrors urged him to stay at all costs and hear what this lawyer should say when his turn came to give evidence. And thus, though he longed to escape, he remained glued to his chair, waiting, waiting for the mine to blow up; and whenever his roving glance fell, as it constantly did from minute to minute, on the sphinx-like countenance of that inopportune lawyer, a cold chill ran down his spine.

Thorndyke, catching from time to time that wandering, apprehensive gaze, was alive to Mr. Pottermack's condition and felt a humane regret that it was impossible to reassure him and put an end to his sufferings. He realized how sinister a significance his unexpected arrival would seem to bear to the eyes of the self-conscious gamester, sitting there trembling for the success of his last venture. And the position was made even worse when the coroner, re-entering with the jury, stopped to confer with him before taking his seat.

"You had a good look at the body, doctor?" he asked, stooping and speaking almost in a whisper. "I wonder if it would be fair for me to ask you a question?"

"Let us hear the question", Thorndyke replied cautiously.

"Well, it is this: the medical witness that I am calling is the police surgeon's locum tenens. I don't know anything about him, but I suspect that he hasn't had much experience. He tells me that he can mid nothing definite to indicate the cause of death, but that there are no signs of violence. What do you say to that?"

"It is exactly what I should have said myself if I had been in his place", Thorndyke replied. "I saw nothing that gave any hint as to the cause of death. You will have to settle that question on evidence other than medical."

"Thank you, thank you", said the coroner. "You have set my mind completely at rest. Now I will get on with the inquiry. It needn't take very long."

He retired to his chair at the head of the long table, on one side of which sat the jury and on the other one or two reporters, and having seen that his writing materials were in order, prepared to begin. And Thorndyke, once more meeting Mr. Pottermack's eye, found it fixed on him with an expression of expectant horror.

"The inquiry, gentlemen," the coroner began, "which we are about to conduct concerns the most regrettable death of a fellow-townsman of yours, Mr. James Lewson, who, as you probably know, disappeared rather mysteriously on the night of the 23rd of last July. Quite by chance, his dead body was discovered last Monday afternoon, and it will be our duty to inquire and determine how, when, and where he met with his death. I need not trouble you with a long preliminary statement, as the testimony of the witnesses will supply you with the facts and you will be entitled to put any questions that you may wish to amplify them. We had better begin with the discovery of the body and take events in their chronological order. Joseph Crick."

In response to this summons a massively built labourer rose and advanced sheepishly to the table. Having been sworn, he deposed that his name was Joseph Crick and that he was a labourer in the employ of Mr. Barber, a local builder.

"Well, Crick," said the coroner, "now tell us how you came to discover this body."

The witness cast an embarrassed glance at the eager jurymen, and, having wiped his mouth with the back of his hand, began: "'Twere last Monday afternoon—"

"That was the thirteenth of April", the coroner interposed.

"Maybe 'twere", the witness agreed cautiously, "I dunno. But 'twere last Monday afternoon. Me and Jim Wurdle had been workin' in the pit a-fillin' the carts with gravel. We'd filled the last cart and seen her off, and then, as it was gettin' on for knockin'-off time, we lights our pipes and goes for a stroll round the pit to have a look at the old shelter-place where they used to keep the carts in the winter. We'd got round to the gate and Jim Wurdle was a lookin' -in when I happened to notice a tree that had fell down from the top of the face. And then I see something layin' by the tree what had got a cap at one end and a pair of shoes at the other. Give me a regler start, it did. So I says to Jim Wurdle I says, Jim, I says, that's a
funny-lookin' thing over yonder long-side the tree, I says. Looks like some one a-layin' down there, I says. So Jim Wurdle he looks at it and he says, 'right you are, mate,' he says, 'so it do,' he says. So we walked over to have a look at it and then we see as 'twere a dead man, or leastways a man's skillin'ton. Give us a rare turn, it did, to see it a-layin' there in its shabby old clothes with the beedles a-crawlin' about on it."

"And what did you do then?" asked the coroner.

"We sung out to the other chaps o'ther side of the pit and told them about it, and then we set off for the town as hard as we could go until we come to the police station, where we see Sergeant Tatnell and told him about it; and he sent us back to the pit to wait for him and show him where it were."

When the coroner had written down Crick's statement he glanced at the jury and enquired: "Do you wish to ask the witness any questions, gentlemen?" And as nobody expressed any such wish, he dismissed Crick and called James Wurdle, who, in effect, repeated the evidence of the previous witness and was in his turn dismissed.

The next witness was Inspector Barnaby of the local police force, a shrewd-looking man of about fifty, who gave his evidence in the concise, exact manner proper to a police officer.

"On Monday last, the thirteenth of April, at five twenty-one p.m., it was reported to me by Sergeant Tatnell that the dead body of a man had been discovered in the gravel-pit in Potter's Wood. I obtained an empty shell from the mortuary, and, having put it on a wheeled stretcher, proceeded with Sergeant Tatnell to the gravel-pit, where the previous witnesses showed us the place where the body was lying. We found the body lying at the foot of the gravel-face close to a tree that had fallen from the top. I examined it carefully before moving it. It was lying in a sprawling posture, not like that of a sleeping man but like that of a man who had fallen heavily. There were a few stones and some gravel on the body, but most of the gravel which had come down with the tree was underneath. The body was in an advanced stage of decay; so much so that it began to fall to pieces when we lifted it to put it into the shell. The head actually dropped off, and we had great trouble in preventing the legs from separating."

An audible shudder ran round the court at this description and the coroner murmured, "Horrible! horrible!" But the inspector proceeded in matter-of-fact tones:

"We conveyed the remains to the mortuary, where I removed the clothing from the body and examined it with a view to ascertaining the identity of deceased. The underclothing was marked clearly 'J. Lewson' and in the breast pocket of the coat I found a letter-case with the initials 'J.L.' stamped on the cover. Inside it were a number of visiting-cards bearing the name 'Mr. James Lewson' and the address 'Perkins's Bank, Borley, Bucks,' and some letters addressed to James Lewson, Esquire, at that address. In one of the trousers pockets I found a key, which looked like a safe key, and as there seemed to be no doubt that the body was that of Mr. Lewson, the late manager of the Borley branch of Perkin's Bank, I cleaned the rust off the key and showed it to Mr. Hunt, the present manager, who tried it in the lock of the safe and found that it entered and seemed to fit perfectly."

"Did it shoot the bolt of the lock?" one of the jurors asked.

"No," replied the inspector, "because, after Mr. Lewson went away and took the key with him, the manager had the levers of the lock altered and a pair of new keys made. But the old duplicate key was there, and when we compared it with the key from the body, it was obvious that the two keys were identical in pattern."

"Did you take any other measures to identify the body?" the coroner asked.

"Yes, sir. I checked the clothing carefully, garment by garment, by the description that we issued when Mr. Lewson disappeared, and it corresponded to the description in every respect. Then I got the caretaker from the bank to look it over, and he identified the clothes and shoes as those worn by Mr. Lewson on the night when he disappeared."

"Excellent," said the coroner. "Most thorough and most conclusive. I think, gentlemen, that we can fairly take it as an established fact that the body is that of Mr. James Lewson. And now, Inspector, to return to the clothing; you have mentioned two articles found by you in deceased's pockets. What else did you find?"

"Nothing, sir. With the exception of those two articles—which I handed to you—the pockets were all completely empty." "And the letter-case?"

"That contained nothing but letters, bills, cards, and a few stamps; nothing but what was in it when I gave it to you."

Here the coroner opened his attache-case, and, taking from it the letter-wallet, the letters, cards, bills, and other contents, placed them, together with the key, on a wooden office tray which he pushed along the table for the jurymen's inspection. While they were curiously poring over the tray, he continued his examination.

"Then you found nothing of value on the person of deceased?"

"With the exception of the stamps, nothing whatsoever. The pockets were absolutely empty."

"Do you happen to know if deceased, at the time of his disappearance, had any valuable property about him?"

"Yes, sir. It is nearly certain that when he went away at about eight o'clock on the night of Wednesday, the twenty-third of last July, he had on his person one hundred pounds in five-pound Bank of England notes."

"When you say that it is nearly certain, what does that certainty amount to?"
"It is based on the fact that after he had gone, banknotes to that amount were found to be missing from the bank."

"And is it known what became of those notes?"

"Yes, sir. Their numbers were known and they have now all been recovered. As soon as they appeared in circulation they were traced; and in nearly every case traced to some person who was known to the police."

"Is it certain that these notes were taken by deceased and not by some other person?"

"Yes, practically certain. Deceased was in sole charge, and he had one key on his person and the other locked in the safe, where it was found when the lock was picked. But, if you will allow me, sir, I should like to say, in justice to deceased, that he had, apparently, no intention of stealing these notes, as was thought at first. Certain facts came to light later which seemed to show that he had merely borrowed this money to meet a sudden urgent call and that he meant to replace it."

"I am sure every one will be very glad to hear that", said the coroner. "We need not go into the circumstances that you mention, as they do not seem relevant to this inquiry. But these notes raise an important point. If they were on his person when he went away and they were not on his body when it was found, and if, moreover, they are known to have been in circulation since his death, the question of robbery arises, and with it the further question of possible murder. Can you give us any help in considering those questions?"

"I have formed certain opinions, sir, but, of course, it is a matter of guesswork."

"Never mind, Inspector. A coroner's court is not bound by the strict rules of evidence; and, besides, yours is an expert opinion. Let us hear what view you take of the matter."

"Well, sir, my opinion is that deceased met his death by accident the night that he went away. I think that he fell into the pit in the dark, dislodging a lot of gravel and pulling the small tree down with him. Both the body and the tree were on top of the heap of gravel, but yet there was a good deal of gravel and some stones on the body."

"Then I think that, about a month later, some tramp found the body and went through the pockets, and when he discovered the notes, he cleared off and said nothing about having seen the body."

"Have you any specific reasons for this very definite theory?"

"Yes, sir. First, there is clear evidence that the pit has been frequented by one or more tramps. Quite close to where the body was discovered is an old cart-shelter, dug out of the gravel, and that shelter has been used from time to time by some tramp or tramps as a residence. I found in it a quantity of wood ashes and charcoal and large sooty deposits on the wall and roof, showing that many fires had been lit there. I also found an old billy, or boiling-can, a lot of rags and tramps' raffle and a quantity of small bones—mostly rabbits' and fowls' bones. So tramps have certainly been there."

"Then the state of deceased's pockets suggests a tramp's robbery. It was not only the valuables that were taken. He had made a clean sweep of everything. Not a thing was left. Not even a pipe or a packet of cigarettes or even a match-box."

"And as to the time that you mentioned?"

"I am judging by the notes. A sharp look-out was kept for them from the first. A very sharp look-out. But for fully a month after the disappearance not one of them came to light. And then, suddenly, they began to come in one after the other and even in batches, as if the whole lot had been thrown into circulation at once. But if it had been a case of robbery with violence, the robber would have got rid of the notes immediately, before the hue and cry started."

"So you consider that the possibility of robbery with murder may be ruled out?"

"On the facts known to me, sir, I do—subject, of course, to the medical evidence."

"Exactly", said the coroner. "But in any case you have given us most valuable assistance. Is there any point, gentlemen, that is not quite clear, or any question that you wish to put to the inspector? No questions? Very well. Thank you, Inspector."

The next witness called was the police surgeon's deputy, a youngish Irishman of somewhat convivial aspect. Having been sworn, he deposed that his name was Desmond M'Alarney, that he was a Doctor of Medicine and at present acting as locum tenens for the police surgeon, who was absent on leave.

"Well, doctor", said the coroner, "I believe that you have made a careful examination of the body of deceased. Is that so?"

"I have made a most careful examination, sir", was the reply, "though as to calling it a body, I would rather describe it as a skeleton."

"Very well!" the coroner agreed good-humouredly, "call it what you like. Perhaps we may refer to it as the remains."

"Ye may", replied the witness, "and mighty small remains, by the same token. But such as they are, I have examined them with the greatest care."

"And did your examination enable you to form any opinion as to the cause of death?"

"It did not."

"Did you find any injuries or signs of violence?"
"I did not."
"Were any of the bones fractured or injured in any way?"
"They were not."
"Can you give us any suggestion as to the probable cause of death?"
"I would suggest, sir, that a twenty-foot drop into a gravel-pit is a mighty probable cause of death."
"No doubt", said the coroner. "But that is hardly a matter of medical evidence."
"Tis none the worse for that", the witness replied cheerfully.
"Can you say, definitely, that deceased did not meet his death by any kind of homicidal violence?"
"I can not. When a body is reduced to a skeleton, all traces of violence are lost so long as there has been no breaking of bones. He might have been strangled or smothered or stabbed or had his throat cut without leaving any marks on the skeleton. I can only say that I found no indications of any kind of homicidal violence or any violence whatsoever."
"The inspector has suggested that deceased met his death by accident—that is by the effects of the fall, and that appears to be your opinion too. Now, if that were the case, what would probably be the immediate cause of death?"
"There are several possible causes, but the most probable would be shock, contusion of the brain, or dislocation of the neck."
"Would any of those conditions leave recognizable traces?"
"Contusion of the brain and dislocation of the neck could be recognized in the fresh body but not in a skeleton like this. Of course, if the dislocation were accompanied—as it very often is—by fracture of the little neck-bone known as the odontoid process of the axis, that could be seen in the skeleton. But there is no such fracture in the skeleton of deceased. I looked for it particularly."
"Then we understand that you found nothing definite to indicate the cause of death?"
"That is so, sir."
"Do you consider that the appearance of the body, in a medical sense, is consistent with a belief that deceased was killed by the effects of the fall?"
"I do, sir."
"Then", said the coroner, "that seems to be about all that we can say as to the cause of death. Do the jury wish to put any questions to the medical witness? If not, we need not detain the doctor any longer."

As Dr. M'Alarney picked up an uncommonly smart hat and retired, the coroner glanced quickly over his notes and then proceeded to address the jury.

"I need not occupy your time, gentlemen, with a long summing-up. You have heard the evidence and probably have already arrived at your conclusions. There are certain mysterious circumstances in the case, as, for instance, how deceased came to be wandering about in the wood at night. But these questions do not concern us. We have to consider only how deceased met his death, and as the doctor justly remarked, the fact that the body was found at the bottom of a gravel-pit, having obviously fallen some eighteen or twenty feet, offers a pretty obvious explanation. The only suspicious circumstance was that deceased had clearly been robbed either before or after death. But you have heard the opinion of a very able and experienced police inspector, and the excellent reasons that he gave for that opinion. So I need say no more, but will now leave you to consider your verdict."

During the short interval occupied by the discussions of the jurymen among themselves, two members of the audience were engaged busily in reviewing the evidence in its relation to the almost inevitable verdict. To Thordyke the proceedings offered an interesting study in the perverting effect upon the judgment of an unconscious bias, engendered by the suggestive power of a known set of circumstances. All the evidence that had been given was true. All the inferences from that evidence were sound and proper inferences, so far as they went. Yet the final conclusion which was going to be arrived at would be wildly erroneous, for the simple reason that all the parties to the inquiry had come to it already convinced as to the principal fact—the identity of the deceased person—which had accordingly been left unverified.

As to Pottermack, his state of mind at the close of the inquiry was one of astonished relief. All through the proceedings he had sat in tremulous expectancy, with a furtive eye on the strange lawyer, wondering when that lawyer's turn would come to give his evidence and what he would have to say. That the stranger had detected some part, at least, of the fraud he had at first little doubt, and he expected no less than to hear the identity of the body challenged. But, as the time ran on and witness after witness came forward guilelessly and disgorged the bait for the nourishment of the jury, his fears gradually subsided and his confidence began to revive. And now that the inquiry was really over and they had all gobbled the bait and got it comfortably into their gizzards; now that it was evident that this lawyer had nothing to say, after all, in spite of his preposterous porings over those admirable shoes, Mr. Pottermack was disposed just a little to despise himself for having been so easily frightened. The 'superiority complex' began to reassert itself. Here he sat, looking upon a thoroughly bamboozled assembly, including a most experienced police inspector, a coroner, a lawyer, and a doctor. He alone of all that assembly, indeed of the whole world, knew all about it.
But perhaps his alarm had been excusable. We get into the habit too much importance to these lawyers and doctors. We credit them with knowing a great deal more than they do. But, at any rate, in this case it was all to the good. And as Mr. Pottermack summed up in this satisfactory fashion, the foreman of the jury announced that the verdict had been agreed on.

"And what is your finding, gentlemen, on the evidence that you have heard?" the coroner asked.

"We find that the deceased, James Lewson, met his death on the night of the twenty-third of last July by falling into a gravel-pit in Potter's Wood."

"Yes", said the coroner. "That amounts to a verdict of Death by Misadventure. And a very proper verdict, too, in my opinion. I must thank you, gentlemen, for your attendance and for the careful consideration which you have given to this inquiry, and I may take this opportunity of telling you what I am sure you will be glad to hear, that the directors of Perkins's Bank have generously undertaken to have the funeral conducted at their expense."

As the hall slowly emptied, Thorndyke lingered by the table to exchange a few rather colourless comments on the case with the coroner. At length, after a cordial handshake, he took his departure, and, joining the last stragglers, made his way slowly out of the main doorway, glancing among the dispersing crowd as he emerged; and presently his roving glance alighted on Mr. Pottermack at the outskirts of the throng, loitering irresolutely as if undecided which way to go.

The truth is that the elation at the triumphant success of his plan had begotten in that gentleman a spirit of mischief. Under the influence of the 'superiority complex' he was possessed with a desire to exchange a few remarks with the strange lawyer; perhaps to 'draw' him on the subject of the inquest; possibly even to 'pull his leg'—not hard, of course, which would be a liberty, but just a gentle and discreet tweak. Accordingly he hovered about opposite the hall, waiting to see which way the lawyer should go; and as Thorndyke unostentatiously steered in his direction, the meeting came about quite naturally, just as the lawyer was turning—rather to Mr. Pottermack's surprise—away from the direction of the station.

"I don't suppose you remember me", he began.

But Thorndyke interrupted promptly: "Of course I remember you, Mr. Pottermack, and am very pleased to meet you again."

Pottermack, considerably taken aback by the mention of his name, shook the proffered hand and cogitated rapidly. How the deuce did the fellow know that his name was Pottermack? He hadn't told him.

"Thank you", he said. "I am very pleased, too, and rather surprised. But perhaps you are professionally interested in this inquiry."

"Not officially", replied Thorndyke. "I saw a notice in the paper of what looked like an interesting case, and, being in the neighbourhood, I dropped in to see and hear what was going on."

"And did you find it an interesting case?" Pottermack asked.

"Very. Didn't you?"

"Well", replied Pottermack, "I didn't bring an expert eye to it as you did, so I may have missed some of the points. But there did seem to be some rather queer features in it. I wonder which of them in particular you found so interesting?"

This last question he threw out by way of a tentative preliminary to 'drawing' the lawyer, and he waited expectantly for the reply.

Thorndyke reflected a few moments before answering it. At length he replied;

"There was such a wealth of curious matter that I found it difficult to single out any one point in particular. The case interested me as a whole, and especially by reason of the singular parallelism that it presented to another most remarkable case which was related to me in great detail by a legal friend of mine, in whose practice it occurred."

"Indeed", said Mr. Pottermack, still intent on tractive operations; "and what were the special features in that case?"

"There were many very curious features in that case", Thorndyke replied in a reminiscent tone. "Perhaps the most remarkable was an ingenious fraud perpetrated by one of the parties, who dressed an Egyptian mummy in a recognizable suit of clothes and deposited it in a gravel-pit."

"Good gracious!" gasped Pottermack, and the 'superiority complex' died a sudden death.

"Yes", Thorndyke continued with the same reminiscent air, observing that his companion was for the moment speechless, "it was a most singular case. My legal friend used to refer to it, in a whimsical fashion, as the case of the dead man who was alive and the live man who was dead."

"B-but", Pottermack stammered, with chattering teeth, "that sounds like a c-contradiction."

"It does", Thorndyke agreed, "and of course it is. What he actually meant was that it was a case of a living man who was believed to be dead, and a dead man who was believed to be alive—until the mummy came to light."

Pottermack made no rejoinder. He was still dumb with amazement and consternation. He had a confused feeling of unreality as if he were walking in a dream. With a queer sort of incredulous curiosity he looked up at the calm, inscrutable face of the tall stranger who walked by his side and asked himself who and what this man could be. Was he, in truth, a
lawyer—or was he the Devil? Stranger as he certainly was, he had some intimate knowledge of his—Pottermack's—most secret actions; knowledge which could surely be possessed by no mere mortal. It seemed beyond belief.

With a violent effort he pulled himself together and made an attempt to continue the conversation. For it was borne in on him that he must, at all costs, find out what those cryptic phrases meant and how much this person—lawyer or devil—really knew. After all, he did not seem to be a malignant or hostile devil.

"That must have been a most extraordinary case", he observed at length. "I am—er—quite intrigued by what you have told me. Would it be possible or admissible for you to give me a few details?"

"I don't know why not", said Thorndyke, "excepting that it is rather a long story, and I need not say highly confidential. But if you know of some place where we could discuss it in strict privacy, I should be pleased to tell you the story as it was told to me. I am sure it would interest you. But I make one stipulation."

"What is that?" Pottermack asked.

"It is that you, too, shall search your memory, and if you can recall any analogous circumstances as having arisen within your experience or knowledge, you shall produce them so that we can make comparisons."

Pottermack reflected for a few moments, but only a few. For his native common sense told him that neither secrecy nor reservation was going to serve him.

"Very well", he said, "I agree; though until I have heard your story I cannot judge how far I shall be able to match it from my limited experience. But if you will come and take tea with me in my garden, where we shall be quite alone, I will do my best to set my memory to work when I have heard what you have to tell."

"Excellent", said Thorndyke. "I accept your invitation with great pleasure. And I observe that some common impulse seems to have directed us towards your house, and even towards the very gate at which I had the good fortune to make your acquaintance."

In effect, as they had been talking, they had struck into the footpath and now approached the gate of the walled garden.
CHAPTER XVII. — DR. THORNDYKE RELATES A QUEER CASE

MR. Pottermack inserted the small, thin key into the Yale lock of the gate and turned it while Thorndyke watched him with a faint smile.

"Admirable things, these Yale locks", the latter remarked as he followed his host in through the narrow gateway and cast a comprehensive glance round the walled garden, "so long as you don't lose the key. It is a hopeless job trying to pick one."

"Did you ever try?" asked Pottermack.

"Yes, and had to give it up. But I see you appreciate their virtues. That looks like one on the farther gate."

"It is", Pottermack admitted. "I keep this part of the garden for my own sole use and I like to be secure from interruption."

"I sympathize with you", said Thorndyke. "Security from interruption is always pleasant, and there are occasions when it is indispensable."

Pottermack looked at him quickly but did not pursue the topic.

"If you will excuse me for a minute", he said, "I will run and tell my housekeeper to get us some tea. You would rather have it out here than in the house, wouldn't you?"

"Much rather", replied Thorndyke. "We wish to be private, and here we are with two good Yale locks to keep eavesdroppers at bay."

While his host was absent he paced slowly up and down the lawn, observing everything with keen interest but making no particular inspections. Above the yew hedge he could see the skylighted roof of what appeared to be a studio or workshop, and in the opposite corner of the garden a roomy, comfortable summer-house. From these objects he turned his attention to the sundial, looking it over critically and strolling round it to read the motto. He was thus engaged when his host returned with the news that tea was being prepared and would follow almost immediately.

"I was admiring your sun-dial, Mr. Pottermack", said Thorndyke. "It is a great adornment to the garden and a singularly happy and appropriate one; for the flowers, like the dial, number only the sunny hours. And it will look still better when time has softened the contrast between the old pillar and the new base."

"Yes", Pottermack agreed, a trifle uneasily, "the base will be all the better for a little weathering. How do you like the motto?"

"Very much," replied Thorndyke. "A pleasant, optimistic motto, and new to me. I don't think I have ever met with it before. But it is a proper sun-dial motto: 'Hope in the morning, Peace at eventide.' Most of us have known the first and all of us look forward to the last. Should I be wrong if I were to assume that there is a well underneath?"

"N-no", stammered Pottermack, "you would not. It is an old well that had been disused and covered up. I discovered it by accident when I was levelling the ground for the sun-dial and very nearly fell into it. So I decided to put the sun-dial over it to prevent any accidents in the future. And mighty glad I was to see it safely covered up."

"You must have been," said Thorndyke. "While it was uncovered it must have been a constant anxiety to you."

"It was", Pottermack agreed, with a nervous glance at his guest.

"That would be about the latter part of last July", Thorndyke suggested with the air of one recalling a half-forgotten event; and Mr. Pottermack breathlessly admitted that it probably was.

Here they were interrupted by the arrival of Mrs. Gadby, for whom the gate had been left open, followed by a young maid, both laden with the materials for tea on a scale suggestive of a Sunday School treat. The housekeeper glanced curiously at the tall, imposing stranger, wondering inwardly why he could not come to the dining-room like a Christian. In due course the load of provisions was transferred to the somewhat inadequate table in the summer-house and the two servants then retired, Mrs. Gadby ostentatiously shutting the gate behind her. As its lock clicked, Mr. Pottermack ushered his guest into the summer-house, offering him the chair once occupied by James Lewson and since studiously avoided by its owner.

When the hospitable preliminaries had been disposed of and the tea poured out, Thorndyke opened the actual proceedings with only the briefest preamble.

"I expect, Mr. Pottermack, you are impatient to hear about that case which seemed to pique your curiosity so much, and as the shadow is creeping round your dial, we mustn't waste time, especially as there is a good deal to tell. I will begin with an outline sketch of the case, in the form of a plain narrative, which will enable you to judge whether anything at all like it has ever come to your knowledge."

"The story as told to me by my legal friend dealt with the histories of two men, whom we will call respectively Mr. Black and Mr. White. At the beginning of the story they appear to have been rather intimate friends, and both were employed at a bank, which we will call Alsep's Bank. After they had been there some time—I don't know exactly how long—a series of forgeries occurred, evidently committed by some member of the staff of the bank. I need not go into details. For our
purpose the important fact is that suspicion fell upon Mr. White. The evidence against him was striking, and, if genuine, convincing and conclusive. But to my friend it appeared decidedly unsatisfactory. He was strongly disposed to suspect that the crime was actually committed by Mr. Black and that he fabricated the evidence against Mr. White. But, however that may have been, the Court accepted the evidence. The jury found Mr. White guilty and the judge sentenced him to five years' penal servitude.

"It was a harsh sentence, but that does not concern us, as Mr. White did not serve the full term. After about a year of it, he escaped and made his way to the shore of an estuary, and there his clothes were found and a set of footprints across the sand leading into the water. Some six weeks later a nude body was washed up on the shore and was identified as his body. An inquest was held and it was decided that he had been accidentally drowned. Accordingly he was written off the prison books and the records at Scotland Yard as a dead man.

"But he was not dead. The body which was found was probably that of some bather whose clothes Mr. White had appropriated in exchange for his own prison clothes. Thus he was able to get away without hindrance and take up a new life elsewhere, no doubt under an assumed name. Probably he went abroad, but this is only surmise. From the moment of his escape from prison he vanishes from our ken, and for the space of about fifteen years remains invisible, his existence apparently unknown to any of his former friends or acquaintances.

"This closes the first part of the history; the part which deals with the person whom my friend whimsically described as 'the dead man who was alive And now, perhaps, Mr. Pottermack, you can tell me whether you have ever heard of a case in any way analogous to this one."

Mr. Pottermack reflected for a few moments. Throughout Thorndyke's recital he had sat with the feeling of one in a dream. The sense of unreality had again taken possession of him. He had listened with a queer sort of incredulous curiosity to the quiet voice of this inscrutable stranger, relating to him with the calm assurance of some wizard or clairvoyant the innermost secrets of his own life; describing actions and events which he, Pottermack, felt certain could not possibly be known to any human creature but himself. It was all so unbelievable that any sense of danger, of imminent disaster, was merged in an absorbing wonder. But one thing was quite clear to him. Any attempt to deceive or mislead this mysterious stranger would be utterly futile. Accordingly he replied:

"By a most strange coincidence it happens that a case came to my knowledge which was point by point almost identical with yours. But there was one difference. In my case, the guilt of the person who corresponds to your Mr. Black was not problematical at all. He admitted it. He even boasted of it and of the clever way in which he had set up Mr. White as the dummy to take all the thumps."

"Indeed!" exclaimed Thorndyke. "That is extremely interesting. We must bear that point in mind when we come to examine the details. Now I go on to the second part of the narrative; the part that deals with the 'live man who was dead.'

"After the lapse of some fifteen years, Mr. White came to the surface, so to speak. He made his appearance in a small country town, and from his apparently comfortable circumstances he seemed to have prospered in the interval. But here he encountered a streak of bad luck. By some malignant chance, it happened that Mr. Black was installed as manager of the branch bank in that very town, and naturally enough they met. Even then all might have been well but for an unaccountable piece of carelessness on Mr. White's part. He had, by growing a beard and taking to the use of spectacles, made a considerable change in his appearance. But he had neglected one point. He had, it appears, on his right ear a small birth-mark. It was not at all conspicuous, but when once observed it was absolutely distinctive.

"But," exclaimed Pottermack, "I don't understand you. You say he neglected this mark. But what could he possibly have done to conceal it?"

"He could have had it obliterated", replied Thorndyke. "The operation is quite simple in the case of a small mark. The more widespread 'port-wine' mark is less easy to treat; but a small spot, such as I understand that this was, can be dealt with quite easily and effectively. Some skin surgeons specialize in the operation. One of them I happen to know personally: Mr. Julian Parsons, the dermatologist to St. Margaret's Hospital."

"Ha", said Mr. Pottermack.

"But", continued Thorndyke, "to return to our story. Mr. White had left his birth-mark untreated, and that was probably his undoing. Mr. Black would doubtless have been struck by the resemblance, but the birth-mark definitely established the identity. At any rate, Mr. Black recognized him and forthwith began to levy blackmail. Of course, Mr. White was an ideal subject for a blackmailer's operations. He was absolutely defenceless, for he could not invoke the aid of the law by reason of his unexpired sentence. He had to pay, or go back to prison—or take some private measures.

"At first, it appears that he accepted the position and paid. Probably he submitted to be bled repeatedly, for there is reason to believe that quite considerable sums of money passed. But eventually Mr. White must have realized what most blackmailers' victims have to realize: that there is no end to this sort of thing. The blackmailer is always ready to begin over again. At any rate, Mr. White adopted the only practicable alternative to paying out indefinitely. He got Mr. Black alone in a secluded garden in which there was a disused well. Probably Mr. Black came there voluntarily to make fresh demands. But however that may have been, Mr. Black went, dead or alive, down into the well."

"In the case which came to my knowledge", said Pottermack, "it was to some extent accidental. He had become rather violent, and in the course of what amounted to a fight he fell across the opening of the well, striking his head heavily on the
brick coping, and dropped down in a state of insensibility."

"Ah," said Thorndyke, "that may be considered, as you say, to some extent accidental. But probably to a rather small extent. I think we may take it that he would have gone down that well in any case. What do you say?"

"I think I am inclined to agree with you", replied Pottermack.

"At all events", said Thorndyke, down the well he went. And there seemed to be an end of the blackmailer. But it was not quite the end, and the sequel introduces a most interesting feature into the case.

"It appears that the path by which Mr. Black approached Mr. White's premises was an earth path, and owing to the peculiar qualities of the soil in that locality, it took the most extraordinarily clear impressions of the feet that trod on it. Now, it happened that Mr. Black was wearing shoes with rubber soles and heels of a strikingly distinctive pattern, which left on the earth path impressions of the most glaringly conspicuous and distinctive character. The result was a set of footprints, obviously and certainly those of Mr. Black, leading directly to Mr. White's gate and stopping there. This was a most dangerous state of affairs, for as soon as the hue and cry was raised—which it would be immediately in the case of a bank manager—the missing Black would be traced by his footprints to Mr. White's gate. And then the murder would be out.

"Now what was Mr. White to do? He could not obliterate those footprints in any practicable manner. So he did the next best—or even better—thing. He continued them past his gate, out into the country and across a heath, on the farther side of which he allowed them discreetly to fade away into the heather.

"It was an admirable plan, and it succeeded perfectly. When the hue and cry was raised, the police followed those tracks like bloodhounds until they lost them on the heath. A photographer with a special camera patiently took samples of the footprints along the whole route, from the place where they started to where they were lost on the heath. But no one suspected Mr. White. He did not come into the picture at all. It seemed that he had now nothing to do but to lie low and let the affair pass into oblivion.

"But he did nothing of the kind. Instead, he embarked on a most unaccountable proceeding. Months after the disappearance of Mr. Black, when the affair had become nearly forgotten, he proceeded deliberately to revive it. He obtained an Egyptian mummy, and having dressed it in Mr. Black's clothes, or in clothes that had been specially prepared to counterfeit those of Mr. Black, he deposited it in a gravel-pit. His reasons for doing this are unknown to my legal friend and are difficult to imagine. But whatever the object may have been, it was attained, for in due course the mummy was discovered and identified as the body of Mr. Black, an inquest was held and the mystery of the disappearance finally disposed of.

"That is a bare outline of the case, Mr. Pottermack; just sufficient to enable us to discuss it and compare it with the one that you have in mind."

"It is a very remarkable case", said Pottermack, "and the most remarkable feature in it is its close resemblance to the one of which I came to hear. In fact, they are so much alike that—"

"Exactly", interrupted Thorndyke. "The same thought had occurred to us both—that your case and the one related by my legal friend are in reality one and the same."

"Yes", agreed Pottermack, "I think they must be. But what is puzzling me is how your legal friend came by the knowledge of these facts, which would seem to have been known to no one but the principal actor."

"That is what we are going to consider", said Thorndyke. "But before we begin our analysis, there is one point that I should like to clear up. You said that Mr. Black had explicitly admitted his guilt in regard to those forgeries. To whom did he make that admission?"

"To his wife", replied Pottermack.

"His wife!" exclaimed Thorndyke. "But it was assumed that he was a bachelor."

"The facts", said Pottermack, "are rather singular. I had better fill in this piece of detail, which apparently escaped your legal friend's investigations.

"Mr. White, in the days before his troubles befell, was engaged to be married to a very charming girl to whom he was completely devoted and who was equally devoted to him. After Mr. White's reported death, Mr. Black sought her friendship and later tried to induce her to marry him. He urged that he had been Mr. White's most intimate friend and that their marriage was what the deceased would have wished. Eventually she yielded to his persuasion and married him, rather reluctantly, since her feeling towards him was merely that of a friend. What his feeling was towards her it is difficult to say. She had some independent means, and it is probable that her property was the principal attraction. That is what the subsequent history suggests.

"The marriage was a failure from the start. Black sponged on his wife, gambled with her money and was constantly in debt and difficulties. Also he drank to an unpleasant extent. But she put up with all this until one day he let out that he had committed the forgeries, and even boasted of his smartness in putting the suspicion on White. Then she left him, and, assuming another name, went away to live by herself, passing herself off as a widow."

"And as to her husband? How came he to allow this?"
"First, she frightened him by threatening to denounce him; but she also made him an allowance on condition that he should not molest her. He seems to have been rather scared by her threats and he wanted the money, so he took the allowance and as much more as he could squeeze out of her, and agreed to her terms.

"Later Mr. White returned to England from America. As he had now quite shed his old identity and was a man of good reputation and comfortably off, he sought her out in the hopes of possibly renewing their old relations. That, in fact, was what brought him to England. Eventually he discovered her, apparently a widow, and had no difficulty in making her acquaintance."

"Did she recognize him?"

"I think we must assume that she did. But nothing was said. They maintained the fiction that they were new acquaintances. So they became friends. Finally he asked her to marry him, and it was then that he learned, to his amazement, that she had married Mr. Black."

Thorndyke's face had suddenly become grave. He cast a searching glance at Mr. Pottermack and demanded: "When was this proposal of marriage made? I mean, was it before or after the incident of the well?"

"Oh, after, of course. No marriage could have been thought of by Mr. White while he was under the thumb of the blackmailer, with the choice of ruin or the prison before him. It was only when the affair was over and everything seemed to be settling down quietly that the marriage seemed to have become possible."

Thorndyke's face cleared and a grim smile spread over it. "I see", he chuckled. "A quaint situation for Mr. White. Now, of course, one understands the mummy. His function was to produce a death certificate. Very ingenious. And now I gather that you would like an exposition of the evidence in this case?"

"Yes", replied Pottermack. "Your legal friend seems to have had knowledge of certain actions of Mr. White's which I should have supposed could not possibly have been known to any person in the world but Mr. White himself. I should like to hear how he came by that knowledge if you would be so kind as to enlighten me."

"Very well", said Thorndyke, "then we will proceed to consider the evidence in this case; and I must impress on you, Mr. Pottermack, the necessity of discriminating clearly between what my legal friend knew and what he inferred, and of observing the point at which inference becomes converted into knowledge by verification or new matter.

"To begin with what my friend knew, on the authority of a director of Mr. Black's bank. He knew that Mr. Black had disappeared under very mysterious circumstances. That he had received an urgent and threatening demand from a creditor for the payment of a certain sum of money. That before starting that night he had taken from the monies belonging to the bank a sum of money in notes exactly equal to the amount demanded from him. The reasonable inference was that he set out intending to call on that creditor and pay that money; instead of which, he appeared to have walked straight out of the town into the country, where all trace of him was lost.

"Then my friend learned from the director that, whereas the books of the bank showed Mr. Black's known income and ordinary expenditure, there was evidence of his having paid away large sums of money on gambling transactions, always in cash—mostly five-pound notes; that these sums greatly exceeded his known income, and that his account showed no trace of their having been received. Since he must have received that money before he could have paid it away, he must clearly have had some unknown source of income; and since he had paid it away in cash, and there was no trace of his having received any cheques to these amounts, the inference was that he had received it in cash. I need not remind you, Mr. Pottermack, that the receipt of large sums of money in notes or specie is a very significant and rather suspicious circumstance."

"Might not these sums represent his winnings?" Pottermack asked.

"They might, but they did not, for all the transactions that were traced resulted in losses. Apparently he was the type of infatuated gambler who always loses in the end. So much for Mr. Black. Next, my friend learned from the director the circumstances of the forgeries, and he formed the opinion—which was also that of the director—that Mr. White had been a victim of a miscarriage of justice and that the real culprit had been Mr. Black. He also learned the particulars of Mr. White's escape from prison and alleged death. But he differed from the director in that, being a lawyer with special experience, he did not accept that death as an established fact, but only as a probability, reserving in his mind the possibility of a mistaken identity of the body and that Mr. White might have escaped and be still alive.

"Thus, you see, Mr. Pottermack, that my friend started with a good deal of knowledge of this case and the parties to it. And now we come to some facts of another kind which carry us on to the stage of inference. The director who furnished my friend with the information that I have summarized also put into his hands a long series of photographs of the footprints of Mr. Black, taken by an employee of the bank on the second morning after the disappearance."

"For what purpose?" asked Mr. Pottermack.

"Principally, I suspect, to try a new camera of a special type, but ostensibly to help the investigators to discover what had become of the missing man. They were handed to my friend for his inspection and opinion as to their value for this purpose. Of course, at the first glance they appeared to be of no value at all, but as my friend happens to be deeply interested in footprints as material for evidence, he retained them for further examination in relation to a particular point which he wished to clear up. That point was whether a series of footprints is anything more than a mere multiple of a single footprint; whether it might be possible to extract from a series any kind of evidence that would not be famished by an
individual footprint.

"Evidently, those photographs offered an exceptional opportunity for settling this question. They were in the form of a long paper ribbon on which were nearly two hundred numbered photographs of footprints, and they were accompanied by a twenty-five inch ordnance map on which each footprint was indicated by a numbered dot. The row of dots started at the bank, and then, after a blank interval, entered and followed a footpath which passed along a wall which was a gate, and which enclosed a large garden or plantation; beyond the wall the dots continued, still on the footpath, between some fields, through a wood and across a heath, on the farther side of which they stopped. A note at the end of the ribbon stated that here the missing man had turned off the path into the heather and that no further traces of him could be found."

"Well," remarked Pottermack. "the police could see all that for themselves. It doesn't seem as if the photographs gave any further information."

"It does not". Thorndyke agreed. "And yet a careful examination of those photographs led my friend to the conviction that the missing man had entered the gate in the wall and had never come out again."

"But", exclaimed Pottermack, "I understood you to say that the footprints continued past the wall, through the wood and out across the heath."

"So they did. But a careful scrutiny of the photographs convinced my friend that this was not a single series of footprints, made by one man but two series, made by two different men. The first series started from the bank and ended at the gate. The second series started from the gate and ended on the heath."

"Then the footprints were not all alike?"

"That", replied Thorndyke, "depends on what we mean by 'alike.' If you had taken any one footprint from any part of the whole series and compared it with any other corresponding footprint—right or left—in any other part of the series, you would have said that they were undoubtedly prints of the same foot."

"Do I understand you to mean that every footprint in the whole series was exactly like every other footprint of the same side?"

"Yes. Every right footprint was exactly like every other right footprint, and the same with the left. That is, considered as individual footprints."

"Then I don't see how your friend could have made out that the whole series of footprints, all indistinguishably alike, consisted of two different series, made by two different men."

Thorndyke chuckled. "It is quite a subtle point", he said, "and yet perfectly simple. I am a little surprised that it had not occurred to Mr. White, who seems to have been an acute and ingenious man. You see, the difference was not between the individual footprints but between certain periodic characters in the two series."

"I don't think I quite follow you", said Pottermack.

"Well, let us follow my legal friend's procedure. I have told you that his object in examining these photographs was to ascertain whether footprints in series present any periodic or recurrent characters that might be of evidential importance. Now, a glance at these photographs showed him that these footprints must almost certainly present at least one such character. They were the prints of shoes with rubber soles of a highly distinctive pattern and circular rubber heels. Now, Mr. Pottermack, why does a man wear circular rubber heels?"

"Usually, I suppose, because if he wears ordinary leather heels he wears them down all on one side."

"And how do the circular heels help him?"

"In the case of circular heels", Pottermack replied promptly, "the wear does not occur all at one point, but is distributed round the whole circumference—?"

He stopped abruptly with his mouth slightly open and looked at Thorndyke.

"Exactly", said the latter, "you see the point. A circular heel is secured to the shoe by a single, central screw. But it is not a complete fixture. As the wearer walks, the oblique impact as it meets the ground causes it to creep round; very slowly when the heel is new and tightly screwed on, more rapidly as it wears thinner and the central screw-hole wears larger. Of course, my friend knew this, but he now had an opportunity of making his knowledge more exact and settling certain doubtful points as to rapidity and direction of rotation. Accordingly he proceeded, with the ribbon of photographs and the ordnance map before him, to follow the track methodically, noting down the distances and the rate and direction of rotation of each heel.

"His industry was rewarded and justified within the first dozen observations, for it brought to light a fact of considerable importance, though it does not happen to be relevant to our case. He found that both heels revolved in the same direction—clock-wise—though, of course, since they were in what we may call 'looking-glass' relation, they ought to have revolved in opposite directions."

"Yes", said Pottermack, "it is curious, but I don't see what its importance is."

"Its importance in an evidential sense", replied Thorndyke, "is this: the anomaly of rotation was evidently not due to the shoes but to some peculiarity in the gait of the wearer. The same shoes on the feet of another person would almost
certainly have behaved differently. Hence the character of the rotation might become a test point in a question of personal identity. However, that is by the way. What concerns us is that my friend established the fact that both heels were rotating quite regularly and rather rapidly. Each of them made a complete rotation in about a hundred and fifty yards.

"My friend, however, did not accept this result as final, but continued his observations to ascertain if this regular rate of rotation was maintained along the whole of the track. So he went on methodically until he had examined nearly half of the ribbon. And then a most astonishing thing happened. Both the heels suddenly ceased to revolve. They stopped dead, and both at the same place.

"Now, the thing being apparently an impossibility, my friend thought that he must have made some error of observation. Accordingly he went over this part of the ribbon again. But the same result emerged. Then, abandoning his measurements, he went rapidly along the whole remaining length of the ribbon to the very end, but still with the same result. Throughout the whole of that distance, neither heel showed the slightest sign of rotation. So it came to this: the photographs from number 1 to number 92 showed both heels rotating regularly about once in every hundred and fifty yards; from number 93 to number 197—showed the heels completely stationary.

"My friend was profoundly puzzled. On the showing of the photographs, the heels of this man's shoes which had been turning quite freely and regularly as he walked, had, in an instant, become immovably fixed. And both at the same moment. He tried to think of some possible explanation, but he could think of none. The thing was utterly incomprehensible. Then he turned to the ordnance map to see if anything in the environment could throw any light on the mystery. Searching along the row of dots for number 93 he at length found it—exactly opposite the gate in the wall.

"This was a decidedly startling discovery. It was impossible to ignore the coincidence. The position was that this man's heels had been turning freely until he reached the gate; after passing the gate his heels had become permanently fixed. The obvious suggestion was that this mysterious change in the condition of the heels was in some way connected with the gate. But what could be the nature of the connection? And what could be the nature of the change in the shoes?

"To the first question the suggested answer was that the man might have gone in at the gate; and while he was inside, something might have happened to his shoes which caused the heels to become fixed. But still the difficulty of the shoes remained. What could cause revolving heels to become fixed? To this question my friend could find no answer. The possibility that the heels had been taken off and screwed on again more tightly would not have explained their complete immobility; and, in fact, they had not been. The screws showed plainly in many of the photographs, and the position of their slots in all was identical. The footprints in the second series—those past the gate—were in every respect the exact counterparts of those in the first series—those from the town to the gate. The only condition that my friend could think of as agreeing with the physical facts was that which would have occurred if the prints in the second series had been made, not by the shoes themselves but by some sort of reproductions of them, such as plaster casts or casts in some other material."

"That sounds rather a far-fetched suggestion", remarked Pottermack.

"It does," Thorndyke agreed; "and in fact my friend did not entertain it seriously at first. He merely noted that the appearances were exactly such as would be produced by making impressions with casts; in which, of course, since the soles and heels would be all in one piece, no movement of the heels would be possible. But, Mr. Pottermack, we must bear in mind whose footprints these were. They were the footprints of a man who had disappeared in the most mysterious and unaccountable manner. The whole affair was highly abnormal. No reasonable explanation was possible either of the disappearance or of the singular character of the footprints. But in the absence of a reasonable explanation, it is admissible to consider an unreasonable one, if it agrees with the known facts. The cast theory did agree with the physical facts, and, on reflection, my friend decided to adopt it as a working hypothesis and see what came of it.

"Now, if the footprints from the gate to the heath were counterfeits of Black's footprints, made with shoes the soles and heels of which were mechanical reproductions of the soles and heels of Black's shoes, it followed that the wearer of these shoes was not Black, but some other person, in which case Black's own footprints ended at the gate. This at once got rid of the most unaccountable feature of the disappearance—the nocturnal flight out into the country: for if his footprints ended at the gate he must have gone in. But there was nothing at all abnormal about his calling at a house quite close to, and, in fact, almost in the town, from which he could have easily gone to keep his appointment with his creditor. Thus far, the hypothesis seemed to simplify matters.

"But it not only followed that Black must have gone in at the gate, it followed that he could never have come out. For the footprints that went on were not his, and there were no footprints going back towards the town."

"He might have come out another way; by the front door, for instance", Pottermack suggested.

"So he might", Thorndyke agreed, "under different circumstances. But the counterfeit footprints showed that he did not. For if the continuing footprints were counterfeits, made by some other person, what could have been their purpose? Clearly their purpose could have been no other than that of concealing the fact that Black had gone in at the gate. But if he had come out of the premises, there could have been no reason for concealing the fact that he had gone in.

"If, however, he did not come out, then, obviously, he remained inside. But in what condition? Was he alive and in hiding? Evidently not. In the first place, he had no occasion to hide, since he could have gone back to the bank and replaced the money. But the conclusive evidence that he was not in hiding was the counterfeit footprints. No mechanical reproduction of the shoes would have been necessary if Black had been there. Black's own shoes would have been
borrowed and used to make the false footprints. But, obviously, the whole set of circumstances was against the supposition that he could be alive. If the evidence was accepted that he went in and was never seen again, the most obvious inference was that he had been made away with. And this inference was strongly supported by the troublesome and elaborate measures that had been taken to conceal the fact that he had gone in at the gate. Accordingly my friend adopted the view, provisionally, that Mr. Black had been made away with by some person inside the gate, hereinafter referred to as the tenant.

"But the adoption of this view at once raised two questions. First, how came it to be necessary to make reproductions of the dead man's shoes? Why did not the tenant simply take the shoes off the corpse and put them on his own feet? If he had done this, if he had made the false footprints with the dead man's own shoes, the illusion would have been perfect. No detection would have been possible. Why had he not done it? The shoes themselves could have presented no difficulty. They were large shoes, and large shoes can, with suitable preparation, be worn even by a small man.

"The answer that suggested itself was that, for some reason, the shoes were not available; that by the time that the necessity for the false footprints had been perceived, the shoes had in some way become inaccessible. But how could they have become inaccessible? Could the body have been buried? Apparently not. For it would have been much less trouble to dig up a body and recover the shoes than to make a pair of reproductions of them. Could it have been burned? Evidently not. Apart from the extreme difficulty of the operation, there had not been time. The false footprints were made on the very night of the disappearance since they were traced by the police the next morning.

"The possibility that the body might have been conveyed away off the premises had to be borne in mind. But it was highly improbable, for many obvious reasons and it did not dispose of the difficulty. For it would surely have been easier and quicker to go—at night—and retrieve the shoes than to make the counterfeits. Indeed, when my friend considered the immense labour that the making of those reproductions must have entailed, to say nothing of the great expenditure of time, just when every moment was precious, he felt that nothing but the absolute physical impossibility of getting access to the original shoes would explain their having been made.

"Now, what conditions would have rendered those shoes totally inaccessible? Remember the circumstances. Inasmuch as the sham footprints were found on the following morning, they must have been made that night. But before they could be made, the counterfeit soles must have been made, and the making of them must have been a long and tedious piece of work. It therefore followed that the tenant must have begun work on them almost immediately after the death of Mr. Black. From this it followed that the body of Mr. Black must have been immediately disposed of in such a way as at once to become inaccessible.

"What methods of disposing of a body would fulfil these conditions? My friend could think of only three, all very much alike: the dropping of the body down a dene-hole, or into a cess-pit, or into a disused well. Any of these methods would at once put the body completely out of reach. And all these methods had a special probability in this particular case. The great difficulty that confronts the would-be murderer is the disposal of the body. Hence the knowledge that there was available a means of immediately, securely, and permanently hiding the body might be the determining factor of the murder. Accordingly, my friend was strongly inclined to assume that one of these three methods was the one actually employed.

"As to the particular method, the question was of no great importance. Still, my friend considered it. The idea of a dene-hole was at once excluded on geological grounds. Dene-holes are peculiar to the chalk. But this was not a chalk district.

"The cess-pit was possible but not very probable; for if in use, it would be subject to periodical clearance, which would make it quite unsuitable as a hiding-place, while cess-pits which become superseded by drainage are usually filled in and definitely covered up. A well, on the other hand, is often kept open for occasional and special use after the laying on of a pipe service."

"Your friend", remarked Pottermack, "seems to have taken it for granted that a well actually existed."

"Not entirely", said Thorndyke. "He looked up an older map and found that this house had formerly been a farm-house, so that it must once have had a well; and as it now fronts on a road in which other houses have been built and which is virtually a street, it is pretty certainly connected with the water-service. So that it was practically certain that there was a well, and that well would almost certainly be out of use.

"And now, having deduced a reason why the counterfeit soles should have been necessary, he had to consider another question. If the original shoes were inaccessible, how could it have been possible to make the counterfeits, which were, apparently, casts of the originals? At first it looked like an impossibility. But a little reflection showed that the footprints themselves supplied the answer. Mr. Black's own footprints on the path were such perfect impressions that a little good plaster poured into selected samples of them would have furnished casts which would have been exact reproductions of the soles and heels of Mr. Black's shoes. Possibly there were equally good footprints inside the premises, but that is of no consequence. Those on the footpath would have answered the purpose perfectly.

"I may say that my friend tested this conclusion and got some slight confirmation. For if the false footprints were impressions of reproductions, not of the original shoes but of some other footprints, one would expect to find the accidental characters of those particular footprints as well as those of the shoes which produced them. And this appeared to be the case. In one of the points of the star on the left heel a small particle of earth seemed to have adhered. This was not to be found in Black's own footprints, but it was visible in all the footprints of the second series, from the gate to the heath. And the fact that it never changed along the whole series suggested that it was really a part of the cast, due to an
imperfection in the footprint from which it was made.

"That brings us to an end of my friend's train of reasoning in regard to the actual events connected with Mr. Black's disappearance. His conclusions were, you observe, that Mr. Black went in at the gate; that he was thereafter made away with by some person inside whom we have called the tenant; that his body was deposited by the tenant in some inaccessible place, probably a disused well; and that the tenant then made a set of false footprints to disguise the fact that Mr. Black had gone in at the gate.

"The questions that remained to be considered were; first, what could be the tenant's motive for making away with Mr. Black? and second, Who was the tenant? But before we deal with his inferences on those points, I should like to hear any observations which you may have to make on what I have told you."

Mr. Pottermack pondered awhile on what he had heard, and as he reflected, he laid a disparaging hand on the teapot.

"It is rather cool", he remarked apologetically; "but such as it is, can I give you another cup?"

"Prolonged exposition", Thorndyke replied with a smile, "is apt to have a cooling effect upon tea. But it also creates a demand for liquid refreshment. Thank you, I think another cup would cheer, and we can dispense with the inebriation."

Mr. Pottermack refilled both the cups and put down the teapot, still cogitating profoundly.
"YOUR legal friend", Mr. Pottermack said at length, "must be a man of extraordinary subtlety and ingenuity if he deduced all that you have told me from the mere peculiarities of a set of footprints, and only photographs at that. But what strikes me about it is that his reconstruction was, after all, pure speculation. There were too many 'ifs'."

"But, my dear Mr. Pottermack", exclaimed Thorndyke, "it was all 'ifs'. The whole train of reasoning was on the plane of hypothesis, pure and simple. He did not, at this stage, assume that it was actually true, but merely true conditionally on the facts being what they appeared to be. But what does a scientific man do when he sets up a working hypothesis? He deduces from it its consequences, and he continues to pursue these so long as they are consistent with the facts known to him. Sooner or later, this process brings him either to an impossibility or a contradiction—in which case he abandons the hypothesis—or to a question of fact which is capable of being settled conclusively, yes or no.

"Well, this is what my friend did. So far we have seen him pursuing a particular hypothesis and deducing from it certain consequences. The whole thing might have been fallacious. But it was consistent, and the consequences were compatible with the known facts. Presently we shall come to the question of fact—the crucial experiment which determines yes or no, whether the hypothesis is true or false. But we have to follow the hypothetical method a little farther first.

"The questions that remained to be considered were: first, What could have been the tenant's motive for killing Mr. Black? and second, Who was the tenant? My friend took the questions in this order because the motive might be arrived at by reasoning, and, if so arrived at, might throw light on the personality of the tenant; whereas the identity of the tenant, taken by itself, was a matter of fact capable of being ascertained by enquiry, but not by reasoning apart from the motive.

"Now, what motives suggest themselves? First, we must note that my friend assumed that the homicide was committed by the tenant himself, that is, by the proprietor of the premises and not by a servant or other person. That is a reasonable inference from the facts that the person, whoever he was, appeared to have command of all the means and materials necessary for making the counterfeits, and also that he must have had full control of the premises, both at the time and in the future, in order to hide the body and ensure that it should remain hidden. Well, what motive could a man in this position have had to kill Mr. Black?

"There is the motive of robbery, but the circumstances seem to exclude it as not reasonably probable. It is true that Black had a hundred pounds on his person, but there is no reason to suppose that any one knew that he had; and in any case, so small a sum, relatively, furnishes a quite insufficient motive for murder in the case of an apparently well-to-do man such as the tenant. My friend decided that robbery, though possible, was highly improbable.

"The possibilities that Black's death might have been the result of a quarrel or of some act of private vengeance had to be borne in mind, but there were no means of forming any opinions for or against them. They had to be left as mere speculative possibilities. But there was another possibility which occurred to my friend, the probabilities of which were susceptible of being argued, and to this he turned his attention. It was based upon the application of certain facts actually known and which we will now consider.

"First, he noted that Mr. Black came to this place voluntarily, and that he came expressly to visit the premises within the gate is proved by the fact that this is the last house on that path. Beyond it is the country. There is no other human habitation to which he could have been bound. Now Mr. Black was, at this moment, in acute financial difficulties. He had borrowed a hundred pounds from the bank's money, and this hundred pounds he was about to pay away to meet an urgent demand. But that hundred pounds would have to be replaced, and it was of the utmost importance that it should be replaced without delay. For if a surprise inspection should have occurred before it was replaced, he stood to be charged with robbery. The circumstances, therefore, seemed to suggest that he had taken it with the expectation of being able to replace it almost immediately.

"Now, you will remember that it transpired after his disappearance that Mr. Black had some mysterious unknown source of income; that he had received on several occasions large sums of money, which had apparently come to him in the form of cash and had been paid away in the same form—always in five-pound notes. These monies did not appear in his banking account or in any other account. They were unrecorded—and, consequently, their total amount is not known. But the sums that he is known to have received were ascertained by means of the discovery of certain payments that he had made. I need not point out to you the great and sinister significance of these facts. When a man who has a banking account receives large payments in cash, and when, instead of paying them into his account, he pays them away in cash, it is practically certain that the monies that he has received are connected with some secret transaction, and that transaction is almost certainly an illicit one. But of all such transactions, by far the commonest is blackmail. In fact, one would hardly be exaggerating if one were to say that evidence of secret payments of large sums in coin or notes is presumptive evidence of blackmail. Accordingly my friend strongly suspected Mr. Black of being a blackmailer.

"And now, assuming this to be correct, see how admirably the assumption fits the circumstances. Mr. Black is at the moment financially desperate. He has taken certain money, which is not his, to pay an urgent and threatening creditor. Instead of going direct to that creditor, he comes first to this house. But he does not enter by the front door. He goes to a gate which opens on an unfrequented lane and which gives entrance to a remote part of the grounds, and he does this late in the evening. There is a manifestly secret air about the whole proceeding.

"And now let us make another assumption."
"What, another!" protested Pottermack.

"Yes, another; just to see if it will fit the circumstances as the others have done. Let us assume that the tenant was the person from whom Mr. Black had been extorting those mysterious payments; the victim whom he had been blackmailing. That he had called in on his way to his creditor to see if he could squeeze him for yet another hundred, so that the notes could be replaced before they could be missed. That the victim, being now at the end of his patience and having an opportunity of safely making away with his persecutor, took that opportunity and made away with him. Is it not obvious that we have a perfectly consistent scheme of the probable course of events?"

"It is all pure conjecture", objected Pottermack.

"It is all pure hypothesis", Thorndyke admitted, "but you see that it all hangs together, it all fits the circumstances completely. We have not come to any inconsistency or impossibility. And it is all intrinsically probable in the special conditions; for you must not forget that we are dealing with a set of circumstances that admits of no normal explanation.

"And now for the last question. Assuming that Mr. Black was a blackmailer and that the tenant was his victim, was it possible to give that victim a name? Here my friend was handicapped by the fact that Mr. Black was a complete stranger, of whose domestic affairs and friends and acquaintances he had no knowledge. With one exception. He had knowledge of one of Mr. Black's friends. That friend, it is true, was alleged to be dead. But it was by no means certain that he was dead. And if he were not dead, he was a perfectly ideal subject for blackmail, for he was an escaped convict with a considerable term of penal servitude still to run. My friend was, of course, thinking of Mr. White. If he should have attained to something approaching affluence and should be living in prosperous and socially desirable circumstances, he would allow himself to be bled to an unlimited extent rather than suffer public disgrace and be sent back to prison. And the person who would be, of all others, the most likely to recognize him and in the best position to blackmail him would be his old friend Mr. Black.

"Bearing these facts in mind, my friend was disposed to waive the prima facie improbability and assume, provisionally, that the tenant was Mr. White. It was certainly rather a long shot."

"It was indeed", said Pottermack. "Your friend was a regular Robin Hood."

"And yet", Thorndyke rejoined, "the balance of probability was in favour of that assumption. For against the various circumstances that suggested that the tenant was Mr. White there was to be set only one single improbability, and that not at all an impressive one: the improbability that a body—found drowned after six weeks' immersion and therefore really unrecognizable—should have been wrongly identified. However, my friend did feel that (to continue the metaphor, since you seem to approve of it) the time had come to step forward and have a look at the target. The long train of hypothetical reasoning had at length brought him to a proposition the truth of which could be definitely tested. The tenant's identity with Mr. White was a matter of fact which could be proved or disproved beyond all doubt. Of course, the test would not be a real experimentum crucis, because it would act in only one direction. If it should turn out that the tenant was not Mr. White, that would not invalidate the other conclusions, but if it should turn out that he was Mr. White, that fact would very strongly confirm those conclusions.

"My friend, then, left his photographs and his ordnance map and made a journey to the scene of these strange events to inspect the place and the man with his own eyes. First he examined the path and the exterior of the premises, and then he made a survey of the grounds enclosed by the wall."

"How did he do that?" enquired Pottermack. "It was a pretty high wall—at least, so I understand."

"He made use of an ancient optical instrument which has been recently revived in an improved form under the name of 'periscope.' The old instrument had two mirrors; the modern one has two total-reflection prisms in a narrow tube. By projecting the upper or objective end of the tube above the top of the wall, my friend was able, on looking into the eyepiece, to get an excellent view of the premises. What he saw was a large garden, completely enclosed by four high walls in which were two small gates, each provided with a night-latch and therefore capable of being opened only from within or by means of a latch-key. A very secure and secluded garden. On one side of it was a range of out-buildings which, by the glazed lights in their roofs, appeared to be studios or workshops. Near one end of the lawn was a sun-dial on a very wide stone base. The width of the base was rather remarkable, being much greater than is usual in a garden dial. A glance at it showed that the dial had been quite recently set up, for, though the stone pillar was old, the base stones were brand new. Moreover, the turf around it had been very recently laid and some of the earth was still bare. Further proof of its newness was furnished by a gentleman who was, at the moment, engaged, with the aid of Whitaker's Almanack and his watch, in fixing the dial-plate in correct azimuth.

"This gentleman—the mysterious tenant—naturally engaged my friend's attention. There were several interesting points to be noted concerning him. The tools that he used were workmen's tools, not amateurs', and he used them with the unmistakable skill of a man accustomed to tools. Then he had laid aside his spectacles, which were 'curl-sided' and therefore habitually worn. It followed, then, that he was near-sighted; for if he had been old-sighted or long-sighted he would have needed the spectacles especially for the close and minute work that he was doing.

"When he had made these observations, my friend proceeded to take a couple of photographs—a right and a left profile."

"How did he manage that?" demanded the astonished Pottermack.

"By placing his camera on the top of the wall. It was a special, small camera, fitted with a four-point-five Ross-Zeiss lens and a cord release. Of course, he made the exposure with the aid of the periscope.
"When he had exposed the photographs, he decided to have a nearer view of the tenant. Accordingly he went round and knocked at the gate, which was presently opened by the gentleman of the sun-dial, who was now wearing his spectacles. Looking at those spectacles, my friend made a very curious discovery. The man was not near-sighted, for the glasses were convex bi-focals, the upper part nearly plain glass. Now, if he had not needed those spectacles for near work, he certainly could not need them for distance. Then, obviously, he did not need them at all. But, if so, why was he wearing them? The only possible explanation was that they were worn for their effect on his appearance; in short, for the purpose of disguise.

"As this gentleman was answering some questions about the locality my friend handed him a folded map. This he did with two objects: that he might get a good look at him unobserved, and that he might possibly obtain some prints of his finger-tips. As to the first, he was able to make a mental note of the tenant's salient characteristics and to observe, among other peculiarities, a purplish mark on the lobe of the right ear of the kind known to surgeons as a capillary naevus."

"And the finger-prints?" Pottermack asked eagerly.

"They were rather a failure, but not quite. When my friend developed them up, though very poor specimens, they were distinct enough to be recognizable by an expert.

"Now you will have noticed that everything that my friend observed was consistent with, and tended to confirm, the conclusions that he had arrived at by hypothetical reasoning. But the actual test still remained to be applied. Was the tenant Mr. White or was he not? In order to settle this question, my friend made enlargements of the photographs of the tenant and also of the finger-prints, and, with these in his pocket, paid a visit to Scotland Yard."

At the mention of the ill-omened name Pottermack started and a sudden pallor spread over his face. But he uttered no sound, and Thorndyke continued:

"There he presented the finger-prints as probably those of a deceased person, photographed from a document, and asked for an expert opinion on them. He gave no particulars and was not asked for any; but the experts made their examination and reported that the finger-prints were those of a convict named White who had died some fifteen years previously. My friend had, further, the opportunity of inspecting the prison photographs of the deceased White and of reading the personal description. Needless to say, they agreed completely in every particular, even to the capillary naevus on the ear.

"Here, then, my legal friend emerged from the region of hypothesis into that of established fact. The position now was that the person whom we have called 'the tenant' was undoubtedly the convict, White, who was universally believed to be dead. And since this fact had been arrived at by the train of reasoning that I have recited, there could be no doubt that the other, intermediate, conclusions were correct; that, in fact, the hypothesis as a whole was substantially true. Do you agree with that view?"

"There seems to be no escape from it", replied Pottermack; and after a brief pause he asked, a little tremulously: "And what action did your legal friend take?"

"In respect of the identity of the tenant? He took no action. He now considered it perfectly clear that Mr. White ought never to have been a convict at all. That unfortunate gentleman had been the victim of a miscarriage of justice. It would have been actually against public policy to disclose his existence and occasion a further miscarriage.

"With regard to the killing of Mr. Black, the position was slightly different. If it comes to the knowledge of any citizen—and especially a barrister, who is an officer of justice—that a crime has been committed, it is the duty of that citizen to communicate his knowledge to the proper authorities. But my friend had not come by any such knowledge. He had formed the opinion—based on certain inferences from certain facts—that Mr. Black had been killed. But a man is not under any obligation to communicate his opinions.

"This may seem a little casuistical. But my friend was a lawyer, and lawyers are perhaps slightly inclined to casuistry. And in this case there were certain features that encouraged this casuistical tendency. We must take it, I think, that a man who suffers a wrong for which the law provides a remedy and in respect of which it offers him protection is morally and legally bound to take the legal remedy and place himself under the protection of the law. But if the law offers him no remedy and no protection, he would appear to be entitled to resume the natural right to protect himself as best he can. That, at any rate, is my friend's view.

"Of course, the discovery of the alleged body of Mr. Black in the gravel-pit seemed to put an entirely new complexion on the affair. My friend was greatly perturbed by the news. It was hardly conceivable that it could really be Mr. Black's body. But it was some person's body, and the deliberate 'planting' of a dead human body seemed almost inevitably to involve a previous crime. Accordingly, my friend started off, hot-foot, to investigate. When the deceased turned out to be a mummy, his concern with the discovery came to an end. There was no need for him to interfere in the case. It was a harmless deception and even useful, for it informed the world at large that Mr. Black was dead.

"That, Mr. Pottermack, is the history of the dead man who was alive and the live man who was dead; and I think you will agree with me and my legal friend that it is a most curious and interesting case."

Pottermack nodded, but for some time remained silent. At length, in a tone the quietness of which failed to disguise the suppressed anxiety, he said:

"But you have not quite finished your story."

"Have I not?" said Thorndyke. "What have I forgotten?"
"You have not told me what became of Mr. White."

"Oh, Mr. White. Well, I think we can read from here upon your sun-dial a few words that put his remaining history in a nutshell. 'Sole decedente pax'. He had the mark removed from his ear, he married his old love and lived happy ever after."

"Thank you", said Mr. Pottermack, and suddenly turned away his head.

THE END
A CRAB of mature age and experience is represented by an ancient writer as offering advice to his son somewhat in these terms: "My son, I have observed in you a most regrettable tendency to walk with ungraceful and unbecoming sidelong steps. Pray endeavour to conquer this pernicious habit and to adopt a straightforward and direct mode of progression."

Excellent advice! Though the gait of the existing generation of crabs leads one to fear that it failed to take effect.

The ancient parable was brought to my mind by the cigarette that I was lighting; for I had been the recipient of some most excellent paternal advice on the subject of cigarettes, coupled with the same on Irish whisky. My revered parent had, in fact, actually removed a choice Egyptian from his mouth the better to expound the subject; and, pointing to the accumulated ends on the hearth and the half empty bottle on the mantelpiece, had explained with his admirable lucidity that these unsubstantial gauds were the inefficient substitutes for bacon for breakfast.

And yet I smoked. I did not consume Irish whisky, though I was perhaps restrained by reasons that were economic
rather than ethical. But I smoked cigarettes; and recently I had started a pipe, having made the interesting discovery that the paternal cigarette ends were capable of reincarnation in a pipe-bowl.

I lit my cigarette and reflected on life and its problems. I was at the moment seated on a folded sack in an up-ended two-wheeled truck or hand-cart. In that truck I had conveyed a heavy bale of stationery from my employers, Messrs. Sturt and Wopsall, to a customer at Mile End; after which I had drawn the empty truck into a quiet yard, up-ended it and taken my seat in it as aforesaid. Since that day I have sat in many a more luxurious seat; in club divans, in hansom cabs, yea! even in the chariots of the mighty. But never have I found one quite equal to an up-ended truck with its floor turned to windward and a folded sack interposed between its tail and my own. There is much to be said for the simple life.

At this time I was just turned seventeen, and needless to say, I was quite poor. But poor boy as I was, there were many things for which I had to be thankful. In the first place I enjoyed the supreme advantage of having escaped education—or rather, I should say, the particular brand that is supplied by the State. Other boys of like indigence were hauled off to Board Schools, where they contracted measles, chicken-pox, ringworm and a most hideous accent, which would cling to them and, socially speaking, darn them hopelessly for ever, even though they should subsequently rise—or sink—to millionairedom.

From this curse I was exempt. My accent was that of the upper middle-class, my vocabulary that of the man of culture; I could manage my aitches and express myself in standard speech. If the present was meagre, the future held untold potentialities; and this was the priceless gift of circumstance.

My father was a clergyman; or rather, I should say, he had been a clergyman. Why he had ceased to be a clergyman I never knew, though I associated the cessation of pastoral activities directly or indirectly with his complexion. When I knew him he was what he called a classical tutor and other people called a crammer; and the “crammees” being mostly of humble station, though ambitious, his income was meagre and precarious even at that.

But he was a wonderful man. He could construe the most difficult passages from the ancient authors and work out intricate problems in spherical trigonometry, when, from causes which I need not dwell upon, the functions of his legs were in temporary abeyance; on which occasions he would sit on the floor, for the excellent reason—as he lucidly explained—that “the direction of the force of gravity being geocentric, it was impossible to fall off.” Yes, he was a remarkable man, and should surely have attained to distinction in the church. Not, to be sure, that you can conveniently sit on the floor to conduct morning service; but what I mean is that a man must be accounted more than ordinarily gifted in whom, once more to adopt his admirable phraseology, “the effect of alcoholic stimulation is merely to induce motor inco-ordination unaccompanied by psychical confusion.”

I must not, however, allow mere family pride to lead me into digressions of unreasonable length. To return to the present incident. The cigarette had dwindled to about an inch and a half, and I was beginning to consider the resumption of locomotive activities, when a man stopped at the entrance of the yard and then slowly advanced towards me. I thought he was going to order me to move on. But he did not. He sauntered down the yard, and, halting opposite the truck, surveyed me attentively until I became quite embarrassed and a little annoyed.

"Want a job, young feller?” he asked at length.

“No, thank you,” I replied. “I’ve got one.”

“So I see. Looks a pretty soft one, too. How much do they pay yer for sittin’ in that truck?”

Of course it was no concern of his; but I was a civil youth and replied simply: “Ten shillings a week.”

“And are they going to give yer a pension?”

“They may if I sit here long enough,” I answered.

He pondered this statement thoughtfully and then resumed: “Sure yer don’t want a job? Wouldn’t care to earn five bob, for instance?”

Now this was a different matter. Five shillings was half my weekly wage. I was not pressed for time, for I had run all the way with the loaded truck and was entitled to loiter on the return journey.

“What sort of job is it?” I asked, “and how long will it take?”

“It’s to carry a case from Mansell Street to Byleses Wharf. Take yer about ‘arf a hour.”

“Very well,” said I. “Five shillings is agreed upon, is it?”

“Five bob it is; to be paid on delivery. You cut along to Mansell Street, right ‘and side next door to the ’bacca shop what’s got the image of a nigger outside. I’ll just mizzle on ahead and tell ’em you’re coming.”

He turned and left the yard at a much more sprightly pace than that at which he had entered, and immediately vanished from my sight. But he evidently discharged his mission, for, when I arrived at the house indicated, a seedy-looking man accosted me.

“Are you the bloke what’s come for that case of eggs?”

“I’ve come for a case that’s to go to Byles Wharf,” I replied.

“That’s right,” said he. “And mind you’re careful with that there case. J’ever hear about Humpty Dumpty what sat on a
I replied that I was quite familiar with the legend.

"Very well," said he. "There's two thousand of 'em in that case, so you go slow and don't get a-joltin' 'em. We don't want 'em made into omlicks before their time. Now then; just hold that truck steady."

As he spoke, two men came out of the house carrying a large, oblong case on the top side, of which was pasted an enormous label inscribed, "Fragile. This side up." I steadied the truck by its pole and they slid the case into position with extraordinary care while the seedy person stood by to superintend and admonish. Having settled it securely, they wiped their hands on the backs of their trousers and retired into the house, when the seedy one administered a final caution.

"Remember what I told ye, young covey. Don't you go a-gallopin' that there case over the cobbles or a-bangin' it against lamp-posts, and you'd best take the back ways so as not to get run into by fire-engines or sechlike. D'ye ogle?"

I assured him that I ogled perfectly and he then requested me to skedaddlle; which I did with the air and at the pace of one conducting a modest funeral.

But my circumspect manner and elaborate care seemed only to invite assaults from without. In Upper East Smithfield a van, attempting to pass me at a wobbling canter, caught the corner of the precious case a bang that was enough to have turned the whole consignment into "omlicks"; and any that remained whole were like to have been addled by the van-driver's comments. Then in Pennington Street a man came running round a corner with a barrowful of empty casks; and I only escaped being capsized by turning quickly and receiving the impact of the collision on the back of the case. And, finally, an intoxicated Swedish seaman insisted on accompanying me down nearly the entire length of Old Gravel Lane, performing warlike music on the end of the case with a ship-wright's mallet.

As I turned into the gateway of Byles Wharf I looked anxiously at my charge, rather expecting to find some oozing of yellow liquid from its joints. But no such traces of its stormy passage were visible and I ventured to hope that the packing was better than I had been led to believe. Just inside the yard I encountered, somewhat to my surprise, the seedy stranger of Mansell Street, with another even seedier.

"Here you are then, young covey," said the former. "I hope you've been careful with them eggs."

I assured him that I had been most careful but I did not think it necessary to mention that some other people had not. After all, you can't mend eggs, so the less said the better.

"Very well," said he; "you stay here a minute while I go and see if they're ready."

The two men went away and disappeared round the corner of a shed, leaving me holding the pole of the truck. Now the act of standing still and holding the pole of a truck soon becomes monotonous, especially to a youth of seventeen. Half unconsciously I began, presently, to vary the monotony by working the pole up and down like a pump-handle. That couldn't hurt the eggs, and it produced a measured creak of the truck-springs that was interesting and pleasing.

Suddenly there smote on my ear a hoarse and muffled voice, which exclaimed fiercely: "Keep still, can't yer!"

I stopped instantly and looked around me. I had not noticed anyone near, and I didn't see anyone now. Could there be a ventriloquist hiding somewhere in the yard? The idea set my youthful curiosity aflame. I couldn't see him. But perhaps I could induce him to speak again and then I might locate the sound.

I renewed my application to the pump-handle with increased vigour, and the truck-springs squeaked joyously. The experiment was a perfect success. At the fourth or fifth squeak a savage but muffled voice exclaimed, rather louder than before: "Keep still, I tell yer, yer young blighter!"

The mystery was solved. There was no doubt this time as to where the voice came from. It came from inside the case. Eggs indeed! And then I thought of the Swedish sailor and I am afraid I grinned.

The joy of a youth of my age at this romantic discovery may easily be imagined. Instantly my mind began to evolve speculations as to the identity of the imprisoned man. He seemed to take his incarceration in a philosophic spirit, though the Swedish mariner must have been a trial, to say nothing of the other incidents. But at this point my reflections were cut short by the reappearance of the two seedy strangers.

"Now, young shaver," said my original employer; "bring them eggs along this way."

He preceded me round the corner to the quay, alongside of which lay a barge with a hoisting tackle rigged from the end of a mast-derrick. There I was directed to halt and my two friends proceeded to lift the case tenderly out of the truck.

"Now you can mizzle," said the seedler of the two.

"I want my five shillings," said I.

The man put his hand in his pocket and produced a half-crown, which he presented to me. I examined it critically and held it out to him.

"This is no use," I said. "It's pewter. Besides, I was to have five shillings."

He was about to argue the point when the other man broke in impatiently: "Don't play the goat, Jim. Give the cove his dibs"; on which the first man produced—from another pocket—five shillings of undoubtedly official origin. I pocketed them
after careful scrutiny and offered him the “snide” half-crown. But he waved it aside magnanimously.

“You can keep that,” said he. “’Tain’t no good to me if it’s a wrong ‘un. And now you can cut your lucky.”

My “lucky” took me about a dozen yards along the quay, where I drew up behind a pile of bales to watch the progress of this stirring drama. The barge’s tackle-rope had a sling hooked on the end, and this was now carefully passed round the case. The fall of the rope was put on the mast-winch, and, when all was ready, the word was given to “heave away.” The men at the winch according hove away. The paws clinked merrily, the rope tightened, the case rose clear of the ground and swung out like the bob of an enormous pendulum.

And then came the disaster. The barge was secured to two mooring-posts and was about ten feet away from the quay, so that the derrick had to be hauled over by guy-ropes. But the case had not been properly balanced in the sling; and no sooner had it swung clear of the edge of the quay than it began to slip through the rope loop.

“Look alive!” roared someone on the quay. “She’s a-slippin’!”

One of the men left the winch and rushed for the guy-rope. But it was too late. Slowly, inexorably, the case slid through the loop and fell with a resounding plop! into the water.

An agonised yell arose from the quay and a furious stampede among the onlookers. The barges snatch up boat-hooks and setting-poles and scrambled along the deck. But, alas! A swift tide was running, and the case, gyrating and dancing like a cork in a mill race, was out of reach before the first boat-hook could be got over the side.

A barge’s dinghy was made fast at the foot of a ladder hard by. Abandoning the truck, I slithered down the ladder, closely followed by a barge-boy, and we met in the boat with mutual recriminations. But there was no time to argue. The boy cast off the painter, and snatching up the paddle, dropped it in the transom-notch and began to scull furiously down stream. Ahead of us, we could see the case dancing along on the tide, turning round and round, vanishing and reappearing among the tiers of shipping. Presently, too, I saw another boat start in pursuit and recognised my two friends among its occupants.

But the case had got a flying start and pursuit was difficult among the crowded shipping. We were beginning to overhaul it when it disappeared behind a cargo steamer, and when we next saw it, it had been neatly snared by a couple of ropes and was being hoisted by hand through the gangway of a little Welsh schooner that was just hauling out of the tiers. The barge-boy and I approached the schooner on the off-shore side and climbed on board unnoticed; for the other boat, containing my seedy acquaintances had just arrived on the in-shore side. My employer proceeded to state his claim. “Hi, Captain! That there’s my case.”

The captain leaned over the bulwark and regarded him with an affable smile.

“D’y’ear,” my friend repeated. “That case belongs to me.”

The captain’s smile broadened. “Belonged,” he corrected blandly.

“What d’yer mean?” demanded the seedy one. “You ain’t going to try to stick to my property?”

The captain maintained his affable manner. “This is a case of salvage,” said he.

“Git out,” rejoined the other. “It’s a case of eggs; and they’re my eggs.”

“Did you lay ’em yourself?” enquired the captain (a good deal nearer the mark than he thought). The question seemed to irritate my seedy friend, for he replied angrily: “Never you mind ’oo laid ’em. You just hand that case over.”

At this moment there came a diversion. One of the sailors, who had been closely examining the case as it lay dribbling on the deck, suddenly started back, like a cat who has inadvertently smelt a hedgehog.

“Golly woes!” he exclaimed. “There’s some-think alive inside!”

“Hey! what’s that?” demanded the captain.

“There is, sir, swelp me! I ’eard it a-movin’ about.”

The captain looked sharply over the bulwark. “Here you, mister!” he sang out, “you haven’t been sitting on those eggs, have you?”

“Sittin’ on ’em? What d’yer mean?”

“Because they seem to have hatched themselves and the chickens are running about inside the case.”

“Yes, and they’re usin’ the most shockin’ langwidge, too,” said an elderly seaman who had been pressing his ear to a crack in the case.

This report, reaching the occupants of the boat, caused very evident dismay. But my late employer made a last effort.

“Don’t talk nonsense,” he said, sulkily. “Pass that case over and I’ll pay what’s doo for salvage in reason.”

“Not me,” replied the captain. “I’m goin’ to broach that case and see what’s inside.”

The effect of this decision was rather curious. The men in the boat consulted together hurriedly; then their craft was turned about and rowed away rapidly in the direction whence they had come.
Meanwhile the captain and his myrmidons proceeded to operate on the case. Producing one or two small crow-bars, they neatly prised up the lid and threw it back; when there rose from the case, some what after the fashion of the obsolete toy known as “Jack-in-the-box,” no less a person than the man who had originally chartered my truck. He stepped out sullenly and confronting the group of grinning seamen, remarked, in, perhaps justifiably, emphatic terms, that he had had enough of that mode of travelling for the present.

The captain looked at him attentively, and he looked at the captain; and then ensued a whispered conversation between them, which was interrupted by one of the crew remarking:

“Looks like the police boat, don’t it?”

The passenger turned and stared wildly in the direction indicated. A police gig was approaching slowly but doggedly over the strong tide; and besides the amphibious officials were two men in civilian garb who sat in the stern-sheets and kept their eyes ominously glued on the schooner.

The passenger bobbed down behind the high bulwark and gazed about him despairingly; and suddenly his eye lighted on me.

“Here, boy,” he said, “get into that case.”

“No thank you,” said I.

He dived his hand frantically into his pocket and brought it out with a shining, yellow burden that clinked musically.

“Here, boy,” he pleaded. “Here’s five quid for you if you’ll get into that case and let ’em nail it up.”

Five sovereigns! It was a fortune to a lad in my position. And there really was no particular risk. I examined the coins—I was a fairly expert judge of money from my occupation, which often included “payment on delivery”—and found them genuine; and I succumbed. Stowing the money in an inside pocket, I stepped into the case and hunched myself up so as to occupy comfortably the rather limited accommodation.

“Don’t you drop the case into the water again!” I said.

“Right-o, Sonny!” the captain answered. “We’ll handle you carefully. Now there, look sharp!”

The lid was clapped on, a few smart but not noisy blows of a hammer drove home the nails, and I began to earn my magnificent wage. The interior of the case was unpleasantly damp and stuffy, though a sufficiency of air and a few streaks of light came through the chinks of the lid. Sounds from without also reached me freely and consisted, for the present, chiefly of suppressed laughter from the sailors and admonitions from the captain.

“Stow that chap down in the lazarette, Fred,” said the latter; “and you men, don’t stand about laughing like a lot o’ fools. Get that tow-rope ready for the tug. Here comes the police boat.”

There was a pause after this with some scuffling about the deck and a good deal of sniggering. Then I heard a sharp, official voice. “What’s this case, Captain?”

“I don’t know,” was the reply. “Belongs to those men that you see running up them steps. They hooked it when they saw your boat coming.”

“That’s Jim Trout,” said another voice; “and Tommy Bayste with him. What’s in the case, Captain?”

“Can’t say. Seems to be something alive in it.”

“There!” said the first official. “What did I tell you, Smith. It’s Powis right enough. We’d better get him out of the case and clap the darbies on him.”

“Not on my ship, you won’t,” said the captain. “I can’t have any criminals let loose here just as I’m hauling out to go to sea. You’d better take the case ashore and open it there.”

“Gad!” exclaimed Smith; “the Captain’s right, Sergeant. We’d better drop the case into the boat and take it ashore. Powis is an ugly customer to handle. He might capsize us all into the river.”

“That’s true,” agreed the sergeant. “We’ll take him as he is if the Captain will have the case let down into our boat.”

The captain was most willing for certain private reasons not entirely unconnected with the lazarette. I heard and felt a rope sling passed round the case and my heart was brought into my mouth by the squeal of tackle-blocks. For a few seconds the case swung horribly in mid-air; then, to my unspeakable relief, I felt it subside on to the floor of the boat.

A good deal of laughter and facetious talk mingled with the measured sound of the oars as I was borne away. Suddenly the sergeant laughed out boisterously like a man who has had a funny idea. And apparently he had.

“I’ll tell you what, Smith,” he chuckled; “we won’t open the case till we get to Holloway. We’ll take it right into the reception ward. Ha! Ha!”

The joke was highly appreciated by Mr. Smith and his colleagues—a good deal more than it was by me; for I had had enough of my quarters already—and they were still in full enjoyment of it when another voice sang out: “Keep clear of that tug, West. She’ll be right on top of us. Hi! Tug ahoy! Look out! Where the dev—”

Here there came an alarming bump and a confused chorus of shouts arose. The case canted over sharply, there was a
fearful splash, and immediately, to my horror, water began to ooze in through the cracks between the boards. Two or three minutes of dreadful suspense followed. A loud churning noise sounded close at hand, waves seemed to be breaking over the case, and I had a sensation as if my residence were being dragged swiftly through the water.

It didn’t last very long. Presently I felt the case run aground. Then it was lifted on to what I judged to be a barrow; which immediately began to move off over an abominably rough road at a pace which may have been necessary but was excessively uncomfortable to me.

Hitherto very little had been said. A few muttered directions were all that I had been able to catch. But now a newcomer appeared to join our procession, and I began to gather a few particulars of the rescue.

“Any of the coppers drowned, d’ye think, Bill?”

“Not as I knows of. I see ‘em all a-crawlin’ up on to a dumb barge.”

“Where’s the tug now?”

“Islington, I should think. We left ‘er on the mud with ‘er propeller goin’ round like blazes.”

“What are you going to do with Powis, Bill?”

“We’re going to shove the case into Ebbstein’s crib and then nip off to Spitalfields with the barrer. And we’ve got to look slippery, or we’ll have the coppers on our heels, to say nothin’ of them tug blokes. They’ll be wantin’ our scalps, I reckon, when they find their craft on the mud.”

This conversation was by no means reassuring. I was certainly out of the frying-pan but it remained to be seen what sort of fire I had dropped into.

Meanwhile I carefully stowed my treasure in a secret receptacle inside the back of my waistcoat and braced myself as well as I could to resist the violent jolting and bumping caused by the combined effects of speed, indifferent springs and an abominably rough road. It was during a readjustment of my position after a more than usually violent joggle that my hand, seeking a more secure purchase on the wet surface, came into contact with a small body which felt somewhat like a flat button. I took it between my fingers and tried by the sense of touch to determine what it was, but could make out no more than that it was hard and smooth, flat and oval in shape and about half an inch long. This did not tell me much, and indeed I was not acutely interested in the question as to what the thing might be; but eventually, on the bare chance that it might turn out to be something of value, I deposited it in my secret pocket for examination on some more favourable occasion. Then I wedged myself afresh and awaited further developments.

I had not long to wait. Presently the barrow stopped. I felt the case lifted off and carried away. The light ceased to filter in through the cracks of the lid and was replaced by a curious, sour smell. A muttered conversation with someone who spoke very imperfect English was followed by another brief journey and then the case came to rest on a wooden floor and the smell grew more intense. A confused jabbering in an uncouth foreign tongue seemed to pervade the foul air, but this was soon interrupted by the unmistakable English voice that I had heard before.

“I’ll soon ‘ave it open, Ebbstein, if you’ve got a jemmy. That’s the ticket, mate. Look out, there, inside!”

The beak of the jemmy drove in under the top edge; one or two quick jerks dislodged the nails, the lid was lifted clear and I popped up as the last occupant had done. A swift, comprehensive glance showed me an ill-lighted frowsy room with a coke fire on which a tailor’s “goose” was heating; a large work-board on which were piled a quantity of unfinished clothing, and three wild-looking women, each holding a half-made garment and all motionless like arrested clockwork figures, with their eyes fixed on me. Besides these, and a barrel filled with herrings and cut cabbage floating in a clear liquid, were the two men who confronted me; of whom one was a common, stubbly-haired English East-Ender while the other was a pale, evil-looking foreigner, with high cheek-bones, black, up-standing hair and a black beard that looked like a handful of horsehair stuffing.

“Blimey!” ejaculated the Englishman, as I rose into view; “’taint Powis at all! Who the blazes are you?”

“Who is he!” hissed the foreigner, glaring at me fiercely, “I will tell you. He is a bolice spy!” and his hand began to creep under his coat-skirt.

The Englishman held up his hand. “Now none o’ that, Ebbstein,” said he. “You foreigners are so bloomin’ excitable. Tell us who you are, young un.”

I told them all I knew, including the name of the schooner—the Gladwys of Cardiff—and I could see that Ebbstein rejected the whole story as a manifest fable. Not so the Englishman. After a moment’s reflection, he asked sharply: “How much did he give you for getting into that case?”

“Five shillings and a duffer,” I replied promptly, having anticipated the question.

“Where’s the five bob?” he asked; and I indicated my left trouser’s pocket. Instantly and with remarkable skill, he slipped his hand into the pocket and fished out the three coins.

“Right you are,” said he, spreading them out on his palm; “one for you, Ebb, one for me and one for yourself, young un,” and here, with a sly grin, he returned me the pewter half-crown, which I pocketed.

“And now,” he continued, “the question is what we’re to do with this young toff. We can’t let him run loose just now. He
might mention our address.” Ebbstein silently placed one finger under his beard; but the other man shook his head impatiently.

“That’s the worst of you foreigners,” said he; “you’re so blooming unconstitooational. This ain’t Russian Poland. Don’t you understand that this boy was seen to get into that case and that the coppers’ll be askin’ for him presently? You’d look a pretty fine fool if they was to come here for him and you’d only got cold meat to offer ‘em. Have you got a empty room?”

“Dere is der top room, vere Chonas works,” said Ebbstein.

“Very well. Shove him in there and lock him in. And you take my tip, young feller, and don’t give Mr. Ebbstein no trouble.”

“Are you going away?” I asked anxiously.

“I’m going to see what’s happened to my pal; but you’ll see me back here some time to-night.”

After a little further discussion, the pair hustled me up the grimy, ruinous stairs to the top of the house and introduced me to an extraordinarily filthy garret, where, after a brief inspection of the window, they left me, locking the door and removing the key.

The amazing folly of the ordinary criminal began to dawn on me when I proceeded to lighten the tedium of confinement by examining my prison. I was shut up here, presumably, because I knew too much; and behold! I was imprisoned in a room which contained incriminating objects connected with at least two different kinds of felony. An untidy litter of plaster moulds, iron ladies, battered pewter pots and crude electrical appliances let me into the secret at once. For, young as I was, I had learned a good deal about the seamy side of London life, and I knew a coiner’s outfit when I saw it. So, too, a collection of jemmies, braces, bits and skeleton keys was quite intelligible; these premises were used by a coiner—presumably Mr. ‘Chonas’—and a burglar, who was possibly Ebbstein himself.

I examined all the tools and appliances with boyish curiosity, and was quite interested for a time, especially when I discovered the plaster mould of a half-crown, very sharp and clear and coated with polished black lead, which seemed to correspond with the ‘Duffer’ in my pocket. The resemblance was so close that I brought forth the coin and compared it with the mould, and was positively thrilled when they proved to be one and the same coin.

Then it suddenly occurred to me that Ebbstein probably had forgotten about the moulds, and that if he should realise the position he would come up and secure his safety by those “unconstitooational” methods that he had hinted at. The idea was most alarming. No sooner had it occurred to me than I resolved to make myself scarce at all costs.

There was not much difficulty at the start. The window was fixed with screws, but there were tools with which to unscrew it; and outside was a parapet. I began by sticking the end of one jemmy in a crack in the floor and jamming the other end against the door; which was as effective as a bolt. Then I extracted the screws from the window with a turn-screw bit, softly slid up the bottom sash and looked out. Exactly opposite was the opening of a mews or stable yard, but it was unoccupied at the moment. The coast seemed quite clear, the house was not overlooked, and the parapet ran along the whole length of the street. Arming myself with a two-foot jemmy, I crawled out on to the broad gutter enclosed by the parapet, shut the window and hesitated for a moment, considering whether I should turn to the right or the left. Providence guided me to the left, and I began to crawl away along the gutter, keeping below the parapet as far as possible.

As I passed the dormer window of the next house, curiosity led me to peep in; but at the first glance my caution fled, and I rose boldly to press my face against the glass. I looked into an unfurnished room tenanted by one person only; a handsome—nay a beautiful girl of about my own age. Her limbs were pinioned with thinnish rope, and she was further secured with the same rope to a heavy chair. A single glance told me that she was no East-End girl; she was obviously a young lady; and my premature knowledge of the seamy side of life enabled me to hazard a guess as to what she was doing here.

She had already seen me and turned her deathly pale face to me in mute appeal. In a moment I had my big clasp-knife out, and, thrusting it up between the sashes, pushed back the catch; when I quietly pulled down the top sash and climbed over into the room. She looked at me with mingled hope and apprehension and exclaimed imploringly:

“Oh! Take me away from this dreadful place—” but I cut her short.

“Don’t speak,” I whispered; “they might hear you. I’m going to take you away.”

I was about to cut the rope when it occurred to me that it might be useful, as there seemed to be a considerable length of it. So I untied the knot and unwound the coils, recoiling the rope and throwing it round my neck. As the young lady rose stiffly and stretched herself, I silently carried the chair to the door, where I stuck its low back under the handle and jammed the back legs against the floor. No one could now get into the room without breaking the door off its hinges.

“Can you follow me along the parapet, Miss?” I asked with some misgiving.

“I will do anything you tell me,” she answered, “if you will only take me away from this place.”

“Then,” I said, “follow me, Miss, if you please,” and climbing back out of the window, I reached in and took her hands to haul her up after me. She was an active, plucky girl, and I had her out on the gutter behind the parapet in a twinkling; and then, having softly shut the window, in case it should be noticed from outside, I crouched down in the gutter and motioned to her to do the same.
In the gathering dusk, we began to crawl slowly away, I leading; but we had advanced only a few yards when I heard her utter a low cry, and at the same time felt her grasp the skirt of my jacket. Turning back, I saw her peering with an expression of terror through a hole in the parapet that opened into a rain-hopper, and, backing as best I could, I applied my eye to the hole, but failed to see anything more alarming than a woman on the opposite side of the street, who was looking at the houses on our side as if searching for a number. To be sure, she was not a pleasant-looking woman. Tall and gaunt with dead black hair and a dead white face, and pale grey eyes that struck a discord with her hair, and were not quite a match in colour—for the left eye looked considerably darker than the right—she impressed me somehow as evil-looking and abnormal with a suggestion of disguise or make-up; a suggestion that was heightened by her dress. For she wore the uniform of a hospital nurse, and I found myself instinctively rejecting it as a masquerade.

Still, unprepossessing as she was, I could see nothing terrifying in her aspect until my companion whispered in my ear: “She is coming to fetch me.” Then I vaguely understood and shared her alarm. But the greater the danger, the greater the need to escape as quickly as possible. Accordingly, with a few whispered words of encouragement, I started forward again, crawling as fast as the confined space permitted. I looked up at the windows as we passed, but did not venture to peep in; but near the end of the row, I made out on one the words “To let,” written with soap or whitewash, and on this, I raised my head and looked in. The appearance of the empty room with its open door confirmed the inscription, and I made bold, after a cautious look round, to slip back the catch with my knife, lower the top sash and enter. A very brief inspection showed that the house was really empty, so I returned, and quickly helping my protégée in through the window, slid up the sash.

While we were exploring the empty house, the young lady told me her story. That very morning her governess had left her for a few minutes to call at an office, and while she was waiting in the Strand, the woman whom we had just seen had come to her to tell her that the governess had been run over and taken to the hospital. She was then hurried into a cab by the nurse and driven to the house in which I had found her.

There was no time, however, for detailed explanations. We were by no means out of the wood yet. All the outside doors, front and back, were locked, and though I could have broken out with the jemmy, it was not a very safe plan on account of the noise that I should make. But there was another plan that looked more feasible. This particular house had no back yard, but gave directly on a narrow court; into which it would be fairly easy to drop from the first-floor window by the aid of the rope.

No sooner had I conceived the idea than I proceeded to execute it. Raising the bottom sash of the back first-floor window, I passed the cord through the bars of the fireplace.

“Shall I go first, Miss?” I asked. “The rope is rather short, and I had better be there to catch you if you have to drop.”

She agreed eagerly, and, after a careful look up and down the court, I took the doubled rope in my hand, climbed out of the window, and, slipping down easily until I was near the ends of the rope, let go and dropped on the pavement.

Looking up, I saw the young lady, without a moment’s delay, seize the rope and climb out of the window. But instead of grasping the two parts of the rope together, she had taken one in each hand, which made the descent much less easy; and as she apparently held one part more tightly than the other, the more loosely-held part began to slip up as the “bight” ran through the bars of the grate above. Finally, she let go with one hand, when the released end flew up and she came down “by the run” holding on to the other. I stepped forward as she dropped the last few feet and caught her without difficulty; and as I set her on her feet, the rope came down by its own weight and fell in a confused coil on top of us. Half unconsciously, I picked it up and flung it round my neck as I glanced about in search of the exit from the court.

At this moment a man came, treading softly, round a bend of the narrow passage; a foreigner, evidently, and so like Ebbstein that, for a moment, I really thought it was that villain himself. He stopped short and looked at me with scowling inquisitiveness. Then, suddenly, he seemed to recognise the young lady, for he uttered a sort of snarl and stepped forward. At the sound she turned and saw the man; and the low, trembling cry that she gave, and the incredulous horror that froze upon her face, will be fresh and vivid in my memory though I should live for a century.

“You shall come back with me now,” the wretch exclaimed, and rushed at her with his foul hands spread out like talons. My gorge rose at the brute. The blood surged noisily in my ears and my teeth clenched tightly. The jemmy in my hand seemed to whirl aloft of itself. I was dimly aware of a strong muscular effort and a dull-sounding blow; of a limp fall and a motionless figure on the pavement. Perhaps the man was dead. I didn’t know and I didn’t particularly care. At any rate I did not stop to ascertain. Taking my companion by the hand, I drew her swiftly down the court, grasping the jemmy tightly and quite ready to use it again if need be.

We were obviously in great danger. Even as David, when he went down into Ashdod, we walked in the midst of enemies. There were few people in the ill-lighted street into which we emerged, but those few eyed us with sinister glances and whispered together ominously. We walked on quickly but without appearing to hurry, and presently turned into a street that was quite deserted save for a hansom cab that had drawn up outside a small public house. I stepped forward joyfully, remembering the golden bribe that I could, and would willingly, offer for a safe passage; but my companion suddenly seized my arm and dragged me into a deep doorway.

“Don’t let him see us!” she exclaimed breathlessly. “He is the man who brought me here, and he is one of them. I heard the nurse call him Louis.”

We pressed back into the doorway and I watched the man putting on the horse’s nose-bag. He certainly was a villainous-
looking rascal; pale, black-eyed, with crisp, curly, black hair; the very opposite of the English horsey type. When he had secured the nose-bag, he turned and entered the public house; and at the same moment I made up my mind. Advancing quickly, I deliberately took off the horse’s nose-bag and threw it down.

“Jump into the cab!” I said to my companion; flinging the coil of rope and the jemmy down on the foot-board; and she stepped in without a word. I led the horse forward a few paces clear of the house, and then I climbed quickly to the driver’s seat and took the reins. My experience of driving was small, but I had driven our van once or twice under the carman’s supervision, and knew how to handle the ‘ribbons’. A gentle shake of them now started the horse at a walk and I had just plucked the whip out of its socket when there rose from the direction of the court a shout of alarm and a confused noise of many voices. I shook the whip, and the horse broke into a trot. The voices drew nearer, and, just as I turned the corner, a loud yell from behind us announced that the cabman had discovered his loss. I gave the horse a sharp cut and he broke into a canter.

On we rattled through one after another of the short and narrow slum streets, turning the sharp corners on one wheel and shaving the treacherous posts; and always the roar of angry voices seemed to pursue us, gathering in volume and seeming to draw nearer. The cab swayed, men leaped aside with curses, women and children sprang from the kennels screaming, windows were flung up and people yelled at us from doorways. And still the roar from behind seemed to draw nearer; and still I sat with clenched teeth, grasping the reins convulsively and thinking only of the posts at the corners.

Presently we entered a longer street and I whipped up the horse afresh. At the end of this street we came out into a broad road and I took a deep breath. Now I knew where I was: Commercial Road East. Ashdod was behind us with the gibbering crowd of our enemies. I lashed the horse into a gallop and rattled gaily along the broad road, westward. The police might stop me if they pleased; I cared not a fig for them. My lady was safe from those vampires, and that was all that mattered.

As we approached Whitechapel High Street, I stopped and raised the trap to ask where I should drive my fare. The address she gave was 63, Dorchester Square; and having obtained this, I drove on once more. But I went more soberly now that the danger was over and avoided the main streams of traffic. Years of experience in the delivery of parcels had made me almost as familiar with London as a fully qualified cabman, and I threaded my way through quiet squares and by-streets with no difficulty beyond that of driving the cab straight and keeping clear of other traffic. In less than an hour I turned into Dorchester Square, and, slowing down to read the numbers, at length drew up before a large house.

I climbed down quickly, and, snatching off my cap, helped my fare to alight. She stood by the cab, still holding my hand and looking earnestly into my face; and her eyes filled.

“I want to thank you,” she said with a little catch in her breath, “and I can’t. But my mother will. I will send someone out to hold the horse in a minute.”

She ran up the steps and rang the bell. The great door opened. It was opened by a tall footman who seemed to be prematurely grey; in fact his hair was perfectly white, though he looked quite young. He stared at the young lady for a second or two as if stupefied; then he let off a most undignified yell. “Miss Stella’s come back!”

So her name was Stella. A pretty name and a fit one for a lovely young lady. But I liked not that footman. And the great house, with its unfamiliar pomp, cast a chill on me. I felt a sudden shyness, which may have been pride.

Why should I see her mother? There was nothing more to do. “Miss Stella had come back,” and there was an end of it.

I led the horse a few yards farther on to a lamp-post and taking the reins, which had fallen down, I secured them to the post with what our packer calls a clove hitch. Thriftily, I gathered up the coil of rope from the footboard—the jemmy had jolted off—and then I walked away across the Square.

I looked in at Sturt and Wopsalls, though the premises were shut. But the foreman, who lived there, told me that my truck had been brought home by the police; and when he had heard my story he advised me to leave all explanations to him; which I did. Of course I said nothing about the young lady.

To my revered parent I was even more reticent. Experience had taught me to maintain a judicious silence about any pecuniary windfall until some periodical financial crisis called forth my savings. But he was singularly incurious about the details of my daily life. Even the coil of rope which I brought home on my arm, drew from him no comment or question. And as the frugal supper was on the table and we were both pretty sharp set, conversation tended for a while to be spasmodic, with the result that the story of my adventures remained untold.

II. — TREASURE TROVE

(JASPER GRAY’S NARRATIVE)

It was not until I had retired to my room for the night and taken the unusual precaution of locking the door, that I ventured to turn out the secret pocket at the back of my waistcoat and inspect the almost unbelievable wealth that the day’s adventures had yielded. Indeed, so incredible did my good fortune appear that nothing short of a minute and critical examination of each coin separately would convince me that the windfall was a glorious reality.

But a reality it was; and as I laid out the shining coins on my dressing-table, my eyes travelled over them with something approaching awe. Five golden sovereigns! Wealth beyond my wildest dreams. As I recall the ecstasy with which I gazed at
them I can understand the joys of the old-fashioned miser. The paper vouchers which pass as money in these later, degenerate days hold no such thrills.

And what a fortunate inspiration that secret pocket had been! The sewing of it on had been but a mere boyish freak with no defined purpose; for nothing more valuable than an occasional stray silver coin had ever come into my possession. Yet, but for that invaluable pocket, the five sovereigns would have gone the way of the two half-crowns. And thus reflecting, I was reminded of the little object that I had picked up in the egg-chest and dipped my fingers into the recesses of the somewhat irregularly shaped pocket. The object, when I at last discovered it in a sunken corner, appeared to be a little oval glass plate, flat on one side and rounded on the other, and about half an inch in length. As it was coated with dirt, I carried it to the wash hand-basin, and, having tenderly bathed and wiped it, brought it back to the candle. And then I received another thrill; for, holding it up to the light, I found it to be of a beautiful deep, clear green colour, whereupon I instantly decided that it must be an emerald. But more than this: as I looked through it with the rounded side towards me, there appeared, as if in its very substance, but actually engraved on the flat side, a little castle, such as one uses in playing chess, and above it the tiny head of some animal which seemed to combine the characteristics of a donkey and a crocodile, while, underneath the castle, in the tiniest of lettering, were the words, “Strong in Defence.” Evidently this emerald had dropped out of a seal or a signet ring.

I knew all about seals, for Sturt and Wopsalls were accustomed to secure small parcels for the post in this way; and occasionally the packer had allowed me to perform this interesting operation, having instructed me in the proper method and how to prevent the wax from sticking to the seal. But the warehouse seal was a big, clumsy, brass affair, quite different from this delicate little engraved gem. Hence it is needless to say that I was agog to make a trial of my new treasure; and, failing any more suitable material, I made a number of experimental impressions on samples of wax from the candle before returning the gem to its secret hiding-place. Then, having bestowed my golden windfall at the bottom of a drawer filled with miscellaneous clothing—mostly outgrown—I went to bed, gloating happily over my sudden accession of wealth.

Throughout the following day—it was a Saturday, I remember—the consciousness of my new opulence never left me. I seemed to walk on air. For the first time in my life I was a capitalist. If I had chosen—only I was not such a mug—I could have gone quite extensively ‘on the bust’ or brought something really expensive. It was a delightful sensation, and it cost nothing so long as I kept my capital intact.

But even more than my treasure of gold was the mysterious emerald a source of joy, to which the uncertainty as to its value contributed not a little. I had read somewhere that the emerald is the most precious of stones, even more precious than the diamond. And this was quite a good-sized stone. Why it might be worth a hundred pounds! I had heard of diamonds that were worth more than that. True, it was probably some other person’s property, and the circumstances in which I had acquired it strongly suggested that it was stolen property. But what of that? I had not stolen it, and I was fully prepared to return the mystery box to the rightful owner if ever he should appear. Meanwhile it was mine to possess and enjoy, and I made the most of it, halting from time to time in unfrequented places to fish it out of its hiding-place and hold it up to the light, revealing its gorgeous colour and the quaint little castle and the preposterous little donkey or crocodile or whatever he was, magnified by the lens-like convex back of the gem.

Presently I became possessed by an overwhelming desire to see those mystic figures embodied in wax—real wax; sealing-wax. A survey of my pockets, revealing the presence of several pennies, and my arrival opposite a small stationer’s shop in Chichester Rents, settled the matter. I went in and demanded a stick of sealing-wax. The presiding genius, a dry-looking elderly man, rummaged awhile among some shelves at the back of the shop, and at length produced a cardboard box which he laid on the counter and in which I perceived a number of sticks of black sealing-wax.

“I’d rather have red,” said I.

“M’yes,” said he, giving the box a sort of reproachful shake, “I seem to have run out of red for the moment. Won’t black wax do?”

I was about to say “No,” when I observed a portion of a broken stick in the box, and my habitual thrift suggested the chance of a “deal.”

“How much for that broken piece?” I enquired.

He looked at the fragment disparagingly, picked it out with much deliberation and laid it on the counter.

“Make you a present of that,” said he; and taking up the box, turned his back on me as if to avoid my grateful acknowledgments.

I went forth gleefully from the shop with the little stump of funereal wax in my pocket and a growing urge to make a trial of it. But there are three factors to a sealing operation; the seal, the wax and the document or letter. The first two I had; and even as I was searching my pockets, and searching in vain, for some letter or envelope which might form a plausible subject for an experiment, Providence, or Fate, in a playful mood, supplied the deficiency. Just as I was about to cross Fleet Street, a spectacled gentleman, who looked like a lawyer’s clerk and carried in his hand a large sheaf of letters, blundered hastily out of Middle Temple Lane and collided with another hustler who was proceeding in the opposite direction. The shock of the impact dislodged one of the letters from his hand, but, unaware of his loss, he hurried away eastward. I ran across the road and picked up the letter, but by the time I had secured it, he had disappeared into the crowd. However, there was no need to pursue him. The letter was stamped and obviously ready for posting. All I had to do was to walk down to the post office and drop it in the box.
With this intention I had turned eastward and was threading my way among the crowd when, happening to glance at the letter in my hand, I noticed that the flap of the envelope was very insecurely stuck down. The letter, as I had already observed, was addressed to a Mr. Brodribb, at New Square, Lincoln's Inn. Now, if Mr. Brodribb lived in Lincoln's Inn, he was probably a lawyer, especially as the letter had come from the Temple; and if he was a lawyer, the letter possibly contained important and confidential matter. It was highly improper that such a letter should be insecurely fastened. The least that I could do was to close the envelope as securely as was possible. And since mere gum had been tried in the balance and found wanting, the obvious proceeding was to seal it and make it absolutely safe.

No sooner had I conceived the idea than I set about its execution. Darting down Inner Temple Lane in search of a retired spot, I turned to the left beside the church, and, passing Oliver Goldsmith's grave, came to a monument provided with a shelf which would serve the purpose to perfection. Here, with no one to observe my proceedings (though, indeed, they were innocent enough and even meritorious) I laid the envelope, the box of matches, the wax and the seal. Very carefully and methodically I melted the wax until I was able to deposit a nearly circular patch on the flap of the envelope. Then, giving it a few moments for the excessive stickiness to subside, I laid the precious seal daintily in position and made steady pressure on it with my thumb.

The result was perfect, even to the microscopic markings on the castle; so perfect that I was loath to part with my work. Again and again I gloated over the beauty of its jet-like polish and the clean-cut device as I walked slowly down Fleet Street until I reached the post office, where, reluctantly I dropped the letter into the yawning mouth of the box. However, if I must needs part with the finished work, I retained the means of repeating it indefinitely; nor, to do myself justice, did I neglect my opportunities. Every parcel to which I could get access went forth enriched as to its exterior with a supplementary impression on the parcel wax, and a couple of ponderous rolls of cartoon paper which I conveyed in the truck to Studios in Ebury Street and at Chelsea, arrived at their destinations adorned with one or two black seals in addition.

It was late in the evening when I reached home—for Saturday was little different to me from other days excepting that it held the promise of Sunday. I was rather tired and uncommonly hungry. But, to a strong and healthy lad, mere fatigue is not unpleasant, especially with an immediate prospect of unrestricted rest; and my hunger was mitigated by the comfortable consciousness of a pound of streaky bacon in my pocket, the product of a trifling honorarium tendered by the Ebury Street artist. That bacon was dedicated to future breakfasts, but still at a pinch (and pinches were not infrequent in our household) it might be made to yield a highly acceptable supper.

However, as I toiled up the noble staircase that mocked our poverty with its faded, old-world magnificence, my nose informed me that the bacon could be reserved for its legitimate function. A savoury aroma on the second-floor landing, waxed in intensity as I mounted the “third pair,” offering suggestions that I hardly dared to entertain. But when I opened the door of our sitting-room, my doubts were dispelled and my wildest hopes received glorious confirmation.

I recall very vividly the picture that greeted my eyes as I paused for a moment in the open doorway. Beside the fire, seated in the old Windsor arm-chair and clad in his shabby dressing-gown, beheld Pontifex (my revered parent—Pontifex Maximus on occasions of ceremony, shortened to Ponty in familiar conversation) delicately adjusting something that reposed in a frying-pan and murmured softly, exhalating a delicious fragrance. I sniffed and listened in ecstasy. More grateful than the odours of myrrh and frankincense was that delightful aroma; sweeter to my ears that soft, sibilant murmur than songs of Araby. For they conveyed, without the clumsy intermediary of speech, the entrancing idea of scallops; and lest any faintest misgiving might linger, there in the fender was ranged a goodly row of twelve empty scallop-shells.

As I entered, Pontifex looked up with a smile compounded of welcome, triumph and congratulation. We were strangely different in many respects, but on one point our souls were tuned in perfect unison. We both had a glutonous passion for scallops. It could not often be indulged, for the bare necessities of life consumed the whole of our joint financial resources. Our ordinary diet—largely consisting of Irish stew—was supplied under a slightly ambiguous contract by the lady on the second-floor. But she was an indifferent culinary artist, and we did not trust her with such rare delicacies as scallops, or even with bacon. These called for more subtle treatment, and besides, the very process of cooking them was a feast in itself.

While Pontifex, with consummate artistry and an air of placid satisfaction, tended the scallops, I proceeded to cut the bread and butter in order that there might be no unnecessary delay. And as I thus busied myself, my mind became half-unconsciously occupied, in the intervals of conversation, with speculations on the train of circumstances that had produced this unlooked-for festivity. How came Pontifex to be able to buy these scallops? Only that morning funds had been so short that it had been doubtful whether they would run to butter. Could Ponty have received an unexpected payment? It might be so, but I doubted it. And as I weighed the probabilities—and found them wanting—a horrible suspicion began to steal into my mind.

Concerning my golden windfall I had, for sound economic reasons, kept my own counsel. But the “smile” half-crown I thought might be allowed to transpire, so to speak, in the form of a booby-trap for poor old Ponty; to which end I had that very morning planted it on the corner of the mantelpiece, experience having informed me of my respected parent’s habit of snapping up any unconsidered trifles in the way of specie. It was a foolish joke, but I had taken it for granted that as soon as Ponty had the coin in his hand, he would see that it was a counterfeit. I had made no allowance for the difference between his eyesight and mine or our respective experiences of “smile” money. And now it looked as if my joke had failed disastrously. For I now remembered having noticed when passing a fishmonger’s shop on my way home, that scallops were
marked two shillings and sixpence a dozen. Of course, it might be only a coincidence. But a sensible man looks askance at coincidences; and the suspicious fact remained that a half-crown had disappeared and two and sixpence worth of scallops had unaccountably made their appearance.

However, I refrained from spoiling poor Pontifex’s enjoyment of the feast by raising the very awkward question and I even managed to dismiss it from my own mind. So we had a banquet that a Lord Mayor might have envied. The scallops were cooked to perfection and served tastefully in their native shells; and when those shells had become once more empty and I had brewed myself a pot of tea while Pontifex mixed an uncommonly stiff jorum of grog and lit a cigarette, we experienced that sense of luxury and well-being that comes only to those who have to count their coppers and whose rare banquets are seasoned by habitual hard living.

But the question of the “snide” half-crown had to be disposed of, for if it had purchased those scallops, then the scallops had been virtually stolen; and if it had not, it must be lurking in Ponty’s pocket, an element of potential danger. Thus, I reflected on the morrow as, in accordance with our Sunday morning routine, I shaved Pontifex, laid the table, fried the bacon and made the tea. Accordingly, as soon as we were seated at table, I opened fire with a leading question, which Pontifex received with a waggish air of surprise.

“So that was your half-crown!” he exclaimed. “Now why did that very simple explanation not occur to me? I tried to remember how I came to put it there but my memory was a complete blank. Naturally, as I realise now.”

“So you annexed it and busted it on scallops.”

Pontifex smiled blandly. “Your inference,” he remarked, “illustrates the curious fact that it is sometimes possible to reach a correct conclusion by means of perfectly incorrect reasoning. The connection which you assumed between the Treasure Trove and the scallops though false in logic was true in fact. But as to your use of the colloquialism, ‘busted’, I would point out that even as omelettes cannot be made without the breaking of eggs, so scallops at two shillings and sixpence a dozen cannot be eaten without the expenditure of half-crowns.”

“Precisely. That was how I established the connection.”

“Assumed, my son,” he corrected. “You did not establish it. You will note that your middle term was not distributed.”

“If the scallops were the middle term,” I rejoined, flippantly, “they were distributed all right. We had six each.”

“I mean,” he said with a deprecating smile, “that you fell into the common confusion of the undistributed middle. You confused the generic half-crown with a particular half-crown.”

“Oh, no I didn’t.” I retorted. “I wasn’t born yesterday. I know that the generic half-crown is made of silver. But this particular half-crown was made of pewter.”

Pontifex suddenly became serious. Laying down his knife and fork, he looked at me for several seconds in silent dismay. At length he exclaimed: “You don’t mean, my son, that it was a base coin?”

“That is just what I do mean. Rank duffer. Made out of a pewter pot. Chappie probably prigged the pewter pot to make it.”

Pontifex was too much overcome even to protest at my vulgarisms of speech. Still gazing at me in consternation, he exclaimed tragically: “But this is terrible, Jasper. I have actually committed a gross fraud on that most estimable fish monger! Unwittingly, it is true; but a fraud nevertheless.” (It was characteristic of Pontifex that he refrained from any suggestion that my idiotic booby-trap was the cause of the disaster. No man was more sensible of his own faults or more oblivious of other people’s).

“Yes,” I agreed, “you undoubtedly sold him a pup. Precious mug he must have been to let you. But I suppose, as it was Saturday night, he was pretty busy.”

“He was. The shop was crowded with buyers. But, my son, we shall have to make restitution: though, really, in the present circumstances of—ah—financial stringency—”

He explored his various pockets, which appeared to be rich in truncated fragments of lead pencil, in addition to which they yielded a small bunch of keys, a pen knife with a broken blade, a sixpence and three half Pence. These treasures he regarded disconsolately and returned them whence they came. Then he turned an enquiring and appealing eye on me. He knew, of course, that I had received my wages on the previous day but delicately refrained from explicit allusion to the fact. However, as the entire sum reposed untouched in my pocket, in the form of four half-crowns and the fishmonger had to be paid, I produced the necessary coin and pushed it across the table. Usually, I was a little chary of handing money to Pontifex, preferring to pay our debts myself. For Ponty’s ideas on the subject of meum and tuum were a trifle obscure—or perhaps I should say communistic—where my property was concerned, and the establishments of the tobacconist and the spirit merchant exercised a fatal fascination. But he was scrupulous enough in regard to strangers and I had no misgivings as to my present contribution safely reaching its proper destination. Accordingly, when I had furnished him with the means wherewith to make restitution to the defrauded fishmonger, I considered the incident of the “snide” half-crown as closed.

But it was not, as I discovered when I arrived home on Monday night. The fishmonger, it appeared, had communicated with the police, and the police were profoundly interested in the coin, which they recognised as one of a series which was being issued in considerable numbers by a coiner whom they had failed to locate or identify. In consequence, Pontifex had
been requested to ascertain from me how the coin had come into my possession and to communicate the information to the fishmonger for transmission to the police.

Now, in my mind, there was little doubt as to the source of that half-crown. It had come from the work shop or studio of the mysterious artist who had been referred to as 'Chonas'. But my experiences under the too-hospitable roof of Mr. Ebbstein had begotten an unwillingness to be involved in any affair connected with that establishment. I am not peculiarly secretive, but I have a habit of keeping my own counsel. 'Chonas's' proceedings were no concern of mine and I was not disposed to meddle with them. Wherefore, in reply to Ponty's not very eager enquiries, I stated simply and quite truthfully, that I had received the coin from a man who was a total stranger to me. This answer satisfied Pontifex, who was not acutely interested in the matter, and once more I assumed that I had finished with that disreputable coin. And once more I was mistaken.

III. — A MYSTERY AND A DISAPPEARANCE

(DR. JERVIS'S NARRATIVE)

THERE are some—and not a few, I fear—of the dwellers in, or frequenters of London to whom the inexhaustible charms of their environment are matters of no more concern than is the landscape which the rabbit surveys indifferently from the mouth of his burrow. For them the sermons in stones are preached in vain. Voices of the past, speaking their messages from many an ancient building or historic landmark, fall on deaf ears. London, to such as these, is but an assemblage of offices and shops, offering no more than a field for profitable activity.

Very different from these unreflective fauna of the town was my friend Thorndyke. Invertebrate town-sparrow as he was, every link with the many-coloured past, even though it were no more than an ancient street-name, was familiar and beloved, never to be passed without at least a glance of friendly recognition. Hence it was natural that when, on a certain Tuesday morning, we crossed Chancery Lane to enter Lincoln's Inn by the spacious archway of the ancient gate-house, he should pause to glance round the picturesque little square of Old Buildings and cast his eyes up to the weathered carving above the archway which still exhibits the arms of the builder and the escutcheons of the ancient family whose title gave the inn its name.

We were just turning away, debating—not for the first time—the rather doubtful tradition that Ben Jonson had worked as a bricklayer on this gateway, when we became aware of a remarkably spruce-looking elderly gentleman who was approaching from the direction of New Square. He had already observed us, and, as he was obviously bearing down on us with intent, we stepped forward to meet him.

"This meeting," said he, as we shook hands, "is what some people would describe as providential, if you know what that means. I don't. But the fact is that I was just coming to call on you. Now you had better walk back with me to my chambers—that is, if you are at liberty."

"May I take it," said Thorndyke, "that there is some matter that you wish to discuss?"

"You may, indeed. I have a poser for you; a mystery that I am going to present to you for solution. Oh, you needn't look like that. This is a genuine mystery. The real thing. I've never been able to stump you yet, but I think I'm going to do it now."

"Then I think we are at liberty. What do you say, Jervis?"

"If there is a chance of my seeing my revered senior stumped, I am prepared to stay out all night. But I doubt if you will bring it off, Brodribb."

Mr. Brodribb shook his head. "I should like to think you are right, Jervis," said he, "for I am absolutely stumped, myself, and I want the matter cleared up. But it is a regular twister. I can give you the facts as we walk along. They are simple enough, as facts. It is the explanation of them that presents the difficulty."

"I think you have heard me speak of my client, Sir Edward Hardcastle. I am the family solicitor. I acted for Sir Edward's father, Sir Julian, and my father acted for Sir Julian's father. So I know a good deal about the family. Now, yesterday morning I received a letter which was sealed on the outside with Sir Edward Hardcastle's seal. I opened the envelope and took out the letter, naturally assuming that it was from Sir Edward. Imagine my astonishment when I found that the letter was from Frank Middlewick, your neighbour in the Temple."

"It certainly was rather odd," Thorndyke admitted.

"Odd!" exclaimed Brodribb. "It was astounding. Here was Sir Edward's private seal—the impression of his signet ring—on the envelope of a man who, as far as I knew, was a perfect stranger to him. I was positively staggered. I could make no sense of it; and as it was obviously a matter that called aloud for explanation, I slipped the letter in my pocket and hopped off to the Temple without delay."

"But my interview with Middlewick only made confusion worse confounded. To begin with, he didn't know Sir Edward Hardcastle even by name. Never heard of him. And he was perfectly certain that the seal wasn't put on in his office. He had written the letter himself—I had already observed that it was in his own handwriting—but the envelope was addressed and the letter put in it by his clerk, Dickson, after the copy had been taken and the entry made in the index. Dickson states that
he put the letter in one of the ordinary envelopes from the rack and he is quite certain that, when he closed it and stuck the stamp on, there was no seal on it. Of course, there couldn't have been. Then he took the letter, with a number of others, and posted it with his own hand at the post office in Fleet Street."

"Did he check the letters when he posted them?" Thorndyke asked.

"No, he didn't. He ought to have done so, of course. But it seems that he was in a deuce of a hurry, so he shot the whole lot of letters into the box at once. Careless, that was. A man has no business to be in such a hurry that he can't attend to what he is doing. However it doesn't matter, as it happens. The post-mark shows that the letter was actually posted there at the time stated. So there's no help in that direction."

"And what about your own premises? Who took the letter in?"

"I took it in myself. I was strolling round the square, having my morning pipe, when I saw the postman coming along towards my entry. So I waited and took my batch of letters from him, and looked them over as I strolled back to the house. This one with the seal on it was among the batch. That is the whole story. And now, what have you got to say about it?"

Thorndyke laughed softly. "It is a quaint problem," said he. "We seem to be able to take it as certain that the letter was unsealed when it left Middlewick's office. Apparently it was unsealed when it was dropped into the post office letter-box. It was certainly sealed when the postman delivered it. That leaves us the interval between the posting and the delivery. The suggestion is that somebody affixed the seal to the letter in the course of transit through the post."

"That seems quite incredible," said I. "The seal was the impression of a signet ring which couldn't possibly have been in the possession of any of the post office people, to say nothing of the general absurdity of the suggestion."

"Mere absurdity or improbability," replied Thorndyke, "can hardly be considered as excluding any particular explanation. The appearance of this seal in these circumstances is grotesquely improbable. It appears to be an impossibility. Yet there is the devastating fact that it has happened. We can hardly expect a probable or even plausible explanation of so abnormal a fact; but among the various improbable explanations, one must be true. All that we can do is to search for the one that is the least improbable, and I agree with you, Jervis, that the post office is not the most likely place in which the sealing could have occurred. It seems to me that the only point at which we make anything resembling a contact with probability is the interval between Dickson's leaving the office and the posting of the letters."

"I don't quite follow you," said Brodribb.

"What I mean is that at that point there is an element of uncertainty. Dickson believes that he posted the letter, but, as he did not check the letters that he posted, it is just barely possible that this one may have in some way escaped from his custody."

"But," objected Brodribb, "it was certainly posted at the place and time stated. The post-mark proves that."

"True. But it might have been posted by another hand."

"And how does that suggestion help us?"

"Very little," Thorndyke admitted. "It merely allows us to suggest, in addition to the alternatives known to us—all of them wildly incredible and apparently impossible—a set of unknown circumstances in which the sealing might credibly have happened."

"That doesn't seem very satisfactory," I remarked.

"It is highly unsatisfactory," he replied, "since it is purely speculative. But you see my point. If we accept Dickson's statement we are presented with a choice of apparent impossibilities. Middlewick could not have sealed the letter; Dickson could not have sealed it; we agree that it appears impossible for the postal officials to have sealed it, and it is unimaginable that the postman sealed it. Yet it left Middlewick's hands unsealed and arrived in the postman's hands sealed. Thus the apparently impossible happened. On the other hand, if we assume that the letter passed out of Dickson's possession in some way without his knowledge, we are assuming something that is not inherently improbable. And if we further assume—as we must, since the letter was posted by somebody—that there was an interval during which it was in the possession of some unknown person, then we have something like a loop-hole of escape from our dilemma. For, since the assumed person is unknown to us, we cannot say that it was impossible, or even improbable, that he should have had the means of sealing the letter."

I laughed derisively. "This is all very well, Thorndyke," said I, "but you are getting right off the plane of reality. Your unknown person is a mere fiction. To escape from the difficulty you invent an imaginary person who might have had possession of Sir Edward's ring and might have had some motive for sealing it a letter which was not his and with which he had no concern. But there isn't a particle of evidence that such a person exists."

"There is not," Thorndyke agreed. "But I remind my learned friend that this perfectly incredible thing has undoubtedly happened and that we are trying to imagine some circumstances in which it might conceivably have happened. Obviously, there must be some such circumstances."

"But," I protested, "there is no use in merely inventing circumstances to fit the case."

"I don't quite agree with you, Jervis," Brodribb interposed. "As Thorndyke points out, since the thing happened, it must have been possible. But it does not appear to be possible in the circumstances known to us. Therefore there must have been
some other circumstances which are unknown to us. Now the suggestion that Dickson dropped the letter (which, I understand, is what Thorndyke means) is not at all improbable. We know that he was in a devil of a hurry and I know that he is as blind as a bat. If he dropped the letter, somebody certainly picked it up and put it in the post; and I agree that that is probably what really occurred. I should think so on grounds of general probability, but I have a further reason.

"Just now I said that I had told you the whole story, but that was not strictly correct. There is a sequel. As soon as I left Middlewick, I sent off a reply-paid telegram to Sir Edward asking him if his signet ring was still in his possession and if he had sealed any strange letter with it. In reply I got a telegram from his butler saying that Sir Edward was away from home and adding that a letter would follow. That letter arrived this morning, and gave me some news that I don’t like at all. It appears that last Tuesday—this day week—Sir Edward left home with the expressed intention of spending a couple of days in Town and returning on Thursday afternoon. But he did not return on that day. On Friday, Weeks, the butler, telegraphed to him at the club, where he usually stayed when in town, asking him when he would be coming home. As no reply to this telegram was received, Weeks telegraphed next day—Saturday—to the secretary of the club enquiring if Sir Edward was still there. The secretary’s answer informed him that Sir Edward had stayed at the club on Tuesday night, had gone out after breakfast on Wednesday morning and had not returned since, but that his suit-case and toilet fittings were still in his bedroom.

"This rather disturbed Weeks, for Sir Edward is a methodical man and regular in his habits. But he didn’t like to make a fuss, so he decided to wait until Monday night, and then, if his master did not turn up, to communicate with me. As I have said, up to the time of his writing to me, Sir Edward had not returned, nor had he sent any message. So the position is that his whereabouts are unknown, and, seeing that he has left his kit at the club, the whole affair has a very unpleasant appearance."

"It has," Thorndyke agreed, gravely, "and in the light of this disappearance the seal incident takes on a new significance."

"Yes," I hastened to interpose, "and the assumed unknown person seems to rise at once to the plane of reality."

"That is what I feel," said Brodribb. "Taken with the disappearance, the incident of the seal has an ominous look. And there is another detail, which I haven’t mentioned, but which I find not a little disturbing. The seal on this letter is impressed in black wax. It may mean nothing, but it conveys to me a distinctly sinister suggestion. Sir Edward, like most of us, always used red wax."

On this Thorndyke made no comment, but I could see that he was as much impressed as was our old friend and as I was, myself. Indeed, to me this funereal wax seemed to impart to the incident of the seal an entirely new character. From the region of the merely fantastic and whimsical, it passed to that of the tragic and portentous.

"There is just one point," said Thorndyke, "on which I should like to be quite clear. It is, I suppose, beyond doubt that this is really Sir Edward’s seal—the actual impression of his signet ring?"

"You shall judge for yourself," replied Brodribb; and forthwith he started forward towards his entry (hitherto we had been pacing up and down the broad pavement of the square). He preceded us to his private office where, having shut the door, he unlocked and opened a large deed box on the lid of which was painted in white lettering: ‘Sir Edward Hardcastle, Bart’. From this he took out an envelope, apparently enclosing a letter and bearing on its flap a small seal in red wax. This he laid on the table, and then, extracting from his pocket wallet another envelope, bearing a similar seal in black wax, laid it down beside the other. Thorndyke picked them up, and, holding them as near together as was possible, made a careful comparison. Then, through his pocket lens, he made a prolonged inspection, first of the red seal and then of the black. Finally, producing a small calliper gauge which he usually carried in his pocket, he measured the two diameters of each of the little oval spaces in which the device was enclosed.

"Yes," he said, handing the envelopes to me, “there is no doubt that they are impressions of the same seal. The possible fallacy is not worth considering."

“What fallacy do you mean?” asked Brodribb.

“I mean,” he replied, “that if you would leave one of these impressions with me for twenty-four hours I could present you with an indistinguishable facsimile. It is quite easy to do. But, in the present case, the question of forgery doesn’t seem to arise.”

“No,” agreed Brodribb, “I don’t think it does. But the question that does arise, is, what is to be done? I suppose we ought to communicate with the police at once.”

“I think,” said Thorndyke, “that the first thing to be done is to call at the club and find out all that we can about Sir Edward’s movements. Then, when we know all that is to be known, we can, if it still seems desirable, put the police in possession of the facts.”

“Yes,” Brodribb agreed, eagerly, “that will be much the better plan. We may be able to do without the police and avoid a public fuss. Can you come along now? It’s an urgent case.”

“It is,” Thorndyke agreed. “Yes, we must let our other business wait for the moment. We had no actual appointment.” Thereupon, Brodribb drew the letters out of the envelopes, and having deposited the former in the deed box, which he closed and locked, bestowed the latter in his wallet.

“May want the seals to show to the police,” he explained as he slipped the wallet into his pocket. “Now let us be off.”
We made our way out of the square by the Carey Street gate and headed for the Strand by way of Bell Yard. At the stand by St. Clement’s Church we picked up an unoccupied ‘Growler’, and, when we had jammed ourselves into its interior, Brodribb communicated the destination to the cabman, who looked in on us as he closed the door. “Clarendon Club, Piccadilly.”

The cabman thereupon climbed to his box and gave the reins a shake, and our conveyance started forward on its career towards the west.

“I take it,” said Thorndyke, “that Sir Edward wears this ring on his finger?”

“Not as a rule,” Brodribb replied. “It is an old ring—an heirloom, in fact—and it is rather a loose fit and apt to drop off. For that reason, and because he sets a good deal of value on it, Sir Edward usually carries it in his waistcoat pocket in a little wash-leather case.”

“And what is the ring like? Is it of any considerable intrinsic value?

“As to its intrinsic value,” replied Brodribb, “I can’t tell you much, as I have not been told and don’t know much about jewels. But I can tell you what it is like, and perhaps you can judge of its value from the description. The stone, I understand, is a green tourmaline of an unusually fine colour, flat on the front, which, of course bears the engraved device, and convex at the back. The ring itself is rather massive and ornamented with a certain amount of chased work, but the general effect is rather plain and simple. What should you say as to its value?”

“Principally artistic and sentimental,” Thorndyke replied. “A tourmaline is a very beautiful stone, especially if it is cut so as to display the double colouring—which, apparently, this one was not; but it is not one of the very precious stones. On the other hand, a green tourmaline might easily be mistaken by a person who had no special knowledge for an emerald, which is, in certain cases, the most precious of all stones.

“In any case,” said I, “it would be worth stealing, and certainly worth picking up if it happened to be dropped.”

The discussion was interrupted by the stopping of the cab opposite the club. We all alighted, and, as Thorndyke was paying the cabman, I followed Brodribb up the steps to the hall, where our friend presented his card to the porter and asked to see the secretary. Almost immediately, the messenger returned and ushered us to the private office where we found a small, grave-looking gentleman standing beside his desk to receive us.

“I am extremely relieved to see you, Mr. Brodribb,” the secretary said when the necessary introductions had been made and the purpose of our visit stated. “I had the feeling that I ought to communicate with the police, but you understand the difficulty. The club members wouldn’t like a public fuss or scandal; and then there is Sir Edward, himself. He would be annoyed if he should return to find himself the subject of a newspaper sensation. But now,” he smiled deprecatingly, “I can transfer the burden of responsibility to your shoulders. Is there any information that I can give you?”

“If you have any,” replied Brodribb. “I have seen your letter to Weeks, Sir Edward’s butler.”

“Then I think you know all that I have to tell. But perhaps there is something more that—” he broke off undecidedly and looked from Brodribb to Thorndyke with an air of vague enquiry.

“Could we have a look at the bedroom that Sir Edward occupied?” Thorndyke asked.

“Certainly,” was the ready, almost eager response. “I will go and get the key.”

He hurried away, evidently all agog to pass on his embarrassments to Brodribb and be clear of them. When he returned with the key in his hand, he invited us to follow him and preceded us along a corridor and up a back stairway, to another corridor at a door in which he halted to insert and turn the key. As the door swung open, he stood aside to let us pass, and, when we had entered, he followed and closed the door after him.

For a minute or more we all stood silently glancing around and taking in the general aspect of the room; and I could see that the distinctly uncomfortable impression that the appearance of the room produced on me was shared by my companions. Not that there was anything unusual or abnormal in its aspect. On the contrary, the room had precisely the appearance that one would expect to find in the bedroom of a gentleman who was in residence at his club. And that was, in the circumstances, the disquieting fact. For thus had the room been lying in a state of suspended animation, as one might say, for close upon a week; a fact which every object in it seemed to stress. The neatly-made bed with the folded pyjamas on the pillow, the brushes, nail scissors and other little toilet implements on the dressing-table, the tooth-brush, nail-brush and sponge on the wash-stand; all offered the same sinister suggestion.

“I take it,” said Thorndyke, voicing my own conclusion, “that Sir Edward wears a beard?”

“Yes,” Brodribb replied.

“Then, since he had no razors, and all his travelling necessaries appear to be here, we may assume that he took nothing with him.”

“Yes, that seems to be the case,” Brodribb agreed, gloomily.

“Which implies,” Thorndyke continued, “that, when he went away, he had the intention of returning here to sleep.”

The implication was so obvious that Brodribb acknowledged it only with a nod and an inarticulate grunt. Then turning to the secretary, he asked: “Did he leave anything in your custody, Mr. Northbrook?”
“Nothing,” was the reply. “Whatever he had with him and did not take away is in this room.”

On this, Thorndyke stepped over to the dressing-chest and pulled out the drawers, one after another. Finding them all empty, he transferred his attention to a suit-case that rested on a trunk-stand. It proved to be locked, but the lock was an artless affair which soon yielded to a small key from Mr. Brodribb’s voluminous bunch.

“Nothing much there,” the latter commented as he held up the lid and glanced disparagingly at a few collars and a couple of shirts which seemed to form the sole contents of the case. He was about to lower the lid when Thorndyke, with characteristic thoroughness, took out the collars and lifted the shirts. The result drew from our friend an exclamation of surprise; for the removal of the shirts brought into view some objects that had been—perhaps intentionally—concealed by them; a large and handsome gold watch and guard, a bunch of keys, a tie-pin, set with a single large pearl and one or two opened letters addressed to the missing man. The latter, Brodribb scanned eagerly and then replaced with an air of disappointment.

“Family letters,” he explained. “Nothing in them that is of any use to us. But,” he added, looking anxiously at Thorndyke, “this is a most extraordinary affair. Most alarming, too. It looks as if he had deliberately removed from his person everything of intrinsic value.”

“Excepting the ring,” Thorndyke interposed.

“No,” Thorndyke replied, answering Brodribb’s interrogative glance rather than his words. “Taking appearances at their face value one would infer that he was intending to go to some place where personal property is not very secure. That is the obvious suggestion, but there are other possibilities.”

“So there may be,” said Brodribb, “but I shall adopt the obvious suggestion until I see reason to change my mind. Sir Edward went from here to some place where, as you say, personal chattels are not very safe. And where a man’s property is not safe his life is usually not safe either. What we have seen here, coupled with his disappearance, fills me with alarm, indeed with despair; for I fear that the danger, whatever it was, has already taken effect. This is the seventh day since he left here.”

Thorndyke nodded gloomily. “I am afraid, Brodribb,” he said, “that I can only agree with you. Still, whatever we may think or feel, there is only one thing to be done. We must go at once to Scotland Yard and put the authorities there in possession of all the facts that are known to us. This is essentially a police case. It involves the simultaneous search of a number of likely localities by men who know those localities and their inhabitants by heart.”

Brodribb assented immediately to Thorndyke’s suggestion, and when he had taken possession of the derelict valuables and given Mr. Northbrook a receipt for them, we shook hands with that gentleman and took our leave.

At Scotland Yard we had the rather unexpected good fortune to learn that our old friend, Superintendent Miller, was in the building, and, after a brief parley, we were conducted to his office. On our entrance, he greeted us collectively and motioned to the messenger to place chairs for us; then, regarding Thorndyke with a quizzical smile, he enquired: “Is this a deputation?”

“In a way,” replied Thorndyke, “it is. My friend, here, Mr. Brodribb, whom you have met on some previous occasions, has come to ask for your assistance in regard to a client of his who is missing.”

“Anyone I know?” enquired Miller.

“Sir Edward Hardcastle of Bradstow in Kent,” Brodribb replied.

The Superintendent shook his head. “I don’t think I have ever heard the name,” said he. “However, we will see what can be done, if you will give us the necessary particulars.”

He laid a sheet of paper on the desk before him, and, taking up his fountain pen, looked interrogatively at Brodribb.

“I think,” said the latter, “you had better hear the whole story first and then take down the particulars. Or I could supply you with a full account in writing, which would save time just now.”

“Yes,” Miller agreed, “that would be the best plan,” but nevertheless he held his pen in readiness and jotted down a note from time to time as Brodribb proceeded with his narrative. But he made no comments and asked no questions until that narrative was concluded, listening with the closest attention and obviously with the keenest professional interest.

“Well,” he exclaimed, as Brodribb concluded, “that is a queer story, and the queerest part of it is that sealed letter. I can make nothing of that. It may be some odd chance or it may be a practical joke. But there is an unpleasant air of purpose about it. We can hardly believe that Sir Edward sealed the letter; and if he didn’t, his ring was in someone else’s possession. If it was, it may have been lost and picked up or it may have been stolen. There’s an alarming lot of ‘ifs’ in this case. Do you know anything about Sir Edward’s habits?”

“Not a great deal,” replied Brodribb. “He is a quiet, studious man, rather solitary and reserved.”

“Not in the habit of attending race meetings?”

“I should say not.”
“Nor addicted to slumming?”

“No. I believe he spends most of his time at his place in Kent, and, apart from books, I think his principal interest is gardening.”

“Ha!” said Miller. “Well, that leaves us pretty much in the dark. If a man was proposing to attend a race meeting, he might naturally leave his more valuable portable property at home; and the same if he was bound on some expedition into the slums, or if he expected to be in some sort of rough crowd. At any rate, the fact remains that he did turn out his pockets before starting from the club, so we can take it that he had in view the possibility of his getting into some shady company. We shall have to find out a bit more about his habits. What is this butler man, Weeks, like?”

“A most intelligent, conscientious, responsible man. He could probably tell you more about Sir Edward’s habits than anyone. Would you like him to come and see you?”

“We’ve got to see him,” Miller replied, “to fill in details, but I think it would be better for one of our men—unless I can manage it myself—to go down and see him at the house. You see, we shall want a full description of the missing man and at least one photograph, if we can get it. And we may want to go over his clothes and hats for private marks and Bertillon measurements.”

“For Bertillon measurements!” exclaimed Brodribb. “But I thought you required the most minute accuracy for them.”

“So you do if you can get it,” replied Miller. “But, you see, the system depends on what we may call multiple agreements, like circumstantial evidence. It isn’t a question of one or two accurate measurements but of the coincidence of a large number with no disagreements. If we should find an unrecognisable body with legs and forearms, thighs and upper arms about the same length as Sir Edward’s; and if the chest and waist measurements were about the same as his and if the head would fit his hats, the hands would fit his gloves and the feet would fit his boots, and if there was no disagreement in any one measurement, then we should have established a very strong probability that the body was his body. It is surprising how much information an experienced man can get from clothes. Of course, I am speaking of clothes that have been worn and that have creases that mark the position of the joints. But even new clothes will tell you quite a lot.”

“Will they really?” said Brodribb, in a slightly shocked tone—for, despite his expressed pessimism, he was hardly prepared to consider his client in the character of a body. “I can understand their use for comparison with those on the—or—person, but I should not have expected them to furnish measurements of scientific value. However, I think you have Weeks’s address?”

“Yes, and I will just jot down one or two particulars—dates, for instance.”

He did so; and when he had finished, as our business seemed to be concluded, we thanked him for his interest in the case and rose to depart. As we moved towards the door, Brodribb turned to make a last enquiry.

“Would it be admissible to ask if you think there is a reasonable chance of your being able to trace my missing client?”

Miller reflected awhile, assisting the process of cogitation by gently scratching the back of his head. “Well, Mr. Brodribb,” he replied, at length, “I’m like the doctor, I’m not fond of guessing. The position is that this gentleman is either alive or dead. If he is dead, his body must be lying somewhere and it is pretty certain to come to light before very long. If he is alive, the matter is not so simple, for he must be keeping out of sight intentionally; and as he is not known to any of our people, he might be straying about a long time before he was recognised and reported. But I can promise you that everything that is possible shall be done. When we have got a good photograph and a description, they will be circulated among the police in all likely districts and instructions issued for a sharp look-out to be kept. That is about all that we can do. I suppose you would not care for us to publish the photograph and description?”

“I don’t think it would be advisable,” Brodribb replied. “If he should, after all, return to his club, it would be so extremely unpleasant for him—and for me. Later, it may be necessary, but for the present, the less fuss that we make, the better.”

The Superintendent was disposed to agree with this view; and when Brodribb had once more promised to send full written particulars with a special impression of the missing seal, we finally took our departure.

---

**IV. — MR. BRODRIBB’S PERPLEXITIES**

*(DR. JERVIS’S NARRATIVE)*

DURING the next few weeks we saw a good deal of Mr. Brodribb; indeed, his visits to our chambers became so frequent, and he became so acutely conscious of their frequency, that he was reduced to the most abject apologies for thus constantly intruding on our privacy. But we always received him with the warmest of welcomes, not only for the sake of our long-standing friendship but because we both realised that the warm-hearted old lawyer was passing through a period of heavy tribulation. For Mr. Brodribb took his responsibilities as a family solicitor very seriously. To him, the clients whose affairs he managed were as his own family, their welfare and their interests took precedence over every other consideration and their property was as precious and sacred as if it had been his own.

Hence, as the time ran on and no tidings of the missing man came to hand, the usually jovial old fellow grew more and more worried and depressed. It was not only the suspense of waiting for news that kept his nerves on edge, but the foreboding that when the tidings should at last come they would be tidings of tragedy and horror. Nor even was this all;
for, presently, it began to transpire that there were further causes of anxiety.

From chance phrases of rather ambiguous import we inferred that the baronet’s disappearance bade fair to create a situation of some difficulty from the legal point of view; but as to the nature of the difficulties we were unable to judge until a certain evening when Brodribb at last unburdened himself of his anxieties and entered into explicit particulars. I do not think that he started with the intention of going into details, but the matter arose naturally in the course of conversation.

“I suppose,” he began, “we could hardly expect to keep this horrible affair to ourselves, but I had rather hoped that we might have avoided scandal and gossip, at least until something of legitimate public interest occurred.”

“And haven’t we?” asked Thorndyke.

“No. There has been a leakage of information somewhere. Police, I suspect, unless it was someone at the club. It would hardly be Northwood, though, for he was more anxious than any of us to keep the affair dark. Anyhow, a notice of the disappearance has got into at least one newspaper.”

“Which newspaper was it?”

“Ah, that is what I have been unable to ascertain. The way in which I became aware of it was this: a man—a relative of Sir Edward’s and an interested party—called on me a day or two ago to make enquiries. He said that he had heard a rumour that Sir Edward was missing and wished to know if there was any truth in it. I asked him where he heard the rumour and he said that he had seen some obscure reference to the matter in one of the evening papers, but he couldn’t remember which paper it was. I pressed him to try to remember for it struck me as most remarkable that he should have forgotten the name of the paper, he being, as I have said, an interested party. I should have expected him to preserve the paper or at least have cut out the paragraph. But he persisted that he had no idea whatever as to what paper it was.”

“It was, as you say, rather odd,” commented Thorndyke. “If it isn’t an indiscreet question, in what respect and to what extent was he an interested party?”

“In a very vital respect,” replied Brodribb. “He thinks that he is the heir presumptive.”

“And do I understand that you think otherwise?”

“No. I am afraid I am disposed to agree with him. But I am not going to commit myself. Meanwhile he shows signs of being damned troublesome. He is not going to let the grass grow under his feet. He began to throw out hints of an application to the court for leave to presume death; which is preposterous at this stage.”

“Quite,” Thorndyke agreed. “But, of course, if Sir Edward doesn’t presently turn up, alive or dead, that is what you will have to do; and having regard to the circumstances, the Court would probably be prepared to consider the application after a comparatively short period.”

“So it might,” Brodribb retorted, doggedly. “But he will have to make the application himself; and if he does, I shall contest it.”

Here he suddenly shut himself up, dipping his fine old nose reflectively into his wineglass and fixing a thoughtful eye on the empty fireplace. But somehow, his abrupt silence conveyed to me in some subtle manner the impression that he would not be unwilling to be questioned further. Nor was I mistaken; for, after a pause, during which neither Thorndyke nor I had made any comment, he broke the silence with the remark: “But I’ve no business to come here boring you two fellows with a lot of shop talk—and my own private shop at that.”

“Indeed!” said Thorndyke. “Are we then of no account? I rather thought that we were to some extent concerned in the case and that, to that extent, we might regard your shop as our shop.”

“He knows that perfectly well, old humbug that he is,” said I. “And he knows that nothing but our superlative good manners has restrained us from demanding full particulars.”

Mr. Brodribb smiled genially and emptied his glass.

“Of course,” said he, “if you are so polite as to express an actual interest in the civil aspects of the case I shall take you at your word. It will be very helpful to me to talk matters over with you, though I really hardly know where to begin.”

“You might begin,” said Thorndyke, “by filling your glass. The decanter is on your side. Then you might tell us what your objections are to this claimant, whom you admit to be the heir presumptive.”

“I don’t admit anything of the kind,” protested Brodribb as he filled his glass and pushed the decanter across the table. “I merely agree that his claim appears, at the moment to be quite a good and well-founded one.”

“I don’t see much difference,” said I, “between an heir presumptive and a claimant with a well-founded claim. But never mind. You object to the gentleman for some reason. Tell us why you object to him.”

Brodribb considered the question for a while. At length he replied:

“I think, if you are really interested in the state of affairs, it would be best for me to give you a short sketch of the family history and the relationships. Then you will understand my position and my point of view. I need not go back in detail beyond Sir Edward’s father, Sir Julian Hardcastle.

“Sir Julian had two sons, Edward and Gervase. As the estate is settled in tail male, we can ignore the female members of
the family. On Sir Julian’s death, Edward, the elder, succeeded; and as he was already married and had one son, the succession was, for the time being, satisfactorily settled. The younger son, Gervase, married his cousin, Phillipa, a daughter of Sir Julian’s brother William. There was a good deal of opposition to the marriage, but the young people were devoted to one another and in the end they made a run-away match of it.”

“Was the opposition due to the near kinship of the parties?” I asked.

“Partly, no doubt. There is a very general prejudice against the marriage of first cousins. But the principal objection of the young lady’s people was to Gervase, himself. It seems—for I never saw her—that Miss Phillipa was an extremely beautiful and attractive girl who might have been expected to make a brilliant marriage, whereas Gervase was a younger son with very little in the way of expectations. However, that might have passed. The real trouble was that Gervase had acquired some bad habits when he was up at Oxford and he hadn’t shaken them off. Plenty of young fellows tend to overdo the libations to Bacchus during their undergraduate days. But it is usually mere youthful expansiveness which passes off safely when they come down from the Varsity and take up their adult responsibilities. Unfortunately, it was not so with Gervase. Conviviality passed into chronic intemperance. He became a confirmed drinker, though not an actual drunkard.

“I may as well finish with him, so far as his history is known to me, as that history complicates the present position. I may have given the impression that he was a waster, but he was not, by any means. He was a queer fellow in many respects, but, apart from his tipping habits, there was nothing against him. And he must have had considerable abilities, for I understand that he not only graduated with distinction but was reputed the most brilliant classical scholar of his year. In fact he became a Fellow of his college and after his marriage I believe he took Orders, though he remained at Oxford in some teaching capacity. I don’t know much of his affairs at this time. It wasn’t my business, and Sir Edward did not talk much about him; but so far as I can gather, his career at the University came to a sudden and disastrous end. Something happened, I don’t know what it was but I suspect that he got drunk under circumstances that created a public scandal. At any rate he was deprived of his Fellowship and had to leave Oxford; and from that time, with a single exception, all trace of him is lost—at least to me. But he must have felt his disgrace acutely for it is clear that he cut himself off entirely from his family and went virtually into hiding on the continent.”

“What about his wife?” I asked.

“She certainly went with him into exile, and though she never communicated with her family at this time, I think there is no doubt that, in spite of all his faults, she remained devoted to him. That appears plainly in connection with the single reappearance which I mentioned, of which I heard indirectly from Sir Edward. It seems that a friend of the family who had known Gervase at Oxford, came across him by chance in Paris; and from his account of the meeting it would seem that the poor fellow was in a very sad way. His appearance suggested abject poverty and his manner was that of a man who had received some severe shock. He had a bewildered air and seemed to be only partially conscious of what was going on around him. He gave no account of himself in any respect save one; which was that he had lost his wife some time previously, but he did not say when or where she died. He did not seem to have any distinct ideas as to place or time. The fact of his loss appeared to occupy his thoughts to the exclusion of everything else. In short, he was the mere wreck of a man.

“The friend—whose name I forget, if I ever knew it—had some idea of helping him and trying to get him into touch with his family; but before he could make any move, Gervase had disappeared. As he had given no hint as to his place of abode, no search for him was possible; and so this unfortunate man passes out of our ken. The only further news we got of him was contained in a notice in the obituary column of The Times some twelve months later which recorded his death at Brighton. No address was given, and, I am sorry to say, neither Sir Edward nor I made any enquiries at the time. I cut the notice out and put it with the papers relating to the estate, and there, for the time being the matter ended.”

“There was no doubt that the notice really referred to him?” Thorndyke asked.

“No. He was described as ‘The Reverend Gervase Hardcastle, M.A. (so apparently he had taken orders), formerly Fellow of Balliol College, Oxford,’ and his age was correctly given. No, I think there can be no doubt that the notice referred to him. Of course, I ought to have looked into the matter and got all the particulars; but at the time Sir Edward’s son and wife were both alive and well, so it looked as if there were no chance of any question arising with regard to the succession.”

“It is not known, I suppose,” said Thorndyke, “whether Gervase had any children?”

“No. There were no children up to the time when he left England. But it is possible that some may have been born abroad. But if so, since we have no knowledge whatever as to where he lived during his wanderings and don’t even know in what country his wife died, we have no date on which to base any enquiries. As a matter of fact, both Sir Edward and I assumed that, at least, there was no son, for if there had been, we should almost certainly have received some communication from him after Gervase’s death. That was what we assumed, but of course we ought not to have left it at that. But now we had better pursue the course of events.

“Gervase’s death, as recorded in The Times, occurred sixteen years ago. Six years later, Sir Edward lost both his wife and his son—his only child—within a few days. A malignant form of influenza swept through the house and brought Sir Edward, himself, to the very verge of the grave. When he at length rose from his bed, it was to find himself a childless widower. This altered the position radically, and, of course, we ought to have made such enquiries as would have cleared up the question of the succession. But Sir Edward was, for the time, so broken by his bereavements that I hardly liked to trouble him about a matter which had ceased to be his personal concern, and on the few occasions when I raised the
question, I found him quite uninterested. His view was that there was nothing to discuss; and assuming, as he did, that Gervase had died without issue (in which assumption I concurred) he was right. In that case, the heir presumptive was undoubtedly his cousin Paul, Phillipa's brother; and as Paul Hardcastle was an entirely eligible successor, Sir Edward made a fresh will bequeathing to him the bulk of his personal property.

“That was the position ten years ago. But four years ago Paul Hardcastle died, leaving only one child, a daughter some twelve years of age. Once more the position was altered; for, now, Sir Edward’s near kin were exhausted and the new heir presumptive was a comparatively distant cousin—a grandson of Sir Julian’s uncle, one David Hardcastle. On this, Sir Edward revoked his will and made another, by which about three quarters of his personal property goes to Paul Hardcastle’s daughter, in trust until she shall reach the age of twenty-one and thereupon absolutely. The remaining fourth, apart from certain legacies, goes to the heir of the estate, that is to David Hardcastle.’

“And supposing the young lady should die during her minority?” Thorndyke enquired.

“Then the property goes to the heir to the title and estate.”

“Does the personal property amount to anything considerable?

“Yes, it is very considerable indeed. Sir Edward came into a comfortable sum when he succeeded, and his wife was a lady of some means; and he has been an excellent manager—almost unduly thrifty—so there have been substantial accumulations during his time. Roughly, the personality will be not less than a hundred thousand pounds.”

“That,” I remarked, “leaves some twenty-five thousand for the heir to the title. He won’t have much to complain of.”

“No,” growled Brodribb, “but I expect he will complain, all the same. In fact, he has complained already. He thinks that the whole of the money should have gone to the heir to enable him to support his position in suitable style.”

“So,” said I, “we may take it that the gentleman who called on you was Mr. David Hardcastle?”

“You may,” replied Brodribb.

“And we may further take it that the said David is not exactly the apple of your eye.”

“I am afraid you may. It is all wrong, I know, for me to allow my likes and dislikes to enter into the matter. But I have acted for Sir Edward and for Sir Julian before him, and my father acted for Sir Julian and his father, Sir Henry, so that it is only natural that I should have a deep personal sentiment in regard to the family and the estate.”

“Which,” said I, “brings us back to the original question; What is the matter with David Hardcastle?”

Brodribb pondered the question, consciously controlling, as I suspect, his naturally peppery temper. But with no great success, for he, at length, burst out: “I can’t trust myself to say what I feel about him. Everything is the matter. He is a changeling, a misfit, an outlander. He doesn’t match the rest of the family at all. The Hardcastles, as I have known them, have been typical English landed gentry; straight-going, honourable men who lived within their income and paid their way and did their duty justly and even generously to their tenants.

“Now this man is a different type altogether. His appearance and manner suggest a flash bookmaker rather than a country gentleman. My gorge rose at him as soon as I clapped eyes on him, and I don’t fancy I was any too civil. Which was a tactical mistake, under the circumstances.”

“Is he a man of independent means,” asked Thorndyke, “or does he do anything for a living?”

“I have never heard that he has any means,” replied Brodribb, “and I do know that he is occasionally in pretty low water, for there are several loans from Sir Edward outstanding against him. As to his occupation, God knows what it is. I should say he is a sort of cosmopolitan adventurer, always on the move, prowling about the continental watering-places, living on his wits, or the deficiency of other people's. A distinctly shady customer in my opinion. And there is another thing. In the course of his travels he has picked up a foreign wife; a Russian woman of some sort—may be a Jewess for all I know.”

“What an inveterate old John Bull it is,” chuckled Thorndyke. “But we mustn’t be too insular, you know, Brodribb. There are plenty of most estimable and charming Russian ladies; and even if she should be a Jewess, surely you would not deny that she would belong to a very distinguished and gifted race.”

Brodribb grunted. “The Lady of Bradstow,” said he, “should be an English lady, not a Russian or a Jewess. Besides, this person is not an estimable and charming lady, as you express it. She had to hop out of Russia mighty sharp in consequence of some political rumpus—and you know what that means in that part of the world. And a brother of hers was I believe, actually tried and convicted.”

“Still,” I urged, “political offences are not—”

“Are not what?” interrupted Brodribb. “I am surprised at you, Jervis, a member of the English Bar, condoning crime. A lawyer should revere the law above everything. No, sir, crime is crime. A man who would compass the death of a Tsar would murder anyone else if it served his purpose.”

“At any rate,” said Thorndyke, “we may sympathise with your distaste for the present claimant; but, as you say, your feeling as to his suitability or unsuitability for the position is beside the mark. The only question is as to the soundness of his claim. And that question is not urgent at the moment.”

“No,” agreed Brodribb, “not at this moment. But it may become urgent in twenty-four hours. And this fellow thinks that
the question is settled already. As he talked to me in my office, his manner was that of the heir just waiting to step into possession.

“By the way,” said Thorndyke, “I understand that he knows exactly how Sir Edward has disposed of the personal estate. How did he come by that knowledge?”

“Sir Edward gave him all the particulars as to the provisions of the will. He thought it the fair thing to do, though it seemed to me rather unnecessary.”

“It was the kind thing to do,” said I. “It will have saved him a rather severe disappointment. But what are you going to do if he shows signs of undue activity?”

“What the deuce can I do?” demanded Brodribb. “That is the question that is worrying me. I have no locus standi; and the beggar knows it. Practically told me so.”

“But,” I objected, “you are Sir Edward’s man of business and his executor.”

“I shall be the executor,” Brodribb corrected, “when Sir Edward dies or his death is proved or presumed. So long as he remains alive, in a legal sense, my powers as an executor have not come into being. On the other hand, my position as his solicitor gives me no authority to act without his instructions. I hold no power of attorney. In his absence I have really no locus standi at all. Of course, if he does not turn up, alive or dead, some arrangements will have to be made for administering the estate and carrying on generally. But the application for powers to do that will be made by the legally interested party—the heir presumptive.”

“And supposing,” said I, “Sir Edward should be proved to be dead—say by the finding of his body—your powers as the executor of the will would then come into being. In that capacity, would you accept David Harcastle as the heir?”

Mr. Brodribb regarded me speculatively for some moments before replying. At length he said with quiet emphasis, and speaking very deliberately: “No, I should not—as matters stand at present.” He paused, still with his eyes fixed on me, and then continued. “A very curious thing has happened. After my interview with Mr. David, realising that the question of the succession might become acute at any moment, I did what I ought to have done long ago. I set to work to clear up the circumstances of Gervase’s death and to try to settle the question as to whether there had been any issue of the marriage, and, if so, whether there could possibly be a son living. I began by looking up that cutting from The Times that I told you about. As I mentioned to you, no address was given. But there was the date; and with that I thought I should have no difficulty in getting a copy of the death certificate, on which, of course, the address would be stated, and at that address it might be possible to start some enquiries.

“Accordingly, off I went to Somerset House and proceeded to look up the register of deaths for that date. To my astonishment, the name was not there. Thinking that, perhaps, a wrong date had been given, I looked up and down the entries for a week or two before and after the given date. But there was no sign of the name of Gervase Hardcastle. Then I settled down to make a thorough search, beginning ten years before the date and going on ten years after. But still there was no sign of the name. I noted one or two other Harcastles and got copies of the certificates corresponding to the entries, but the particulars showed them all to relate to strangers.

“Then I went down to Brighton and personally called upon the local registrars and got them to overhaul their records. But the result was the same in all the cases. There was no record of the death of Gervase Hardcastle. Now what do you make of that?”

“Mighty little,” said Thorndyke. “Apparently, the notice in The Times was a false notice, but why it should have been inserted is difficult to guess.”

“Unless,” I suggested, “he was living under an assumed name and that name was given to the registrar, the true name being published for the information of the family.”

Thorndyke shook his head. “I don’t think that will do, Jervis,” said he. “The person who sent the notice to The Times knew his proper name, age and description. There is no imaginable reason why a person having that knowledge should give a false name to the registrar, and there are the best of reasons why he should not.”

“Is it possible,” I suggested, “that he may have committed suicide and sent off the notice himself before completing the job?”

“It is possible, of course,” replied Thorndyke, “but, in the absence of any positive fact indicating the probability of its having occurred, the mere possibility is not worth considering.”

“No,” agreed Brodribb, “it is of no use guessing. The important truth that emerges is that his death, which has been accepted all these years by the family as an established fact, has now become extremely doubtful. At any rate, there is no legal evidence that he is dead. No court would entertain a mere obituary notice unsupported by any corresponding entry in the register of deaths. Legally speaking, Gervase is presumably still living, and it is not at all improbable that he is actually alive.”

“Then, in that case,” said I, “why do you say that David has a good claim to be the heir?”

“Because he is here and visible—extremely visible; whereas the very existence of Gervase is problematical. David’s claim is good unless it is contested by Gervase. In Gervase’s absence, I think David would have no difficulty in taking possession.
Who could oppose him? If I did, as executor (and I think I should have a try), the probability is that his claim would be admitted, subject to the chance that Gervase or his heir might come forward later and endeavour to oust him."

"And meanwhile?" asked Thorndyke.

"Meanwhile, I propose setting on foot some enquiries by which I hope to be able to pick up some trace of Gervase on the Continent. It isn't a very hopeful task, I must admit."

"I can't imagine any less hopeful task," said I, "than searching for a man who has been lost to sight for over sixteen years, who was probably living under an assumed name and whose place of abode at any time is utterly unknown. I don't see how you are going to start."

"I am not very clear, myself," Brodribb admitted; and with this, as it was now growing late, he rose, and, having gathered up his hat and stick, shook our hands despondently and took his departure.
V. — FINE FEATHERS MAKE FINE BIRDS

(JASPER GRAY’S NARRATIVE)

THE providence that doth shape our ends is apt to do so by methods so unobtrusive as entirely to escape our notice. Passively we float on the quiet stream of events with no suspicion as to whither we are being carried until at last we are thrown up high and dry on the shore of our destiny, the mere jetsam of unnoted circumstances.

When I drew up my truck at the shabby door of a studio in a mews near Fitzroy Square and pulled the bell-handle no intelligible message was borne to me by the tintinnabulation from within; nor, when the door was opened by a pleasant-faced grey-haired woman in a blue overall, did I recognise the chief arbiter—or shall I say arbitress?—of my fate. I merely pulled off my cap and said: “A roll of paper, madam, from Sturt and Wopsalls.”

“Oh, I’m glad you’ve come,” she said. “Shall I help you to carry it in?”

“Thank you, madam,” I replied, “but I think I can manage without troubling you.”

It was an unwieldy roll of cartoon paper, six feet long and uncommonly heavy. But I was used to handling ponderous and unshapely packages, and I got the roll on my shoulder without difficulty. The lady preceded me down a passage and into a great, bare studio, where, according to directions, I laid the roll down on the floor in a corner.

“You seem to be very strong,” the lady remarked.

“I’m pretty strong, thank you, madam,” I answered; adding that I got a good deal of exercise.

Here a second lady, rather younger than the first, turned from her easel to look at me.

“I wonder if he would help us to move that costume chest,” she said.

I expressed my willingness to do anything that would be of service to them; and being shown the chest, a huge box-settle with an upholstered top, I skillfully coaxed it along the bare floor to the place by the wall that had been cleared for it.

“Would you like a glass of lemonade?” the elder lady asked when she had thanked me.

I accepted gratefully, for it was a hot day; though, for that matter, I believe a healthy boy of seventeen would drink lemonade with pleasure at the North Pole. Accordingly a glass jug and a tumbler were placed on a little table by the settle and I was invited to sit down and refresh at my leisure; which I did, staring about me meanwhile with the lively curiosity proper to my age. It was a great barn of a place with rough, white washed walls, which were, however, mostly covered with large paper cartoons, on which life-size figure subjects were broadly sketched in charcoal. There were also a number of smaller studies of heads and limbs and some complete figures—complete, that is to say, excepting as to their clothing; and the strangely aboriginal state of these, even allowing for the heat of the weather, occasioned profound speculations on my part.

As I sat sipping the lemonade and gazing at the pictures with serene enjoyment, the two ladies conversed in low tones and disjointed scraps of their conversation reached my ears, though I tried not to listen.

“Yes” (this was the elder lady), “and not only so handsome but so exactly the correct type. And a rare type, too. Even the colouring is absolutely perfect.”

“Yes,” agreed the other; “it is typical. So clean-cut, refined and symmetrical. A little severe, but all the better for that; and really quite distinguished—quite distinguished.”

Here I happened to glance at the ladies and was dismayed to find them both looking very attentively at me. I blushed furiously. Could they be talking about me? It seemed impossible. Sturt and Wopsall’s parcels-boy could hardly be described as a distinguished person. But it almost seemed as if they were, for the elder lady said with an engaging smile: “We want to see how you would look in a wig. Would you mind trying one on?”

This was a staggerer, but of course I didn’t mind. It was rather a “lark” in fact. And when the lady produced from a cupboard a golden wig with long ringlets, I sniggered shyly and allowed her to put it on my head. The two women looked at me with their heads on one side and then at another.

“It’s the very thing, you know,” said the younger lady.

The other nodded, and, addressing me, said: “Would you just frown a little and put on a rather haughty expression?”

Needless to say, I grinned like a Cheshire cat, and, a heroic effort to control my features only ended in violent giggles.

The two ladies smiled good-humouredly, and the elder said, in a wheedling tone:

“I wonder if you would do me a very great favour.”

“I would if I could,” was my prompt and natural reply.

“It is this,” she continued. “I am painting a picture of an incident in the French Revolution to be called ‘An Aristocrat at Bay’. I suppose you have heard of the French Revolution?”

I had. In fact I had read Carlyle’s work on the subject—and didn’t think much of it—and the “Tale of Two Cities” which I had found greatly superior.
“Very well,” my new friend went on, “then I will show you the sketch for the picture;” and she led me to a great easel with a handle like that of a barrel-organ, on which was a large canvas with a sheet of cartoon paper pinned on it. The sketch, which was roughly put in with charcoal and tinted in parts with an occasional smear of pastel or wash of water-colour, showed a lady standing in a doorway at the top of a flight of steps around the foot of which surged a crowd of revolutionaries.

“My difficulty,” the lady continued, “is this. I have got a model for the figure of the Aristocrat but I can’t get a suitable model for the head. Now you happen to suit perfectly and the question is, will you let me paint the head from you?”

“But it’s a woman!” I protested.

That lady knew something about boys. “I know,” she said; “but a man would do as well if he was clean-shaved and wore a wig. You will say yes, now, won’t you? Of course it is a business arrangement. You will be paid for your time.”

Eventually it was settled that I should sit from six to eight every morning—I wasn’t due at the warehouse until half-past eight—and breakfast in the studio afterwards. I didn’t much like this latter arrangement for Pontifax and I always breakfasted together and the old gentleman would miss me. My employer suggested that he should come to breakfast too; but this would not do. Poor old Ponty would have pawned my boots if the whisky had run short, but he took no favours from strangers. However, my salary was to be twelve shillings a week, Sunday sittings to be extra pro rata, and that would have to compensate. I agreed to the terms and the arrangement was fixed.

“Your hair is rather long,” said my employer. “Would you mind having it cut short, so as to let the wig set more closely?”

Would I mind! For, twelve shillings a week I would have had my head shaved and painted in green and red stripes. As a matter of fact I went that very evening to a barber and made him trim me until my head looked like a ball of brown plush. Which must have made Providence wink the eye that was fixed on my destiny.

The sittings—or rather standings—began two days later, when I took up my pose on the model’s throne, rigged out in the full costume of a royalist lady and an aristocrat; my first appearance in either character. After the sitting we all had breakfast in a corner of the studio, and the two ladies crammed me until I was ready to burst with nourishment and gratitude. They were dear women. I loved them both from the very beginning, with a slight preference, perhaps, for my employer, Miss Vernet; though, to be sure, the younger lady, Miss Brandon, was a lovable creature, too. But I must not linger on their perfections. Reluctantly I must leave them for a while to my employment by them.

It was, I think, on the day of my fourth sitting that I had a stroke of luck; a parcel—and not a very large one, either—to deliver to a bibliophile who kept a private press somewhere out Tottenham way and close to the river Lea. It was virtually a day’s holiday with a railway fare thrown in, and I set forth jubilantly with the parcel on my shoulder, whistling an operatic air as I went. The train bore me luxuriously to Black Horse Road Station, I found the house of the bibliophile, delivered my parcel, a then, free as air, struck out across the fields towards the river.

Along the shallow, winding stream that runs parallel to the ‘Lea Navigation’ I wandered with the ecstatic delight of the thoroughbred Londoner in rural scenes, be they never so homely. It was a day of wonders. I had hardly ever been in the country before and this mere suburb—though it was more rural then than now—gave to my urban eyes a veritable glimpse of Paradise. I looked into the few inches of running water and saw actual fish. I watched an angler and saw him land, with elaborate artifice, what looked like a piece of cheese. For the first time in my life I looked upon a living frog and chased it to its lair under the bank. And then I came on a group of urchins, disporting themselves, as naked as cherubim, in the shallow; and Providence closed its left eye firmly.

It was a roasting day. Those urchins were certainly naked and wet and probably cool. How delicious! And why not? There was no one about, and there was plenty of cover. Five minutes later I had shed my garments beside a willow bush and was lying on my stomach in four inches of water making frantic efforts to swim.

I waded joyfully up the stream, sometimes almost knee-deep, and impersonated characters suitable to the scenery. Now I was some sort of Indian and impaled fish—which weren’t there—with an imaginary barbed spear. There I discovered a curious lurking-place under a large pollard and between two clumps of willow-bush; and forthwith I tucked myself into it, becoming instantly—as I persuaded myself—invisible to mortal eyes. I was now an Indian no longer. My role had changed to that of some unclassified species of water-sprite; at least I think so, though I am not quite clear; for the fact is that, at this moment, a nursemaid with two children hove in sight on the bank facing me, and, having sauntered along with exasperating slowness, finally sat down exactly opposite my hiding-place and produced a novelette which she began to read with much composure and satisfaction.

I watched her balefully; and I watched the children. Especially, I watched the children. And meanwhile I sat up to my hips in water, finding it delightfully cool and shady beneath the pollard.

The minutes wore on. It was still cool. Surprisingly so, considering the heat of the sun outside. In fact my teeth presently began to chatter slightly and an urgent desire to sample the sunshine once more made itself felt. But there I was, and there I must stay until the young lady opposite moved on; for I was a modest youth with a rather exaggerated notion of the delicacy of young women. And, after all, the situation was of my own making.

At last, one of the children observed me and pointed me out with a yell of ecstasy. “Oh! Look, Nanny! What’s that hiding in the water over there?
“It’s nothing, dear,” replied Nanny, without raising her eyes from her novelette; “only a frog.”

“But it looks like a man,” the young viper protested.

“I know, dear. They do,” and Nanny went on serenely with her reading.

The child was evidently dissatisfied and continued to stare at me with large, devouring eyes, and was presently joined by his fellow demon. But now a new object appeared, to divert their attention and mine. A man came along the bank just behind them, walking quickly and breaking now and again, into a shambling trot. I watched him at first without special interest; but when he had passed, and a back view was presented, I found myself viewing him with suddenly-awakened curiosity. What first attracted my attention was a patch in the rear of his trousers. For my own trousers had a precisely similar patch: I had sewn it in myself, so I knew it thoroughly. It was an extraordinary coincidence. The two patches were identical in shape and colour, but more than this; the pattern of the man’s trousers was absolutely the same as the pattern of mine. There could be no doubt about it. They were made from the same piece; or else—Yes! The horrible conviction forced itself on me—they were my trousers!

But that was not all. A glance at the coat, Yea! and even the cap, revealed familiar traits. The fellow was walking off in my clothes!

For a brief space, modesty, anger and chilly horror struggled for mastery; and in that interval the man disappeared over a fence. Then modesty was “outed” and I stood up. The children howled with joy; the nursemaid bounced up and retreated, making audible references to a “disgusting creature,” and I ran splashing through the shallows towards the spot where I had undressed. For it was fairly certain that the man had not come to this place unclothed. He must have left some sort of exuvium in place of mine. But if the exchange had been worth his while—well! my expectations expressed themselves in a premonitory impulse to scratch myself, for whatever the clothes were like, I should have to put them on.

The reality turned out to be better and worse than my anticipations. The clothes were good enough; better than mine, in fact, though the colour—a dusty buff—was disagreeable. But it was the decoration that spoiled them. Some misguided person had covered them with a pattern that recalled the device on a bench mark. The broad arrow, to put it in a nutshell. My absent friend was a run-away convict.

I huddled the wretched garments on as quickly as I could, for I was chilled to the marrow; and as I stood up in that livery of shame, I was sensible of a subtle influence that exhaled from it, impelling me to skulk in unfrequented places and to sneak from cover to cover. Of course the mistake could be explained if I was arrested; but I didn’t want to be arrested. I was safer at large. The better plan was to get home if possible, or make for Sturt and Wopsalls, where I was known. But how was I to get home? My return ticket was in the pocket of the vanished trousers in company with a clasp-knife and eighteen-pence, and miles of town lay between me and safety.

I crept stealthily round the meadows away from the river, keeping under the cover of hedges and fences and reviewing anxiously my chances of escape, which seemed hopelessly remote. Ahead of me, near the side of a meadow, were a couple of hayricks, like enormous loaves; and the narrow space between their ends looked a likely place in which to conceal myself while I thought over my plans. Accordingly I crept along under the hedge until I was opposite the ricks, when I dashed out across the open, darted into the space between the ricks, and nearly fell over a man who was lying there smoking a pipe.

“I beg your pardon,” I stammered. “I didn’t know you were here.”

“Don’t mention it,” he replied suavely. “If I’d expected yer I’d ha’ told the footman to announce yer.” He sat up, and, regarding me attentively, asked: “And how goes it? Doin’ a bit o’ a skyboozle I guess?” I assented vaguely, not being perfectly clear as to the nature of a skyboozle, and he then enquired: “How did yer git out o’ the jug?”

“I didn’t get out at all. I wasn’t ever in.”

“Lor!” he exclaimed. “Wasn’t yer? Where did yer git them pretty clothes from?”

I described the disastrous circumstances of the exchange and he listened to my story with a foxy smile.

“Well I’m Blowed!” was his comment. “What bloomin’ impudence, to take and prig a young gentleman’s clothes. I call it actually rude. And he seems to ‘ave cut yer ‘air, too. He oughn’t to ‘a done that. He’d ‘ave to be spoke to.”

At this reference to my closely cropped hair, I started violently. That was an added danger that I had overlooked, and I was so much disturbed by it that I have no recollection of my friend’s further remarks; only I know that they were few and brief, for he shortly rose, and, knocking out his pipe (against the rick), looked at me with profound attention.

“Well,” he said, at length, “I must be movin’ on or I shall be late for lunch. You’d best lay down ‘ere and ‘ave a good rest, ‘cos you may have to make a bolt for it any minute, and the fresher you are the quicker you’ll be able to leg it. So long.”

With these words of sage advice, he turned and sauntered away with funereal slowness, looking back once or twice to see if I had profited by his counsel. I sat down—not where he had been lying—and when he looked back again and observed this, he nodded approvingly and changed his direction slightly, so that he passed out of view. But the influence of that livery of dishonour had made me wary. After waiting a few seconds, I crept on all fours to the corner of the rick and peeped round; and behold! my friend’s pace was funereal no longer; he was running across the meadow like a slip-shod, disreputable hare. And I had no difficulty in guessing at his destination.

I let him get well out of sight and then I followed his example in the opposite direction. Skirting the adjoining meadow, I
came to a hedge that bordered a by-road; and here I lurked awhile, for a van was approaching, though it was still some distance away, and I was afraid to cross the road until it had passed. I watched the vehicle listlessly as it drew nearer. Through the opening of the tilt I could see that it was empty, or nearly so; and, from the conduct of the driver, who lolled in the corner of his seat and chanted a popular ballad, I judged that he had finished his delivery and was homeward bound.

Nearer and nearer drew the van at a steady jog-trot. Now I could see the driver's face and hear the words of his song. I could also make out the tops of one or two cases—probably empties—rising above the back of his seat; and I crouched by a gap in the hedge, my heart thumping violently and my knees trembling. At last the van came rumbling by. I had a brief view of a familiar name and of the words "Theobald's Road" painted on the tilt, and it had passed.

I looked out of the gap. Besides the coterie there was not a soul in sight. The tail-board of the van was up, its body was half empty, and the driver's back was towards me. In a moment I was out through the gap and padding along swiftly in my soft prison shoes after the van. I had my hands on the tilt-board, I gave a light spring, remained poised for a moment on the edge, and then stealthily crawling over, crept silently into the space between two empty cases. For the moment I was saved.

The van rattled along and the driver, all unconscious of his passenger, carolled blithely. From my retreat I could see out at the back by peeping round a case, and so ascertain our direction; and I was somewhat alarmed presently to observe that the road took a sharp turn towards the place where the tramp had disappeared. This made me so uneasy that I risked craning up to look out through the front of the van; and when I did so, I got a most terrible shock. Far away along the road, but coming towards us, was a small crowd of men, and, as we mutually approached, I could make out at least one constable in uniform among them. A little nearer and I was able to recognise the tramp, walking by the constable and evidently acting as guide. I broke out into a cold perspiration. Would that constable stop the van and search it? It was quite possible; it was even likely. And again I craned up and peeped at my enemies.

We were getting quite near when the tramp stopped and pointed at the ricks, no doubt. Then he climbed over the fence that bordered the road. The constable followed him and the others followed the constable; and so they passed out of view.

But they came into sight again shortly from the back of the van, and now I could see the ricks, too. The crowd had deployed out into a long, curved line and were advancing, in the highest style of strategy, under the direction of the tramp and the constable. It reminded me of the formation of the Spanish Armada, as that great fleet swept up-channel. I didn't see the end of it. The line was still deploying out to encircle the rick when the van turned sharply and rumbled over a bridge. I was sorry to miss the denouement; but perhaps it was better so. After all, my business was to get clear away.

The van rumbled on at its quiet jog-trot and all seemed plain sailing. Through the northern suburbs and gradually into the town by way of Stamford Hill and Stoke Newington. And still all went well until we came out of the Essex Road and drew nigh unto the Angel at Islington; when the Devil entered into the carman and caused him to draw up by a public house and inspect the interior of the van.

Of course he saw me at once though I squeezed myself into the farthest corner between the cases, and with a sort of gruff reluctance, he ordered me to clear out. I begged to be allowed to travel with him as far as Theobald's Road, and began to tender explanations; but he shook his head decidedly.

"I'd be in chokee myself if I let you," said he, "and I can't afford that with a wife and family to keep."

There was nothing more to be said. Reluctantly and with deep misgivings, I bundled out and began to walk away briskly along the crowded pavement. But I didn't get far. Before I had gone a hundred yards, two tall men who were walking towards me suddenly roused and, darting at me, seized me by the arms.

"Have you got a pair of darbies about you, Sims?" one of them asked the other. Fortunately Mr. Sims had not but suggested that "this young feller" did not look like giving trouble, whereupon, the two officers began to walk me along briskly in the direction of the Angel.

There was no lack of public recognition. I had already gathered quite a nice little following when I met the detectives, and my retinue increased so rapidly that before we reached the Angel we had become the centre of a hurrying hallooing crowd. At this point, my captors decided to cross the road.

Now the traffic about the cross roads by the Angel is usually pretty dense. On this occasion, I think it was denser than usual, and when our procession launched itself from the kerb, it reached a superlative degree of density. Vans, omnibuses, hansom, all manner of vehicles slowed down that their drivers might get a better view of the man in motley. For the moment the roadway seemed to be completely choked with vehicles and foot-passengers, and from the closely-packed throng there arose a very babel of shouts and cheers. Thus we were standing in the roadway, jammed immovably, when above the universal uproar, rose a new sound; a thunderous rattle, jingling of small bells and a quick succession of shouts.

The omnibuses, vans and hansom began to back hurriedly towards the pavements, their drivers cheering lustily and flourishing their whips; the mob surged to and fro, a cloud of smoke and sparks arose behind them; there was a vision of gleaming brass helmets and of galloping horses bearing down apparently straight on us; the rattle, jingling and shouting swelled into a deafening roar, and the crowd surged away to the right and left.

"Look out, Sims!"] yelled the other detective. "They'll be on top of us." He thrust his shoulder into the crowd and dragged me out of the track of the oncoming engine. The horses dashed by within a few inches; the rushing wheels grazed our very toes and still I kept a cool head. With eyes dazzled by the scarlet glare, the glitter of brass and the flying sparks, I watched
for my chance and took it. As the shining boiler whizzed past, I made a quick snatch at the big brass rail that supports the foot-plate, and at the same moment, jumped forward. The sudden wrench nearly dislocated my arm; but it was a strong arm and I held on. The jerk whisked me clean out of the grasp of the two officers; I swung round behind the engine and, grabbing the engineer with my other hand, hauled myself on to the foot-plate. A single, instantaneous glance backward showed me two plain-clothes officers lying on their backs with their feet in the air. Of course they could not have maintained that position permanently, but I saw them only for the fraction of a second and that was how they appeared.

The engine rattled on. The coachman and his two satellites had naturally seen nothing; and the four men who sat back to back on the body of the engine also appeared to be unaware of my arrival though, oddly enough, they were all on the broad grin and their “Hi, hies!” tended at times to be tremulous. Even the engineer, whom I clasped fondly by the waist, seemed to be oblivious of my presence and solidly shovelled coal into the little furnace.

We swept round the corner at the “Angel,” and never shall I forget the way in which we thundered down Pentonville Hill with our brakes on and our horses at full gallop. I think I have never enjoyed anything so thoroughly. The engine skidded to and fro, the firemen yelled themselves purple, houses and lamp-posts flashed by and far ahead, even unto King’s Cross, an expectant crowd awaited us with welcoming bawls. We passed through the narrow strait at the foot of the hill like a royal procession; our arrival was respectfully anticipated at the crossing by the Great Northern, and we thundered down the Euston Road between racks of waiting omnibuses like the leaders in a chariot race. We were approaching Tottenham Court Road when the engineer observed placidly, apparently addressing his remark to the pressure gauge, that “there was such things as telegraph wires and it might be as well to hop off.” I accepted the friendly hint, and as we turned into the latter thoroughfare I dropped from the foot-plate and made a bolt down Warren Street. The engine gave me a send-off, for it attracted so much attention that I was, at first, almost unnoticed; it was only when I had covered half the length of Warren Street, that juvenile and other loafers, deciding that a convict in the hand is worth two fire engines in the bush, turned to follow my fortunes, or misfortunes, as the case might be.

What manner of crowd it was that howled at my heels, I cannot say, for I did not look back. I was on familiar ground and now had a definite objective. Miss Vernet’s studio backed on a mews, and there was a large window which was usually left open. That was my port of salvation. Swiftly I zigzagged up and down the narrow streets, keeping my pursuers at a respectful distance, and gradually drawing nearer to the vicinity of the mews. At length I shot round the last corner and, diving into the entrance of the mews, padded furiously over the rough cobbles. The place was fortunately empty, for it was now late afternoon, and half-way down, the open window yawned hospitably. Setting my foot on a brick plinth, I sprang up, grasped the window-sill and shot in through the opening like a harlequin.

My arrival on all-fours on the studio floor was hailed by startled shrieks from my two friends who were hard at work at their easels. But, of course, they recognised me at once, and a few words of breathless explanation enabled them to grasp the state of affairs.

“Get into the dressing-room instantly,” said Miss Vernet, “and put on your costume.”

“Yes, and throw us out those horrible clothes,” added Miss Brandon.

I shot into the dressing-room, and peeling off the garb of infamy with the speed of a quick-change artist, threw the garments out and whisked the costume down from its pegs; and even as the roar of many voices from the mews outside announced the arrival of my pursuers, I dropped the gown over my head, secured the fastenings with trembling fingers and clapped the ringlets on my stubby pate. When I came out into the studio Miss Brandon had just closed the costume chest, on the lid of which she was piling palettes, paint-tubes and sheafs of brushes, and Miss Vernet was standing at her easel.

“Now,” she said briskly, “get on the throne and take up your pose; and pull your gloves on. They mustn’t see your hands.”

I had just struggled into my long gloves and taken up the pose when the murmur of voices announced the return of my pursuers from an unsuccessful quest at the end of the mews. There was a scrambling sound and a disreputable head and shoulders framed itself in the window, and the eyes appertaining thereto glared inquisitively into the studio. Then it disappeared with a suddenness suggestive of outside assistance; the scrambling sound was renewed and a helmeted head rose majestically in its place. The constable gazed in enquiringly, and had just opened his mouth as if about to speak, when he caught the stern and for bidding eye of Miss Vernet, which seemed to paralyse him completely.

“What are you doing at my window, sir?” the lady demanded acidly.

The constable’s mouth opened once more and this time with more result.

“I beg your pardon, madam,” said he, “but there is an escaped convict—” here the constable disappeared with the same suddenness as the previous observer, his toes having apparently slipped off the brick coping. He did not reappear, but I heard a voice, which seemed to be his, enquiring irritably: “Where’s the dam door?”

Somebody must have shown him the “dam door”, for after a brief pause, the studio bell rang and Miss Brandon, smothering her giggles, went out and returned accompanied by two constables and two elderly gentlemen. The latter came in in a state of hilarity that contrasted strongly with the solemnity of the officials.

“I hear you’ve got a convict hiding in here,” said one of them, a fresh-faced farmer-like looking gentleman.

“What’s that?” demanded Miss Vernet, whisking round from her easel.

“Yes, madam,” said one of the constables, staring hard at the picture and then glaring at me. “A convict who has escaped...
from Pentonville is believed to have climbed in at your window."

"At my window!" shrieked Miss Vernet, "but what a frightful thing, and how disgraceful of you to let him. I call it a perfect scandal that a respectable householder, paying police rates, should be subjected to the annoyance and danger of having hordes of convicts and criminals swarming in at all the windows if they happen to be left open."

"Oh, droat it mild, madam," protested the constable. "It ain’t as bad as that. There’s only one of them."

"If there’s one there may be a dozen," Miss Vernet replied, rather illogically, I thought, "and I insist on your searching the premises and removing every one of them."

"Is that the window?" asked the gentleman who had spoken before. The constable admitted that it was. "But, my good man," the gentleman protested, "how could anyone have got in without being seen?"

The constable suggested that the ladies might have been looking the other way at the time, at which both the old gentlemen laughed aloud and shook their heads.

"At any rate," said Miss Vernet, laying down her palette, "I must insist on having the premises searched thoroughly," and thereupon she and Miss Brandon conducted the two constables out through the doorway that led to the kitchen and offices. As soon as they were gone, the two gentlemen settled themselves to examine the picture, and from the canvas they presently turned their attention to me with an intentness that made my flesh creep. The farmer-like gentleman seemed particularly interested, and having minutely compared me with the figure on the canvas, turned suddenly to his companion.

"This is a most extraordinary coincidence, Brodribb," said he; and as he spoke I was dimly aware of something familiar in the sound of the name.

The other gentleman—a fine, jovial-looking old cock with a complexion like that of a Dublin Bay prawn and hair like white silk—looked about him a little vaguely and then asked: "What is?

"That figure in the picture," his friend replied. "Doesn’t it recall anything to your mind?"

Mr. Brodribb looked at the canvas with a frown of concentration and an air of slight perplexity, but apparently without the desired effect on his memory, for, after a prolonged stare, he shook his head and replied: "I can’t say that it does."

"Come and stand here," said the other, stepping back a couple of paces, "and look carefully at the central figure only, taking the architrave of the door way as the picture frame. Is there no portrait that you have ever seen that it reminds you of?"

Again Mr. Brodribb looked and again he shook his head.

"Dear, dear," exclaimed the farmer-like gentleman, "and to think how many dozens of times you must have looked on it! Don’t you remember a portrait that hangs over the fireplace in the small drawing room at Bradstow? A portrait by Romney of, I think, a Miss Isabel Hardcastle."

Mr. Brodribb brightened up. "Yes, yes, of course," said he, "I remember the portrait that you mention. Not very well, though. But what about it?"

"Why, my dear Brodribb, this figure is an almost exact replica. The dress is of the same character and the pose is similar, though that might easily be in an historical picture of the same period. But the most astonishing resemblance is in the face. This might be a copy."

Mr. Brodribb looked interested. "I remember the picture," said he, "and I recognise the general resemblance now you point it out, though I can’t recall the face. I am not a portrait painter, you see, Sir Giles, so I haven’t your memory for faces. But if the facial resemblance is as strong as you say it is in the two portraits, a very interesting fact seems to follow; for as this portrait is an excellent likeness of this young lady, (here the old gentleman bowed to me deferentially, whereupon I grinned and turned as red as a lobster) "she must be extremely like the subject of the other portrait, is it not so?"

Sir Giles laughed a fine, jolly, agricultural laugh. "Q.E.D., hey, Brodribb. Very acutely argued. Discreetly, too, as we can’t put the other lady in evidence. But, of course, you’re right."

At this point the two ladies returned, accompanied by the constables, who were both looking into the interiors of their helmets and bore a subtle suggestion of having taken refreshment. They departed with thanks and apologies, and the two ladies and the gentlemen then engaged in a spirited discussion on the composition of the picture. I was glad when it came to an end and the two gentlemen took their leave—each with a valedictory bow to me, which I returned to the best of my ability—for I was tired and hungry and wanted to get home.

"Now, Jasper," said Miss Vernet, when she had shown them out, "the question is how we are to get you away from here. You can’t wear the prison clothes and you can’t go home in your costume. What are we to do, Lucy?"

Miss Brandon reflected awhile and then suggested: "There’s that widow’s costume, you know. That would fit him."

"Yes, of course," agreed Miss Vernet, "it’s the very thing. He shall put it on and I will walk home with him, myself."

And so the tragedy ended. Less than an hour later, a tall and gawky-looking widow might have been seen—but fortunately was not—sneaking up the stairs to the third floor of the house in Great Ormond Street. Pontifex was out shopping and came in later with a bottle under his arm. But by that time, my widowhood had come to an end. The
resources of my wardrobe were slender, but they included two suits which I had outgrown before they had degenerated into mere scarecrow’s costume, and into one of these I insinuated myself cautiously and with some misgivings as to its tensile strength. But, of course, it was impossible. Even Sturt and Wopsall’s packer revolted at the sight of four inches of visible sock above my boots, and besides, I didn’t dare to stoop. Miss Vernet had delicately hinted as we walked home at a desire to replace my lost garments, but, grateful as I was to her the thing was not to be thought of when I had five golden sovereigns hidden away. Accordingly, the very next day, I disinterred two of them and, making my way to a shop of which I knew in the vicinity of Convent Garden, procured in exchange for them a most admirable second-hand suit, in which I came forth proudly with my outgrown exuvium under my arm. Never before had I been so well dressed. When I returned to the warehouse, the packer raised his brown-paper cap and made me a deep bow; and even Pontifex, who was not ordinarily acutely observant, eyed that suit in silence and with an evidently unsuccessful effort of memory.

But there was a fly in the ointment—perhaps I should say that there was a fly—a butterfly—missing from the ointment. I hastened to sew in at the back of the waistcoat a commodious secret pocket. But alas! that pocket was empty. The miserable wretch who had absconded in my patched and threadbare clothes, had, all unconsciously, been the bearer of a priceless treasure. In the agitation of the moment, I had forgotten the emerald that reposed at the back of his—or rather my—waistcoat. Now, too late, the realisation of my loss was borne in on me and remained for weeks a deep and abiding sorrow.

VI. — A VISIT TO STRATFORD ATTE BOW

(DR. JERVIS’S NARRATIVE)

THE mystery surrounding the disappearance of Sir Edward Hardcastle was solved in a very startling and tragic manner; if, indeed, that can be called a solution which was even more mysterious than the problem which it solved. The news was brought to us late one afternoon by Mr. Brodribb, who burst into our chambers in a state of such extreme agitation that we were at once prepared for some tidings of disaster.

“Here is a terrible thing, Thorndyke!” he exclaimed, dropping into a chair and mopping his face with his handkerchief. “Sir Edward has made away with himself.”

Thorndyke was evidently surprised at the news, as also was I, but he made no comment beyond a half-articulate “Ha,” and Brodribb continued: “I have just had the information from the police. Superintendent Miller was kind enough to call on me and give me the report himself. He had no details but—to put the horrible affair in a nutshell—Sir Edward’s body was found this morning hanging from a beam in an empty house at Stratford.”

“At Stratford!” Thorndyke repeated, incredulously. For if the news of the suicide itself was surprising, the alleged circumstances were amazing.

“Yes,” said Brodribb, “it is an astonishing affair. I can’t imagine what can have taken him to Stratford. But I suppose that people in the state of mind that is associated with self-destruction are apt to behave in a rather unaccountable way. Perhaps some kind of explanation will be forthcoming at the inquest, which I understand from the Superintendent is to take place to-morrow. It appears that there are some circumstances that make it desirable to hold the inquiry as soon as possible.”

We had no difficulty in guessing what those circumstances were, but neither of us made any comment.

“I shall have to go,” Brodribb continued; “in fact the Superintendent warned me, but I should like you to be present to watch the proceedings, if you can manage it. Not that there is any real necessity, since there is no insurance question to raise and there seems unfortunately to be no doubt of the facts. But inquests are quite out of my province and I should feel more satisfied if I had your views on the affair.”

“Very well,” said Thorndyke. “I will attend the inquest on your instructions. But I think I had better be present at the post mortem, too. I should wish to have an opportunity of forming a direct judgement on the facts as well as hearing the evidence of the medical witness.”

Brodribb nodded approvingly. “That is what I like about you, Thorndyke,” said he. “You are so thorough—even beyond the necessities of the case. You take nothing on trust. But there is another matter. The Superintendent urged me—in fact, I may say that he ordered me—to go down to Stratford this evening and identify the body. He said that it was most important that the question of identity should be settled at once, and I suppose he is right. But it is frightfully unpleasant.”

I suspected that it would be more unpleasant than he was aware of, but I kept my suspicions to myself; and he continued: “I don’t see why the identification couldn’t have been done by Weeks, Sir Edward’s butler. They have summoned him by telegraph—I left his name and address with Miller, you remember—and I suppose he will have to see the body. However, the Superintendent insisted that I ought to go this evening, so there is no help for it. I suppose you couldn’t come down with me?” he added, wistfully.

“Yes,” Thorndyke replied, promptly, “I will come with you, and perhaps Jervis will keep us company.”

He looked enquiringly at me, and, when I had assented—which I did readily enough—he resumed: “But there is one thing that must be done, at once, since there may not be time to-morrow. I must get a letter from the Home Office asking the coroner to give me the necessary facilities. Otherwise I may be refused permission to be present at the post mortem.”
“Would that matter?” asked Brodribb. “There can’t be much question as to the cause of death.”

“That is impossible to say,” replied Thorndyke. “If I am to attend I may as well be in a position to check the medical evidence. That, in fact, is my proper function.”

“But you won’t find anybody at the Home Office now,” Brodribb objected.

“I think I shall,” said Thorndyke. “There is always some responsible person on late duty to attend to urgent business. I suggest that you two go on to Stratford and wait for me at the police station.”

“No, we won’t do that,” said Brodribb. “We will wait for you at my office and then we can all go down together.”

To this arrangement Thorndyke agreed and took his departure forth en route for Whitehall, while Brodribb and I, in more leisurely fashion, made our way out into Fleet Street and so, by way of Carey Street to New Square. We did not, however, go into Brodribb’s office; for our old friend was in a state of nervous unrest, and now that he was to have our company on his distasteful errand, was all impatience to start. Accordingly we walked together up and down the pavement of the quiet square, exchanging now and again a few words but mostly occupied with our own thoughts.

What Brodribb’s thoughts were I cannot guess, but my own were fully occupied by the communication that he had made to us. For, brief and sketchy as it was, it contained matter that certainly invited reflection. Thorndyke, I could see, was, if not actually suspicious, at least very definitely on his guard. His determination to check the official medical evidence by independent observation showed clearly that in his view there might be more in the case than might meet the eye of a routine investigator. And I found myself in complete agreement with him. The alleged facts carried a distinct suggestion of fishiness. As to the probability of Sir Edward’s committing suicide I could form no opinion; but the circumstances in which the suicide had occurred called aloud for inquiry. I was, indeed, somewhat surprised at the easy-going fashion in which the usually astute Brodribb had accepted them. But perhaps I was doing him an injustice. Possibly he was purposefully withholding his own doubts the better to test Thorndyke’s attitude.

I had reached this point in my reflections when, on making a quarter-deck turn, I perceived my colleague advancing swiftly up the pavement from the Carey Street gate. We stepped out to meet him and, as he joined us, Brodribb greeted him with the comprehensive question: “Well, what news?”

“I have got a letter for the coroner asking for facilities, and a hansom waiting opposite the gate.”

“Hm,” grunted Brodribb, “it will be a damned tight fit.”

And I must admit that it was. Three large men, one of whom was distinctly of “a full habit” were more than the coachbuilder had made allowance for. However, Thorndyke and I bore the brunt of the squeeze, and the journey was not a long one. In due course we unpacked ourselves at Liverpool Street Station and presently boarded a train bound for Bow and Stratford.

We travelled for the most part in silence, and what conversation passed was not connected with our present quest. There was, in fact, no opportunity for interchange of talk on confidential matters as our carriage contained, besides ourselves, three passengers, apparently businessmen returning, at the end of the day’s work, not indeed to Stratford, but to some of the more savoury localities in the neighbourhood of Epping Forest. At length a strange and repulsive effluvium which began to filter in at the windows, suggestive of soap-boiling, glue-making and other odoriferous forms of industry, announced our approach to the classical neighbourhood of Stratford atte Bow, and a minute or two later we disembarked, Brodribb snorting disgustedly and holding a large silk handkerchief to his nose. From the railway station we made our way to that of the police, to which Mr. Brodribb had been directed by Superintendent Miller; and presentling ourselves to the sergeant on duty in the outer office and stating our business, were duly conducted into the inner office and the presence of the Station Superintendent.

The latter turned out to be an eminently helpful officer. Possibly the Home Office letter (which, though it was addressed to the coroner, was shown to the Superintendent) requesting that Dr. Thorndyke should be given such facilities as he might reasonably require, might have influenced him, to say nothing of our virtual introduction by Superintendent Miller. But apart from this, he was a capable, businesslike man, quite free from any tendency to red tape officialism and naturally inclined rather to help than to obstruct. Accordingly, when we had presented our credentials and explained our connection with the case, he proceeded to give us, without reserve, all the information that he possessed.

“The discovery,” he began, “was made this morning about nine o’clock by a man named Holker, a retired ship’s steward who owns a good deal of low-class weekly property about here—mostly small houses that he has picked up cheap and put in some sort of repair himself. He’s what you’d call a handy man, able to do a job of bricklaying or plastering or joinery, so it doesn’t cost him much to codge up these old derelicts that he buys. Now, some time ago he bought a row of half a dozen little houses that some fool had built on a bit of waste land down by Abbey Creek. He got them for next to nothing as they had never been inhabited and were in a ruinous condition and stood by an unmade road that was often half under water. He meant to do them up and let them at low rents to some of the labourers at the works. In fact he started work on one of them—Number Five—about a month ago, that is how we are able to fix the dates. The last time he was working there was Sunday, the twenty-first of June, and he is quite sure that nothing had happened then because he went all over the house. On Sunday night he was offered, and accepted, a temporary job on one of his old ships which traded to Marseilles; and on Monday morning he dropped in at the house to fetch away his tools. As he was in a hurry, he only went into the front room, where the tools had been left, but he could see that someone had been in the house by the fact that a glove was lying on the
floor. He thought it queer, but, as I said, he was in a hurry and as it was an empty house with nothing in it to steal, he didn’t trouble to look into the matter but just got his tools and came away.

“That was three weeks ago—this is the fourteenth. Now, Holker got back from his trip yesterday, and this morning he went round to get on with his work at the house. As soon as he got there he noticed the glove still lying on the floor. And then he noticed—well he noticed that there was something wrong about the house, so he went through to the kitchen and from there to the wash-house; and the first thing he saw when he opened the wash-house door was a man hanging from a tie-beam. There was no doubt that the man was dead and that he had been dead a pretty long time. Holker didn’t stop to cut the body down. He just bolted out and came up here to report what he had seen. I happened to be here at the time so I thought I had better go along and see into the affair, though the job didn’t sound much of a catch from what Holker said. And I can tell you it wasn’t. However, I needn’t go into that. You can imagine what it was like for yourselves.

“Well, there was the body hanging from the beam and an old, broken-backed windsor chair capsized on the floor underneath. Evidently he had stood on the chair to tie the rope to the beam and when he had fixed the noose round his neck he had kicked the chair over and left himself dangling. It was all pretty obvious, fortunately, for one didn’t want to spend a lot of time in that wash-house making observations. I just cut the rope when the constables had got the stretcher underneath and they lowered the body on to it, covered it up and carried it away.”

“Concerning the rope,” said Thorndyke, as the Superintendent paused; “I presume deceased found that on the premises?”

“No,” the officer replied, “he must have brought the rope with him for it wasn’t Hiker’s. It was a smallish, brown rope—looked like coir—and he’d brought more than he wanted, for there was a spare end about four feet long.”

“And with regard to the glove that was mentioned—?”

“Yes, I saw that in the front room. The fellow one was on the wash-house floor. I picked them both up and I’ve got them here.”

“By the way,” said Thorndyke, “how do you suppose the deceased man got into the house?”

“He must have got in by the window. He didn’t get in by the front door, for Holker is sure he shut it when he left on Sunday and he found it shut when he went there on Monday morning. Of course, the lock is only a cheap builder’s night-latch that anyone used to locks could open easily enough. But I don’t suppose the deceased gentleman was accustomed to picking locks; and he didn’t open it with a key because he hadn’t a key of any sort about him.”

“I don’t suppose,” Thorndyke remarked, “that he was much accustomed to getting in at windows.”

“Probably not,” the officer agreed. “But, you see, sir, he got in somehow; and Holker found the sitting-room window unfastened on the Monday morning. So it would have been easy enough for anyone to get in. The window-sill is only about two feet six above the ground. And you remember that the one glove was lying on the sitting-room floor. As a matter of fact, it was just under the window.”

There was silence for a few moments. Then Brodribb remarked: “The officer from Scotland Yard mentioned that the body had been identified by some letters that were found in the pockets. I suppose there were some other things?”

“Yes, but mighty few considering the man’s position; and yet enough to show that the body had not been robbed. I’ve got the things here if you would like to see them.”

He stepped over to a nest of drawers which stood on a massive shelf, and, unlocking one of the drawers, drew it out bodily and brought it over to the table at which we were sitting. “There’s the collection,” said he. “It isn’t quite what you’d expect to find on the person of a baronet. Look at that watch, for instance. Sort of thing that you could pick up at a cheap jeweller’s for seven and six. What is rather odd, too, is that there are no keys. Not even a latch-key.”

“He left his keys and his gold watch and some other valuables at his club,” said Brodribb as he ran a gloomy eye over the contents of the drawer.

“Ah! Did he? Yes, very natural and very proper, too, having regard to what he intended to do. I’ll make a note of that. It will be an important point for the coroner.”

Brodribb was evidently sorry that he had spoken, but he did not lose his presence of mind. “Yes,” he agreed. “The secretary of the club, Mr. Northbrook, will be able to tell you about it. I suppose you will have to summon him as a witness as Sir Edward was staying at the club.”

“Yes, we shall want his evidence, and in fact, a summons has been served on him,” the Superintendent replied, adding with a faint smile, “I take it that you’d rather not be called. But I’m afraid it can’t be helped. You know more about his private and financial affairs than anybody else. The butler has been summoned, but he can’t tell us what state the deceased’s affairs were in, whereas you can give any information that is wanted. My sergeant, here, is the coroner’s officer and he will hand you the summons when he takes you over to the mortuary.”

“Do you really think it necessary for me to go there?” Mr. Brodribb protested with evident discomfort. “The butler will be able to testify to the identity.”

“Yes,” the officer agreed, “that is so. But for our own information, now, we should like to know whether this is or is not Sir Edward’s body. You had better run over and just take a glance at it.”
Brodribb acquiesced with a faint groan and the Superintendent then reverted to the contents of the drawer. "Do you recognise any of these articles?" he asked.

Brodribb looked them over once again before replying. They comprised the watch, a pair of wash-leather gloves, a shabby leather cigar-case—empty—a small silver match-box, an old and well-worn pigskin purse, containing, as the officer demonstrated, three sovereigns, a handkerchief marked E. H., a lead pencil, a fountain-pen, a small pocket-knife, some loose silver and coppers and a letter-case, containing two five-pound notes and one or two letters in envelopes, addressed to "Sir Edward Hardcastle, Bart., Bradstow, Kent."

"No," Brodribb replied, at length. "I don’t recognise any of these things. The handkerchief is marked with Sir Edward’s initials, as you can see; and the envelopes bear his name and address, as you can also see. That is all. Would you like me to look through the letters?"

"There is no need," the officer replied. "The coroner will read them and he will ask you anything that he wants to know about them. And now you would like to step across to the mortuary? I will tell the sergeant to take you over."

He rose, and, having replaced the drawer in its nest, passed through into an adjoining office and returned almost immediately accompanied by his subordinate, who bore in his hand a small blue paper.

"Here," said the Superintendent, "is your summons, Mr. Brodribb. Is there anything else that I can do for you?"

"There is one little matter, Superintendent," said Thorndyke. "I should like, if possible, to have an opportunity to inspect the house in which the body was found. I presume there is no objection?"

"None whatever," was the reply. "But you are not thinking of going there to-night? Better go to-morrow morning by daylight, before you attend at the post mortem. I’ll see that there is someone to show you the place and let you in, and then we can tell you what time to turn up at the mortuary. But you’ll waste your time at the house, for there is nothing to see but the end of a cut rope and an overturned chair."

"Well," said Thorndyke, "we will inspect them. It is a mere formality, but it is a good rule to see everything."

"So it is, sir," the Superintendent agreed; and with this he glanced at the sergeant, who forthwith opened the door and launched us into the street, the gathering darkness of which was tempered by the light of the lamp over the doorway.

"A pleasant night, gentlemen," he remarked as he led us across the road; "a trifle warm, perhaps, but that is seasonable, though for my part, I prefer rather colder weather for mortuary jobs."

At this, Mr. Brodribb shuddered audibly, and, as I observed that he had taken Thorndyke’s arm, I suddenly realised that what was for me and my colleague a matter of mere daily routine was to our poor old friend a really distressing and horrible experience. Evidently, Thorndyke had realised it too, for when the sergeant had unlocked a door at the bottom of a narrow alley and entered before us to light the gas, I heard him say in a low tone: "I’ll go in first, Brodribb. You had better wait here till I call you."

The light from the large, shaded gas-lamps shone down brightly on the shrouded figure that lay on the central table and lit more dimly and fitfully the side benches, the great porcelain sink and the white washed walls. Thorndyke and I, with the sergeant, advanced to the table and the latter drew back the sheet, exposing the head and shoulders of the corpse. It was not a pleasant spectacle, but, still, immeasurably less repulsive than I had expected from my experiences of the "found drowned" corpses that I had seen in riverside mortuaries; and what was more to the point, it appeared to be quite recognisable. For a few seconds we stood looking down at the shrunken, discoloured face. Then Thorndyke drew up the sheet and having arranged it so that the face alone was visible, called out to Brodribb; who thereupon entered, walking quickly and a little unsteadily, and stepped up to the table by Thorndyke’s side.

A single horrified glance apparently disposed of any doubts or hopes that he may have entertained, for he turned away quickly, muttering, "Dear Lord! What an end!" and began to walk towards the door.

"Can you identify the body, sir?" the sergeant asked in matter-of-fact tones.

"I can," replied Brodribb, relapsing, despite his agitation, into legal precision. "The body is that of Sir Edward Hardcastle of Bradstow in Kent; and having made his weather for mortuary jobs, he walked out into the dark alley."

We followed almost immediately, for there was nothing to see that would not be better seen by daylight on the morrow. At the top of the alley we wished the sergeant “good night” and while he hurried away in the direction of the office, we turned our steps towards the station.

During the short walk, hardly a word was spoken. Brodribb strode forward with his chin on his breast and his gaze bent on the ground, absorbed in gloomy reflections, while Thorndyke and I silently turned over in our minds the significance of what we had seen and heard. It was not until we were seated in a first-class carriage—of which we were the only occupants—that our friend came out of his “brown study.” Then, as the train moved out of the station, he turned to my colleague and asked abruptly: "Well, Thorndyke; what do you think of it?"

Thorndyke considered a few moments before replying. "It is early," he said, at length, "to express, or even to form an opinion. At present, we have no technical data. All that we can do is to form a provisional opinion based on the facts now known to us. That you can do as well as Jervis and I can."

"Perhaps," said Brodribb. "All the same, I should like to hear what the facts convey to you."
“Then I may say,” Thorndyke responded, “that they convey to me principally the urgent necessity of getting more facts. At present we are confronted by two sets of conflicting probabilities, and we await further facts to throw greater weight on the one or the other. For instance, the mode of death is markedly characteristic of suicide. When a man is found hanging, the probability is that he has hanged himself. The possible alternatives are accident and homicide. Accidental hanging is rare and is usually obvious on inspection. Homicidal hanging is extremely rare. So that the mode of death, in the absence of any elucidatory evidence, establishes a strong presumption of suicide. Evidence of motive or intention would turn that presumption into something approaching certainty. Absence of such motive would reduce the probability; but the presumption would remain. At present we have no evidence of motive or intention.”

“You are not forgetting that he emptied his pockets of all valuables?” Brodribb objected.

“No, I am not. The exact significance of that proceeding is not obvious but it does not appear to me to indicate an intention to commit suicide.”

“Does it not? Do you not find a certain congruity between that action and the place and circumstances in which the body was found?”

“Undoubtedly I do,” replied Thorndyke. “But the place and circumstances have no natural connection with suicide. That is what I mean by conflicting probabilities. If Sir Edward had been found hanging from a peg in his bedroom the ordinary presumption of suicide would have existed, because suicides commonly act in that way. But here we have a man making preparations (as it appears to me) to go into some place where property on the person is not safe and being later found dead in a remote part of the town which we should suppose to be quite unknown to him. The circumstances are so abnormal and the conduct so strikingly unlike the usual conduct of suicides that the ordinary presumption based on the mode of death cannot be accepted.”

“Then,” said Brodribb, “what is it that you are suggesting?”

“At present, I am suggesting nothing excepting that I am not prepared to accept the Superintendent’s account at its face value. Beyond that it is useless to go until we have heard what transpires at the inquest.”

Brodribb nodded gravely. “Yes,” he agreed. “Discussion at this stage is merely academic. But probably the evidence at the inquest will clear matters up. I suppose the post-mortem will settle the question of suicide?”

“It may,” Thorndyke replied, guardedly, “in a negative sense, by showing the absence of any alternative suggestion. But the conditions are not favourable for forming positive and definite opinions as to the exact circumstances in which death occurred.”

“Well, you will be there, so, if it is possible to establish the fact of suicide—or to exclude it—by an examination of the body, we may say that the question will be decided to-morrow.”

To this statement Thorndyke made no rejoinder; and as Brodribb relapsed into silent meditation and my colleague showed no inclination for further discussion, I followed their example, and, as I smoked my pipe, turned the situation over in my mind.

In the colloquy to which I had listened, two things had impressed me rather forcibly. For the first time in my experience of him, Brodribb had appeared unprepared to defer to Thorndyke’s judgement. It was evident that in his opinion the suicide of Sir Edward was virtually an established fact, and that in his view Thorndyke’s scepticism was merely a manifestation of the specialist’s tendency to see things through the medium of his own specialty. On the other hand it had struck me that Thorndyke had made little effort to influence his opinion. He had, it is true, fairly answered Brodribb’s questions; but it was quite obvious to me that he had not put the case against suicide with nearly the force that was possible even with the few facts that we had. This might have been due to his habit of avoiding anything like premature conclusions, but I had the feeling that he was not unwilling that Brodribb should continue to take the case, as he had expressed it, at its face value.

At the terminus we separated, Brodribb setting forth alone in a hansom while Thorndyke and I decided to restore our circulations by a brisk walk homewards through the city streets on which the quiet and repose of evening had now descended. Having seen Brodribb fairly launched, we turned out of the station, and, crossing Liverpool Street, started at a swinging pace up New Broad Street. For a minute or two we walked on in silence while I debated inwardly whether or not I should propound my views to Thorndyke. Finally deciding in the affirmative, I began, cautiously: “Brodribb appears to me to have made up his mind definitely on this case. He seems quite convinced that Sir Edward hanged himself.”

“Yes, that was what I gathered from his remarks on the case.”

“I wonder why. He is a lawyer, and a pretty shrewd one, too.”

“Yes; but not a criminal lawyer. His experience is all on the civil side and principally in relation to property. Still, he may have reasons for his views of the affair which he has not disclosed. He knew Sir Edward pretty intimately and he knows all about the family. There may be some highly pertinent facts connected with the dead man’s personality and the family history which we know nothing about. I take it that you don’t agree with Brodribb?”

“I do not; and neither, I suspect, do you.”

“You are quite right, Jervis. I do not. But we must not allow ourselves to come to any sort of conclusion before we have seen and heard the evidence. We must try to approach to-morrow’s investigation with a perfectly open mind, and I am not
sure that we ought to be discussing it now.”

“There is no harm,” said I, “in just going over the ground—without prejudice.”

“Perhaps not,” he agreed; “and since my learned friend seems to have arrived at certain provisional conclusions, it would be interesting to bear his exposition of the case as it presents itself to him.”

I reflected for a moment, trying to arrange my ideas in an orderly sequence. At length I began: “Taking the points for and against the theory of suicide in this case, I know of only one in favour of it; the one that you mentioned—that unofficial hanging is usually suicidal. On the other hand, there are several reasons against it.

“First, there is the fact that he came to London. Why should he, if he had been intending to commit suicide? The natural thing, according to precedent, would have been to hang himself in his own bedroom or in a garret.”

“There are precedents of the opposite kind, though,” objected Thorgnyke. “I recall a case of a lady who poisoned herself in a very secluded wood on a common or in a park near London and whose body was not discovered for some months. Still, I agree that the probabilities are with you. What is the next point?”

“It is the fact that he unloaded his pockets of all valuables before he set out from the club. Why did he do that? If it is suggested that it was to provide against the chance that his body might be robbed, the obvious answer is that he could have avoided that possibility by committing suicide on his own premises. And the way in which the things were hidden under his shirt strongly suggests an intention to return and recover them. By Brodribb this incident seems to have been accepted as proof of an intention to commit suicide; but to me it has quite the opposite significance. Your own suggestion, made at the time, that he was expecting to go to some place and among some people where he might expect to be robbed, seems to meet the case perfectly; and Brodribb’s suggestion that where property on the person is not safe, the person is probably also in some danger seems to receive corroboration. You and Brodribb suggest in advance the possibility of his being exposed to danger of personal violence, and the next thing that happens is that he is found dead, having admittedly died a violent death.”

Thorndye nodded approvingly. “Yes,” he admitted, “I think that is quite fairly argued.”

“The next point,” I continued, “is the place in which the body was found. It is an empty house in an obscure and remote part of a region which is quite unknown to the immense majority of Londoners and almost certainly unknown to the deceased. How on earth did he get there and what could have been his object in going there? He could hardly have strayed thither by chance, for the place is difficult of access and right off the track to any more likely locality. On the other hand, the choice of this particular house suggests some local knowledge—knowledge of the existence of that desolate row of houses and of the fact that they were all uninhabited and likely to be left undisturbed and unexamined for months. The whole set of circumstances seems to me profoundly suspicious.”

“Then,” I resumed, “there is that new, cheap watch, evidently bought as a substitute for the watch that he had left at the club. The purchase of that watch seems to me utterly to exclude the state of mind of a man intending immediately to commit suicide. Then, finally, there is a point which, strangely enough, seems to have been overlooked by Brodribb—the seal. That seems to me the most suspicious of all the elements in the case. The sealed letter was posted on the Saturday, but we have evidence that the hanging could not have occurred before Sunday night at the earliest. Now, it is fair to assume that the letter was not sealed by Sir Edward.”

“It is extremely unlikely,” Thorndye interposed, “but we can’t say that it is impossible. And if we accept the hypothesis of suicide, it is not even very improbable. It might be suggested that Sir Edward adopted that method of announcing his death. But I may say that I agree with you in assuming that the letter was almost certainly sealed and posted by some other person.”

“Then, in that case, Sir Edward’s signet ring must have been in the possession of some other person at least twenty-four hours before the earliest moment at which he could have hanged himself in the empty house. That is a very remarkable and significant fact.”

“Has it occurred to you, Jervis,” Thorndye asked, “that Sir Edward might have been wearing his ring that day, or some other day after he left the club, and that it might have slipped off his finger and been picked up by some chance stranger? We have been told that it was a very loose fit.”

“That did occur to me,” I replied, “but I think we must reject that explanation. You remember that Sir Edward usually carried the ring in a little leather case or bag in his pocket. Now, if he had lost the ring off his finger, the empty case would have been in his pocket. But apparently it was not. I looked for it carefully among the things in the drawer that the Superintendent showed us and it was not there. And it could hardly have been overlooked in a careful search of the pockets.”

“No,” Thorndye agreed, “I think we may take it that the case was not there, though we shall have to verify its absence, since, as you say, the point is an important one and opens up some very curious possibilities. But here we are at our journey’s end. Your masterly summing-up of the evidence has made the miles slip by unnoticed. I must compliment you on the completeness of your survey. And we shall be none the worse for having gone over the ground in advance, provided that we approach the actual investigation to-morrow without prejudice or any expectation as to what we are likely to
VII. — NUMBER FIVE PIPER’S ROW

(DR. JERVIS’S NARRATIVE)

FROM my long association with Thorndyke, I was often able to deduce something of his state of mind and his intentions from observation of his actions. Particularly interesting was it to me to watch him (as unobtrusively as possible) packing his green canvas “research case” in preparation for some investigation, for, by noting carefully the appliances and materials with which he provided himself, I could form a pretty clear idea as to the points that he thought it necessary to elucidate.

Thus, on the morning on which we were to set forth for our second visit to Stratford, I stood by with an attentive eye on his proceedings as he put into the case the various articles which he thought might be needed. I was specially interested on this occasion because, while I viewed the case with the deepest suspicion, I could think of no method of attack on the undoubtedly plausible prima facie appearances. Possibly Thorndyke was in the same position; but one thing became clear to me as I watched him. He was taking nothing for granted. As I observed him putting into the case the chemically clean bottles with stoppers prepared for sealing, I realised that he was prepared for signs that might call for an analysis. The little portable microscope and the box of blank-labelled slides, the insufflator, or powder-spray, the miniature camera and telescopic tripod, the surveyor’s tape and small electric lamp, each indicated certain points which were to be subjected to exact tests and measurements, and the rubber gloves and case of post-mortem instruments showed that he contemplated taking an active part in the actual necropsy if the opportunity should present itself. The whole outfit suggested his habitual state of mind. Nothing was to be taken on trust. The one undisputed fact was that Sir Edward Hardcastle was dead. Beyond that Thorndyke would accept no suggestion. He was going to begin at the beginning as if no cause of death had been hinted at.

One item of the outfit did certainly puzzle me considerably—a box of keys from Polton’s rather doubtfully legal collection. The fact is that our worthy laboratory assistant held somewhat obscure views on certain aspects of the law; but on one subject he was perfectly clear. Whatever legal restrictions or obligations might apply to common persons, they had no application to “The Doctor.” In his view, his revered employer was above the law. Thus, in the assumed interests of that employer, Polton had amassed a collection of keys that would have been enough to bring a “common person” within hail of penal servitude, and a portion of his illegal hoard I now saw going into the research case. I examined them with profoundly speculative eyes. The collection included a number of common latch-keys, a graded set of blanks (how on earth had Polton managed to acquire those blanks, so strictly forbidden by the law?) and a bunch of skeleton keys of the pipe variety, simple in construction but undeniably felonious in aspect.

I asked no questions concerning those keys, reserving to myself the prospective entertainment of seeing them produced and put to their mysterious use; as to which I could form no sort of surmise. They were certainly not to let us into the house, for we had already been promised free admittance. But it was useless to speculate. The explanation would come all in good time, and now the research case, having received its lading, was closed and fastened and we were due to start.

At Stratford, we found the Superintendent ready to receive us and in the same helpful spirit as on the preceding day.

“You are full early, gentlemen,” he remarked, “as matters stand. The inquest opens, as you know, at four p.m., and the doctor has fixed two p.m. for the post-mortem. So you’ll have plenty of time to survey the ‘scene of the tragedy,’ as the newspapers call it, though I don’t fancy that you’ll spend your time very profitably. However, that’s your affair. You are acting for the executor, as I understand, so I suppose you have got to make a show of doing something.”

“Exactly,” Thorndyke agreed. “A specialist must make a demonstration of some kind. You gave my letter to the coroner?”

“Yes, sir. And it is just as well that you had it. Otherwise I don’t fancy you’d have got many facilities. He’s rather a touchy man and he seemed disposed to resent your coming here to hold what he calls ‘an unofficial inquiry of your own.’ However, it is all right. I am to let you see anything that you want to see, and the medical witness—he is the police surgeon’s deputy—has got the same instructions. And now I expect you would like to start. I’ve got the key here, but I can’t give it to you in case the coroner wants to inspect the place himself. Besides, you’ll want someone to show you where it is.”

He stepped to the door, and, looking into the adjoining office, called out: “Marshall, just take these two gentlemen down to number five Piper’s Row. You needn’t stay. Just let them into the house and bring the key back to me.”

As he spoke, he produced from the nest of drawers a key with a wooden label attached to it which he handed to the constable; and I noticed that, as it passed from hand to hand, Thorndyke bestowed a quick glance on it, and I suspected that he was memorising its shape and size. It was, however, but a momentary glance, for the key disappeared immediately into the constabulary pocket and the officer, with a salute to his superior, turned and led the way out into the street.

The town of Stratford is not strikingly prepossessing in any part. There is nothing of the residential suburb about it. But the district to which we were conducted by Constable Marshall seemed to reach the very limit of what is attainable in the way of repulsive squalor by the most advanced developments of modern industry. Turning out of the High Street by Abbey Lane, we presently emerged from the inhabited areas on to a dreary expanse of marsh, on which a few anaemic weeds
struggled to grow in the interstices of the rubbish that littered every open space. Gas works, chemical works, pumping stations and various large buildings of the mill or factory type arose on all sides, each accompanied by its group of tall chimney-shafts, all belching forth smoke and each diffusing the particular stench appropriate to the industry that it represented. A few rough roads, like urbanised cart tracks, flanked by drainage ditches, meandered across this region, and along one of these we picked our way until it brought us to the place where, as the Superintendent bluntly but justly expressed it, “some fool had built” Piper’s Row.

"Not much to look at, are they, sir?” Constable Marshall remarked in comment on our disparaging glances at the unspeakably sordid, ruinous little hovels. “Mr. Holker bought them for a song, but I fancy he’s going to lose his money all the same. This is the one.”

He halted at a decaying door bearing the number 5, fished the key out of his pocket, inserted it, gave it a turn and pushed the door open. Then, as we entered, he withdrew the key, wished us “good morning,” closed the door and took his departure.

For some moments Thorndyke stood looking about the tiny room—for there was no hall, the sitting-room opening directly on the street—letting his eye travel over its scanty details; the rusty grate, the little cupboard in the recess, the small, low window and especially the floor. He stepped across and tried the door of the cupboard, and, finding it locked, remarked that Holker had probably used it to stow away his tools.

“You notice, Jervis,” he added, “that the appearance of the floor does not seem to support the theory that the house was entered by the window. There are foot-marks under the window, certainly, but they are quite faint, whereas there are well-marked prints of muddy feet, two pairs at least, leading from the street door to the next room, which I suppose is the kitchen.”

“Yes, I see that,” I replied; “but as we don’t know whose foot-prints they are or when they were made, the observation doesn’t carry us very far.”

“Still,” he rejoined, “we note their existence and observe that they proceed, getting rapidly fainter, direct to the kitchen.”

He passed through the open doorway, still narrowly examining the floor, and halted in the kitchen to look round. But, beyond the faint marks on the floor, there was nothing to attract notice, and, after a brief inspection, we went on to the wash-house, which was what we had actually come to see.

Apparently, the place had been left in the condition in which it had been found by Holker, for the decrepit Windsor chair still lay on its side, while almost directly above it a length of thinnish brown rope hung down from a short beam that connected the principal pair of rafters. At this Thorndyke, when he had finished his scrutiny of the floor, looked with an expression of interest that it hardly seemed to warrant.

“The Superintendent,” he remarked, “spoke of a tie beam. It is only a matter of terminology, but this is rather what architects would call a collar beam. But the fact is of some interest. A tie beam, in a building of this size, would be within comfortable reach of a short man. But this beam is fully eight feet above the floor. Even with the aid of the chair, it is not so very accessible.”

“No. But the rope could have been thrown over and pulled taut after the knot was tied. It is made fast with a fisherman’s bend, which would run up close when the rope was hauled on.”

“Yes,” he agreed, “that is so. And, by the way, the character of the knot is worth noting. There is something rather distinctive about a fisherman’s bend.”

He stood looking thoughtfully at the knot, from which a long end hung down beside the ‘standing part’, which had been cut, as if the rope had been longer than was necessary for the purpose. Then he took the cut end in his hand and examined it minutely, first with the naked eye and then with the aid of a pocket lens. Finally, slipping on a glove, he picked up the chair, and, mounting on it, began deliberately to untie the knot.

“Is that quite in order, Thorndyke?” I protested. “We had permission to inspect the premises, but I don’t think we were expected to disturb anything.”

“We are not going to disturb anything in any essential sense,” he replied. “When we have finished, we shall re-tie the knot and put the chair as we found it. That will be good enough for the coroner’s jury. You might give me the tape out of the case.”

I opened the case and took out the long tape, which I handed to him and watched him as he carefully measured the rope and entered the length in his note book. It seemed an unaccountable proceeding, but I made no comment until he had re-fastened the rope and stepped down from the chair. Then I ventured to remark: “I should like to know why you measured that rope, Thorndyke. It seems to me that its length can have no possible bearing on anything connected with the case that we are investigating. Evidently I am wrong.”

“When we are collecting facts,” he replied, “especially when we are absolutely in the dark, we are not bound to consider their relevancy in advance. The length of this rope is a fact and that fact might acquire later some relevancy which it does not appear to have now. There is no harm in noting irrelevant facts, but a great deal of harm in leaving any fact unnoted. That is a general rule. But in this case there is a reason for ascertaining and recording the length of this piece of rope. Look at it attentively and see what information it yields.”
I glared at the rope with concentrated attention, but all the information that it yielded to me was that it was a piece of rope.

“I am looking at it attentively,” I said, doggedly, “and what I see is a length—about a fathom and a half—of thinnish coir rope, the thinnest coir rope, I think, that I have ever seen. It is made fast at the end with a fisherman’s bend and the other part has been cut.”

“Why the other part? I mean what is the distinction?”

“It is obvious,” I replied. “The end proper has got the whipping on it.”

“Exactly,” said Thorndyke. “That is the point. Incidentally, it is not a coir rope. It is a hemp rope dyed, apparently with cutch. But that is a detail, though a significant one. The chief point is that the end is whipped. A rope with cut ends is a rope of no determinate length. It is simply a piece of rope. But a rope with whipped ends has a determinate length. It is a definite entity. It may be a boat’s painter, a sheet, a halyard, a waterman’s towing-rope; in any case it is a thing, not a part of a thing. Here we have a piece of rope with a whipping at one end. We haven’t seen the other part. But we know that when it was complete it was whipped at both ends. And we know that, somewhere, there is a counterpart to this fragment and that the two together make up a known length.”

“Yes,” I agreed, “there is no denying the truth of what you have said, but it is a mere exposition of theory. Undoubtedly there does exist a piece of rope which is the complement to this piece. But as we have no idea where it is and there is not the remotest chance that we shall ever meet with it, or that we should recognise it if we did, your measurement is a mere demonstration of a principle without any utility at all.”

“Our chance of meeting with that complementary portion is small enough, I must admit,” said Thorndyke, “but it is not so infinitesimal as you think. There are some points which you have overlooked; and I think you have not fully taken in the immense importance of tracing the origin of this rope. But we must not waste time in discussion. This chair is the next subject for investigation. On the hypothesis that Sir Edward hanged himself, there should be prints of his fingers on some part of it; and if he did not, then there should be prints of the fingers of some other person.”

“I think we can take it that there will be plenty of finger-prints on it,” I said, “if they are not too old to develop. The latest must be at least three weeks old.”

“Yes, it is rather a poor chance, but we will try our luck.”

He opened the research case and brought out the insufflator with one of the powder containers which was filled with pure white powder. Having fitted the container to the spray-producer, he placed the chair where the light fell on the front aspect of it and began to work the bellows, keeping at some distance from the chair, so that the cloud of white powder met the surface quite gently. Very soon the whole of the front of the chair became covered with a thin, uniform coating of the impalpably fine white dust. Then the chair was turned about by pushing and pulling the lower parts of the legs and the other aspect coated with powder. When this process was completed Thorndyke proceeded to tap each of the legs very lightly and quickly with the handle of a large pocket-knife. At once, in response to the faint jarring strokes, the white dust began to creep down the perpendicular surfaces, and in a few seconds there came into view a number of rounded, smearable shapes on the broad, flat top rail of the chair-back. Still, as the light, quick tapping went on, the powder continued to creep down, leaving the shapes more and more conspicuous and distinct. Finally, Thorndyke transferred his operations to the top of the chair-back, gradually increasing the force of his blows until practically the whole of the powder had been jarred off, leaving the shapes—now unmistakable finger-prints—standing out strongly against the dingy, varnished surface.

“Not a very promising lot,” Thorndyke commented, after a preliminary inspection. “Several hopeless smears and several more super-imposed. Those won’t be much use even to the experts.”

With the aid of his pocket lens, he made a more critical survey of the one side while I examined the other, reinforcing the feeble light with the electric lamp.

“They are a very confused lot,” I remarked. “The trouble is that there are too many of them on top of one another. Still, there are several that show a distinguishable pattern. I should think the fingerprint experts will be able to make something of them.”

“Yes,” Thorndyke agreed, “I think so. It is surprising to see what shockingly bad prints they manage to decipher. At any rate, we will give them a chance.”

Between us, we got out the little camera, mounted it on its tripod and placed it in position by means of its wire sighting frame. Having measured the distance with the tape and set the focusing-scale, Thorndyke stopped the lens down to F. 16, and, taking out his watch, gave the long exposure that was demanded by the weak light and the small stop. Then, when, as a measure of safety, he had made a second exposure, we turned the chair round and repeated the operation on the opposite side.

“Are you going to leave the powder on the chair?” I asked as we re-packed the camera.

“No,” he replied. “The police have had their opportunity. Perhaps they have taken it. At any rate it will be best for us to keep our own counsel as to our private investigations. And the photographs will be available if they are wanted.”

With this he carefully dusted away all traces of the powder and when he had laid the chair in the place and position in which we had found it, he picked up the research case and we went back to the front room.
“Well,” I said, moving towards the door, “I think we have seen everything here and we have picked up one or two crumbs —pretty small ones as far as I am concerned. But perhaps there is something else that you want to see?”

“Yes,” he replied, “there are two more points that we ought to consider before we go. First there are those wheel-ruts. You noticed them, I suppose?

“I observed some ruts in the road as we came along. Deuced uncomfortable they were to a man with thin shoes. But what about them?”

“Apparently you did not notice them,” said he, “excepting as a source of physical discomfort. Come out now and take a careful look at them.”

He opened the street door and we stepped out on to the strip of rough ground that served as the footpath or ‘side-walk’. The unmade road that passed the houses was bumpy with obscure impressions of feet that had trodden it when the surface was moist and there were faint suggestions of old ruts. But in addition to these was a pair of deep, sharply-defined ruts with clear hoof-marks between, which I now remembered having seen as we came out of Abbey Lane.

“I can’t quite make up my mind as to the class of vehicle,” he said. “What do you make of it?”

“A two-wheeled cart of some kind,” I suggested. “A largish one, to judge by the space between the ruts.”

“Yes, it is rather wide for a light cart. My provisional diagnosis was a good-sized gig or dog-cart—more probably a gig. It was evidently a light, high vehicle, as we can tell by the narrowness of the rims and the large diameter of the wheels.”

“I can see that the rims were narrow, but I don’t see how you arrive at the diameter of the wheels.”

“It happens,” he explained, “to be quite easy in this case. There is a notch in the edge of the near tyre; rather a surprising feature if you consider the strength of an iron tyre. It must have been caused by striking a sharp angle of granite or iron at some corner.”

“I should have thought,” said I, “that a blow that would notch the tyre would have broken the wheel.”

“So should I,” he agreed. “However, there it is, and it leaves a small, triangular projection at the side of the rut; and of course, the distance between two such projections is the circumference of the wheel. We may as well measure that distance, and the width between the two tracks and the width of the rims. Fortunately, there is no one here to spy on us.”

I looked round as I unfastened the research case and handed out the tape. There was not a human creature in sight. Piper’s Row might as well have been in the midst of the Sahara.

Taking advantage of the solitude, we went out on to the road and made the three measurements at our ease; and as I held one end of the tape while Thorndyke stretched it and took the reading, I speculated vaguely as to the object of the proceeding.

“The tyres are one inch and a half wide,” he reported as he put away his note-book, “the width between the outside edges of the tyre-marks is fifty-seven inches and the circumference of the wheels is thirteen feet ten inches. That makes the diameter about four feet seven and a half, that is fifty-five and a half inches.

“Yes,” I agreed without much enthusiasm, “that will be about right. But why are we taking all this trouble? Is there anything particularly interesting about this cart?”

“The interest attaching to this cart,” he replied, “lies in the fact that it stopped at number five Piper’s Row.”

“The deuce it did!” I exclaimed. “That is rather remarkable, seeing that Number Five is an empty house.”

“Very remarkable,” he agreed. “It was quite a short halt,” he continued, “unless the horse was more than usually patient. But there is no doubt about it. You can see where the tracks swerve in slightly towards the house. Then there is the spot where the ruts lose their regularity and broaden out somewhat, and there is quite plainly the re-duplication of the hoof-marks where the horse has trodden two or three times in nearly the same place. That could have happened only when the cart was stationary.”

I was still looking down at the impressions to verify his statements when I was aroused by the slamming of a door. I looked up quickly and saw that a gust of wind had caught the door of Number Five and shut us out.

“Well, Thorndyke,” I remarked with a faint grin, “that seems to put the stopper on that further point that you were going to elucidate.”

“Not at all,” he retorted. “I would say rather that it introduces it in a particularly opportune way. Do you mind opening the research case?”

I did so; and when he had replaced the tape in its compartment, he took out the box of keys which had so stimulated my curiosity. Opening it, he extracted the bunch of skeleton keys, and, glancing from them to the keyhole, he deliberately selected one and inserted it. It entered quite easily and when he gave it a turn and a slight push, the door opened and we walked in.

“You see, Jervis,” he said, withdrawing it from the keyhole and holding it out to me, “here is a perfectly elementary skeleton key, made by simply cutting away the whole of the bit excepting the top and the bolt edge. I selected it with Constable Marshall’s key in my mind.”
“That was a ward key, I think?”

“Yes, it had three vertical slits in the bit, which ostensibly corresponded to three concentric wards in the lock.”

“Why ‘ostensibly’?”

“Because I suspect that they are not there. But in selecting the skeleton key I assumed that they were there, and you saw the result. Also you see the weakness of a ward lock. The wards are obstructions placed in the path of the key. The key which fits a particular lock has slits corresponding to the wards, so that it can turn and let the wards pass through. But it isn’t necessary for the slits to fit the wards. All that is necessary is a hole in the key-bit large enough to let it pass the wards. The simplest plan is, as in this key, to cut out the whole of the bit excepting the distal edge—which enters the notch, or ‘talon’—of the bolt and moves it—and the top edge which joins it to the key stem. I am speaking, of course, of comparatively simple locks.”

“And you think that this lock hasn’t any wards at all?”

“It is a mere guess based on the generally shoddy appearance of the fittings. But we can easily settle the question.”

Once more he opened the key box and this time took out a locksmith’s ‘blank’, which he compared with the skeleton key. Finding their bits about the same width, he tried the blank in the lock. It entered as easily as the skeleton had, and when he turned it, it made its circuit in the same manner and duly drew in the bolt.

“That,” said Thorndyke, “makes it perfectly clear. This blank could not possibly have passed a ward. It follows that this lock contains nothing but a spring bolt. Consequently it could be opened by practically any key that would enter the keyhole and that was long enough in the bit to reach the notch of the bolt.”

“By the way,” said I, “if there are no wards, what is the function of those slits that you described in the key?”

“Their function, I take it, is purely commercial—a matter of salesmanship; to produce a certain moral effect on the purchaser. He sees a somewhat intricate key and naturally infers a corresponding intricacy in the lock. The ethics of commerce are sometimes a little difficult for the uncommercial mind to follow.”

“Yes, by Jove,” said I. “That dummy key does seem uncommonly like a fraud. But with regard to this lock: it is all very curious and interesting but I don’t quite see the purpose of these experiments. Obviously they have some bearing since you took the trouble to bring that collection of keys.”

“Yes,” he replied as he returned the box to the green canvas case and fastened the latter, “they have a bearing. We can discuss it as we walk back to the town; and I propose that we follow the tracks of the cart and see where it went to. It is bound to go our way, as this area of marsh is enclosed on the other three sides by the creeks.”

We went out of the dismal little house, slamming the door behind us, and set forth along the rough footway in the direction in which the cart had gone. We walked a short distance in silence; then Thorndyke returned to my question.

“The bearing of what we have ascertained about that lock is this; we are invited to believe that entrance was effected into the house by the window because the door was shut and locked. But the fact, which we have established, that the lock is one which can be opened with almost any key—or even with a piece of stiff wire—makes any such supposition unnecessary. The house was accessible to anybody by way of the door.”

“As far as Sir Edward was concerned,” said I, “you remember that he had no keys on him at all.”

“Yes. And that fact may have influenced the Superintendent. But it doesn’t influence us. If Sir Edward went into that house of his own free will it is of no concern to us whether he got in at the window or climbed down the chimney. But if we assume—as I take it we both do, without prejudice as to what may transpire at the inquest—that he was taken into that house forcibly, or in a state of unconsciousness, or actually dead, then the facility of access becomes a material fact. For the proceedings would necessarily be hurried. There would be no time for the manipulation of windows or picking of locks. Entry would have to be effected at once.”

“That means,” said I, “that the person or persons who entered knew what sort of lock was on the door.”

“Undoubtedly,” he agreed. “The house must have been known to at least one of the parties, and would, presumably, have been visited and explored. The plan must have been arranged and prepared in advance to enable it to be carried out quickly.”

“What do you suppose to have been the actual modus operandi?” I asked.

“From what we have seen, I should reconstruct events somewhat thus: First, a scout would come to the place, try the lock and ascertain that a particular key would open it, explore the house and select the place where the victim could be most conveniently hanged. Then, at the appointed time, the victim—who must almost necessarily have been either dead or insensible—would be put in the cart and covered up; the three men—possibly two, but much more probably three—would mount to the seat and the cart would be driven to the house pretty late at night, so as to secure complete darkness.

“On arriving at Number Five, one man would jump down and open the door. The victim and the rope would then be handed down and carried in and the door shut. The cart would then be driven off, possibly to wait at some rendezvous outside the immediate neighbourhood. The two men, having concluded the business, would come out and walk to the rendezvous and the whole party would then return whence they came.”
"Yes," I said, "that sounds very complete and consistent. But aren’t we taking rather a lot for granted? I admit that the stopping of that cart opposite Number Five is a highly suspicious circumstance—and here we are, back at Abbey Lane and here are the cart-tracks back with us. So the cart must have made the round expressly to call at Number Five, which strongly supports your theory. But still, we are assuming that the cart made that very suspicious call on that particular night. Of course, it is extremely probable that it did; and if it did, it almost certainly conveyed Sir Edward, alive or dead. The fatal flaw in the evidence is that we can’t fix the date on which the cart called at the house."

"But I think we can, Jervis. One doesn’t really like to use the word certainty, but I think I can fix the date with the very highest degree of probability."

"Then," said I, "if you can do that, I accept your hypothetical reconstruction as almost certainly representing what actually happened. But I should like to hear the evidence."

"The evidence," he replied, "is based on two factors; one is the state of the road when the tracks were made; the other is the time at which the road could have been in that particular state. Let us consider factor one.

"You saw the ruts and the hoof-prints. They were deep and sharp but by no means dead sharp. There was a slight blurring of the edges of the impressions. The soil of the road was an impure clayey loam. Now, since the impressions were deep, the road must have been quite soft; but since the impressions were fairly sharp, the mud could not have been liquid or diffused, for liquid or semi-liquid mud does not retain impressions. It could not have been raining when the impressions were made, for in the soft state of the road, rain would have largely obliterated them. For the same reason, no appreciable rain could have fallen after they were made.

"On the other hand, the road could not have dried enough to become plastic or semi-solid, or—on soil of this kind—the impressions would have been dead sharp. So it comes to this: the ruts were made after heavy rain—heavy enough to swamp the road. But there was an interval after the rain, long enough to allow the semi-liquid stage to pass off but not long enough to allow the mud to pass into the plastic or semi-solid stage.

"Now let us take the second factor—the time factor. I need not remind you of the long drought that has prevailed this summer. It began, as you probably remember, at the very end of May, and it still continues. In that drought there has been up to the present only a single break—a single, dramatic break. On Sunday, the twenty-first June, a tremendous storm burst over the London area, and for more than an hour the rain fell in torrents. The storm clouds came up quite suddenly about half-past four in the afternoon and the rain ceased and the clouds rolled away with almost equal suddenness about six o’clock. And forthwith the drought resumed its sway. A hot, dry easterly wind followed the storm and the pavements dried up as if the water on them had been spirit.

"Now, during that heavy rain, these roads across the marshes must have been flooded. For the time being, their surfaces must have been just liquid mud. But we must remember that under that liquid mud, only a few inches down, was soil baked dry by weeks of drought. Before midnight the surface water would have soaked in, bringing the soil to the consistency shown by these ruts. By the following morning, or at least by noon, the plastic stage would have been reached, while by evening, after a day’s hot sunshine and dry wind, the surface would have become too firm to yield deep impressions like these with their surrounding ridges. As I say, one doesn’t like to use the word certainty; but I submit that we are justified in assuming with considerable confidence that these ruts were made on the night of Sunday, the twenty-first of June, probably after ten o’clock."

"More probably in the small hours of the morning," I suggested.

"The state of the road would admit of that view," he replied, "but other considerations suggest an earlier hour—say from eleven to half-past. A party of men with a dead or insensible man in a cart would not wish to attract notice or run the risk of being stopped and questioned. Up to midnight they would be pretty safe, but in the small hours a cart prowling round an unfrequented neighbourhood or travelling along a road that leads nowhere might excite the curiosity of an alert and enterprising policeman. However, that is mere surmise and not at present of special interest to us. The important point is the date and the approximate time."

"By the way, Thorndyke," I asked, "how do you manage to remember all these details? I recollect the storm, of course, and now that you mention it, I think I can corroborate the date and the time. But it is a mystery to me how you keep these dates and times in your memory, ready to be produced at a moment’s notice."

"The solution of that mystery," he replied, "is quite simple. I don’t. I keep a diary; a highly condensed affair, but I note in it everything that may need to be recalled. And I always enter the state of the weather, having learned from experience that it is often a vitally important means of fixing the time of other happenings, as in the present case. I looked it up last night, principally in connection with the possibility of finding muddy foot-prints in the house."

"After reading me a lecture on the impropriety of discussing the case in advance," I said with a grin; "and now you have built up a complete reconstruction of the events before we have even seen what the post mortem has to tell, to say nothing of the inquest."

He smiled deprecatingly. "We had no choice, Jervis. We could only observe the facts in the order in which they were presented. But, still, I hope we shall approach the inquest without prejudice; and it is possible that we may get a surprise from the evidence of Brodribb or Weeks, but especially Brodribb. I suspect that he has something in his mind that he has not disclosed to us."
"The deuce!" I exclaimed. "You think there may have been reasons for anticipating the possibility of suicide? It will be a bit of an anti-climax if evidence of that kind is given, for it will knock the bottom out of your elaborate reconstruction."

"Not necessarily," he replied; "opinions and expectations are no answer to observed facts; and you must not forget, Jervis, that a known intention or tendency to commit suicide makes things uncommonly easy for a murderer. But it is time that we turned our attention to the subject of food. We are due at the mortuary at two o'clock, and it will not be amiss if we get there a few minutes before our time. How will this place do?"

He halted opposite a restaurant of somewhat fly-blown aspect, the fascia of which bore an Italian name. In the window, a 'set piece' (consisting of two glass dishes of tomatoes flanking the head of a calf, who appeared from his complexion to have died of pernicious anaemia) was exhibited to whet the appetites of passers-by, while through the open doorway an unctuous odour suggestive of thick soup stole forth to mingle with the aroma from an adjacent soap-boiler's.

"Well," I said, "the soup inside smells better than the soap outside. Let us go in." Accordingly we went in.

VIII. — SIR EDWARD HARDCASTLE, BART., DECEASED

(DR. JERVIS'S NARRATIVE)

THORNDYKE'S reasons for wishing to arrive at the mortuary a few minutes before the appointed time were not difficult to guess at. But they became crystal clear as soon as the constable, deputed by the Superintendent, had admitted us and retired. As soon as the door shut behind the officer, he stepped quickly across to the long shelf on which the clothing had been deposited, and, picking up the shoes, turned them over, took a single glance at the soles, and then, without comment, held them out for my inspection.

No comment was needed. The soles were, relatively speaking, perfectly clean. There was not a trace of mud or any sign whatever of their having been damp. On the contrary, there still clung to them a certain amount of light dust, and this was still more evident on the welts and uppers. The condition of those shoes proved with absolute certainty that however and whenever Sir Edward Hardcastle had got into that empty house, he had not walked there on the night of Sunday, the twenty-first of June.

There was no time, however, to dwell on this striking confirmation of our previous conclusions. Thorndyke already had the research case open and had taken out the little finger-print box and produced from it the ready-inked copper plate, a piece of soft rag and a couple of smooth cards. The latter he handed to me, and together we moved over to the great table and uncovered the hands of the corpse.

"We shan't get normal prints," he remarked, as he wiped the finger-tips one after the other and then touched them with the inked plate, "but they will be clear enough to compare with our photographs of those of the chair-back."

They were certainly not normal prints, for the finger-tips were shrunken and almost mummified. But, distorted as they were, the ridge-patterns were fairly distinct and quite decipherable, as I could see by the quick glance that I took at each print after pressing the inked finger-tip on the card.

"Yes," I agreed, "there will be no difficulty about these. I only wish the photographs were half as clear."

I handed them to him and he immediately slipped them into the grooved receptacle with which the box was provided. Then he closed the latter and replaced it in the research case.

"I am glad we were able to get that done unobserved," said he. "Now we can make our observations at our ease."

He took out of the research case a pair of rubber gloves and a case of post-mortem instruments which he placed on a vacant spot on the great table. Then he brought out the tape and carefully measured the length of the corpse.

"Sixty-five inches," he reported. "Five feet five. You remember the height of that beam. Now we will have another look at those shoes."

He took them up once more and turned them over slowly to bring each part into view. Adhering to one heel was a small flat mass of some material which had apparently been trodden on, and which Thorndyke detached with his pocket-knife and deposited in an envelope from the research case.

"Looks like a small piece of soap," he remarked as he wrote "heel of right shoe" on it and put it back in the case, "but we may as well see what it is. You notice several rubbed places on these shoes, but especially on the backs, as if deceased had been dragged along a fairly smooth surface. Perhaps the back of his coat may tell us something more."

He laid the shoes down and, taking up the neatly folded coat, carefully unfolded it and held it up.

"I think you are right, Thorndyke," said I. "The coat is pretty dirty all over, but the back is noticeably more dusty than the other parts. It looks as if it had been dragged along a dirty floor; and those two bits of cotton sticking to it suggest indoor rather than outdoor dirt. And the same is true of the trousers," I added, holding them up for inspection. "There is a definitely dusty area at the back, and here is another piece of cotton sticking to the cloth."

"Yes, I think that point is clear," he said, "and it is an important point. The cotton is, as you say, definitely suggestive of a floor rather than an out-of-door surface." He picked off the three fragments, and, as he bestowed them with the other 'specimens', remarked: "There is nothing very distinctive about cotton, but we may as well take them for reference. I wish
we had time to go over the clothing thoroughly, but we had better not show too conspicuous an interest.”

Nevertheless, he looked over each garment, quickly, but with intense scrutiny, passing each to me before taking up the next. Over one object only—the collar—did he seem disposed to linger; and certainly its appearance invited notice; for not only was it extremely dirty and crumpled, but it seemed to be uniformly stained as if with weak tea. Moreover, as I held it in my hands, it gave me the impression of a sort of harsh stiffness unaccounted for by the material, for it was a collar of the kind known as ‘semi-stiff’ which usually becomes quite limp after a day’s wear. But now Thorndyke had passed on to an examination of the rope noose and I laid down the collar to join him.

“Evidently,” said he, “as they were able to remove it without cutting it, the knot must have slipped open pretty easily. And you can see why. The noose was made with a running bowline, a rather unsuitable and unusual knot for the purpose. We will venture to untie it and measure its length, to add to our other measurement. You notice that both ends are cut, so that the whole length is only a part of the complete rope, whatever it was.”

He rapidly unfastened the knot and measured the length of the piece, and when he had made a note of the measurement, he produced his pocket-knife and cut off a portion about eight inches long which he dropped into the research case. Meanwhile, I carefully re-tied the bowline and had just replaced it where we had found it when the door opened somewhat abruptly and a stout, well-dressed, middle-aged man bustled in and deposited a hand-bag on a side bench.

“I must really apologise to you, gentlemen,” he said, civilly, “for keeping you waiting, but you know how difficult it is for a G.P. to keep appointments punctually. Inquests are the bane of my life.”

He hung his hat on a peg by the door, and then, as he turned, his glance lighted on Thorndyke’s rubber gloves and instrument case.

“Those your tools?” he asked; and when Thorndyke admitted the ownership, he enquired with evident interest: “Were you thinking of taking a hand in this job?”

“I came prepared to offer any assistance that might be acceptable,” Thorndyke replied.

“That is very good of you—my name is Ross, by the way. Of course I know yours—very good of you, indeed. I don’t mind confiding to you that I hate post-mortems; and really, they are not very suitable jobs for a man who is going in and out of sick-rooms and examining living people.”

“I quite agree with you,” said Thorndyke. “Medicine and pathology do not mix kindly; and as I am a pathologist and not in medical practice, perhaps you would like me to carry out the actual dissection?”

“I should, very much,” Dr. Ross replied. “You are an experienced pathologist and I am not. But do you think it would be in order?”

“Why not?” Thorndyke asked. “You are instructed to make a post-mortem inspection. You can do that without performing the dissection. The observations and inferences on which you will give evidence will be your own observations and inferences.”

“Yes, that is true,” agreed Ross. “But perhaps I had better make, say, the first incision. If I do that, I can say truthfully that I made the post-mortem with your assistance. That is, if I am asked. The whole affair is a mere formality.”

“Very well,” said Thorndyke; “we will make the autopsy jointly,” and with this he took off his coat, rolled up his shirt sleeves, drew on the rubber gloves, opened his instrument case and removed the sheet with which the body had been covered.

I was somewhat amused at our colleague’s casuistry and also at the subtlety of Thorndyke’s tactics. The sort of examination that our friend would have made, on the assumption that the cause of death was obvious and the autopsy “a mere formality,” would not have served Thorndyke’s purpose. Now he would conduct the investigation in accordance with what was in his own mind.

Dr. Ross ran his eye quickly over the corpse. “It is not an attractive body,” he remarked, “but it might easily have been worse after three weeks. Still, all those post-mortem stains are a trifle confusing. You don’t see anything abnormal about the general appearance, do you?”

“Nothing very definite,” replied Thorndyke. “Those transverse stains on the outer sides of the arms might be pressure marks, or they might not.”

“Precisely,” said Ross. “I should say they are just post-mortem stains. They are certainly not bruises. What do you think of the groove?”

“Well,” replied Thorndyke, “as we know that the body was hanging for three weeks, we can hardly expect to learn much from it. You notice that the knot was at the back and that it was a rather bulky knot.”

“Yes,” said Ross. “Wrong place, of course, and wrong sort of knot. But perhaps he hadn’t had much practice in hanging himself. Shall I make the incision now?”

Thorndyke handed him a scalpel and he made an incision—a very tentative one. Then he retired to the open window and lit his pipe.

“You don’t want to supervise?” Thorndyke enquired with a faint smile.
“What is the use? You are an expert and I am not. If you will tell me what you find, that will satisfy me. I accept your facts without question, though I shall form my own conclusions.”

“You don’t consider an expert’s conclusions as convincing as his facts?” I suggested.

“Oh, I wouldn’t say that,” he replied. “But, you see, a medico-legal expert tends to approach an inquiry with a certain bias in favour of the abnormal. Take this present case. Here is an unfortunate gentleman who is found hanging in an empty house. A melancholy affair, but that is all that there is to it. Yet here are you two experts, with an enthusiasm that I admire and respect, voluntarily and cheerfully undertaking a most unpleasant investigation in search of something that pretty certainly is not there. And why? Because you utterly refuse to accept the obvious.”

“It isn’t exactly the function of a medico-legal expert to accept the obvious,” I ventured to remind him.

“Precisely,” he agreed. “That is my point. Your function is to look out for the abnormal and find it if you possibly can. To you, a normal case is just a failure, a case in which you have drawn a blank.”

I was on the point of suggesting that his own function in this case was, in effect, the same as ours. But then, as I realised that his easy-going acceptance of surface appearances was making things easy for Thorndyke, I refrained and proceeded to “make conversation” along other lines.

“Your work as police surgeon must give you a good deal of medico-legal experience,” I remarked.

“I’m not the police surgeon,” he replied; “at least only by acting rank. The genuine artist is away on leave and I don’t care how soon he comes back. This job is a hideous interruption of one’s ordinary routine. But I see that the pathologist has made a discovery. What is the specimen that you are collecting?” he added as Thorndyke replaced the stopper in a bottle and stood the latter on a side bench.

“It is some fluid from the stomach,” Thorndyke replied. “There was only an ounce or so, but I am surprised to find any in a half-mummified body like this.”

“And you are preserving it for analysis, I suppose?” said Ross.

“Yes, just a rough analysis as a matter of routine. Would you write the label, Jervis?”

“Any particular reason for preserving that fluid?” asked Ross. “Any signs or suggestions of poison, for instance?

“No,” replied Thorndyke. “But it will be just as well to exclude it definitely. The stomach is better preserved than I should have expected and less red.”

“You don’t suspect arsenic?”

“No, certainly not as a cause of death; nor, in fact, any other poison. The routine analysis is just an extra precaution.”

“Well, I expect you are right, from your point of view,” said Ross. “And, of course, poison is a possibility. The ways of suicides are so unaccountable, I heard of a man who took a dose of oxalic acid, then cut his throat, ineffectually, and finally hanged himself. So this man may have taken a dose and failed to produce the desired effect; but he undoubtedly finished himself off with the rope, and that is all that matters to the coroner’s jury.”

“There are a number of small bodies which look like fish-scales sticking to the walls of the stomach,” Thorndyke reported. “No other contents excepting the fluid.”

“Well,” Ross protested, “there is nothing very abnormal about fish-scales in the stomach. The reasonable inference is that he had been eating fish. What do you mean to suggest?”

“I am not suggesting anything,” replied Thorndyke. “I am merely reporting the facts as I observe them. The lungs seem slightly oedematous and there is just a trace of fluid in them—but only a trace.”

“Oh, come,” Ross expostulated, “you are not going to hint that he was drowned! Because he wasn’t. I’ve seen some drowned bodies and I can say quite positively that this is not one. Besides, let us keep the facts in mind. This man was found hanging from a beam in a house.”

“Once more,” Thorndyke replied, a little wearily, “let me repeat that I am offering no suggestions or inferences. As we agreed, I report the facts and you form your own conclusions. There are one or two of these little bodies—fish-scales or whatever they are—in the air-passages. Perhaps you would like to look at them.”

Dr. Ross walked over to the table and looked down as Thorndyke demonstrated the little whitish specks sticking to the sides of the bronchial tubes, and for the moment he seemed somewhat impressed. But only for a moment. Unlike the medico-legal expert, as his fancy painted him, Dr. Ross evidently approached an inquiry with a strong bias in favour of the normal.

“Yes,” he said, as he returned to the window, “it is queer how they can have got into the lung. Still, we know he had been eating fish, and there must have been particles in the mouth. Perhaps he had an attack of coughing and got some of them drawn down his trachea. Anyhow there they are. But if you will excuse me for saying so, these curious and no doubt interesting little details are just a trifle beside the mark. The object of this examination is to ascertain the cause of death—if it isn’t obvious enough from the circumstances. Now, what do you say? You have made a pretty complete examination—and uncommonly quick you have been over it. I couldn’t have done it in twice the time. But what is the result? The alleged fact is that this man hanged himself. If he did, he presumably died of asphyxia. Is the appearance of the body consistent

with death from asphyxia? That is the question that I shall be asked at the inquest; and I have got to answer it. What do you say?

“One doesn’t like to dogmatise,” Thorndyke answered, cautiously. “You see the state of the body. Most of the characteristic signs are absent owing to the drying and the other changes. But making all the necessary allowances, I think the appearances are suggestive of death from asphyxia. At any rate there are no signs inconsistent with that cause of death and there is nothing to suggest any other.”

“That is what I wanted to know,” said Ross, “and if you can give me one or two details, I will run off and put my notes in order so that I can give my evidence clearly and answer any questions.”

Thorndyke dictated a brief description of the state of the various organs which Ross took down verbatim in his notebook. Then he put it away, got his hat from the peg and picked up his hand-bag.

“I am infinitely obliged to you two gentlemen,” he said. “You have saved me from a task that I hate and you have done the job immeasurably better than I could have done it and in half the time. I only hope that I haven’t victimised you too much.”

“You haven’t victimised us at all,” said Thorndyke. “It has been a matter of mutual accommodation.”

“Very good of you to say so,” said Ross; and having thanked us once more, he bustled away.

“I hope that you have not misled that good gentleman,” I remarked as Thorndyke proceeded to restore, as far as possible, the status quo ante and render the corpse presentable to the coroner’s jury.

“I have not misled him intentionally,” he replied. “I gave him all the observed facts. His interpretation of them is his own affair. Perhaps, while I am finishing, you would complete the labels. That corked tube filled with water contains the fish-scales, as I assume them to be.”

“Shall I write ‘fish-scales’ on the label?”

“No; just write ‘from lungs, mouth and stomach’; and perhaps you might look through the beard and the hair and see if you can find any more.”

“The hair!” I exclaimed. “How on earth could they get into the hair?”

“Perhaps they did not,” he replied. “But you may as well look. We are not adopting Ross’s interpretation, you know.”

I took a pair of dissecting forceps and searched among the rather short hair of the scalp, speculating curiously as to what Thorndyke could have in his mind. But whatever it was, it evidently agreed with the facts for my search brought to light no less than six of the little, white, lustrous objects.

“You had better put them in a separate tube,” said Thorndyke, when I reported the find, “in case they are not the same as the others. And now it would be as well to have another look at the coat.”

He had drawn the sheet over the whole of the body excepting the head and neck and now proceeded to clean and dry his rubber gloves and instruments. While he was thus occupied, I took up the coat and made a fresh and more detailed inspection.

“It is extraordinarily dirty at the back,” I reported, “and there seems to be a slight stain on the collar and shoulders as if it had been wetted with dirty water.”

“Yes, I noticed that,” he said. “You don’t see any foreign particles sticking to it or to any of the other garments?”

I looked the coat over inside and out but could find nothing excepting a tiny fragment of what looked like black silk thread, which had stuck to the flap of a pocket. I picked it off and put it in the envelope with the ends of cotton. Then I turned my attention to the other garments. From the trousers nothing fresh was to be learned, nor from the waistcoat—the pockets of which I searched to make sure that the little leather ring-case had not been overlooked—excepting that, like the coat, it showed signs on its collar of having been wetted; as also did the blue and white striped cotton shirt. I was examining the latter when Thorndyke, having finished ‘tidying up’, came and looked over my shoulder.

“That stain,” he remarked, “hardly looks like water, even dirty water, though it is surprising how distinct and conspicuous a stain perfectly clean water will sometimes make on linen which has been worn and exposed to dust.”

He took the garment from me and examined the stained part intently, felt it critically with finger and thumb and finally held it to his nose and sniffed at it. Then he laid it down and picked up the collar, which he examined in the same manner, by sight, touch and smell, turning it over and opening the fold to inspect the inside.

“I think,” he said, “we ought to find out, if possible, whether this was water or some other fluid. We don’t know what light the knowledge might throw on this extraordinarily obscure case.”

He was still standing, as if undecided, with the collar in his hand when the sound of footsteps approaching down the alley became audible; whereupon he turned quickly, and, dropping the collar into the research case, closed the latter and took his hat down from the peg. The next moment the door opened and the sergeant looked in.

“Jury coming to view the body, gentlemen,” he announced; and with a critical look towards the table, he added: “I thought I had better come on ahead and see that they shouldn’t get too bad a shock. Juries are sometimes a bit squeamish,
but I see that the doctor has left everything tidy and decent. You know where the inquest is to be held, I suppose?

"We don’t," replied Thorndyke, “but if we lurk outside and follow the jury we shan’t go far wrong.”

We walked up to the top of the alley, where we met a party of rather apprehensive-looking men who were being personally conducted by a constable. We waited for them to return, which they did with remarkable promptitude and looking not at all refreshed by their visit, and we turned and followed in their wake, the sergeant, as coroner’s officer, hurrying past us to anticipate their arrival at the place where the inquiry was to be held.

“It seems almost a waste of time for us to sit out the proceedings,” I remarked as we walked along in the rear of the procession. “We have got all the material facts.”

“We think we have,” replied Thorndyke, “and it is not likely that we shall hear anything that will alter our views of the case. But, still, we don’t know that something vital may not turn up in the evidence.”

“I can’t imagine anything that could account for the state of the dead man’s shoes,” said I.

“No,” he agreed, “that seems conclusive, and I think it is. Nevertheless, if it should transpire in evidence that Sir Edward was seen in the neighbourhood before the rain started, the absence of mud on his shoes would cease to have any special significance. But here we are at the court. I expect Brodribb is there already and it will probably be best for him and for us if we select seats that are not too near his. He will want to give his whole attention to his own evidence and that of the other witnesses.”

We watched the last of the jurymen enter the municipal office in which the proceedings were to take place; then we went in and took possession of a couple of chairs in a corner, commanding a view of the table and the place in which the witnesses would stand or sit to give their evidence.

IX. — THE CROWNER’S QUEST

(DR. JERVIS’S NARRATIVE)

DURING the brief preliminary period, while the jurymen were taking their places and the court was pervaded by the hum of conversation and the rustle of movement, I looked about me to see who was present and if possible to identify the prospective witnesses. Brodribb was seated near the coroner’s chair, and, by his rather unhappy, preoccupied look, I judged that Thorndyke, with his usual tact, had pretty accurately gauged his mental state. He caught my eye once and acknowledged my silent greeting with a grave nod, but immediately relapsed into his previous gloomy and meditative condition.

Seated next to him was an elderly—or perhaps I should say an old—man, for he looked well over sixty, who was, in appearance, such a typical example of the old-fashioned better gentleman’s servant that I instantly placed him, correctly, as it turned out, as Mr. Weeks, Sir Edward’s butler. Behind the coroner’s chair was our friend the Superintendent, who was carrying on a whispered conversation with Dr. Ross. Our colleague struck me as looking a little nervous and sheepish and I noticed that he held a paper in his hand and glanced at it from time to time. From which I inferred that he was conning over his notes with a view to the prompt and confident delivery of his evidence.

At this point my observations were brought to an end by a premonitory cough on the part of the coroner, which had somewhat the effect of the warning rattle of a striking clock, as giving the company to understand that he was about to begin his address. Thereupon, silence fell on the assembly and the proceedings opened. Quite briefly and in general terms, he indicated the nature of the case which was the subject of the inquiry, and, having sketchily recited the leading facts, proceeded to call the witnesses.

“It is the common practice,” he said in conclusion, “to begin with the medical evidence, as the state of the body is usually the principal means of determining the cause of death and of answering the questions, How, When and Where that death was brought about. But in the present case the circumstances surrounding the discovery of the body have so important a bearing that I think it better to take the evidence on that point first. The first witness will be James Holker.”

In response to the implied summons, a well-dressed, capable-looking man rose and approached the table. Having been sworn, he deposed that his name was James Holker, that he was by calling a ship’s steward but now retired and living chiefly on the proceeds of certain house property that he owned. Among other such property was a row of houses known as Piper’s Row; and it was in one of these houses, Number Five, to wit, that he made the discovery.

“On what date was that?” the coroner asked.

“On Tuesday, the fourteenth of July. Yesterday morning, in fact.”

“Tell us exactly what happened on that occasion.”

“I went round to Number Five to go on with some repairs that I had begun. I went straight into the front room—that is the living-room—and then I noticed a glove lying on the floor under the window. I remembered having seen that glove before. But now I noticed something very unpleasant about the air of the place and there seemed to be an unusual number of flies and blue-bottles about. So I went through to the kitchen and it was worse there. Then I opened the door of the wash-house and looked in; and there I saw a man hanging from a roof-beam. I didn’t stop to examine him. I just bolted straight out of the house and ran up to the police station to report what had happened.”
“You had no doubt that the man was dead?”

“No, sir. That's all I know about it.”

The coroner glanced at the jury. “Are there any questions that you wish to ask the witness, gentlemen?” he enquired. “If not, we will next take the evidence of Superintendent Thompson.”

The Superintendent marched briskly up to the table and having disposed, with business-like brevity, of the preliminary formalities, gave his evidence with a conciseness born of long experience.

“At ten-fifteen yesterday morning, that is Tuesday, the fourteenth of July, the previous witness, James Holker, came to the police station and reported to me that a dead man was hanging in a house of his, Number Five Piper’s Row. I gave instructions for a wheeled stretcher to be sent there and then proceeded forthwith to the house in company with Holker and Constable Marshall.

“On entering, I went straight through to the wash-house, where I saw the dead body of a man hanging by a rope from a roof-beam. Nearly underneath the body but a little to one side was an overturned chair; and close to the chair a wash-leather glove was lying on the floor and a little farther off a soft felt hat. A walking-stick was standing in the corner by the door. Deceased had no collar on, but I found the collar, afterwards, in his pocket, very dirty and crumpled. The rope by which the body was hanging was a small coir rope, a trifle thinner than my little finger. It was tied very securely to the beam above and the noose had a rather large knot, which was at the back of the neck.”

“Could you form any idea as to how long the body had been hanging?” the coroner asked.

“I could only form a rough estimate. Judging by the advanced state of decomposition I concluded that it must have been hanging at least a fortnight, and I thought it probable that Holker's account, making it three weeks, was correct.”

“Did there appear to be anything unusual in the method used by deceased?”

“No. The way in which the suicide was carried out seemed quite simple and ordinary. Apparently, when he came into the wash-house, he stood his stick in the corner, threw down his hat and glove, took off his collar and put it in his pocket. Then he probably made the noose, stood on the chair and tied the rope to the beam, put the noose round his neck, pulled it fairly tight, drew up his legs and kicked the chair over so that he was left swinging free. That was what it looked like.”

“Is there any evidence as to how deceased got into the house?”

“I think there is no doubt that he got in by the front room window. He couldn't have got in by the street door, because it was locked—at least, so I am informed by Holker, who is quite sure that he shut it when he left the house on Sunday evening, the twenty-first of June—and deceased had no keys on him. But there is positive evidence that he got in by the window; for when I went into the front room, I found the window unfastened and open a couple of inches, and just underneath it I found a wash-leather glove on the floor, which was evidently the fellow of the glove that was lying on the wash-house floor under the body.”

“And with regard to the rope. Did deceased find that on the premises?”

“No. He must have brought it with him. I questioned Holker about it and he informed me that it was not his, that he had never seen it before and that there was no rope of any kind in the house.”

“Were there any signs that the body had been robbed?”

“No; and I think I can say definitely that it had not. There was not much in the pockets, considering the deceased
gentleman’s position, but there were things in them that no thief would have left. For instance, there was a purse containing three sovereigns and a letter wallet with two five-pound notes in it. And the small value of the contents of the pockets seems to be satisfactorily accounted for, as Mr. Brodribb has informed me that deceased had emptied his pockets of most of his valuables, including his gold watch, before he left the club."

"Ah," said the coroner, "that is a significant fact. We must get the details from Mr. Brodribb. Are there any further facts known to you that ought to be communicated to the jury?"

"I think I ought to mention that deceased's clothing was extraordinarily dirty and tumbled. The collar was excessively dirty and seemed to have been wetted, and so did the shirt at the neck; and the coat and trousers were very dusty at the back, as if deceased had been lying on a dirty floor."

"What do you suggest as to the significance of those facts?"

"Taken with the fact that deceased left the club (as I am informed) on Wednesday, the seventeenth of June, and could not have entered the empty house before Sunday night, the twenty-first of June, the state of his clothes suggests to me that he had been wandering about in the interval, perhaps spending the nights in common lodging-houses or sleeping in the open, and that he had washed himself at pumps or taps and got his head and neck wet. Of course, that is only a guess."

"Quite so. But it seems probable and certainly agrees with the known circumstances. Is there any thing more that you have to tell the jury?"

"No, sir. That is all the information that I have to give."

"Any questions, gentlemen?" the coroner asked, glancing at the jury. "No questions. Thank you, Superintendent. Perhaps, before we hear the next witness we had better recall Mr. Holker in order that he may confirm on oath those of his statements which have been quoted by the Superintendent."

Holker was accordingly recalled and formally confirmed those passages of the officer’s evidence (referring to the door and the rope) when they had been read out by the coroner from the depositions. This formality having been disposed of, the coroner glanced through his notes and then announced: "We will take the medical evidence next so that the doctor may be able to get away to his patients. Dr. Ross."

Our colleague approached the table with less obvious self-possession than the experienced officer who had preceded him. But he was quite a good witness. He had made up his mind as to what he was going to say and he said it with a confident, authoritative air that carried conviction to the jury.

"You have made a thorough examination of the body of deceased?" the coroner said, when the witness had been sworn and the other preliminaries despatched.

"I have," was the reply.

"And what was the result of your examination? You understand, doctor, that the jury don’t want you to go into technical details. They just want the conclusions that you arrived at. To begin with, how long should you say the deceased had been dead?"

"I should say that he had been dead not less than three weeks."

"Were you able to ascertain the cause of death?"

"I was able to form a very definite opinion. The condition of the body was so very unfavourable for examination that I hardly like to go beyond that."

"Quite so. The jury have seen the body and I am sure they fully realise its condition. But you were able to form a decided opinion?"

"Yes. I found distinct signs of death from asphyxia and I found nothing whatever to suggest any other cause of death."

"Well," said the coroner, "that seems to be sufficient for our purpose. Was there anything to account for the asphyxia?"

"There was a deep groove encircling the neck, marking the position of the rope by which deceased had been suspended." Here the foreman of the jury interposed with the request that the witness would explain exactly what he meant by asphyxia.

"Asphyxia," the doctor explained, "is the condition which is produced when a person is prevented from breathing. If the breathing is completely stopped, death occurs in about two minutes."

"And how may the breathing become stopped?" the foreman asked.

"In various ways. By hanging, by strangling, by covering the mouth and nose with a pillow or other soft object, by drowning or by immersion in a gas such as carbonic acid."

"What do you say was the cause of the asphyxia in this case?"

"As hanging causes asphyxia and deceased was undoubtedly hanged, the asphyxia was presumably due to the hanging."

"That seems fairly obvious," said the coroner; "but," he added, looking a little severely at the foreman, "we mustn’t ask the doctor to provide us with a verdict. He is giving evidence as to the facts observed by himself. It is for you to decide on
the significance of those facts. He tells us that he observed signs of death from asphyxia. We have heard from other witnesses that deceased was found hanging; the connection of those facts is a question for the jury. Is there anything else that you have to tell us, doctor?"

"No, I observed nothing else that is relevant to the inquiry."

"Does any gentleman wish to ask the doctor any further questions?" the coroner asked, glancing at the jury; and as no one expressed any such desire, he continued: "Then I think we need not detain the doctor any longer. The next witness will be Herbert Weeks."

On hearing his name pronounced, Mr. Weeks rose and took his place at the table. Having been sworn, he stated that he had been butler to deceased, whose father, Sir Julian, he had served in the same capacity. He had known deceased practically all his (deceased’s) life and they were on very intimate and confidential terms.

"Had you ever any reason to expect that deceased might make away with himself?" the coroner asked.

"No," was the reply. "Such a thing never occurred to me."

"Have you noticed anything of late in his manner or his apparent state of mind that might account for, or explain his having made away with himself? Has he, for instance, seemed worried or depressed about anything?"

Mr. Weeks hesitated. At length he replied, with an air of weighing his words carefully: "I don’t think he was worried about anything. So far as I know, there was nothing for him to worry about. And I should hardly describe him as being depressed, though I must admit that he had not very good spirits. He had never really recovered from the shock of losing his wife and his son—his only child."

"When did that happen?"

"About ten years ago. They were both carried off by influenza within a few days, and Sir Edward himself nearly died of the same complaint. When he began to get better, we had to break it to him and I thought it would have killed him; and though he did at last recover, he was never the same man again."

"In what respect was he changed?"

"He seemed to have lost interest in life. When her ladyship and the young gentleman were alive, he was always cheerful and gay and full of schemes and projects for the future. He was constantly planning improvements in the estate and riding about the property with his son to discuss them. He was very devoted to his wife and son, as they were to him; a most affectionate and united family. When they died, it seemed as if he had lost everything that he cared for. He took no further interest in his property but just left it to the bailiff to manage and turned his business affairs over to Mr. Brodribb."

"And you say that he was changed in manner?"

"Yes. All his old high spirits went, though he was just as kind and thoughtful for others as he had always been. But he became grave and quiet in his manner and seemed rather dull and aimless, as if there was nothing that he cared about in particular."

The coroner reflected for a few moments on these statements. Then abandoning this line of enquiry, he asked: "When did deceased leave home?"

"On Tuesday, the sixteenth of June."

"Did he inform you what his intended movements were?"

"Yes. He said that he was going to spend a couple of days in London and that he expected to return home on Thursday afternoon. He told me that he intended to stay at his club as he usually did when visiting London."

"Did you notice anything unusual in his manner on that occasion?"

"I thought that he seemed rather preoccupied, as if he had some business on hand that he was giving a good deal of thought to."

"He did not strike you as unusually depressed or anxious?"

"No; only that he gave me the impression that he was thinking out something that he did not quite understand."

"Was that the last time that you saw him alive?"

"Yes. I stood at the main door and watched him walk away down the drive, followed by one of the gardeners carrying his suit-case. I never saw him again until this morning, when I saw him in the mortuary."

Mr. Weeks delivered these statements in quiet, even tones, but it was easy to see that he was controlling his emotion with some difficulty. Observing this, the coroner turned from the witness to the jury.

"I think," he said, "Mr. Weeks has given us all the material facts known to him, so, if there are no questions, we need not prolong what is, no doubt, a very painful ordeal for him." He paused, and then, as no question was asked, he thanked the witness and dismissed him. A brief pause followed during which the coroner glanced quickly through his notes. Then Mr. Brodribb’s name was called; and, bearing Thorndyke’s prediction in mind, I gave his evidence my very special attention.

"What was the exact nature of your relations with deceased?" the coroner asked, when the introductory matter had been
disposed of.

"I was his solicitor. But in addition to my purely legal functions, I acted as his adviser in respect of the general business connected with the management of his property. I am also the executor of his will."

"Then you can tell us if there were any embarrassments or difficulties connected with his property that were causing him anxiety."

"I can. There were no embarrassments or difficulties whatever. His financial affairs were not only completely in order but in a highly favourable state. I may say that his estate was flourishing and his income considerably in excess of his expenditure. He certainly had no financial anxieties."

"Had he any anxieties of any kind, so far as you know?"

"So far as I know, he had none."

"You heard Mr. Weeks's description of the change in his manner and habits caused by his bereavement. Do you confirm that?"

"Yes; the loss of his wife and son left him a broken man."

"You attribute the change in him to the grief due to his bereavement?"

"Principally. The loss of those so dear to him left an abiding grief. But there was a further effect. Sir Edward's lively interest in his estate and his ambition to improve it and increase its value were based on the consideration that it would in due course pass to his son, and probably to his son's son. Like most English landowners, he had a strong sense of continuity. But the continuity of succession was destroyed by his son's death. The present heir-presumptive is a distant relative who was almost a stranger to Sir Edward. Thus deceased had come to feel that he was no more than a life-tenant of the estate; that, at his death, it would pass out of the possession of his own family into the hands of strangers and there was no knowing what might happen to it. As a result he, not unnaturally, lost all interest in the future of the estate. But since, hitherto, this had been the predominant purpose of his life, its failure left him without any strong interest or aim in life."

The coroner nodded, as one who appreciates a material point of evidence.

"Yes," he said, "this loss of interest in life seems to have an important bearing on our inquiry. But beyond this general state of mind, did you ever notice any more particular manifestation. In short, did you ever observe anything that caused you to entertain the possibility that deceased might make away with himself?"

Mr. Brodribb hesitated. "I can't say," he replied, after a pause, "that the possibility of suicide ever entered my mind."

"That, Mr. Brodribb, seems a rather qualified answer, as if you had something further in your mind. Am I right?"

Apparently the coroner was right, for Mr. Brodribb, after a few moments' rather uneasy reflection, replied with obvious unwillingness: "I certainly never considered the possibility of suicide; but, looking back, I am not sure that there were not some suggestions that were at least susceptible of such an interpretation. I now recall, for instance, a remark which deceased made to me some months ago. We were, I think, discussing the almost universal repugnance to the idea of death when deceased said (as nearly as I can remember), 'I often feel, Brodribb, that there is something rather restful in the thought of death. That it would be quite pleasant and peaceful to feel oneself sinking into sleep with the certain knowledge that one was never going to wake up.' I attached no weight to that remark at the time, but now, looking at it in the light of what has happened, it seems rather significant."

"I agree with you," the coroner said, emphatically. "It seems very significant indeed. And that suggests another question. I presume that you are pretty well acquainted with the affairs of deceased's family?"

"Very well indeed. I have been connected with the Hardcastle estate during the whole of my professional life, and so was my father before me."

"Then you can tell us whether any instances of suicide have occurred among any of deceased's relatives."

Once more Mr. Brodribb hesitated with a slightly puzzled and reluctant air. At length, he replied, cautiously: "I can only say that no instance of suicide in the family is known to me, or even suspected by me. But it seems proper that I should acquaint you with the rather mysterious and highly eccentric conduct of deceased's brother, Gervase. This gentleman became, unfortunately, rather intemperate in his habits, with the regrettable result—among others—that he was deprived of a fellowship that he held at Oxford. Thereafter, he disappeared and ceased to communicate with his family, and all that is known of him is that he was, for a time, living in poverty, and apparently in something like squalor, in Paris and other foreign towns."

"Had his family cast him off?"

"Not at all. Sir Edward's feelings towards him were quite friendly and brotherly. He would willingly have provided the means for his brother to live comfortably and in a manner suitable to his station. The self-imposed ostracism on Gervase's part was sheer perversity."

"And what became of this brother? Is he still living?"

"His death was announced in the obituary column of The Times about sixteen years ago without any address other than Brighton. Of the circumstances of his death, nothing whatever is known."
“Have you any reason to suppose that he made away with himself?”

“I have not. I mentioned his case merely as an instance of voluntary disappearance and generally eccentric behaviour.”

“Exactly; as furnishing a parallel to the voluntary disappearance of deceased. That is quite an important point. And now, as a final question, I should like to ask you to confirm what the Superintendent told us as to deceased having emptied his pockets of things of value before leaving the club.”

“The Superintendent’s statement is, in the main, correct. When examining his bedroom at the club, I found in a locked suit-case—which I was able to unlock—a gold watch and chain, a valuable pearl tie pin, a bunch of keys and a few private letters, which I glanced through and which threw no light on his disappearance.”

“Ah,” said the coroner, “a very significant proceeding. No doubt it struck you so?”

“It did, coupled with the fact that the owner was missing; and I communicated the facts at once to the police.”

“Yes. Very proper. And that, I think, is all that we wish to ask you, unless there is anything else that occurs to you or unless the jury desire to put any questions.”

Mr. Brodribb intimatethat he had nothing further to communicate, and, as the jury made no sign, the witness was allowed to retire to his seat.

The next name called was that of Mr. Northbrook, the secretary of the club; but as his evidence for the most part, merely confirmed and amplified that of the preceding witnesses, I need not record it in detail. One new fact, however, emerged, though it did not seem to me, at the time, to have any particular significance.

“You say,” said the coroner, “that you saw deceased leave the club?”

“Yes. I was in the porter’s office at the time, and, as deceased passed the open door, I wished him ‘good morning.’ But apparently he did not hear me, for he passed out without taking any notice.”

“And that, I take it, was actually the last time he is known to have been seen alive?

“Not absolutely the last time. He was seen a few minutes later by one of the club waiters, getting into a hansom cab. I have brought the waiter with me in case you wished to hear his account first hand.”

“That was very thoughtful of you,” said the coroner, “and I am glad you did. We should certainly wish to have the evidence of the last person who saw deceased alive.”

The waiter was accordingly called and sworn, when it transpired that his name was Joseph Wood and that he had mighty little to tell. That little may as well, however, be given in his own words.

“I was coming along Piccadilly from the west when I caught sight of Sir Edward Hardcastle, coming towards me. He was a good distance off, but I recognised him at once. I wait at the table that he always used, so I knew him very well by sight. While I was looking at him, a hansom drew up by the pavement and he got in, and then the hansom drove away. I didn’t see him hail it, but he may have done. I couldn’t see if there was anyone else in the cab, because its back was towards me, and as soon as he got in it drove away. I didn’t see him say anything to the cabman, but he may have spoken up through the trap. The cab drove off in an easterly direction—towards the Circus. I did not notice the number of the cab. There was no reason why I should.”

This was the sum of his evidence, and it was not clear to me why he had been brought so far to tell so little, for the trivial circumstance that he deposed to appeared to have no bearing whatever on the case; and I was not a little surprised to observe that Thorndyke took down his statements, apparently verbatim, in short-hand; a proceeding that I could account for only by bearing in mind his invariable rule that nothing could be considered irrelevant until all the facts were known.

The waiter, Joseph Wood, was the last of the witnesses, and, when he had concluded his evidence, the coroner, having announced that all the known facts were now in the jury’s possession, made a brief inspection of his notes with a view to his summing-up. At length he began: “It is not necessary, gentlemen, that I should address you at great length. We have given to this painful case an exhaustive consideration which was called for rather by reason of the deceased gentleman’s position and the interests involved than by any inherent difficulties. The case is, in fact, quite a simple one. All the material circumstances are known to us, and there is not the slightest conflict of evidence. On the contrary, all the witnesses are in complete agreement and the evidence of each confirms that of the others.

“The time at which this sad affair occurred is fixed beyond any possible doubt by Mr. Holker’s evidence. Deceased must have entered the house, in which his body was subsequently found, during the evening or night of Sunday, the twenty-first of June; and this date is confirmed by the medical evidence. Thus, the questions, When and Where are answered conclusively. Mr. Holker and the Superintendent both saw the dead body suspended from a beam; and the medical witness found signs of death from asphyxia, as would be expected in the case of a man who had died by hanging.

“The question of motive seems to be solved as completely as we could expect by the evidence of Mr. Weeks and especially by that of Mr. Brodribb. The terrible bereavement which deceased suffered, the shipwreck of all his hopes and ambitions and the desolate state in which he was left, if they could not be properly regarded as conditions predisposing to suicide, furnish a reasonable explanation of it after the event.

“There is one feature in the case which did, at first, appear very strange and difficult to explain, and which, I may admit,
occasioned this very rigorous inquiry. That feature is the extraordinary surroundings in which the body was discovered. How, one asked oneself, is it possible to account for the appearance of a man in deceased’s position in an empty house in the purlieus of Stratford? It seemed an insoluble mystery. Then came the evidence of the Superintendent and Mr. Brodribb. The one finds traces that, to the expert eye, tell of ramblings in sordid neighbourhoods and waste places, of nights spent in doss-houses or in the open. The other tells us of a relative—actually a brother of deceased—who, in a strangely similar manner, had disappeared from his usual places of resort, cut himself off from family and friends and, by deliberate choice, had lived—and perhaps died—in surroundings of sordid poverty. I will not say that this evidence explains the proceedings of deceased. Probably they will never be completely explained. But I do say that our knowledge of the brother’s conduct makes that of deceased perfectly credible.

“I will add only one further observation. If you find that deceased made away with himself, as the evidence seems to prove, I think you will agree with me that, at the time and for some days previously, he was not in his right mind. If that is your view, I will ask you to embody it in your verdict.”

At the conclusion of the coroner’s address, the jury consulted together. But their consultation occupied only a minute or two. Apparently they had already made up their minds, as they might well have done, taking the evidence at its face value. When the whispered conference came to an end, the foreman announced that they had agreed on their verdict and the coroner then put the formal question: “And what is your decision, gentlemen?”

“We find,” was the reply, “that deceased committed suicide by hanging himself while temporarily insane.”

“Yes,” said the coroner, “I am in entire agreement with you, and I must thank you for the care and attention with which you have considered the evidence.”

As the proceedings came to an end, Thorndyke and I rose and made our way out, leaving Brodribb in conversation with the coroner and the Superintendent.

“Well,” I said as we halted outside to wait for our friend, “it has been quite entertaining, but I don’t see that we have got much for our attendance.”

“We have got one fact, at least,” replied Thorndyke, “that was worth coming for. We now know that Holker was in the house until after the rain had begun to fall. That clears away any uncertainties on a point of vital importance. But we had better not discuss the case now. And I think—though it seems rather scurvy treatment of our old friend—but I think we had better keep our own counsel. Brodribb accepts the suicide as an established fact, and perhaps it is as well that he should. If we are going to work at this case, it will be all to the good that we hold the monopoly of the real facts. It will be a difficult and obscure case, but the difficulty will be materially reduced if we can watch the development of events quietly, without anyone suspecting that we are watching. This was no crime of sudden impulse. It was premeditated and arranged. Obviously there was, behind it, some perfectly definite motive. We have, among other things, to discover what that motive was. The criminals at present believe themselves to be entirely unsuspected. If they maintain that belief, they will feel at liberty to pursue their purpose without any special precautions; and we—also unsuspected—may get our chance. But here comes Brodribb.”

I must confess that Thorndyke’s observations appeared to me so cryptic as to convey no meaning whatever. That, I recognised, was owing to my own ‘slowness in the uptake’. However, there was no opportunity to seek elucidation, for Brodribb had seen us and was now bearing down on us. He replied to our greeting with something less than his usual vivacity, and we set forth on our way to the station in almost uninterrupted silence.
X. — A SUMMARY OF THE EVIDENCE

(DR. JERVIS'S NARRATIVE)

MR. BRODRIBB'S taciturn mood persisted even after we had taken possession of an empty first-class smoking compartment and lit our pipes. Evidently his recent experiences had depressed him profoundly; which, after all, was no matter for surprise. An inquest is not a jovial function under the most favourable conditions, and the conditions in the recent inquiry had been far from favourable for the friends of the deceased.

"It was a ghoulish business," he remarked in semi-apologetic explanation of his low spirits, "but, of course, it had to be; and the coroner managed it as decently as possible. Still, I had rather that he had managed without me."

"If he had," said I, "he would have missed what he regarded as most important evidence."

"Yes, I know," replied Brodribb. "That was what I felt, though I hated giving that evidence. The affair had to be cleared up, and I have no doubt that the jury were right in their verdict. I know you don't agree with me, Thorndyke, but I think your special experience has misled you for once."

"There is always the possibility," Thorndyke admitted, "that professional bias may influence one. In any case, our divergence of views does not affect the position in practice. The death of Sir Edward is an established fact and the ambiguity of your legal status is at an end."

"Yes," Brodribb agreed, "there is that very unsatisfactory compensation. I am now the executor and can act as I think best. I could only wish that the best course of action were a little more easy to decide on."

With this, he relapsed into silent reflection, possibly connected with the difficulties suggested by his last sentence; and as Thorndyke and I were unable to discuss before him the matters that were occupying our thoughts, we followed his example and devoted ourselves to the consideration of our own affairs.

Suddenly Brodribb sat up with a start and began to rummage in his inside breast-pocket. "Bless my soul!" he exclaimed. "What a fool I am! Clean forgot this. Ought to have mentioned it in my evidence."

Here he brought out a letter wallet, and, taking from it an envelope, opened the latter and tipped some small object out on to his palm.

"There!" he said, holding out his open hand to Thorndyke. "What do you think of that?"

Thorndyke picked up the object, and, having examined it, held it up to the light, when I saw that it was a little oval plate of a bright transparent green bearing an engraved device which I recognised instantly.

"The missing seal!" I exclaimed, taking it from Thorndyke to inspect it more closely. "Then we may assume that the great mystery is solved."

"Indeed, you may assume nothing of the kind," said Brodribb. "On the contrary, the mystery is more profound than ever and the chance of a solution more remote. I will tell you all about it—all that I know, that is to say. It is a queer story. Your friend, Superintendent Miller, brought it to me yesterday afternoon to compare with my seals and for formal identification by me (which I thought very kind and courteous of him), and this is the account he gave of its discovery.

"It seems that, about a week ago, a man escaped from Pentonville Gaol. I understand that he got away in the evening, and in some miraculous fashion—you know where the prison is; right in the middle of a populous neighbourhood—he kept out of sight until it was dark, which wouldn't have been much before eleven at this time of year. Then, with the same miraculous luck, he managed to slip away through the streets, right across the northern suburbs to the neighbourhood of Temple Mills by the River Lea.

"There he was lurking the next afternoon when he had another stroke of luck. Some devotee of the simple life had elected to take a bath in the river, and he must have strayed away some distance from his clothes, for our Pentonville sportsman found them unguarded. Possibly he may have watched the other sportsman taking them off. At any rate, he seized the opportunity; slipped off the prison clothes and popped on the others. Then he nipped off across the meadows in the direction of Tottenham. And there it was that his luck deserted him; for, by the merest chance, a plain clothes officer who knew him by sight, happened to meet him, and, as the hue and cry was out, he collared him forthwith.

"And now comes one of the quaint features of the story. At Tottenham Police Station they went through his pockets—they were really the other fellow's, of course—with mighty little result. The next day they took him back to Pentonville, and once more he was put into uniform. The clothes that were taken off him were put aside until they could be disposed of in some way. But a couple of days ago it occurred to one of the officers to go over them carefully to see if he could find out the lawful owner. And then he made a discovery. Apparently, the owner of those clothes was a pickpocket, for there was a secret receptacle in the back of the waistcoat, which had been overlooked at the first search; and in that secret pocket the officer found this stone."

"And what happened to the other man?" I asked.

"Ah!" chuckled Brodribb, quite recovering his natural spirits for the time being, "that's the cream of the joke. He found the gaol-bird's discarded garments in place of his own clothes and of course he had to put 'em on, since he couldn't go
about naked. It was a lovely situation; almost as if he had walked into prison and locked himself in. However, as soon as he was dressed in his proper character, he made a bolt for it; and he had even better luck than the other fellow. In some perfectly incredible manner, he made his way, in broad daylight, right across North London and came to the surface at the Angel, of all unlikely places."

"At the Angel!" I repeated, incredulously.

"At the Angel," Brodribb reiterated, joyously. "Just picture to yourselves an escaped convict in full uniform, elbowing his way through the crowd at the Angel! Well, of course, it couldn't go on. A couple of plain-clothes men saw him and pounced on him in an instant. It looked as if his luck had given out. But apparently his wits were as nimble as his heels, for he got just a dog's chance and he took it. At the moment when the two constables were taking him across the road, a fire-engine came thundering along and they had to scuttle back out of the way. But as it flew past, our friend made a grab at the rail of the foot-plate and held on. The momentum of the engine whisked him out of the clutches of his captors and sent them sprawling; and when they got up, their prisoner was standing on the foot-plate and fading in the distance before their eyes. Of course, it is no use shouting after a fire-engine.

"Now the odd thing is," Mr. Brodribb continued in a slightly shaky voice, "that none of the fire-men on the engine seem to have noticed him; and the constables couldn't telephone a warning until they had found out where the fire was. So our friend stuck on the engine until it turned down Tottenham Court Road, when he hopped off and made a bolt down Warren Street. Naturally, he soon picked up some followers, but he kept ahead of them, flying up one street and down another until he arrived at Cleveland Mews with half the town at his heels. He turned into the mews, still well ahead, and shot down it like a rocket. And that was the last that was seen of him. The crowd and the police surged in after him, and as the mews is a blind alley, they were quite coosure that they'd got him. But when they came to the blind end, there was not a sign of him. He had vanished into thin air. And he had vanished for good, you observe. For, as nobody knew who he was, nobody could identify him when once he had changed his clothes."

"No," I agreed, "he has got clear away, and I must admit that I think he deserved to."

"I am afraid that I agree with you," said Brodribb. "Very improper for a lawyer, but even lawyers are human. But the police were very puzzled; not only as to how he had managed to escape, but, when the real convict was captured, they couldn't make out why he ran away. Of course, when the seal was found in the pocket, they understood."

"I wonder how he did get away," said I.

"So do I," said Brodribb. "It was a remarkable exploit. I examined the place myself and could see no apparent way of escape."

"You examined the place?" I exclaimed in surprise.

"Yes. I forgot to mention that, by a remarkable coincidence, I happened to be there at the very time. I took Sir Giles Farnaby to see a client of mine who has a studio that fronts on the mews. When we arrived the police were actually searching the studio. They thought the fugitive might have got in at the open window, unnoticed by the two ladies who were at work there. So they went all over the premises. Just as well for our friend that they did; for while they were searching the studio premises he had time to make his little arrangements at the bottom of the mews. And now we shall never know how he came by that seal, though, as he seems to have been a pickpocket, we can make a pretty likely guess."

"Yes," Thorndyke agreed a little dryly, "it is always possible to guess. But guesses are not very valuable evidential assets. The police guessed that this man was a pickpocket, and we can guess that, being a pickpocket, he obtained the seal in the practice of his art. That guess is supported by the fact that the ring is the only article known to be missing from his person, and that the leather case in which it was usually carried, is also missing. On the other hand, it is not in agreement with the fact that the stone had been dismounted from the ring and that the ring was not found with it. The pickpocket usually takes his booty to the receiver as he finds it. It is the receiver who extracts the stones and melts down the metal. That is the usual procedure, but, naturally, there are exceptions."

"At any rate," said Brodribb, "what matters to us is that the man has vanished and no one knows who he is."

On this conclusion neither Thorndyke nor I made any comment, and the discussion was brought to an end by our arrival at Liverpool Street, where we saw Mr. Brodribb into a hansom and then embarked in another for the Temple.

During the meal which we found awaiting us at our chambers, I endeavoured to extract from Thorndyke some elucidation of the statement that had seemed to me so obscure. But he was not willing to enter into details at present.

"The position at the moment, Jervis," said he, "is this. We have no doubt whatever that Sir Edward Hardcastle was murdered. We have evidence that the murder was premeditated and the methods planned in advance with considerable care and some ingenuity. It was carried out by more than one, and probably several persons. It was, in fact, of the nature of a conspiracy. The purpose of the murder was not robbery from the person. The perpetrators, or at least some of them, were apparently of a low class, socially; and the victim seems to have walked, not entirely unsuspecting, into some sort of ambush.

"That is all that we know at present, and it doesn't carry us far. What we have to discover, if we can, is the identity of the murderers. If we can do that, the motive will disclose itself. If, on the other hand, we can uncover the motive, that will probably point to the murderers. We must proceed along both lines if we can. We must endeavour cautiously to ascertain whether Sir Edward had any enemies who might conceivably have been capable of a crime of revenge; and we must watch
the consequences of his death and note who benefits by them."

"It is evident," said I, "that someone is going to benefit to the extent of a title and an uncommonly valuable estate."

"Yes, and we shall bear that in mind. But we mustn't attach undue weight to it. Whenever a well-to-do person is murdered, the heirs benefit; but that fact—though it furnishes a conceivable motive—does not cast suspicion on them in the absence of any other evidence. In practice, as you know, I like to leave the question of motive until I have got a lead in some definite direction. It is much safer. The premature consideration of motive may be very misleading, whereas its use as corroboration may be invaluable."

"Yes, I realise that," said I, "but in this case I don't see how you are going to get a lead. The murderers left plenty of traces of a kind; but they were the wrong kind. There was nothing personal about them—unless the finger-prints can be identified, and I doubt if they can. They were very confused and obscure. And even if they could be made out, they would be of no use unless they were the prints of criminals known to the police and recorded at the register."

Thorndyke laughed grimly. "My learned friend," he remarked, "is not disposed to be encouraging. But never mind. We have made many a worse start and yet reached our goal. Presently we will examine our material and see what it has to tell us. Perhaps we may get a lead in some direction from an unexpected source."

At the actual examination I was not present, for our expeditions to Stratford had left me with one or two unfulfilled engagements. Accordingly, as soon as we had finished our supper (or dinner—the exact status of our evening meal was not clearly defined), I went forth to despatch one of them, my regret tempered by the consideration that I should miss nothing but the mere manipulations, most of which were now fairly familiar to me, and that on my return I should find most of the work done and the results available.

And so it turned out. Re-entering our chambers about half-past ten and finding the sitting-room untenanted, I made my way up to the laboratory where a glance around told me that the final stage of the investigation had been reached. On one bench was a microscope and a row of slides, each bearing a temporary or permanent label; on the chemical bench a sand-bath stood over a bunsen burner and bore a small glass evaporating dish, and one or two large watch-glasses containing fluid with a crystalline margin had apparently had their turn on the bath. Beside them in a beaker of fluid—presumably water—was the collar that had been abstracted from the mortuary by Thorndyke, who was at the moment gently prodding it with a glass rod, while his familiar demon, Polton, was engaged in vigorously wringing out the end of rope in a basin of hot liquid which exhaled the unmistakable aroma of soft soap.

"We have nearly finished," said Thorndyke, "and we haven't done so badly, considering that this is only the beginning of our investigation. Have a look at the specimens and see if you agree with the findings."

I went over to the microscope bench and ran my eye over the exhibits. As I did so, I was once more impressed by the wonderfully simple, orderly and efficient plan on which my colleague worked. For years past, indeed, from the very earliest days of his practice, it had been his habit to collect impartially examples of every kind of natural and artificial material and to make, wherever it was practicable, permanent microscopic preparations of each. The result was an immense and carefully classified collection of minute objects of all kinds—hairs, feather insect scales, diatoms, pollen, seeds, powders, starches, textiles, threads, fibres—any one of which could be found in a moment and used for comparison with any new 'find', the nature of which had to be determined. Thus he was, to a great extent, independent of books of reference and had the great advantage of being able to submit both the new specimen and the 'standard' to any kind of test with the micrometer or polariscope or otherwise.

In the present case, the specimens were laid out in pairs, the new, unknown specimen with a 'certified' example from the collection; and an eye-piece micrometer was in position for comparing dimensions. I took up one slide, labelled 'E. H. decd. 15. 7. 03. From Rt. Bronchus', and placed it on the stage of the microscope. Instantly the nature of the object became obvious. It was a fish-scale; but, of course, I could not say what fish. Then I laid on the stage the companion slide from the collection, labelled 'Scale of Herring', and made a rough comparison. In the shape of the margins, the concentric and radiating markings and all other characters, the two specimens appeared to be identical. I did not make an exhaustive examination, assuming that this had been done by Thorndyke, but went on to the other specimens. All the fish-scales were alike, as might have been expected, and I gave them only a passing glance. Then I picked up a slide labelled 'From Trachea' and placed it on the stage. The specimen appeared to be a small piece of a leaf of some kind; a rather large leaf, as I judged by the absence of any indication of form, and by its thickness, and I observed that it seemed to have one cut edge.

Taking up the 'reference' slide I read, 'Cuticle of Cabbage'.

"I don't remember this scrap of leaf, Thorndyke," said I.

"No," he replied. "I did not draw Ross's attention to it. It was wearisome to keep pointing out facts to a man who had already made up his mind. It seems to be a fragment of cabbage leaf, but it is of no special importance. The fish-scales prove the entrance of water to the lungs, which is the really significant fact."

"And this little melted fragment from the heel of the boot? It doesn't look like soap."

"It isn't. It is beeswax. I put that fragment on the slide to observe the melting-point."

The other two specimens were the scraps of cotton and silk thread that we had picked off the clothes. The silk thread was clearly shown, by comparison with the 'reference specimen' to be a fragment of 'buttonhole twist'. The white cotton corresponded exactly with a reference specimen of basting cotton; but here the identification was less certain owing to the
less distinctive character of the thread.

“Yes,” Thorndyke agreed when I remarked upon this, “white cotton threads are a good deal alike, but I haven’t much doubt that this is basting cotton. Still, I shall take the specimens to a trimmings-dealer and get an expert opinion.”

“Have you made any analysis of the fluids from the stomach and lungs?” I asked.

“No,” he replied, “only a preliminary test. But I think that has given us the essential facts, though as a measure of safety, I shall have a complete examination made. What I find is that both fluids contain a considerable amount of sodium chloride. They appear to be, and I have no doubt are, just simply salt water. We can’t tell how salt the water was when it was swallowed and drawn into the lungs owing to the drying that had occurred in the body. But the salt is there, and that is the important point.”

“You haven’t yet tested the water in which you have soaked the collar?”

“No. We will do that now.”

He poured a little of the water from the beaker in which the collar had been soaking, through a filter into a test-tube. Then, with a pipette, he dipped up a small quantity of a solution of silver nitrate from a bottle and let it fall, drop by drop, into the test-tube. As each drop fell into the clear liquid it gave rise to a little milky cloud, which became denser with each succeeding drop.

“Chloride of some kind,” I observed.

“Yes,” said he, “and we may take it, provisionally, that it is sodium chloride. And that finishes our preliminary examination of our material. Have you got that rope clean, Polton?”

“Yes, sir,” replied Polton, producing the end of rope from a towel in which he had been squeezing the last remains of moisture from it. “It is quite clean, but a good deal of the colour has come out. I think you are right, sir. It looks like cutch.”

He exhibited the discoloured water in the basin and handed the piece of rope to Thorndyke, who passed it to me.

“Yes,” I said, “I see now that it is a hemp rope. But it is odd that they should have been at the trouble of dyeing it to imitate coir, which is an inferior rope to hemp.”

He made no reply, but seemed to look at me attentively as I turned the rope over in my hand, and finally took it from me without remark. I had the feeling that he had expected me to make some observation, and I wondered vaguely what it might have been. Also, I wondered a little at his interest in the physical characters of this rope, which really seemed to have no bearing on our inquiry; and even as I wondered, I had an uneasy suspicion that I had missed some significant point.

“How have the photographs come out?” I asked.

“I haven’t seen them yet,” he replied. “They are in Polton’s province. What do you say, Polton? Is it possible to inspect them?”

“The enlargements are now washing,” Polton replied. “I’ll fetch them in for you to see.”

He went through into the dark room and presently returned with four porcelain dishes, each containing a half-plate bromide print, which he laid down on the bench under the shaded light. All the four prints were enlargements to the same scale—about three times the natural linear size.

“Well,” I remarked, as we looked them over together, “Sir Edward’s finger-prints are clear enough, though they look a little odd, but the chair-back groups are a most unholy muddle. Most of the prints are just undecipherable smears.”

“Yes,” Thorndyke admitted regretfully, “they are a poor lot and too many superimposed and obliterating one another. But, still, I have some hopes. Our expert friends are wonderfully clever at sorting out imperfect prints; and some of these seem to me to have enough visible detail for identification. At any rate, one important negative fact can, I think, be established. I see no print that seems to resemble any of Sir Edward’s.”

“Neither do I; and, of course, if they were there, they would be more distinct than any of the others, being the most recent. But it would be a facer if the experts should find them there. That would fairly knock the bottom out of the entire case.”

“It would, certainly,” Thorndyke agreed. “But the probability is so negligibly remote that it is not worth considering. What is of much more interest is the chance of their being able to identify some of the prints as those of known criminals.”

“Supposing they can?” said I. “What then?”

“In that case,” he replied, “I think we should have to take Miller into our confidence. You see, Jervis, that our present difficulty is that we are dealing with a crime in the abstract, so to speak. The perpetrators are unknown to us. We have—at the moment—no clue whatever to their identity. But give us a name; turn our unknown criminals into actual, known persons, and I think we have enough evidence to secure a conviction. At any rate, a very little corroborative by police investigation would make the case complete.”

“The deuce it would!” I exclaimed, completely taken aback. “I had no idea that the case had advanced as far as that. I thought it was rather a matter of strong suspicion than of definite evidence. But evidently your examination of the material has brought some new facts to light. Is it not so?”
"We have elicited a few new facts; nothing very startling, however. But the evidence emerges when we put together, in their proper order, the facts that we already knew with the new ones added. Shall we go over the evidence together and see what we really know about the case?"

I assented with enthusiasm, and, having filled my pipe, disposed myself in the rather ascetic laboratory chair in a posture of attention and receptivity; and I noticed that Polton had unobtrusively drawn a stool up to the opposite bench, and, having stuck a watchmaker’s glass into his eye, was making a shameless pretence of exploring the ‘innards’ of an invalid carriage clock.

"Let us begin," said Thorndyke, "by taking the evidence in order without going into much detail. In the first place we have established that Sir Edward Hardcastle was drowned in salt water in which considerable numbers of herring-scales were suspended."

"You think there is no doubt about the drowning?"

"I think it is practically certain," he replied. "The presence in the lungs of salt water and herring-scales, together with the presence of similar salt-water and herring-scales in the stomach is nearly conclusive. That the herring-scales were water-borne and not the remains of food eaten is proved by our finding them in the hair. Add to this the fairly definite signs of asphyxia and no signs of any other cause of death; and the fact that deceased’s head and neck had been immersed in salt water containing suspended herring-scales, as proved by the scales which you found in the hair, by the stains on the neck of his shirt and on his collar and by the salt which I extracted from that collar; and I think we have complete and conclusive evidence of drowning."

"I agree," said I. "Excuse my interrupting."

"Not at all," he replied. "I want you to challenge the evidence if you do not find it convincing. To proceed; we find that, Sir Edward’s body, dead or alive, had been lying on, and apparently dragged along, the dirty floor of a room. Among the litter on that floor were short pieces of basting-cotton and button-hole twist and a fragment of beeswax. These materials suggest a room in which garments were being made; probably a tailor’s work-room, though other people besides tailors use these materials.

"Next we find that the body was conveyed in a two-wheeled vehicle, which may have been a cart or gig, or perhaps a hansom cab—"

"Surely not a hansom, Thorndyke," I interrupted. "It had iron tyres."

"That doesn’t absolutely exclude it," said he. "You occasionally meet with iron-tired Hansoms even to this day. I saw one at Fenchurch Street Station only a few weeks ago—a shabby old crock with the old-fashioned, round-backed dicky, probably driven by the owner. The reason that I incline to the hansom is that the dimensions of this vehicle coincide exactly with those of a hansom. I looked them up in my notes on the dimensions of various vehicles. The wheels of a hansom are fifty-five and a half inches in diameter. The tyres, when of iron, are one and a half inches wide, on a rim which is slightly thicker and which widens inwards towards the spokes. The track, or distance between the wheels, measured at the ground level from the outer edge of one tyre to the outer edge of the other, is fifty-seven inches. Now, these are exactly the dimensions that we noted in our measurements of the track of the unknown vehicle. It isn’t by any means conclusive, but we are bound to take note of the coincidence."

"Yes, indeed," I assented. "It is a decidedly striking coincidence; a sort of Bertillon measurement, at least so it appears, though I don’t know to what extent the dimensions of vehicles are standardised."

"At any rate," said he, "we note the possibility that this vehicle may have been a hansom cab; and whatever it was, it served to convey the body of Sir Edward to Five Piper’s Row on Sunday, the twenty-first of June, at some time in the evening or night, but most probably between eleven and twelve. The body was carried into the house by at least two persons, one of whom appears to have been a waterside or sea-faring person."

"Is it clearly established that there was more than one person?" I asked.

"Yes. There were at least two sets of muddy foot-marks—and apparently only two—on the floor leading from the front door to the kitchen. They were not Holker’s, for he arrived with dry feet; they were certainly not Sir Edward’s, as we know from the state of his shoes, apart from the ascertained fact that he was dead when he was taken into the house. There were undoubtedly two men; and we can take it that neither of them was the driver of the vehicle since that made merely a pause at the house and not a prolonged stay.

"The body, then, was carried into the house by these two persons, one of whom—probably the nautical person—had brought with him a piece of rope which had been cut off a longer complete rope and which bears visible evidence of having been stolen."

"What do you mean by visible evidence?" I demanded. "Surely a rope which has been stolen is not visibly different from any other rope! The act of stealing a rope does not impress on it any new distinguishable properties."

"That is true," he admitted; "and yet it may be possible to recognise a stolen rope by its visible properties. Did you ever hear of a ‘rogue’s’ yarn?"

"Not to my knowledge."
“It is a device that used formerly to be employed in the Navy to check the stealing of cordage. Every rope that was made in the Royal Dockyards had one yarn in one of the strands which was different from all the others. It was twisted in reverse, and, if the rope was a white rope, the rogue’s yarn was tarred, while in a tarred rope the tell-tale yarn was left white. Later, the special yarn was replaced by a single coloured worsted thread, which was spun into the middle of a yarn and so was not visible externally, but only at the cut end. This was a better device, as each dockyard had its own colour, so that when a stolen rope was discovered it could be seen at once which dockyard it belonged to.

“But the plan of marking rope in this way is not confined to the Navy. Many public, and even private bodies which use rope, have it made up with some distinctive mark—usually a coloured thread in one of the yarns. And that happens to be the case with this particular rope. It is a marked rope; evidently the property of some public or private body.” He took the washed ‘specimen’ from the bench, and, handing it to me, continued: “You see this is a four-strand rope, and in two of the strands is a yarn in which has been twisted a coloured cotton thread, a red thread in the one and a green thread in the other.”

I examined the little length of rope closely, and, now that I had been told, the coloured threads were easy enough to see, though only at the cut ends. Now, too, I understood Thorndyke’s intense interest in the rope. But there was another thing that I did not understand at all.

“I suppose,” said I, “that it was these coloured threads that made you give so much attention to this rope?”

“Undoubtedly,” he replied; “and you must admit that they were calculated to attract attention.”

“Certainly, I do. But what puzzles me is how you came to see them at all. They are extremely inconspicuous, and must have been still more so before the rope was cleaned.”

“There is no mystery about that,” said he. “I saw them because I looked for them. You remember that you—like the Superintendent—took this rope for a coir rope. So did I, at first. Then I saw that the texture did not agree with the colour; that it was really a hempen rope dyed to imitate coir. Then I asked myself the question that you asked just now: Why should anyone dye a hempen rope to imitate the less valuable coir? The natural suggestion was that the rope had been disguised to cover unlawful possession. It was probably a stolen rope. This idea suggested the possibility that it might be a marked rope. Accordingly I carefully examined the cut end, and behold! the two coloured threads; very inconspicuous, as you inferred, but visible enough when looked for.”

“But this is a very important fact, Thorndyke,” said I.

“It is,” he agreed. “It is by far the most valuable clue that we hold. In fact, if the finger-prints fail us, it is the only clue that leads away from generalities to a definite place and set of surroundings. We shall almost certainly be able to trace this rope to the place from which it was stolen, and that alone will tell us something of the person who stole it.”

“Mighty little,” said I.

“Probably. But if we are able to add only a little to what we know, that little may be very illuminating.”

“What do we know about these men?” I asked.

“Perhaps I should have said ‘infer’ rather than ‘know’; but our inferences are fairly safe. First, we find a person evidently accustomed to handling cordage, and probably a seaman or waterside character; a person, probably the same, who has a stolen rope in his possession; a person who is in some way connected with a tailor’s work-room or some similar establishment; and a person who uses, drives and probably owns some two-wheeled vehicle, either a gig, a light cart or possibly a hansom cab, and if the latter, an old cab, probably in poor condition and distinguished by the unusual character of iron tyres. Then there is the choice of Piper’s Row. The selection of this particular house could hardly have been made by a complete stranger. It suggests a person with some knowledge of the place and of its usually undisturbed condition. Assuming the object to be the disposal of the body in some place where it would not be discovered until all traces of the crime—of the actual method of the murder—had disappeared, the hiding-place was extraordinarily well chosen. But for the mere accident of Holker’s picking out this house for repairs, the body might have remained undiscovered for months and the plan have succeeded perfectly.”

“It has succeeded pretty perfectly as it is,” said I, “so far as the coroner and the police are concerned.”

“Yes. But in another month the cause of death would have been completely unascertainable. But you notice that however long the interval might have been, the body would still have been identifiable by the contents of the pockets and the marking of the clothes. That seems to be worth noting.”

“You mean that the intention was that the body should ultimately be identified?”

“I mean that there was no attempt to conceal the identity. The significance of that—such as it is—lies in the fact that in an ordinary murder the safety of the murderers is much greater if the identity of the murdered person is unknown, since, in that case, the police usually have nothing to indicate the identity of the murderer. But I doubt if there is much in it. The intention evidently was, in this case, that the death should not be recognised as a murder at all.”

“Yes, and they were very near to bringing it off. In fact, they have brought it off so far. They are still very decidedly birds in the bush. And the inquest was an absolute walk-over for them. All the evidence seemed to point to suicide, and that of Weeks and Brodribb must have been most convincing to people who already had a bias in that direction. By the way, did you pick up anything from the evidence besides that statement of Holker’s?”
"Nothing very definite," he replied. "There were certain hints and suggestions in the evidence of Weeks and in that of Joseph Wood, the waiter. Weeks, you remember, had evidently had the feeling that there was something unusual in the air when Sir Edward started from home that morning; and Wood seemed to me to have the impression that there was someone in the cab which drew up for Sir Edward to enter. He didn't say so, in fact he said that he did not know, but he mentioned pointedly that he did not see Sir Edward hail the cab or give any directions to the driver. Taking what was implied rather than stated by these two witnesses, there seems to be a suggestion that one, at least, of the murderers was known to Sir Edward; and the fact that he went away in a hansom, whether alone or with some other person, is certainly significant as pointing to a definite destination. It is quite inconsistent with the Superintendent’s suggestion of aimless wandering.

"But we are straying away into a consideration of the general aspects of the case. To come back to the question that we were discussing, you see now what our position is at the moment. If Miller can give us the name of a person who has handled that chair at Piper’s Row, we can give him sufficient information to enable him to put that person on trial for murder. Of course he would not do so off-hand. Before he moved, he would fill in detail and seek corroborative evidence. But there would be very little doubt of the result.

"On the other hand, if Miller cannot produce a known person, we shall be left with a very complete case of murder against some persons unknown. Then it will be our task to convert those unknown persons into known persons; and to do that we shall need to acquire some further facts."

There were some other points that I should have liked to raise. But Thorndyke's very definite conclusion seemed to put an end to the discussion; so much so that Polton threw off all pretence, and, removing the eyeglass from his eye, deliberately carried the clock to a cupboard and there deposited it as a thing that had served its purpose.

XI. — ASHDOD REVISITED

(AJASPER GRAY'S NARRATIVE)

A GOOD old proverb assures us that we may be sure our sins will find us out. I will not make the customary facetious commentary on this proposition. That joke has now worn rather thin. But the idiotic booby-trap that I set for poor old Ponty, rebounding on me again and again like a self-acting, perpetual motion boomerang, illustrated the proverb admirably, while the encounter on my very doorstep with a dry-faced, plain-clothes policeman, illustrated the joke. Most inopportune, my sins had found me at home.

He must have had a description of me for he addressed me tentatively by name. I acknowledged my identity and he then explained his business.

"It's about that counterfeit half-crown that your father passed by mistake. I want to know, as well as you can remember, how it came into your possession."

Now, of course I ought to have told him all I knew. I realised that. But my recollections of Mr. Ebbstein’s establishment were so exceedingly unpleasant that I boggled at the idea of being any further mixed up with it. And then there was Miss Stella. I couldn't endure the thought of having her name dragged into a disreputable affair of this sort. Wherefore I temporised and evaded.

"The man who gave it to me was a complete stranger," said I.

"Naturally," said the officer. "You didn’t hear his name by any chance?"

"I heard another man call him 'Jim'."

"Well, that's something, though it doesn’t carry us very far. But how came he to give it to you? Was it payment?"

I described the transaction with literal truth up to the point of the delivery of the coin but said nothing of the subsequent events. I think he must have been a rather inexperienced officer, for he assumed that the payment concluded the business and that I then came away. I didn’t say so.

"You took the case up in Mansell Street. Do you remember what number?"

"No, but I remember the house. It was on the right-hand side, going from the High Street, just past a tobacconist's shop—next door, in fact. The shop had a figure of a Red Indian on a bracket outside."

He entered this statement in a large, black-covered note-book and then asked: "You took the case to Byles's Wharf, you say. Whereabouts is that? Isn’t it somewhere down Wapping way?"

"Yes, this end of Wapping."

"And do you think you would know the man again?"

"I am sure I should."

He noted this down and reflected awhile. But having missed all the really relevant questions, he didn’t seem able to think of any others. Accordingly, after a spell of profound thought, he put his note-book away and closed the proceedings.

I went on my way greatly relieved at having, as I hoped, at last shaken myself free of that accursed make-believe, but yet
by no means satisfied with my conduct of the affair. I knew that, as a good citizen, I ought to have told him about ‘Chonas’, and my default rankled in my bosom and again illustrated the proverb by haunting me in all my comings and goings. But the oddest effect of the working of my conscience was to develop in me a most inconsistent hankering to make my incriminating knowledge more complete. I became possessed by an unreasonable urge to revisit the scene of my adventure, to go down again into Ashdod, and turn my confused recollections into definite knowledge.

The opportunity came unexpectedly. I had to deliver a parcel of stationery at an office appertaining to a large warehouse in Commercial Road East. It was a heavy parcel, but not heavy enough to demand the use of the truck. I carried it on my shoulder, and when I had at length dumped it down in the outer office and taken my receipt for it, I was free and unencumbered. And the weight of the parcel seemed to justify me in taking a little time off to spend on my own affairs.

As I strolled back along Commercial Road East, I kept a sharp look-out for landmarks of that memorable journey with the hansom. Presently I came to the corner of Sidney Street, which I remembered having passed on that occasion, and which gave me what mariners call a “departure.” I turned back, eastward, and, taking the first turning on the right (southerly), left the broad thoroughfare behind and entered a maze of small streets. They were rather bewildering. But it is difficult thoroughly to bewilder a seasoned Londoner who is accustomed to wandering about the town on foot (people who ride in conveyances don’t count. They never become real Londoners). Presently I came to a corner which was marked at the kerb by an angular granite corner-stone. I remembered that stone. I had reason to (and so had the owner of the cab). Taking a fresh departure from it, I soon arrived at a little street at the end of which was a seedy-looking public-house distinguished by the sign of a lion and an inscription in Hebrew characters which suggested that the royal beast aforesaid was none other than the Lion of Judah.

I now had my bearings. This was the place where I had found and purloined the hansom. Just round the corner was the empty house from which Miss Stella and I had dropped down into the court. That was the last house in the street which I had come to identify, the street which was made illustrious by the residence therein of Mr. Ebbstein and his tenant, the ingenious ‘Chonas’, to say nothing of the old villain whom I had knocked on the head.

I sauntered round the corner, keeping my eyes skinned (as our packer would have expressed it) but carefully avoiding any outward manifestation of interest. The illustrious street I learned from a half-illegible name-plate rejoiced in the romantic name of Pentecost Grove. Strolling along it, I took in the numbers—where there were any—with the tail of my eye, keeping account of them, since so many were missing, until I arrived exactly opposite the mews, or stable-yard, which I had seen from the window of my prison. Thereby I learned that Mr. Ebbstein resided at Number Forty-nine, and the person whose cranium I had damaged was to be found—if still extant—at Number Fifty.

If I had been content with this enlargement of my knowledge and taken myself off, all would have been well. But at this point, my intelligent interest over powered my caution. The stable-yard opposite, bearing the superscription, ‘Zion Place’, yawned invitingly and offered an alluring glimpse of a hansom cab, horseless and apparently in dry dock. I couldn’t resist that hansom cab. Without doubt, it was the identical hansom with which I had scattered the howling and blaspheming denizens of Ashdod. Of course, it didn’t matter a ‘snide’ half-crown whether it was or not. But I was sensible of an idiotic impulse to examine it and try to verify its identity. Accordingly I crossed the street and sauntered idly into Zion Place, gradually edging towards the object of my curiosity.

It was an extraordinarily shabby old vehicle and seemed to be dropping to pieces from sheer senile decay. But it wasn’t really. The actual robustness of its old age was demonstrated by the near wheel, which memory impelled me to inspect narrowly. On the rim including the tyre, was a deep, angular notch, corresponding, as I grimly realised, with that sharp granite corner-stone and recalling the terrific lurch that had nearly jerked me from my perch. The notch was an honourable scar on which the builder and wheelwright might have looked with pardonable pride.

I had just reached this conclusion when I became aware of a face protruded round a stable door and a pair of beady eyes fixed very attentively on me. Then the face emerged, accompanied by a suitable torso and a pair of thin, bandy legs, the entire outfit representing the Jehu whom I remembered as bearing the style and title of Louis. He advanced towards me crab-wise and demanded, suspiciously: “Vell. Vat you vant in here?”

I replied that I was just having a look round.

“Ah,” said he, “zen you shall take your look outside.”

I expressed the hope that I had not intruded, and, turning about, strolled up the yard and out into the street. He followed closely at my heels, not up the yard, but along the street. Finding him still clinging to me, I quickened my pace, deciding now to get clear of the neighbourhood without delay. Heading towards The Lion, I was approaching the corner when two men came round it. One of them, whose head was bound with a dirty rag, instantly riveted my attention and stirred the chords of memory. Apparently, my appearance affected him in a like manner, for, as soon as he saw me he stopped, and, after regarding me for a moment with an astonished glare, flung up his arms and uttered a loud cry which sounded to me like “Hoya!” At the same moment, his companion started forward as if to intercept me.

That uncanny, Oriental alarm-cry, repeated now and echoed by the other two men, instantly warned me of my danger. I remembered its effect last time; indeed, the aid of memory was needless, for already a dozen windows were thrown up and a dozen shaggy heads thrust out, with open mouths repeating that ill-omened word, whatever it might be. Pocketing my dignity, I evaded the attempt to head me off and broke into a run with the cab-driver and the other man yelling at my heels.
Past the Lion of Judah I bolted and along the street beyond for some fifty yards; but now my imperfect recollection of the neighbourhood played me false. For, coming to a narrow turning on my right, I assumed it to be the one by which I had come, and did not discover my error until I had covered more than half its length, when a sharp turn revealed a blind end. But the discovery came too late. Already the place was humming like an overturned hive, and, when I spun about to retrace my steps, behold! the end of the little street was blocked by a yelling crowd.

There was nothing for it but to go back, which I did at a brisk walk; and when the mob came forward to meet me with the obvious intention of obstructing my retreat, I charged valiantly enough. But, of course, it was hopeless. A score of dirty hands grabbed at me as I strove to push my way through and in a few moments I was brought to a stand with both my arms immovably held, and then began to be slowly pushed and dragged forward; and all around me were those strange, pale, greasy, alien faces with their high cheek bones and beady eyes, all jabbering vociferously in an uncouth, alien tongue. Suddenly, out of this incomprehensible babel issued the welcome sound of some thing resembling English speech.

"Wot's the good of makin' all this rumpus? Give the bloke a clout on the 'ed and let 'im go."

I looked round at the speaker and instantly recognised the man who had given me the 'snide' half-crown at Byles's Wharf; and even in my bewilderment, I could see that he was obviously nervous and uneasy.

"Let 'im go!" exclaimed a flat-faced, hairy alien who was hanging on to my arm. "You do not know zat he have try to kill poor Mr. Gomorrah!"

"I know," said the other. "E 't 'im on the 'ed. And wot I says is, 't 'im on the 'ed and let 'im 'ook it. Wot's the good of raisin' a stink and bringin' the coppers round?"

"He shall pay for vot he 'ave done, Mr. Trout," the other replied, doggedly; and at this moment, my acquaintance with the bandaged head pushed his way through the crowd and stood for a few moments glistening over me with an expression of concentrated vindictiveness; and certainly, the presence of the bandage after all these weeks suggested that he had some excuse for feeling annoyed with me. I thought that he was about to take 'consideration for value received' forthwith, but then he altered his mind, and, with a savage grin, directed his friends (as I gathered) to bring me along to some more convenient place.

"Don't be a fool, Gomorrah," urged my friend—whose name appeared to be Trout. "You'll get yourself and the rest of us into the soup if you ain't careful. This 'ere is England, and don't you forget it."

His warnings, however, had no effect, and, once more an effort was made to propel me in the desired direction. It was clear to me that I was being led to the slaughter—not, however, like a lamb (whose policy I have always considered a mistaken one), for I proceeded to make things as uncomfortable as possible for the men who were holding me; who, to do them justice, retaliated effectively in kind. The proceedings became distinctly boisterous with considerable wear and tear of my clothing and person, and our progress was neither dignified nor rapid. Suddenly, the man who was clinging to my right wrist, breathlessly addressed the stiff-protesting Trout.

"Here come Mr. Zichlinsky. Now ye shall see."

I looked anxiously at the new-comer who was thrusting through the crowd, and, as he came into view, I had two instantaneous impressions. First, in spite of his shabby, ill-fitting clothes, he was obviously of a totally different social class from the others. Secondly, though he was certainly a stranger, his face seemed to awaken some dim and vague reminiscence. It was a villainous face—dead white with a pair of strangely colourless eyes of the palest grey; and the pallor of eyes and skin was intensified by a brush of jet-black hair that stood straight up on his hatless head. Though not actually uncomely, his appearance and expression were evil to the point of repulsiveness.

These were but momentary impressions of which I was but half aware; for there was matter enough of another kind to keep my attention fully occupied. As soon as Mr. Zichlinsky had worked his way through to me, he introduced himself by slapping my face and remarking, with a sort of wild-cat grin: "So you hav come to see us again. Zis time you shall hav a brober welcome."

With this he slapped my face again, and then grabbing a handful of flesh and clothing together, helped the others to drag me along. Mr. Trout made yet one more appeal.

"For Gawd's sake, Mr. Zichlinsky, don't go and do nothing stoopid. This ain't Russia, yer know—"

Zichlinsky turned on him as if he would have bitten him. "Have I ask for you to tell me vot I shall do? Keep your hands out of my business!"

But there was yet another protestor. I could not see him, and, though I could hear his voice—speaking in barbarous French—I could make out only a word or two. But of those words, two—"la pucelle"—conveyed to me the gist of the matter.

Zichlinsky answered him less savagely and in excellent French: "It is not only revenge, though this beast has robbed me of a fortune. But he knows too much, and you can see for yourself he is a spy."

Here he refreshed himself again by slapping my face, and then, apparently goaded to fury by the recollection of his wrongs, snarled and bared his teeth like a dog, and, seizing my ear, began to pull and twist it with the ferocity of a madman. The pain and consequent anger scattered the last remains of my patience and caution. Wrenching my left hand free, I shot out my fist with the full strength of an uncommonly strong arm.
My knuckles impinged on his countenance exactly between his eyes, and the weight of the blow flung him backward like a capsized ninepin. If there had been room, he would have measured his length on the ground. As it was, some of his friends caught him, and he leaned against them motionless for a few seconds apparently dazed, while from the crowd a deafening yell of execration arose. Then he recovered himself, and, with a horrid, womanish shriek, came at me with all his teeth exposed. And now I could see that he held a long, pointed knife in his hand.

I suppose that, until my time comes, I shall never be so near death as I was at that moment. The man was within a foot of me and his arm was swung out to strike. The nearest wretches in the crowd glared at me with glowing, fascinated eyes while my own followed the outward swing of the knife.

And then, in an instant, the fateful thing happened: A pair of strong hands—I think they were Trout's—seized and held the outswung arm. The din of triumphant yells died down suddenly, giving place to a strange silence. The hands which gripped my arms relaxed their hold so that I could shake myself free. I cast a bewildered glance around, and then I saw the cause of this singular change. Above the heads of the crowd appeared two constabulary helmets, and in another moment two stalwart policemen (the police patrol in pairs in neighbourhoods of this type) pushed their way to the centre of the throng. Zichlinsky hurriedly put away his knife—but not before one of the policemen had observed it—and was in the act of withdrawing when a stern official voice commanded him to stay.

"Now," said the constable who had noticed the knife, "what's going on here?"

Mr. Trout hastened to explain. "It's a parcel of foolery, constable, that's what it is. A silly mistake. They took this young man for somebody else and they was going to wallop 'im."

"Seem to have done a fair amount of walloping already," the constable remarked apropos of my rather dishevelled condition. "And one of them," he added, fixing an accusing eye on Zichlinsky, "was going to do the walloping with a knife. I saw you putting it away. Now what might your name be?"

The question was evidently anticipated for Zichlinsky replied, promptly: "Jacob Silberstein."

"And where do you live?"

"I lodge with Mr. Gomorrah."

"Oh," said the constable, "you live with old Solomon Gomorrah, do you? That isn't much of a testimonial."

He produced a large, black-covered note-book in which he entered the particulars while the other constable peered curiously over his shoulder.

"What's that?" the latter asked. "Did he say he lived at Sodom and Gomorrah?"

"No," his colleague explained. "Solomon Gomorrah is a man—at least he'd pass for one in the monkey-house at the Zoo. One of these cag-mag tailors. Makes shoddy trousers. What they call in Whitechapel a kickseys builder. You'll know all about Solomon when you've been a little longer on this beat." He ran an expert eye over the remaining bystanders (the production of the note-book had occasioned a rapid dwindling of the assembly, though curiosity still held the less cautious) and demanded: "But what was it all about? What did they want to wallop this young fellow for?"

Mr. Trout would have essayed to explain, but he was forestalled by an elderly Jewess who looked as if she might have been "collected" from the Assyrian room at the British Museum. "He is a wicked man! He have try to kill poor Mr. Gomorrah."

"Nothing of the sort!" said Trout. "T'wasn't this bloke at all. They thought 'e was 'im, but it wasn't. It was another cove altogether. 'E 'it 'im on the 'ed."

The constable's unsympathetic comment on this slightly confused explanation was that it probably served him right; "but," he asked, "where is Gomorrah?"

"Seems to have hooked it," said Trout, looking round vaguely, and I then observed that Zichlinsky had also taken the opportunity to fade away. The constable turned to me somewhat wearily and asked:

"What is your name, sonny, and where do you live?"

"My name," I replied, "is Jasper Gray, and I live at 165, Great Ormond Street."

"Quite a treat to hear a Christian-like name," said the officer, writing it down. "So you don't belong to this select residential neighbourhood; and if you will take my tip, you'll clear out of it as quickly as possible. Better walk with us up to Commercial Road East."

I accepted the invitation gladly enough, and we turned away together from the now silent and rapidly emptying street, and as we went, the senior constable put a few judicious questions. "Do you know what the rumpus was about? Why did that man Silberstein want to knife you?"

"He said I had robbed him of a fortune. I don't know what he meant. I have never seen him before, to my knowledge. But his name is not Silberstein. It is Zichlinsky. I heard them call him by that name."

"Oh, Zichlinsky, is it?" said my friend, fishing out the note-book again. "Probably a 'wanted' name as he gave a false one. We must see who he is. And now, here we are in Commercial Road East. You'd better have a penn'orth on a bus. Safer than walking. Got any coppers?"
He was slipping his hand into his trousers pocket, but I assured him that I was solvent to the extent of twopence, whereupon, waving away my thanks, he hailed a west-bound Blackwall omnibus and stood by to see me safely on board.

I was not sorry to sink down restfully on a cushioned seat (the constable had directed me to travel inside) for I had had a strenuous finish to a rather fatiguing morning. And as the omnibus rumbled along west ward I reflected on my late experiences, and once more the voice of conscience made itself heard. Evidently, Pentecost Grove was a veritable nest of criminals of the most dangerous type. Of those criminals I knew enough to enable the police to lay hands, at least on some and probably on all. Hitherto I had, for purely selfish reasons, kept my knowledge to myself. Now it was time for me to consider my duties as a citizen.

So I reflected as the leisurely omnibus jogged on along the familiar highway, and the sordid east gradually gave place to the busy west. When I dropped off opposite Great Turnstile my mind was made up. I would seek out the guardians of the law and tell them my story.

But once more Fate intervened. The guardians of the law forestalled my intentions; and the ears into which my story was delivered were not those of the mere official police.

XII. — OF A HANSOM CAB AND A BLACK EAGLE

(DR. JERVIS'S NARRATIVE)

WHEN I came down to breakfast on the day after the inquest, I found the table laid for one; a phenomenon which Polton explained by informing me that “the doctor” had gone out early. “In a hansom,” he added with a crinkly and cunning smile. “I fancy he's got something on. I saw him copying a lot of names out of the directory.”

I followed his knowing glance to a side table, whereon lay a copy of the Post Office Directory, and had no doubt that he was right. The Post Office Directory was one of Thorndyke's most potent instruments of research. In his hands, and used with imagination and analytical feeling, it was capable of throwing the most surprising amount and kind of illumination on obscure cases. In the present instance, its function, I had no doubt, was quite simple; and so, on examination, it turned out to be. Although closed, the volume had two places conspicuously marked by slips of paper, one at the page devoted to rope manufacturers and the other at the list of ship chandlers; and a number of light pencil marks opposite names in the two lists showed that a definite itinerary had been made out.

“The doctor said I was to show you this,” said Polton, laying an open envelope beside my plate.

I drew out the enclosed letter, which I found to be a short and civil note from Mr. Northbrook, inviting us informally to lunch at the Clarendon Club. The invitation was for the current day, and the note was endorsed by Thorndyke: “I have accepted, and shall be at the club at one o'clock. Come if you can.”

I was a little surprised, for Thorndyke was evidently full of business, and I suspected that Northbrook merely wanted to extract comments on the inquest; but it was quite convenient for me to go, and, as Thorndyke clearly wished me to—quite possibly for some definite reason—I strolled forth in good time and made my way to the rendezvous by the pleasant way of St. James's and the Green Park.

Northbrook’s intentions were as I had supposed, and I have no doubt that, in the course of a very pleasant lunch, he may have elicited some interesting comments on the previous day’s proceedings. But Thorndyke was an extremely difficult man to pump; the more so as he had the manner of discussing affairs without any appearance of reservation. But I noted that no inkling was conveyed to Northbrook of any dissent from the finding of the jury.

I found myself speculating from time to time on Thorndyke’s object in wasting rather valuable time on this leisurely and apparently purposeless conversation. But towards the end of the meal I received a sudden enlightenment. “This,” he said, “I take to be the table at which Sir Edward usually took his meals?”

“Yes,” replied Northbrook, “and a very pleasant table it is, looking out right across the Green Park. You judged, no doubt, by the fact that Joseph Wood is waiting on us?”

“You are quite right,” said Thorndyke; “and that reminds me that I should like to have a word or two with Joseph Wood, presently.”

“But certainly, my dear sir. You shall have an opportunity of interviewing him in the strictest privacy.”

“Oh, that is not necessary at all,” said Thorndyke. “There are no secrets. I merely wanted him to amplify one of the points in his evidence. Perhaps I may ask him now, as I see he is coming with the coffee.”

“Do so, do so, by all means,” said Northbrook, evidently delighted at the chance of hearing the “amplification.”

Thus invited, Thorndyke addressed the waiter as he placed the coffee on the table.

“I wanted to ask you one or two questions about your evidence at the inquest concerning the hansom in which Sir Edward drove away.”

“Yessir,” said Wood, standing stiffly at attention.

“It seemed to me that you had an impression that there was someone in it when it drew up for him to get in.”
“Yessir. I had. I didn’t say so at the inquest, because I was there to tell what I saw, not what I thought.”

“You were perfectly right,” said Thorndyke. “It was for the coroner to ask for your opinions if he wanted them. But you did think so?”

“Yessir. I didn’t see Sir Edward hail the cab, and I don’t think he did. He just stopped and the cab drew up. Then he got in and the cab drove away. I didn’t see him speak to the cabman, and I don’t believe he did, for the man started off and whipped up his horse as if he knew where he had to go.”

“You said you didn’t notice the number of the cab. Of course, you would not.”

“No, sir. I hadn’t no occasion to.”

“Did you notice what the cab was like—whether there was anything unusual in its appearance?”

“Yessir, I did notice that. You couldn’t help noticing it. That cab,” he continued solemnly, “must have been the great-grandfather of all the cabs in London. You never see such a shabby rattle-trap. Got an old round dickey with a sheet-iron back, like I remember when I was a boy, and, if you will believe me, sir, iron tyres! Iron tyres in this twentieth century! Why that cab must have been fifty years old if it was a day.”

“Why didn’t you say that in your evidence, Wood?” Northbrook demanded.

“Nobody asked me, sir,” was the very reasonable reply.

“No. And, after all, I suppose it didn’t very much matter what the cab was like. Do you think so, doctor?”

“It would have been helpful if we could have identified the cab and ascertained if anyone was in it and where it went to. That might have enabled us to fill in the picture. However, we can’t; but, all the same, I must thank you, Wood, for telling me what you noticed.”

After this little episode, I was not surprised when Thorndyke became suddenly conscious of the passage of time.

“Dear me!” he exclaimed with a glance at his watch, “how the minutes slip away in pleasant society! We shall have to get on the road, Jervis, and let Mr. Northbrook retire to his office. It was most kind of you to invite us, Mr. Northbrook, and we have both enjoyed a very agreeable interlude in the day’s work.”

He finished his coffee and we both stood up; and after a few more exchanges of compliments, we took our departure. As we descended the steps, a disengaged hansom approached and drew up in response to Thorndyke’s hail. I stepped in, and, as my colleague followed, I heard him give the destination: “New Scotland Yard, Whitehall Gate.”

“That waiter man’s information was rather startling—at least, it was to me,” I remarked as the cab horse padded away to the accompaniment of his softly tinkling bell.

“It is a very valuable addition to our small stock of facts,” Thorndyke replied. “And how extraordinarily opportune Northbrook’s invitation was. I was casting about for some way of getting a talk with Wood without making a fuss, and behold! Northbrook solves the difficulty in the simplest fashion. What did you think of the other point; the possible presence of some other person in the cab?”

“I think it is more than merely possible. I should say it is very highly probable, especially in view of the peculiarity of the cab. And, of course, this new information confirms very strongly your suspicion that the Stratford vehicle was really a hansom.”

“It does,” he agreed; “in fact I am assuming as a working hypothesis that the cab which bore Sir Edward away from the club, conveyed his body to Piper’s Row. On that assumption I am now going to Scotland Yard to find out what facilities are for tracing a cab the number of which is unknown. I should like to see Miller in the first place if we are lucky enough to catch him.”

By this time our ‘gondola’ was turning from Trafalgar Square into Whitehall, and I was noting how strikingly it contrasted with the ‘rattle-trap’ that Wood had described. This was a typical West End hansom, as smart and clean as a private carriage; furnished with gay silken blinds and at each side with a little mirror and a flower-holder containing a bunch of violets; and it slid along as smoothly as a sleigh, without a sound beyond the gentle and musical tinkle-tinkle of the bell on the horse’s collar.

“If you want to catch Miller,” said I, as we approached the main gateway of the Police Headquarters, “you are just in time. I see him coming out across the courtyard.”

In effect, the Superintendent emerged into Whitehall just as we got out of the hansom, and, observing us, stopped to wait for us.

“Were you wanting to see me?” he asked with an inflection that subtly conveyed the earnest hope that we were not. Thorndyke evidently caught that faint overtone, for he replied: “Only for a moment. Which way are you going?”

“Westminster Station—underground.”

“So are we; so we can talk as we go. What I want to know is this: there are still in London a few old hansom cabs with unconverted iron tyres. Now, could your people produce a list of those cabs?”

Miller shook his head. “No,” he replied. “The register doesn’t give particulars of the furnishing of particular cabs. Of
course, we could find out by means of what they call an ad hoc investigation. But it would be a troublesome business. Possibly Inspector Radcliffe might be able to give you some information. He is our principal specialist in public vehicles.”

He paused and seemed to reflect for a few moments. Then, suddenly, he emitted a soft laugh as if he had remembered something amusing. Which, in fact, turned out to be the case, for he resumed: “Talking of iron-tired cabs, Radcliffe told me a rather quaint story some time ago. Nothing much in it, but your question brought it to mind. It seems that a certain constable whose beat included Dorchester Square was going his round rather late one evening when he noticed a hansom cab drawn up about the middle of the south side of the square. There was no sign of the driver, and no one minding the horse; and as this was not quite according to Cocker, it naturally attracted his attention. But what specially tickled him was the way the horse was secured. The reins were made fast to a lamp-post with a clove hitch, just as a waterman makes fast his boat’s painter to a railing or a thin iron post. The constable was a Margate man and familiar with the ways of boatmen, so it struck him as rather funny to see a cab moored to the lamp-post like a boat.

“However, he didn’t take any notice but went off on his beat. When he came round the square the next time, the cab was still there and there was still no sign of the driver. He began to think it a bit queer, but he didn’t want to make a fuss unnecessarily. But when he came round the third time and found the cab still there, he began to look into things. First he noticed that the cab was a most shocking old ramshackle—battered old round-backed dickey and iron tires—sort of cab that Queen Elizabeth might have driven about in; and then he looked at the horse and saw that it looked ready to drop with exhaustion. Just then as the sergeant happened to come round, the constable drew his attention to the cab, and the sergeant detailed another constable to take it round to a livery stable. There they gave the poor old horse a drink and a feed, and they say that he went for the oats as if he’d never tasted any before and nearly swallowed the nose-bag.

“Next morning, having found out from the register that the cab came from a little private yard down Mile End way, one of our men took it there and interviewed the owner, who drove it himself. It was a queer affair. The owner was a Polish Jew, about as unlike a horseman as you can imagine. But what struck our man principally was that the fellow seemed to be in a blue funk. His story was that he had gone into a pub to get a drink, leaving the cab in charge of a man who happened to be loafing outside, and when he’d had his drink and come out, the cab was gone. Asked why he hadn’t given information to the police, he said he hadn’t thought of it, he was so upset. And that was all our man could get out of him. But as it was obvious that there was something behind the affair, our man took the fellow’s name—though it was on the register—and reported the incident to Radcliffe.

“That’s the story. I don’t know whether it is of any interest to you, but if it is, I will tell Radcliffe to let you have particulars if you care to look him up. And he might be able to tell you about some other cabs with iron tyres.”

Thorndyke thanked the Superintendent and said that he would certainly avail himself of the assistance thus kindly offered. Then, as the train began to slow down he rose. (I have not interrupted Miller’s narrative to describe our movements but I may explain that, at Westminster, we had all taken tickets, Miller’s being for Bishopsgate and ours for the Monument and that we had all boarded the same east-bound train.) When the train stopped we shook hands with the Superintendent and got out, leaving him to pursue his journey.

“That Polish gentleman sounds suspiciously like one of our friends,” I remarked as we made our way out of the station.

“He does,” Thorndyke agreed. “The man and the cab seem to fit the circumstances. It remains to be seen whether the date will. But I shall take an early opportunity of calling on Inspector Radcliffe and getting more precise details.”

“Where are we going now?” I asked, having noted that our course seemed to be riverward.

“The Old Swan Pier,” he replied, “whence we shall embark for a short voyage. The object of that voyage will, I hope, appear later.”

As Thorndyke’s answer, while withholding the explanation, did not deprecate speculation on my part, I gave the possibilities due consideration by the light of our further proceedings. From the Old Swan Pier we boarded one of the excellent and convenient river steamers which plied on the Thames in those days, by which we were borne eastward beneath the Tower Bridge and down the busy Pool. Cherry Gardens Pier was reached and left behind without supplying any hint, nor was I any the wiser when, as the boat headed in towards The Tunnel Pier, Wapping, my colleague rose and moved towards the gangway.

From the head of the pier, Thorndyke turned westward along High Street, Wapping, commenting on our surroundings as he went.

“A queer, romantic old neighbourhood, this, Jervis; dull and squalid to look at now but rich in memories of those more stirring and eventful days which we think of fondly with the advantage of not having had to live in them. We are now passing Execution Dock, still, I believe, so called though it is now a mere work-a-day wharf. But a century or so ago you could have stood here and looked on a row of pirates hanging in chains.”

“I shouldn’t mind if you could now,” I remarked, “if I could have the choosing of the pirates.”

Thorndyke chuckled. “Yes,” he said, “there was no nonsense about legal procedure in those days. If the intermediate stages were not all that could be desired, the final ones had the merit of conclusiveness. Here we approach The Town of Ramsgate Inn and Wapping Old Stairs, the latter a little disappointing to look at. The art of seasoning squalor with picturesqueness seems to have been lost. This is the goal of our pilgrimage.”

As he spoke, he turned in at the gateway of a small dock and began to walk at a reduced pace along the quay. I looked
around in search of some object that might be of interest to us but my glance met nothing beyond the craft in the basin—mostly lighters and Thames barges—the dreary dock buildings, the massive mooring-posts and bollards and here and there a life-buoy stand. Suddenly, however, I became aware that these last, which my eye had passed almost without notice, were not viewed with the same indifference by Thorndyke, for he walked straight up to the nearest one and halted before it with an air of obvious interest. And then, in a moment, I saw what we had come for.

The life-buoy stand was in the form of a screen supported on two stanchions. In the middle of the screen, under a little pent-house, was a massive wooden hook on which was hung the life-buoy and a coil of smallish rope. Neither the buoy nor the rope was secured in any way, but either or both could be freely lifted off the hook. I thought at first that Thorndyke was about to lift off the coil, but he merely sought one of the ends of the rope, and, having found it, looked at it for a few moments with close attention. Then, having spread out with his thumb the little brush of fibres that projected beyond the whipping, he made a more minute examination with the aid of his pocket lens. Finally, without comment, he handed the end of the rope and the lens to me.

A moment's careful inspection through the glass was sufficient.

"Yes," I said, "there is no doubt about it. I can see the red and the green threads plainly enough through the lens though they are mighty hard to see with the naked eye. Which is unkind to the thief as giving him a false sense of security."

"It is for the thief, like the rest of us, to know his job," said Thorndyke, producing from his pocket the invaluable calliper gauge. He took the rope from me, and having measured the diameter, continued: "The agreement is perfect. This is a four-strand rope three eighths of an inch in diameter and having the two 'rogues' threads' of the same colour and similarly placed. So we may say that the place of origin of the Piper's Row rope is established beyond doubt."

At this moment an amphibious-looking person in a peaked cap who had been approaching slowly and with a somewhat stealthy manner, made his presence known.

"What's the game?" he enquired, and then, by way of elucidation: "What are yer up to with that rope?"

Thorndyke faced him genially.

"You, I take it, are the dock keeper?"

"I am," was the concise reply. "And what abaat it?"

"I should like, if you would not mind," said Thorndyke, "to ask you one or two questions. I may explain that I am a lawyer and am, at the moment, rather interested in the subject of rope-stealing. These life-lines look to me very exposed and easy to steal."

"So they are," our friend replied in a slightly truculent tone, "but what else can you do? Make 'em fast with a padlock, I suppose! And then you'd be in a pretty fine 'ole if a bloke went overboard and nobody hadn't got the key."

"Very true," said Thorndyke. "They must be free to lift off at a moment's notice. I see that. But I expect you find one missing now and again."

"Now and again!" repeated the dock-keeper. "I tell you, the way them ropes used to disappear was somethink chronic."

"That was before you took to marking them, I suppose?"

"How did you know we marked 'em?" our friend enquired suspiciously; and as Thorndyke silently held up the free end, he continued: "If you spotted them marks, you won't be much good to the spectacle trade. But you are quite right. Before we took to marking 'em they used to go one after the other. Couldn't keep one no how. And we lost one or two—three altogether—after we took the marks. But we got back two of 'em and dropped on the coves that pinched one of 'em; and now they've ogled that there's something wrong with our ropes and they leaves 'em alone—leastways they have for the last week or two."

Here he paused, but neither of us made any comment. Guided by long experience, we waited for the inevitable story to emerge; and sure enough, after a brief interval, our friend resumed:

"Three ropes we lost after the marks was put in, and we got back two. The first one I found in a junk shop in Shadwell 'Igh Street. The bloke said he bought it of a stranger, and p'raps he did. Nobody could say he didn't, so there was no use in makin' a rumpus. I just collared the rope and told him to keep a sharper look out in future. The second rope I spotted laying in a boat alongside Hermitage Stairs. Nearly missed it, I did, too, for the artful blighters had gone and dyed it with cutch. Made it look just like a ky-ar rope. But I looks at it a bit hard and I thinks it looks uncommon like our rope, barrin' the colour; four strands, same size, looked about the same length as ours—ten fathoms, that is, to a inch—and it seemed to be laying spare in the boat. So I jumps down—there wasn't anybody in the boat at the time—and I has a look at the cut end. And there was our marks quite plain in spite of the cutch.

"Now it happened that while I was overhauling that rope, a bobby came out on the head of the stairs and stood there a-twiggin' of me."

"That your boat?" he says.

"No," I says, 'it ain't."

"Then," he says, 'what are you doin' with that rope?' he says.
“So I nips up the stairs with the rope in my hand and tells him how things is and who I am.

“Well,” says he, ‘are you goin’ to charge this man with stealin’ the rope?’

“No,” I says, ‘I ain’t,” I says. “I’m a-goin’ to pinch this rope,’ I says, ‘and you’ve caught me in the very act, and you’re goin’ to run me in, and you’re goin’ to bring this bloke along to make the charge and to swear to his property.’

The copper grins at this. ‘You seem to be a pretty fly old bird,’ he says, ‘but it’s a sound wheeze. You’ll catch him on the hop if he sweats to the rope.’

Just then two blokes come down to the stairs. They take a long squint at me and the copper and then down they goes to the boat. One of ’em was a regler Thames water rat and the other was one of them foreign sheenies—hair down on his shoulders and a beard what looked as if he’d pinched it out of a horse hair mattress. The copper grabs hold of my wrist and runs me down after them.

“Here,” he says to the water rat, ‘is this your boat?’

Water rat didn’t seem quite sure whether it was or not, but at last he said he supposed it was.

“Well,” says the copper, ‘I’ve just caught this man stealing rope out of your boat, and I’m going to take him along to the station, and you two have got to come along with me to identify your property.’

Then I saw that my wheeze wasn’t going to work. Water rat bloke had rumbled me—seen me at the dock, I expect.

‘Wot property are yer talkin’ about,’ says he, beginning to cast off his painter from the ring. ‘That there rope don’t belong to me. Someone must have dropped it into the boat while we was up at the pub.’

The copper reaches out and grabs the painter so that they couldn’t hike off and he says: ‘Well, it’s somebody’s rope and it’s been pinched, and you’ve got to come along to the station to tell us about it.’

I thought those coves was going to give trouble, but just then a Thames Police gig came along and the copper beckoned to ’em. So they pulls in and one of the water police helped us to take the two blokes to the station. I went along quite quiet, myself. When we got there, the Inspector asks the water rat what his name was. Water rat didn’t seem quite sure about it but at last he says: ‘Frederick Walker,’ he says, ‘is my name,’ he says.

“No, it isn’t,” says the Inspector. ‘Think again,’ he says. ‘Last time you was James Trout and you lived in King David Lane, Shadwell. Live there still?’

“Yus,” says Trout. ‘If you knewed, what did you ask me for?’

“We don’t want any of your sauce,” says the Inspector; and then he turns to the sheeny. ‘What’s your name and address?’ he says.

“The sheeny shakes his head like as if he was trundling a mop. ‘No speak Anglish,’ says he.

“Oh, rats!” says the Inspector, ‘you can’t have forgot the English language in a couple of months. Last time you was Solomon Gomorrah and you lived in Pentecost Grove and was a tailor by trade. Any change?’

“No,” says Solomon. ‘It vas chust ze same.’

“Well,” says the Inspector, ‘you’ll have to stay here while I send a man round to see that the addresses are correct. Sure you don’t want to make any change?’

“They said no; so I left the rope with the Inspector and came away.”

“And what was the end of it?” Thorndyke asked.

“That was,” our friend replied. He expectorated scornfully and continued: “Both of ’em swore before the beak that it wasn’t their rope, and we couldn’t prove that it was, so he dismissed the case and told ’em to be more careful in future.”

“And with regard to the third rope that you lost?”

“Ah,” said the dock-keeper, regretfully, “I’m afraid that’s a goner. Now that they know it’s got a secret mark, they’ll most likely have traded it away with some foreigner.”

“You haven’t done so badly,” said Thorndyke. “I must compliment you on the smart way in which you found the lost sheep. And we needn’t despair of the third rope. If you can give me the exact dates and the names and addresses, I may be able to help you, and you will certainly help me. I want to get a list of these rope thieves.”

Our friend hereupon produced from his pocket a portentous note-book, the leaves of which he turned over rapidly. Having at last found the entry of the transaction, he read out the particulars, which Thorndyke duly entered in his own note-book.

“The length of these ropes, you say, is ten fathoms?”

“Ten fathoms exactly to a inch. I cut ’em off the coil myself and put on the whippings at the ends.”

“I should have thought you would want them longer than ten fathoms,” Thorndyke remarked.

“Why?” our friend demanded. “It’s long enough for a man overboard. Of course, if he was going for a channel swim that would be a different matter. We haven’t provided for that.”
“Naturally,” said Thorndyke. “And now, perhaps I had better make a note of your name and address in case I have any information to give you.”

“My name,” said the dock-keeper, “is Stephen Waters, and any letters addressed to me at the office here—Black Eagle Dock, Wapping—will find me. And I may as well have your name and address, if you don’t mind.”

Thorndyke produced a card from his case and handed it to Waters with the remark: “Better not mention to anyone that you have been in communication with me. The less we tell other people, the more we are likely to learn.”

Mr. Waters warmly agreed with these sentiments (though his own practice had not been strikingly illustrative of them), and when we had thanked him for having so far taken us into his confidence, we bade him adieu and made our way out of the dock premises.

“Well,” I exclaimed as we turned out into the High Street, “this has been a regular windfall. But how did you discover the place?”

“Oh, that was simple enough,” replied Thorndyke. “I just took a list of rope-merchants and ship chandlers from the Post Office Directory and started systematically to call on them. One was bound, sooner or later, to strike the right one. But I was lucky from the beginning, for the second rope-merchant whom I called on gave me the name of a rope-maker who made a speciality of private ropes of unusual construction and particularly of marked ropes. So I went straight off to that maker and gave him the description of our rope, when it turned out that it was one of his own make. He had a big coil of it actually in stock and was good enough to give me a sample (when I had given him my card) as well as a direction to Black Eagle Dock. That was a stroke of luck, for I obtained, after a couple of hours’ search, information that I had been prepared to spend a week on. But this meeting with Waters is a much bigger stroke of luck. We could, and should, have discovered eventually all that he has told us, but it would have involved a long and tedious investigation. This has been an excellent day’s work.”

“By Jove, it has!” I exclaimed. “With the Polish-Hebrew cab-driver and Mr. William Trout and the venerable Sodom-and-Gomorrah, we seem to have gathered up the whole party.”

“We mustn’t let our conclusions get ahead of our facts,” Thorndyke protested. “We are doing extremely well. Our great need was to get to certain unknown persons ‘a local habitation and a name.’ We seem to have done that; but we have to make sure that it is the right habitation and the right name. Possibly the finger-prints may dispose of that question definitely.”

Unfortunately, however, they did not. As we entered the Temple by the Tudor Street gate, we perceived Superintendent Miller advancing towards us from the direction of the Mitre Court entrance. He quickened his pace on seeing us and we met almost on our own threshold.

“Well, Doctor,” he said as we turned into the entry together, “I thought I would come along and give you the news, though it isn’t very good news. I’m afraid you’ve drawn a blank.”

“Finger-prints unknown or undecipherable?” asked Thorndyke.

“Both,” replied Miller. “Most of the marks are just smears, no visible pattern at all. There are two prints that Singleton says he could identify if they were in the records. But they are not. They are strangers. So that cat won’t jump. Then there is a print—or rather part of a print, and bad at that—which Singleton thought, at first, that he could spot. But he decided afterwards that it was only a resemblance. You do get general resemblances in finger-prints, of course, but they don’t stand systematic checking, character by character.”

“And this one failed to pass the test?” asked Thorndyke.

“Well, it wasn’t that so much,” replied Miller. “It was a bad print and the identification was very uncertain; and when we came to look up the records, it didn’t seem possible that the identification could be right. The print in the register that it resembled was taken from a man named Maurice Zichlinsky who was tried under extradition procedure for conspiracy to murder. The alleged crime was committed at St. Petersburg, and, as the extradition court convicted him, he was handed over to the Russian police, and a note on the record says that he was tried in Russia and sentenced to imprisonment for life. Consequently, as he is presumably in a Russian prison at this moment, it seems to be physically impossible that this print can be his. That is, if these are recent finger-prints.”

“They are,” said Thorndyke. “So I am afraid it is an absolute blank. Can you show me which are the possible prints?”

“Yes,” replied Miller. “Singleton marked them on the photograph and wrote the particulars on the back. Here they are,” he continued, laying the photograph on the table; “these are the two possibilities and this one, numbered ‘three,’ is the one that might have been the Russian’s.”

“And with regard to the second photograph?”

“Ah,” said Miller, producing it from his pocket, “Singleton was rather interested in that. Thought the prints looked as if they had been taken from a dead body.”

“He was quite right,” said Thorndyke. “They were; and the question was whether there was any trace of them on the other photograph.”

“There was not,” said Miller. “Of course, negative evidence is not conclusive, but Singleton couldn’t find the least sign of
them and he is pretty sure that they are not there. You see, even a smear may give you a hint if you know what you are looking for."

"Then," said Thorndyke, "we have not drawn an utter blank. We can take it that our known prints are not among the group, and that is something gained."

I now inducted the Superintendent into an easy chair while Thorndyke placed by his side a decanter of whisky, a siphon and a box of cigars. It has sometimes struck me that my learned colleague would have made an excellent innkeeper, judging by the sympathetic attention that he gave to the tastes of his visitors in the matter of refreshments. Brodribb delighted in a particular kind of dry and ancient port and Thorndyke kept a special bin for his exclusive gratification. Miller's more modern tastes inclined to an aged and mellow type of Scotch whisky and a particular brand of obese and rather full-flavoured cigar; and his fancy also received due consideration.

"I was going to ask you," said Thorndyke, when the Superintendent's cigar was well alight, "at what time Radcliffe is usually to be found in his office."

"You needn't find him at all," replied Miller. "I thought you would probably want particulars of that hansom I told you about, so I got them for you when I saw him this afternoon."

"That was very thoughtful of you, Miller," said Thorndyke, watching with lively interest the extraction of a large pocket-book from the Millerian pocket.

"Not a bit," was the reply. "You are always ready to give me a bit of help. The driver's name, which is also that of the owner, as they are one and the same person, is Louis Shemrofsky—there's a name for a hansom cab driver!—and he keeps his blooming antique at a stable yard in Pentecost Grove; that is one of those little back streets somewhere between Commercial Road East and Shadwell—a pretty crummy neighbourhood, if you ask me—full of foreign crooks and shady Jews and what they call refugees."

"I suppose," said Thorndyke, "you didn't happen to note the date on which the cab was found in Dorchester Square?"

"Oh, didn't I?" replied Miller. "Do you suppose I don't appreciate the importance of dates? The cab was found in the Square on Friday, the nineteenth of June, at about ten-fifteen p.m."

Thorndyke probably experienced the faint sense of disappointment of which I was myself aware. For, of course, it was the wrong date. Meanwhile, Miller watched him narrowly, and, after a short interval, was fain to let the cloven hoof come plainly into view.

"That interest you particularly?" he asked with suppressed eagerness.

Thorndyke looked at him thoughtfully for a few moments before replying. At length he answered:

"Yes, Miller, it does. Jervis and I have a case in hand—a queer, intricate case with very important issues, and I think that this man, Shemrofsky, comes into the picture. We have quite a lot of evidence, but that evidence is in isolated patches with wide spaces between."

"Why not let me try to fill up some of the spaces," said Miller, eagerly, evidently smelling a case with possibilities of glory.

"I am going to ask for your collaboration presently," Thorndyke replied. "But just at the moment, the case is more suitable to my methods than to yours. And there is no urgency. Our activities are entirely unsuspected."

The Superintendent grinned. "I know," said he. "I've seen you do it before. Just work away out of sight until you are ready and then pounce. Well, Doctor, when you want me you know where to find me, and meanwhile, I'll do anything you want done without troubling you with inconvenient questions."

When the Superintendent had gone, I ventured to raise a question that had arisen in my mind during the conversation.

"Aren't you a little over-critical, Thorndyke? You spoke of spaces between patches of evidence but it seems to me that the case comes together very completely."

"No, Jervis," he replied. "It does not. We are getting on admirably, but we have not made out a coherent case. We have facts and we have probabilities. But the facts and the probabilities do not make complete contact."

"I do not quite follow you," said I.

"Let us look at our evidence critically," he replied. "The vehicle which went to Piper's Row was probably a hansom. Very probably but not certainly. That probable hansom was probably Shemrofsky's hansom and probably driven by Shemrofsky. We have to turn those probabilities into certainties. Again, the rope which was used to hang Sir Edward was stolen from Black Eagle Dock. We may treat that as a fact. It was dyed with cutch. That again is a fact. The rope found in the possession of Trout and Gomorrah was stolen from Black Eagle Dock and it was dyed with cutch. That is a fact. That it was stolen by, and was the temporary property of, one or both of them is highly probable but cannot be proved. The magistrate dismissed it as unproved. Gomorrah lives in Pentecost Grove. Shemrofsky's cab is kept in Pentecost Grove. Those are facts. The inference that Gomorrah and Trout and Shemrofsky were concerned in conveying that dyed rope (together with the body) to Piper's Row is very highly probable, but it cannot be certainly connected with the known facts.

"Again, the murder of Sir Edward we may regard as a known fact. He was probably murdered in a house in which is a
tailor’s work-room. Therefore he was probably murdered in Gomorrah’s house. Still it is only a probability. And here there is a considerable space in our evidence. For Sir Edward was murdered by being drowned in salt water in which numerous herring-scales were suspended. Now, we have not traced that salt water or those herring-scales.”

“No, we have not; and I can’t even make a guess at what they may have been. Have you formed any theory on the subject?”

“Yes, I have a very definite opinion. But that is of no use. We have an abundance of excellent inferences. What we want is some new facts.”

“But surely, Thorndyke,” I protested, “a body of facts such as you have here, affording a series of probabilities all pointing in the same direction, is virtually equivalent to proof?”

“I don’t think so,” he answered. “I distrust a case that rests entirely on circumstantial evidence. A learned judge has told us that circumstantial evidence, if there is enough of it, is not only as good as but better than direct evidence, because direct evidence may be false. I do not agree with him. In the first place, direct evidence which may possibly be false is not evidence at all. But the evil of circumstantial evidence is that it may yield false inferences, as it has often done, and then the whole scheme is illusory. My feeling is that circumstantial evidence requires at least one point of direct evidence to establish a real connection of its parts with the question that is to be proved.

“For instance, if we could prove directly that Shemrofsky’s cab was actually at Piper’s Row on that Sunday night, we should link up all the other facts. Or again, if we could establish the fact of personal contact between Sir Edward and any of these suspected persons, that would connect the other facts with the murder. Or again, if we could prove by direct evidence that the remainder of that rope was or had been in the possession of Gomorrah or Trout or Shemrofsky, the other facts, and our inferences from them, would immediately become of high evidential value.

“And that is what we have got to do. We have to obtain at least one undeniable fact which will establish incontestably the actual connection of one or more of these persons with Sir Edward or with Number Five Piper’s Row.”

“Yes,” I admitted, “I suppose you are right. It is an obscure case, after all. And there is one curious feature in it that puzzles me. I can’t understand what object these men could have had in murdering Sir Edward. Nor can I imagine how he came to be in any way mixed up with a parcel of ragemuffsins like these.”

“Exactly, Jervis,” said he. “You have struck the heart of the mystery. How came Sir Edward to be in this neighbourhood at all? We infer that he came voluntarily in Shemrofsky’s cab to Pentecost Grove, probably with some other person. But why? And who was that other person? When we ask ourselves those questions, we cannot but feel that there is something behind this murder that we have not yet got a glimpse of.”

“This seems to have been a conspiracy carried out by a gang of East End criminals of the lowest class. Legally speaking, they are no doubt the principals in the crime. But I have the feeling—the very strong feeling—that behind them was some person—or some persons—of a very different social class, who were pulling the strings. The motive of this crime has not yet come into sight. Probably if we can secure the actual murderer or murderers, the motive will be revealed. But until it is, our work will not be completed. To lay hands on the criminal puppets will not be enough. We have to secure the master criminal who has furnished at once the directing and the driving force.”

XIII. — MR. BRODRIBB’S DISCOVERY

(DR. JERVIS’S NARRATIVE)

I AM not quite clear how the matter arose. We had, I remember, been discussing with Mr. Brodrribb some of the cases in which a contact occurs between legal and scientific theory, and eventually the conversation drifted towards the subject of personal identity in connection with blood relationship and heredity. Mr. Brodrribb quoted a novel, the title of which has escaped me, and asked for an opinion on the problem in heredity that the story presented.

“I have rather forgotten the book,” he said, “but, so far as my memory serves me, the story turns upon the appearance in a certain noble or royal family of a man who is completely identical in appearance and outward characteristics with a more or less remote ancestor—so completely identical that he can be passed off as a survival or re-incarnation of that very person. Now, I should like to know whether such a thing can be, in a scientific sense, admitted as possible.”

“So should I, and so would a good many other people,” I interposed. “But I don’t think you will get Thorndyke to commit himself to a statement as to the possibility or impossibility of any particular form of inheritance.”

“No,” Thorndyke agreed. “A scientist is chary of declaring anything to be absolutely impossible. It is better to express it in terms of probability. Evidently a probability of one to a thousand millions is in practice equivalent to impossibility. The probability is negligible. But the statement keeps within the limits of what is known and can be proved.”

“Hm,” grunted Brodrribb. “Seems rather a hair splitting distinction. But what is the answer to my question in terms of probability?”

“It is not at all simple,” replied Thorndyke. “There are quite a number of different lines of probability to follow. First there is the multiplication of ancestors. A man has two parents, to both of whom he is equally related; four grandparents, eight great-grandparents, and so on by a geometrical progression. The eighth ancestral generation contains two hundred
and fifty-six ancestors, to all of whom he is equally related. Then the first question is, what is the probability of his completely resembling one of these two hundred and fifty-six and bearing no resemblance to the other two hundred and fifty-five?

"Of course," said Brodribb, "the probability is negligible. And since de minimis non curat lex we may say that it doesn't exist."

"So it would seem," Thorndyke agreed. "But it is not quite so simple as that. Have you given any attention to the subject of Mendelism?

"Mendelism?" repeated Brodribb, suspiciously. "What's that? Sounds like some sort of political claptrap."

"It is a mode of inheritance," Thorndyke explained, "by which certain definite characteristics are transmitted unchanged and undiminished from generation to generation. Let us take the case of one such characteristic—colour-blindness, for instance. If a colour-blind man marries a normal woman, his children will be apparently normal. His sons will be really normal but of his daughters some will be carriers of colour-blindness. A proportion of their sons will be colour-blind. If these sons marry, the process will be repeated; normal sons, daughters who are carriers and whose sons may be colour-blind. Tracing the condition down the generations, we find, first a generation of colour-blind men, followed by a generation of normal men, followed by a generation of colour-blind men, and so on for ever. The defect doesn't die out, but it appears only in alternate generations. Now see how this affects your question. Supposing that, of my two hundred and fifty-six ancestors of the eighth generation, one had been colour-blind. That could not affect me, because I am of the odd generation. But my father—who would have been of the even generation—might have been colour-blind; and if I had had married sisters, I might have had colour-blind nephews."

"Yes, I see," said Brodribb, in a slightly depressed tone.

"And you will also see," pursued Thorndyke, "that this instance will not fit your imaginary case. The inheritance is masked by continued change of family name. Colour-blind Jones has normal sons, and colour blind grandsons. But those grandsons are not named Jones. They are his daughter's sons. Suppose his daughter has married a Smith. Then the defect has apparently moved out of the Jones family into the Smith family. And so on at each reappearance. It always appears associated with a new family name. But this will not do for the novelist. For his purpose inheritance must usually be in tail male to agree with the devolution of property and titles.

"But even now we have not opened up the whole problem. We have to consider what characteristics go to the making of a visibly distinguishable personality and how those characteristics are transmitted from generation to generation."

"Yes," Brodribb admitted, wearily, "it is damned complicated. But there is another question, which I was discussing the other day with Middlewick. How far is a so-called family likeness to be considered as evidence of actual relationship? What do you say to that?"

"If the likeness were real and would bear detailed comparison," replied Thorndyke, "I should attach great importance to it."

"What do you mean by a real likeness?" asked Brodribb.

"I mean, first, that subtle resemblance of facial character that one finds in families. Then special resemblance in particular features, as the nose and ears—especially the ears—the hands and particularly the finger-nails. The nails are nearly as distinctive as the ears. If, added to these resemblances, there were similarities of voice and intonation and of gait and characteristic bodily movements, I should think that these agreements as a whole established a strong probability of blood relationship."

"That was Middlewick's view, though he did not present it in so much detail. I have always had rather strong doubts as to the significance of apparent personal likeness and I have recently met with a very striking case that serves to justify my rather sceptical attitude. I told Middlewick about it, but, of course he was not convinced, as I could not produce my example for his inspection."

"We aren't as unbelieving as Middlewick," said I. "Tell us about your case."

Brodribb fortified himself with a sip from his glass and smiled reminiscently. "It was an odd experience," said he, "and quite romantic in a small way. You remember my telling you about a visit that I paid with Sir Giles Farnaby to the studio of my friend and client, Miss Vernet."

"I remember. It was in connection with the adventure of the disappearing pickpocket in the convict suit."

"Yes, that was the occasion. Well, while Miss Vernet was assisting the police to search the premises, Sir Giles and I examined the picture that she was at work on. It was a large subject picture, called 'An Aristocrat at Bay,' showing a French noblewoman of the Revolution period standing in a doorway at the top of a flight of steps around which a hostile mob had gathered. Miss Vernet was apparently then working at the principal figure, for she had a model posed on the studio throne in the correct costume.

"Now, as soon as Sir Giles clapped eyes on the picture, he uttered an exclamation of surprise, and then he drew my attention to what he declared to be a most extraordinary coincidence. It seemed that the picture of the French lady was an exact counterpart of a portrait by Romney that hangs in the small drawing-room at Bradstow, the architrave of the doorway representing the frame of the portrait. It was not only that the costume was similar and the pose nearly the same
—there would have been nothing very astonishing in that; but he declared that the facial resemblance was so perfect that the figure in the picture might have been copied from the portrait. I wasn’t able to confirm this statement at the time, for, although I remembered the portrait and recognised the general resemblance, I hadn’t his expert eye or his memory for faces. But what I could see was that the figure that Miss Vernet was painting was a most excellent likeness of the very handsome young lady who was posing on the throne.

“A few days later, however, I had to go down to Bradstow to see the bailiff and I then took the opportunity to have a good look at the portrait—which represented a Miss Isabel Hardcastle; and I assure you that Sir Giles’s statement was absolutely correct. The figure in Miss Vernet’s picture might have been a portrait of Isabel Hardcastle. But that figure, as I have said, was a perfectly admirable portrait of the young lady who was acting as the model.”

“That is very interesting, Brodribb,” said I. “Quite a picturesque incident as you say. But what is it supposed to prove?”

Brodribb looked at me fiercely. “The testimony of a reputable eye-witness,” said he, “is good enough for a court of law. But apparently you won’t accept anything short of the production in evidence of the actual things; the portrait, the picture and the model. Must see them with your own eyes.”

“But,” I objected, “you have only proved half of your case. What evidence have you that this young lady—Miss Vernet’s model—is not a blood-relation of Isabel Hardcastle?”

Brodribb turned as red as a lobster (boiled) and began to gobble like a turkey. Then, suddenly, he stopped and gazed at me with his mouth slightly open.

“Yes,” he said, “I suppose you are right, Jervis. Of course I was taking that for granted.”

With this he let the argument drop and seemed to lose interest in the subject for he sat sipping his wine with a profoundly reflective air but speaking no word. After sitting thus for some time, he roused himself by a visible effort, and, having emptied his glass, rose to take his leave. But even as he shook our hands and moved towards the door, I had the impression that he was still deep in thought, and I seemed to detect in his bearing a certain something suggestive of a settled purpose.

“I am afraid, Jervis,” said Thorndyke, as our friend’s footsteps died away on the stairs, “you have given Brodribb a sleepless night and perhaps sent him off to explore a mare’s nest. I hope he has not taken you too seriously.”

“If you come to that,” I retorted, “you are the real offender. It was you who tried to prove that ancestral characteristics might reappear after several generations—and you didn’t do it.”

“No,” he admitted, “the argument came to a premature end. Mendelian factors were too much for Brodribb. But it is an interesting problem; I mean the question as to the number of factors that go to the making of a recognisable personality and the possibilities of their transmission. The idea of a more or less complete re-incarnation is attractive and romantic, though I am afraid that the laws of chance don’t offer much encouragement. But to return to Brodribb; I deeply suspect that you have sent him off in search of a re-incarnated Isabel Hardcastle. I only hope that he won’t be too seriously disappointed.”

“I hope so, too. When I saw how he took my objection, I was sorry I had spoken. For poor old Brodribb would give his eyes to discover some hitherto unknown Hardcastle whose claim he could set up against that of the present heir presumptive, though I don’t see that a young lady would help him, seeing that the settlement is in tail male.”

“No; but he is probably looking farther afield. We may safely assume the existence of at least one male relative, alive or dead.”

“Yes, she certainly must have, or have had, a father. But there again one doesn’t see any loophole for Brodribb. There can’t be any unknown members of the family nearer to Sir Edward than David Hardcastle, unless he is thinking of the elusive Gervase. Perhaps he is.”

“I have no doubt that he is,” said Thorndyke, “and I wish him luck though it doesn’t look like a very hopeful quest. But time will show.”

In effect, time did show and the time was not very long. Our suspicions as to Brodribb’s activities were fully justified. He had ‘gone a-angling’. But the fish that he landed was as great a surprise to himself as to us.

The news reached us four days after the conversation which I have recorded. It was brought by him in person, and even before he spoke, we knew by the way in which he danced into the room, fairly effervescing with excitement, that something of more than common import had happened.

“Congratulate me, gentlemen,” he exclaimed. “I have made a discovery, thanks to Jervis’s confounded leg-pulling.”
He flopped down in a chair, and, when we had made suitable demonstrations of curiosity, he continued: “I have been making enquiries about the young lady who was posing as the Aristocrat for Miss Vernet.”

“Ah!” I exclaimed. “And who is she?”

“That I can’t say exactly at the moment. But, to begin with, she is a he. The young lady turns out to be a boy.”

“Ha!” said I, “we smell a mystery.”

“You smell the solution of a mystery,” he corrected. “The young lady is not only a boy. She is the boy.”

“The boy?” Thorndyke repeated enquiringly.

“Yes, the boy. The disappearing pickpocket. The gentleman in the convict suit. The police were quite right, after all. He had popped in through the open studio window. But I had better begin the story at the beginning.

“It appears that this lad—Jasper Gray by name—is employed by a firm of wholesale stationers, Sturt and Wopsalls, to deliver parcels. He seems to be a highly respectable youth—”

“With a secret pocket in the back of his waistcoat,” I murmured.

“Yes, that is a queer feature, I must admit,” said Brodribb. “But both the ladies seem to have the highest opinion of his character.”

“Plausible young rascal, I expect,” I said. “Naturally, he would be able to bamboozle a pair of innocent spinsters.”

“That is quite possible,” Brodribb admitted, “and he is certainly most unusually good-looking. I saw that, for myself, though the wig and the costume may have helped. But to continue; he came to the studio to deliver a roll of paper, and Miss Vernet was so struck with his appearance that she persuaded him to pose for the principal figure in her picture. It was a regular arrangement. He came and took up the pose every morning before going to work.

“Now you see how the escape was managed. When he found himself in the Tottenham Court Road in a prison suit, he simply made a bee-line for the studio. He knew about the open window and made straight for it and sprang in. Then the two women bundled him into the dressing-room where he made a quick change into his costume. They hid the prison clothes and he took up his pose on the throne. By the time the police arrived he had become transformed into a lady of the old noblesse. It was a delightful comedy. Now I can appreciate the solemn way in which Miss Vernet conducted the two unsuspecting constables over the premises to search for the missing convict.”

“Can you?” said I, with mock severity. “I am surprised at you, Brodribb, a respectable solicitor, chortling over a manifest conspiracy to defeat the ends of justice. You are not forgetting that secret pocket or the fact that Sir Edward Hardcastle’s seal was found in it?”

“Of course I am not,” he replied. “That is the importance of the discovery. I expect he picked the seal up, though as you say, there is the secret pocket to be accounted for. But we shall soon know all about it. Miss Vernet has arranged for him to meet me at the studio the day after to-morrow. He was quite willing and he is prepared to tell me anything I want to know. I suggested that you might come with me and there was no objection to that, so I hope you will be able to come. It ought to be quite interesting to us all. What do you say?”

There was no doubt in my mind as to what Thorndyke would say, for, evidently, this young scallywag was one of the indispensable missing links.

“I will come with you with the greatest pleasure,” he replied, “and no doubt Jervis will come too and add to the gaiety of the proceedings.”

“Good,” said Brodribb. “I will let Miss Vernet know.” And with this he took his departure with an appearance of satisfaction that seemed to me to be somewhat disproportionate to the results of his embassy. For, whereas to us the tracing of the seal held untold potentialities of enlightenment, to Brodribb it could appear no more than a matter of curious and trivial interest.

“Yes,” Thorndyke agreed when I commented on Brodribb’s remarkable self-complacency. “I had the same impression. Believing as he does, that Sir Edward made away with himself, he can have no reason for attaching any special significance to the fact that the seal was in the lad’s possession. But he is obviously extremely pleased with himself; and I suspect we shall find that he has not disclosed to us the whole of his discovery. But we shall see.”

And in due course we did see.

XIV. — NEW LIGHT ON THE PROBLEM

(JASPER GRAY’S NARRATIVE)

IT was while I was carrying out some improvements on the studio skylight that Miss Vernet made her momentous communication. Of course, she didn’t know that it was momentous. Neither did I. You never do. Providence has a way of keeping these little surprises up its sleeve and letting them fly at you when you are looking the other way.

But it was not only her communication that held such unsuspected potentialities. My very occupation, trivial and
commonplace as it appeared, was fraught with a hidden significance which it was presently to develop together with that of other seemingly trifling actions.

At the moment, I was standing on the top of a rickety pair of steps which Miss Vernet was anxiously steadying while I fastened a rope to a swinging fan light. Hitherto that fan-light had been clumsily adjusted from below with the aid of a sort of boat-hook. Now, by means of the rope and a cleat on the wall, it could be conveniently set at any angle and securely fixed.

As I came down the steps, having completed the job, Miss Vernet murmured her thanks, mingled with expressions of admiration at the ingenuity of the arrangement. Then, after a pause, she said a little hesitatingly: “I have a confession to make, Jasper. I hope you won’t be angry, but I have to a certain extent broken your confidence.”

I looked at her in surprise but made no comment. There was nothing to say until I knew what she meant, so I waited for her to continue.

“Do you remember Mr. Brodribb?” she asked.

“Is that all?” I exclaimed. “What does it matter? I don’t mind his knowing. I don’t care who knows now that the affair is over and we have sent the clothes back.” (I had addressed the parcel myself to the Governor of Pentonville Prison and delivered it in person at the gate.)

She was obviously relieved at my attitude, but I could see that there was something more to come.

“I don’t know why he is so concerned about you,” she continued, “but he assures me that his interest is a proper and legitimate interest and not mere curiosity. He would very much like to meet you and ask you one or two questions. He thinks that you might be able to give him some information that would be very valuable and helpful to him. Do you think you would mind meeting him here one day?”

“Of course I shouldn’t. Why should I? But I think he must be mistaken if he thinks I could tell him anything that would matter to him.”

“Well, that is his affair,” said she, “and naturally you won’t tell him anything that you don’t want to. I am sure, when you meet him, you will like him very much. Everybody does.”

Accordingly we proceeded to arrange the date of the meeting which was fixed for the ensuing Thursday afternoon, subject to my obtaining leave of absence from Sturt and Wopsalls; and then, as an afterthought, Miss Vernet mentioned that Mr. Brodribb would like to bring a friend and fellow lawyer with him. This sounded rather portentous, but I made no objection; and when I went away (having secured the rope on its cleat) I left Miss Vernet happy in having success fully carried out the negotiations on Mr. Brodribb’s behalf.

Sturt and Wopsalls raised no difficulties about the afternoon off, it being the first time that I had ever made such a request. I cleared up most of the deliveries in a strenuous morning, and, having made myself as presentable as the resources of my wardrobe permitted, presented myself at the studio punctually at three o’clock in the afternoon. I was the first arrival and thereby was enabled to assist the two ladies in settling out a tea-table that made my mouth water; and I was amused to observe that, of the three, I was the only one who was not in a most almighty twitter.

But even my self-possession sustained a slight jarg when the visitors arrived; for Mr. Brodribb had gone beyond the contract and brought two friends with him; both, as I assumed, lawyers. But it appeared that I was mistaken, for it turned out that they were doctors. And yet, later, it seemed as if they were lawyers. It was rather confusing. However, they were all very agreeable gentlemen and they all addressed me as “Mr. Gray,” which caused me to swell with secret pride and induced in Miss Brandon a tendency to giggles.

One thing which astonished me was their indifference to the delicacies with which the table was loaded. I had seen such things in pastry cooks’ windows and had wondered sometimes if they tasted as well as they looked. Now I knew. The answer was in the affirmative. But these gentlemen trifled negligently with those incredible cakes and pastries as if they had been common ‘tommy,’ and as for Mr. Brodribb he positively ate nothing at all. However, the delicacies weren’t wasted. Miss Vernet knew my capacity for disposing of nourishment and kept a supply moving in my direction.

Of course, there were no questions asked while we were having tea. The gentlemen mostly talked with the ladies about pictures and painting and models, and very entertaining their conversation was, only I found myself wishing that Mr. Brodribb had taken something to eat to distract his attention from me. For whenever I glanced at him, I met his bright blue eye fixed on me with an intensity of interest that would have destroyed my appetite if the food had not been so unusually alluring. Not that he was the only observer. I was distinctly conscious that his two friends, Dr. Jervis and Dr. Thorndyke, were ‘taking stock of me’, as our packer would express it; but they didn’t devour me with their eyes as Mr. Brodribb did.

As the closing phases of the meal set in, the conversation turned from the subject of pictures and models in general to Miss Vernet’s picture and her model in particular, and while the two ladies were clearing away, I was persuaded to go to
the dressing-room and put on my costume for the visitors’ entertainment. When I came forth and took up my pose on the throne, my appearance was greeted with murmurs of applause by all, but especially by Mr. Brodribb.

“It is perfectly amazing,” he exclaimed. “I assure you Thorndyke, that the resemblance is positively photographic.”

“Do you think,” Dr. Thorndyke asked, “that you are making full allowance for the costume and the pose?”

“I think so,” Mr. Brodribb answered. “To me the facial resemblance seems most striking. I should like you to see the portrait for yourself. Nothing short of that I know will convince you.”

“At any rate,” said Dr. Thorndyke, “we can understand how those unfortunate constables were deluded. I am all agog to hear Mr. Gray’s account of that comedy of errors.”

On this hint I retired once more to shed my gorgeous plumage and when I returned to the studio, I found half a dozen chairs arranged and the audience in waiting.

“Now, Jasper,” said Miss Vernet, “you understand that Mr. Brodribb wants you to tell us the story in full detail. You are not to leave anything out.”

I grinned a little uncomfortably and felt my face growing hot and red. “There isn’t much to tell,” I mumbled, “I expect Miss Vernet has told you all there is.”

“Never mind,” said Mr. Brodribb, “we want the whole story. To begin with, what took you to the River Lea?”

I explained about the parcel and the railway journey, and having thus broken the ice, and got fairly started, I went on to recount the successive events of that day of mingled joy and terror, gradually warming to my task under the influence of the genuine interest and amusement that my audience manifested. So great was their appreciation that—my shyness being now quite dissipated—I was quite sorry when I had brought my adventures down to the moment when I changed into my costume and took up my pose. For that was the beginning of my story—at least I thought it was. But my legal friends soon undeceived me. The end of the story was the beginning of the cross-examination.

Mr. Brodribb started the ball. “When that convict ran off with your clothes did he take anything of value with them? Anything in the pockets, I mean.”

“Yes,” I answered. “There was my return ticket in the trousers’ pocket and an emerald in a secret pocket at the back of the waistcoat.”

“An emerald?” said Mr. Brodribb.

“Well, it was a green stone of some kind and it must have come out of a signet ring, because it had a seal engraved on it; a little castle with a motto underneath—‘Strong in Defence’—and above it the head of some sort of animal that looked rather like a crocodile.”

“What is known in heraldry as a Wyvern, I think. Now would you recognise an impression of that seal?”

I assured him that I most certainly should, whereupon he carefully extracted from a pocket letter-case an envelope on which was a black seal.

“Now,” said he, handing it to me, “just look at that seal and tell me if you think it was made with the stone that you had.”

I looked at the seal and glanced at the address on the envelope, and then I grinned.

“I am quite sure it was,” I answered, “because I made it myself.”

“The deuce you did!” exclaimed Mr. Brodribb. “How was that?”

I described the incident of the dropped letter and was rather surprised at the amount of amusement it created, for I didn’t see anything particularly funny in it. But they did; especially Dr. Jervis, who laughed until he had to wipe his eyes.

“Excuse me, gentlemen,” said he, “but the recollection of the great pow-wow in New Square was too much for me. Mr. Gray had us all guessing that time.”

“Yes,” chuckled Mr. Brodribb, “we were a trifle out of our depth, though I would remind you that Thorndyke gave us practically the correct solution. But, now, I wonder if you would mind, Mr. Gray, telling us how that seal stone came into your possession?”

I had been expecting this question, and obviously it had got to be answered. For the seal had probably been stolen and I had to make it clear that it had not been stolen by me. It would not be enough merely to say that I had found it.

“I have no objection at all,” said I, “but it is rather a long story.”

“So much the better,” said Dr. Jervis, “if it is as amusing as the last. But tell us the whole of it.”

“Yes,” urged Dr. Thorndyke, “begin at the beginning and don’t be afraid of going into detail. We want to know all about that seal.”

My recent experience in Pentecost Grove had completely cured me of any tendency to reticence. Here was an opportunity to expose that nest of criminals and I resolved to take it. Accordingly, in obedience to Dr. Thorndyke’s directions, I began with the incident of the truck and the egg-chest and recounted in full detail all the adventures and perils of that unforgettable day.
“Bless the boy!” exclaimed Miss Vernet, as I described my entry into the egg-chest on the schooner’s deck, “he is a regular Sindbad the Sailor! But don’t let me interrupt.”

She did interrupt, nevertheless, from time to time, with ejaculations of astonishment and horror. But what interested me especially was the effect of my story on the three men. They all listened with rapt attention, especially Dr. Thorndyke; and I had the feeling that they were comparing what I was telling them with something that they already knew. For instance, when I described Ebbstein’s house and the work-room with the goose on the fire and the sour smell and the big tub of herrings and cabbage, Dr. Jervis seemed to start; and then he turned to Dr. Thorndyke, and looked at him in a most singular way. And Dr. Thorndyke caught his eye and nodded as if he understood that look.

When I came to my escape from Ebbstein’s house I hesitated for a moment, being, for some reason, a little unwilling to tell them about Miss Stella. But I had promised to give them the whole story and I felt that perhaps this part, too, might mean more to them than it did to me. So I described the rescue in detail and related how we had escaped together. And very glad I was that I had not held anything back. For I could see at once by Dr. Jervis’s manner and expression that there was more in my story than I had understood.

“I hope,” Miss Vernet interrupted as I was describing the escape from the empty house, “that you didn’t kill that unfortunate wretch. It would really have served him right, but still—”

“Oh, it’s all right,” I reassured her. “I didn’t kill him. I’ve seen him since.”

This statement Dr. Thorndyke noted in a book which he had produced from his pocket and in which I had observed him jotting down short notes from time to time with a view, as I discovered later, to cross-examination, and to avoid interrupting my narrative. He was evidently deeply interested; much more so, I noticed, than Mr. Brodribb, who, in fact, listened with an air of rather detached amusement.

I now went on to describe our meeting with the hansom; and at the mention of that vehicle and the driver’s name, Louis, Dr. Jervis uttered an exclamation of surprise or excitement. But the climax, for me, came when I brought my story to a close with our arrival at Miss Stella’s house. Then, in an instant, Mr. Brodribb’s detached interest gave place to the most intense excitement. He sat up with a jerk, and, having stared at me in astonished silence for a few moments, demanded:

“Dorchester Square, you say? You don’t remember the number, I suppose?”

“It was number sixty-three,” I replied.

“Ha!” he exclaimed; and then, “You didn’t happen to learn the young lady’s name?”

“I heard the footman refer to her as Miss Stella.”

“Ha!” said Mr. Brodribb again. Then he turned to Dr. Thorndyke and said in a low, deeply impressive tone: “Stella Hardcastle. Paul’s daughter, you know.”

Dr. Thorndyke nodded. I think he had already guessed who she was—and for a little while no one spoke. It was Mr. Brodribb who broke the silence. “I’ve been a fool, Thorndyke. For the first—and last—time, I have set my judgement against yours. And I was wrong. I see it plainly enough now. I only hope that my folly has not caused a fatal hindrance.”

Dr. Thorndyke looked at him with an extraordinarily pleasant smile as he replied: “We assumed that you would alter your mind when some of the facts emerged, and we have been working on that assumption.” Then, turning to me, he said: “I have quite a number of questions to ask you, Mr. Gray. First of all, about that rope. You mentioned that you threw it on the foot board of the cab. Did you leave it there?”

Now, I had already noticed Dr. Thorndyke looking rather hard, now and again, at the rope that hung from the skylight, so I wasn’t surprised at his question. But what followed did surprise me most uncommonly.

“No,” I answered. “I brought it away with me.”

“And what has become of it?”

I grinned (for I was pretty sure that he had ‘ogled’ it, as our packer would say), and pointed to the rope. “That is it,” said I.

“The deuce it is!” exclaimed Dr. Jervis. “And a brown rope, too. This looks like another windfall, Thorndyke.”

“It does,” the latter agreed; and, rising, he stepped over to the cleat and taking the two ends of the rope in his hands, looked at them closely. Then he brought a magnifying-glass out of his pocket and had a look at them through that.

“Were both of these ends whipped when you found the rope?” he asked as Dr. Jervis took the glass from him and examined the ends through it.

“No,” I answered. “Only one end was whipped. I did the other end myself—the one with the white whipping.”

He nodded and glanced at Dr. Jervis, who also nodded. Then he asked: “Do you think, Miss Vernet, that we might have this rope down to examine a little more completely?”

“But, of course,” she replied. “Jasper will—”

I didn’t hear the finish, for I was off, hot-foot for the steps. Evidently there was mystery in the air and it was a mystery that I was concerned with. I had the rope down in a twinkling and handed it to Dr. Thorndyke, who had just taken
possess of the studio yard measure, which he now passed to Dr. Jervis.

"Measure the rope carefully, Jervis, and don’t pull it out too taut."

I helped Dr. Jervis to take the measurement, laying the rope on the table and pulling it just taut but not stretching it, while Mr. Brodribb and the two ladies looked on, mightily interested and a good deal puzzled by the proceedings. When we had made the measurement, Dr. Jervis wrote the length down on a scrap of paper and then did the measurement over again with practically the same result. Then he laid the yard measure down and asked: "What do you say the length is, Thorndyke?"

"If the whole remainder is there," was the reply, "it should be forty-six feet, four and a half inches."

"It is forty-six feet, five inches," said Dr. Jervis, "which we may take as complete agreement."

"Yes," said Dr. Thorndyke, "the difference is negligible. We may take it as certain that this is the remainder."

"The remainder of what?" demanded Mr. Brodribb. "I see that you have identified this rope. What does that identification tell you?"

"It tells us," Dr. Thorndyke replied, "that this rope was stolen from Black Eagle Dock, Wapping, when it was sixty feet long; that a piece thirteen feet, seven inches long was cut off; that that piece was taken in a two-wheeled vehicle—probably a hansom cab—on the night of Sunday, the twenty-first of June, to Number Five, Piper's Row, Stratford. Those facts emerge from the identification of this rope, from Mr. Gray's story and from certain other data that we have accumulated."

"Good God!" exclaimed Mr. Brodribb. "Then this was the very rope! Horrible, horrible! But, my dear Thorndyke, you seem to have the whole of the case cut and dried! Can you give the villain a name?"

"We shall not mention names prematurely," he replied. "But we haven’t finished with Mr. Gray yet. I think he has something more to tell us. Isn’t it so? You said just now that you had seen the man whom you knocked on the head on some later occasion. Would you mind telling us about that?"

I didn’t mind at all. On the contrary, I was only too delighted to put my new knowledge into such obviously capable hands. Therefore I embarked joyfully on a detailed narrative of my journey of exploration, to which Dr. Thorndyke listened with the closest attention, jotting down notes as I proceeded but never interrupting. Others, however, were less restrained, particularly Mr. Brodribb, who, when I had described the murderous attempt of the man with the knife, broke in excitedly: "You say that this man spoke in French to the other."

"Yes, and quite good French, too."

"Then we may take it that you understand French?"

"Yes, I speak French pretty fluently. You see, I was born in France or Belgium—I am not quite sure which—and we lived in France until I was nearly four. So French was the first language that I learnt. And my father speaks it perfectly, and we often converse in French to keep up our knowledge of the language."

He nodded as if the matter were quite important. Then he asked: "You say that this man accused you of having robbed him of a fortune?"

"Yes"; and here I repeated the exact words that the man had used.

"Have you any idea what he meant?"

"Not the least. So far as I know, I had never seen him before."

"You didn’t by any chance hear what his name was?"

"Yes, I did. He gave the name of Jacob Silberstein to the policeman. But that was not his name. I heard two of the people call him Mr. Zichlinsky."

At this Mr. Brodribb fairly exploded. I have never seen a man so excited. He spluttered two or three times as if he was going to speak, and then, whisking an envelope out of his pocket, scrawled something on it, and, apologising to the rest of us, passed it to Dr. Thorndyke, who glanced at it and handed it to Dr. Jervis, remarking: "This is extremely valuable confirmation of what we had inferred. It seems definitely to establish the fact that Maurice Zichlinsky is in England—assuming this to be Maurice, of which I have little doubt."

Mr. Brodribb stared at him in astonishment. "How did you know that his name was Maurice?" he demanded.

"We have been looking into matters, you know," said Dr. Thorndyke. "But we mustn’t interrupt Mr. Gray or he may overlook something important."

I had not, however, much more to tell, and when that little was told, I waited for the inevitable cross-examination.

"There are one or two points that I should like to have cleared up," said Dr. Thorndyke, glancing at his notes. "First, as to the cab that you saw in the yard. You seem to have had a good look at it. I wonder if you noticed anything unusual about the near wheel?"

"I noticed one thing," said I, "because I looked for it. There was a deep notch on the edge of the tyre. I fancy I made that
notch when I bumped the cab over a sharp corner-stone. The tyre was worn very thin. I wonder that the jolt didn’t break the wheel."

"It is a mercy that it didn’t," said he. "However, the notch was what we wanted to know about. And now, as to the names and addresses of these people. Can you give us those?"

"The street that I went to is Pentecost Grove. Ebbstein, and Jonas, the coiner, live at Number Forty nine. Gomorrah lives next door, Number Fifty, the house in which I found Miss Stella. Zichlinsky lives there, too. He lodges with Gomorrah. The cab-yard turns out of Pentecost Grove just opposite Ebbstein’s house. It is called Zion Place. I don’t know where Trout lives."

"He lives in Shadwell," said Dr. Thordnyke. "We have his address." On hearing which, Mr. Brodribb chuckled and shook his head. I think he found the doctor as astonishing as I did. He seemed to know everything. However, this seemed to finish the cross-examination, for Dr. Thordnyke now rose to depart and took leave of the ladies with polite acknowledgments of their hospitality. As he shook hands with me, he gave me a few directions concerning the rope.

"You had better put it away in a safe place," said he, "and remember that it is of the greatest value, as it will be produced in evidence in an important case. When the police take possession of it, which they will probably do very shortly, they will want you to certify to its identity. I will send you a rope to replace it for the skylight."

Finally, he took down my address in case he might have to write to me, and then he turned to Mr. Brodribb.

"You are not coming with us, are you?" he asked. "No," replied Mr. Brodribb. "I want to have a few words with Mr. Gray on another matter. Perhaps, if he is going homeward, I may walk part of the way with him."

On this hint, I, too, made preparations for departure, and we issued forth together in the wake of the two doctors.

"I want you to understand," said Mr. Brodribb as we walked up the mews, "that I am not poking my nose into your affairs from mere curiosity. If I seem to ask impertinent questions, believe me I have very good reasons."

"I quite understand that, sir," said I, wondering what the deuce was coming next. Nothing came for a little while, but at length he opened fire.

"You mentioned just now that you lived abroad in your early childhood. Have you any recollection of how and where you lived?"

"Very little. I was quite a small child when we came to England. I remember seeing dogs harnessed in carts and I have a dim recollection of an old woman in a big white cap who used to look after us. I expect we were very poor, but a little child doesn’t notice that."

"No," said Mr. Brodribb with a sigh. "There are many advantages in being young. You don’t remember your mother?"

"No. She died when I was quite an infant. But she must have been a very good woman, for my father once said to me that she had been a saint on earth and was now an angel in heaven. I think he was very devoted to her."

Rather to my surprise, Mr. Brodribb appeared to be deeply moved by my reply. For some time he walked on in silence, but at length, he asked: "Did you ever hear what your mother’s name was?"

"Yes. Her Christian name was Phillipa."

"Ha!" said Mr. Brodribb in a tone of deep significance; and I wondered why. But I was quite prepared for his next question. "Your father, I take it, is a man of considerable education?"

"Oh, yes, sir. He is quite a learned man. He is a classical tutor—crams fellows for examinations in classics and mathematics."

"Do you happen to know if he was always a tutor, or if he ever had any other vocation?"

"I have an idea," said I, "that he was at one time a clergyman."

"Yes. Probably. Clergymen often do become tutors. You haven’t any idea, I suppose, why he abandoned his vocation as a clergyman?"

I hesitated. I didn’t like the thought of disclosing poor old Ponty’s failings, but I remembered what Mr. Brodribb had said. And, obviously, there was something behind these questions.

"I suppose, sir," I said, at length, "there is no harm in my confiding in you. The fact is that my father is not very careful in the matter of stimulants. He doesn’t ever get intoxicated, you know, but he sometimes takes a little more than would be quite good for a clergyman. I expect it is due to the rather dull, lonely life that he leads."

"No doubt, no doubt," said Mr. Brodribb, speaking with a singular gentleness. "I have noticed that classical tutors frequently seem to feel the need of stimulants. And it is, as you say, a dull life for a man of culture."

He paused, and seemed to be in a little difficulty, for after an interval he resumed in a slightly hesitating manner: "I have a sort of idea—rather vague and indefinite—but I have the feeling that I may have been slightly acquainted with your father many years ago, and I should very much like, if it could be managed, to see whether my memory is or is not playing me false. I don’t suppose your father cares much for encounters with strangers?"
“No, he does not. He is extremely reserved and solitary.”

“Exactly. Now if I could get an opportunity of seeing him without making any formal occasion—just a casual inspection, you know, even by passing him in the street—”

“I think you might have a chance now, sir,” said I. “He has a teaching appointment from four to six on Thursdays and usually comes straight home. It is now a few minutes to six, so if we step out, we shall probably meet him. If we do, I will point him out to you and then you would like me to leave you, I expect.”

“If you don’t mind, I think it would be better,” said he; “and if I may make a suggestion, it would be as well, for the present, if you made no mention of this conversation or of your having met me.”

I had already reached this conclusion and said so; and for a while we walked on at a slightly quickened pace in silence. As we crossed the top of Queen Square by the ancient pump that stands in the middle of the crossing, I began to keep a sharp look-out, for Ponty was now due; and we had hardly crossed to the corner of Great Ormond Street when I saw the familiar figure turn in from Lamb’s Conduit Street and come creeping along the pavement towards us.

“That is my father, sir,” said I; “that old gentleman with the stoop and the walking-stick.”

“I see,” said Mr. Brodribb. “He has something under his arm.”

“Yes,” I answered; and there being no use in blinking the fact, I added: “I expect it is a bottle. Good evening, sir.”

He shook my hand warmly and I ran on ahead and dived into our entry. But I didn’t run up the stairs. A reasonable and natural curiosity impelled me to linger and see what came of this meeting. For some thing told me that Mr. Brodribb could, if he chose, enlighten the mystery of my father’s past on which I had often vaguely speculated, and that these present proceedings might not be without some significance for me.

From the entry I watched the two men approach one another and I thought they were going to pass. But they did not. Mr. Brodribb halted and accosted Ponty, apparently to ask for some direction, for I saw my father point with his stick. Then, instead of going on his way, Mr. Brodribb lingered as if to ask some further questions. A short conversation followed—a very short one. Then the two old gentlemen bowed to one another ceremoniously and separated. Mr. Brodribb strode away down the street and Pontifex came creeping homeward more slowly than ever with his chin on his breast and something rather dejected in his manner.

He made no reference to the meeting when he entered the room, whither I had preceded him, but silently placed the bottle on the mantelpiece. He was very thoughtful and quiet that evening, and the matter of his thoughts did not appear to be exhilarating. Indeed he seemed to be in such low spirits that I found myself wishing that Mr. Brodribb had taken less interest in our affairs. And yet, as I watched poor old Pontifex despondently broaching the new bottle, my thoughts kept drifting back to that meeting and those few words of conversation; and again the suspicion would creep into my mind that perhaps the shadows of coming events were already falling upon me.
XV. — THORNDYKE’S PLAN OF ATTACK

(DR. JERVIS’S NARRATIVE)

“A MOST astonishing experience, Thorndyke,” I commented as we walked away from Miss Vernet’s studio after our meeting with Jasper Gray (recorded above in his own words).

“Yes,” he agreed; “and not the least astonishing part of it was the boy himself. A truly Olympian errand boy. I have never seen anything like him.”

“Nor have I. As an advertisement of democracy he would be worth his weight in gold to a propagandist. If he could be seen strolling across the quadrangle of an Oxford College, old-fashioned persons would point him out as a type of the young British aristocrat. Yet the amazing fact is that he is just a stationer’s errand boy.”

Thorndyke chuckled. “I am afraid, Jervis,” said he, “that as a demonstration of the essential equality of men he would fail, as demonstrations of that kind are apt to do on going into particulars. Our young friend’s vocabulary and accent and his manners and bearing, while they fit his personal appearance well enough, are quite out of character with his ostensible social status. There is some mystery in his background. But we needn’t concern ourselves with it, for I can see that Brodribb’s curiosity is at white heat. We can safely leave the private enquiries to him.”

“Yes. And I suspect that he is pursuing them at this moment. But, speaking of Brodribb, I think you rather took his breath away. He was positively staggered at the amount of knowledge that you disclosed. And I don’t wonder. He was hardly exaggerating when he said that you had the whole case cut and dried.”

“I wouldn’t put it so high as that,” said Thorndyke. “We can now be confident that we shall lay our hands on the murderer, but we haven’t done it yet. We have advanced our investigations another stage and I think the end is in sight. But we have yet another stage before us.”

“It is surprising,” I remarked, “how our knowledge of the case has advanced step by step, almost imperceptibly.”

“It is,” he agreed, “and an intensely interesting experience it has been, to watch it closing in from the vaguest generalities to the most complete particularity. We began with a purely speculative probability of murder. Then the murder became an established fact and its methods and procedure ascertained. But the perpetrators remained totally unknown to us and even unguessed at. Then, as you say, step by step, our knowledge advanced. One figure after another came into view, first as mere contacts with the known circumstances, then as possible suspects, until at last we seem to have the whole group in view and can begin to assign to each his place in the conspiracy.”

“It seems to me,” said I, “that Jasper Gray’s information should help us to do that off-hand.”

“It is extremely valuable,” he replied. “But the enormous importance of what he has told us is really tactical. He has placed an invaluable weapon in our hands.”

“What weapon do you mean?” I asked.

“I mean the power to make an arrest whenever we please. And that, when the moment comes, will be the very keystone of our tactics.”

“I don’t quite see either point; how we have the power or what special value it is. You wouldn’t suggest an arrest before you are prepared to prove the murder charge against a definite person.”

“But that, I suspect, is precisely what we shall have to do. Let me explain. The abduction of Miss Hardcastle is a new fact. It is very illuminating to us, but we can’t prove that it was connected with the murder of Sir Edward. Nevertheless, it is a crime, and we actually know two of the guilty parties, Shemrofsky and Gomorrah. With Gray’s assistance, we could lay a sworn information now; and on his and Miss Stella’s evidence, we could secure a conviction. Of course, we shall not do anything of the kind. We have got to make sure of the woman who lured the girl away. Brodribb evidently suspects that she is Mrs. David Harcastle—at least that is what I gathered when he wrote down her maiden name, Marie Zichlinsky, for our information—and I think he is probably right. You remember that she had a brother who was convicted in Russia of a conspiracy to murder. He also thinks that the Zichlinsky who tried to murder Gray is that brother. And again I suspect that he is right.

“But these are only suspicions, and we cannot rush into action on suspicions. We have to prove them right or wrong. If we can turn our suspicions into demonstrable truths, we shall have our whole case complete and can act at once and with confidence.”

“Then what do you propose to do?”

“First, I propose to settle the question, if I can, as to whether the Zichlinsky of Pentecost Grove is the Maurice Zichlinsky whose finger-prints are in the records at Scotland Yard. If he is the same man, I shall then try to ascertain if the convict, Maurice Zichlinsky, is Mrs. David Harcastle’s brother.”

“But I understood Brodribb to say that he was.”

“So did I,” said Thorndyke. “But I must get a categorical statement with particulars as to the date of the extradition proceedings. If Brodribb can confirm his implied statement, then I shall have to test our suspicion that the woman who
managed the abduction of Miss Stella was Marie Zichlinsky, alias Mrs. David Hardcastle."

"You will have your work cut out," I remarked. "I don't see how you are going to prove either proposition."

"There are no insuperable difficulties in identifying the woman," he replied, "though I have not yet made a definite plan. As to Zichlinsky, I shall ask Singleton to re-examine our finger-print."

"But he has already said that he can't identify it."

"That was not quite what I understood. I gathered that he recognised the print, but then rejected his identification on extrinsic evidence. He realised that a man who is in a Russian prison cannot make a finger print in London. But if I re-submit the print with the information that the man is believed to be in London and that there are circumstances which make it probable that the print was made by him, we may get an entirely different report; especially if I have previously communicated the facts to Miller."

I laughed with malicious glee. "Really, Thorndyke," I chuckled, "I am surprised at you! Actually, you are going to set Miller on to ginger up Singleton and induce him to swear to a doubtful finger-print. And this after all your professions of scepticism regarding finger-print evidence!"

"My dear Jervis," he replied with an indulgent smile, "let us be reasonable. If this finger-print conforms in pattern to the one at the Record Office, it is Zichlinsky's finger-print. There is no question of forgery. It is obviously a real finger-print. The only problem is its identity of pattern. And we are not proposing to ask for a conviction on it. We shall use it merely to enable us to secure the person of Zichlinsky and charge him with the crime. Nor need you be uneasy about Singleton. He won't swear to the print unless he is prepared to prove its identity in court, factor by factor, on an enlarged photograph."

"No, I suppose he won't. But what plan of action is in your mind? Assuming that all our suspicions are confirmed, including the finger-print; what do you propose to do?"

"I propose to make arrangements with Miller that the whereabouts of each of the parties shall be ascertained and an overwhelming force kept ready for action at a moment's notice. Then, at the appointed time, we shall swoop down on the whole crowd simultaneously—Mrs. David, Zichlinsky, Gomorrah, Shemrofsky, Ebbstein, and, if it seems practicable, James Trout."

"But," I protested, "you could never charge all these people with the murder. The magistrate would insist on your making out a prima facie case; and you couldn't do it."

"No," he replied. "But that is where Jasper Gray's information is so invaluable. We don't need a prima facie case for the charge of murder against any of these persons, excepting Zichlinsky. And in his case, the finger-print, which we are assuming to be provable, will be enough. In all the other cases, we shall proceed on different charges, on which we can make out a prima facie case. Mrs. David, Gomorrah and Shemrofsky will be charged with the abduction. Ebbstein—against whom we have nothing but deep suspicion—will be roped in as an accessory of the felonious proceedings of his lodger, Mr. Jonas, the ingenious manufacturer of half-crowns. As to Trout, I am not sure whether we can get him on suspicion of having stolen the rope. I should like to. He would be extremely useful. I must see what Miller thinks about it."

"But when you have got all these people by the heels? What then?"

"Ah, then we shall allow the subject of the murder to leak out; and it will be remarkable if, among this gang of rascals, there is not, at least, one who will be prepared to volunteer a statement. Take the case of Shemrofsky; he was probably a principal in the second degree as to the murder. It is unlikely that he took part in the actual killing; and if he did not, he will probably be very willing to clear himself of the major charge by giving evidence as to who actually committed the murder. Again there is Trout. He probably selected the house at Stratford. He probably stole the rope, and the fisherman's bend and the running bowline look like his work. He is an associate of Gomorrah's, but it is very unlikely that he had a hand in the murder. If he could be charged, he would almost certainly make safety by putting the onus on the shoulders of the actual murderers."

"It seems a rather unsatisfactory method," I objected. "You are going to depend very largely on bluff."

"It is unsatisfactory," Thorndyke admitted, "but what else can we do? We know that these people conspired together to commit the murder. One or more of them did actually commit the murder; the rest are principals in the second degree. The only proceeding open to us is to charge them all and let them sort themselves out."

"But supposing they don't sort themselves out? What can you prove independently?"

"Let us see," he answered, "what sort of case we could make out. I am assuming that Singleton can identify the finger-print and that Stella and Gray can identify Mrs. David, because without that evidence we should not proceed at all. We should require further investigation. But, assuming those identifications, we shall proceed somewhat thus:

"First, we charge Mrs. David, Shemrofsky and Gomorrah with the abduction; and observe that we here bring into evidence the motive—the elimination of the principal beneficiary under Sir Edward's will, with reversion to the husband of Mrs. David. That charge we can prove conclusively.

"We then charge the whole group with conspiracy to commit murder. Here, again, the motive comes into view. The murder of Sir Edward leaves—or is believed to leave—the succession to the property and title open to the husband of Mrs. David."
“What about David, himself?”

"At present he doesn’t seem to come into the picture, though, naturally, he lies under suspicion of complicity. We have no direct evidence against him. But to continue. The abduction, with its apparent motive, connects itself with the murder, of which the motive is similar. Mrs. David stands to gain by the success of both crimes. But we have proved her to be guilty of one of the crimes. This is presumptive evidence of her guilt in respect of the other crime, since the two crimes appear to be parts of the same transaction. Then the evidence against Zichlinsky operates against her since he is her brother and has no motive excepting that of benefiting her.

“Gomorrah is implicated by the facts that the rope used to hang the deceased is known to have been in his possession; that Zichlinsky was his lodger; that he is proved to have been concerned in the abduction and was therefore a confederate of Mrs. David.

“Shemrofsky was concerned in the abduction and is thus implicated in the conspiracy. We can bring weighty evidence to prove that he was at Piper’s Row on the night of Sunday, the twenty-first of June, and that he assisted to convey the body of the victim to that house.

“Zichlinsky is proved, by his finger-print, to have been in the Stratford house and to have handled the chair. He is Mrs. David’s brother and so stands to benefit, indirectly, by the deaths of Stella and Sir Edward. His statement, overheard by Jasper Gray, would be admitted as evidence of his being an interested party.

“As to Trout, all that is actually against him is his connection with the rope. But, if the police could definitely connect him with the neighbourhood at Stratford, that would be a material point. The importance of getting him charged is that, although he was almost certainly an accessory, it is most improbable that he had any hand in the murder; and from what Gray has told us as to his efforts to restrain Zichlinsky and Gomorrah, we may suspect that he disapproved of their violent proceedings and would not be prepared to take any risk in shielding them. He is really an outsider of the gang.”

“Well,” I said, “you have a better case than I thought, though it isn’t up to your usual standard.”

“No,” he admitted, “but it is the best that we can do. And probably we shall get some further detail. We have not yet ascertained how much Miss Stella will be able to enlarge our knowledge. But, in any event, we have a substantial case to start with. We can prove the fact of the murder and the conveyance of the body to the house at Stratford; and by means of the rope, we can definitely connect this group of persons with the crime. Moreover, we can prove that one, at least, of those persons had a very strong motive for committing the murder and was known to have committed another crime—the abduction—apparently with the same motive.”

“To say nothing,” said I, “of the fact that the circumstances of the abduction strongly suggest an intention to commit another murder.”

“Exactly,” he agreed. “Zichlinsky’s remark that he had been robbed of a fortune makes that fairly clear.”

“I suppose,” said I, after a pause, “that you now have a tolerably complete picture in your mind as to the actual course of events?”

“Yes,” he replied. “Of course, it is largely inferential; but I think I can reconstruct the whole crime in outline with considerable confidence that my reconstruction is broadly correct. Perhaps it would be helpful to go over it and see exactly what we shall have to prove.”

“It would be extremely helpful to me,” I said, “seeing that it is, in effect, the case for the prosecution.”

“Then,” said he, “we will begin quite at the beginning and adopt the narrative style to save words. First some communication was made to Sir Edward, probably verbally and probably by some confidential envoy of Mrs. David’s, begging him to grant an interview to some person who was unable to come to him. This person may have been her brother, who, being a fugitive from Russia, might naturally be in hiding and might be living in an otherwise unlikely neighbourhood. Sir Edward consented, with some misgivings, as we may judge from Weeks’s description of his preoccupied state when he left home. It was arranged that Mrs. David should meet him with a hansom at an appointed place near his club and convey him to the place where the person was living. The approximate whereabouts of this person’s place of abode was mentioned, as suggested by Sir Edward’s precautions in leaving his valuables at the club; which also suggests that he was not without suspicions as to the nature of the transaction.

“On his arrival at Pentecost Grove, in Shemrofsky’s cab, he was introduced to Zichlinsky; and, probably almost at once, the attack was made on him. I am disposed to think that the original intention was to hang him, but that, suddenly during the struggle, it became necessary to silence him. A knock on the head was not practicable as it would have produced a recognisable injury, and made the pretence of suicide untenable. The alternative, adopted on the spur of the moment, was to thrust his head into the brine tub; and this having been done, he was held there until he was dead.”

“They must have been savage brutes!” I exclaimed. “But their savagery was their undoing. If they had hanged him, it would have been difficult to prove the murder, if not impossible.”

“Hardly impossible, Jervis,” said he. “You will remember that we had virtually decided against suicide before we saw the body. And then there were the shoes and the wheel-tracks. Still, the drowning made the case much more conclusive.”

“By the way,” said I. “You mentioned that you had a hypothetical explanation of the salt and the herring scales. Was it a brine tub that was in your mind?”
“It occurred to me as a possibility, and the only one I could think of. I happened to know that it is the habit of low-class East European aliens to keep in their living or working rooms a tub of brine containing herrings and cut cabbage. The crime seemed to be associated with that part of London in which colonies of these people are settled, and it had a certain crude atrocity that was unlike English crime. Then the appearances agreed with this supposition and with no other. The man had been drowned, but only his head and neck had been wetted. He might have been held over the side of a boat or a landing-stage; but that theory would not account for the salt and the herring scales. But a receptacle containing salt water and herrings met the conditions exactly. And that little shred of cabbage gave strong confirmation. Still, it was only a hypothesis; and even now it is but an inference. It remains to be proved.”

“I don’t think there is much doubt of it,” said I, “though it had never occurred to me. Of course, when Jasper Gray mentioned the tub of herrings and cabbage floating in brine, the explanation came in a flash. But go on with your reconstruction.”

“There isn’t much more to say. The body was kept at Gomorrah’s house—or Ebbstein’s, whichever it was. Ebbstein’s house fits the conditions perfectly but Gomorrah’s is probably exactly similar—until Sunday night, perhaps because then there would be fewer people about down by the creeks. Then one man—probably Trout—was sent on ahead to get the house open and see that all was clear. The body was put into Shemrofsky’s cab—probably it was placed upright, sitting on the seat—and accompanied by one of the murderers, who was almost certainly Zichlinsky. Then, as it had been a wet evening, the glass front could be let down without appearing remarkable, and the two occupants, the living and the dead, would thus be practically invisible from the outside.

“On the arrival of the cab at the house, the advance man—call him Trout—would give the signal ‘all clear’ and the body and the rope would then be quickly carried in by him and Zichlinsky. Probably Trout made the rope fast to the beam and prepared the noose while Zichlinsky held up the body. As soon as it was suspended, they would turn the chair over and make the other arrangements. Then they would go into the front room, open the window and drop the glove under it. Finally, they would look out to see that there was no one about and then come away and make for the rendezvous where Shemrofsky would be waiting for them with his cab. Or he may have driven straight home, leaving them to follow on foot or in an omnibus.

“That is how I think the plan was carried out, and that is the account that I shall give to Miller as the basis of enquiries and of such questions as he may think fit to put to the prisoners.”

“And what do you propose to do at the moment?”

“My first proceeding,” he replied, “will be to see Miller and try to get the finger-print question settled. Then I shall consult with Brodribb as to the best way of ascertaining whether the woman who captured Miss Stella was or was not Mrs. David Hardcastle. I have a plan in my mind, but as it involves Brodribb’s co-operation, I can’t decide on it until I have secured his agreement.”

“My impression is,” said I, “that Brodribb will agree gladly to anything that you may suggest.”

“That is my impression, too,” said Thorndyke. And subsequent events proved that we were both right.

XVI. — MRS. DAVID HARDCASTLE

(Jasper Gray’s Narrative)

MY premonitions of some impending change in the conditions of my life, dimly associated with Mr. Brodribb, were revived some days later when I saw that gentleman coming out of our office in earnest conversation with Mr. Wopsall. The apparition caused me some surprise, and when Mr. Wopsall beckoned to me, I came forward with alacrity, bubbling over with curiosity.

“You are going off duty for a day or two, Gray,” said Mr. Wopsall. “Mr. Brodribb wants you to attend at his office tomorrow and perhaps afterwards. He will give you your instructions, and you will understand that they have my full concurrence; and I need hardly suggest that you smarten yourself up a bit and try to do us credit.”

With this he shook hands with Mr. Brodribb and retired to his office, leaving us together; and we drifted out into the street to pursue our business. However, he had not much to say. In effect, he wished me to present myself at his abode in New Square, Lincoln’s Inn, punctually at ten o’clock on the following morning, when he would give me more detailed instructions; and having delivered himself of this request and satisfied himself of my ability to find my way to his office, he shook my hand warmly and went his way with an air of deep satisfaction.

As he had given me no hint as to the nature of the business on hand, it was natural that I should spend the remainder of the day in speculating with the most intense curiosity on the circumstances that called for my presence in a place so remote from the scene of my customary activities; and it was equally natural that I should make my appearance in the place of assignation with more than common punctuality. Indeed, the word ‘punctuality’ understates the case; for, although I had spent a full hour operating on my clothes with a sponge, a nail-brush and a flat iron, I strolled into the Square from Chancery Lane at the moment when the hands of the big clock showed a quarter past nine. (I say ‘the hands’ advisedly, for the Joker who put up that clock had omitted the figures on the dial, substituting for them a dozen exactly similar marks.)

I stood for some time inspecting that eccentric clock-face with mildly surprised interest. Then I transferred my attention
to a fine pear-tree that some rural-minded lawyer had trained up the side of his house; and I was still contemplating this phenomenon when I became aware of a somewhat chubby gentleman in a broad-brimmed straw hat and slippers who was sauntering up the pavement smoking a very large pipe. At the moment, his head was inclined forward so that the hat-brim concealed his face; but as we approached, he raised his head, and, the hat ascending with it, disclosed the countenance of Mr. Brodribb.

“Ha!” he exclaimed as he caught sight of me, “You are a little before your time, which is a good fault, if that is not a contradiction of terms. The early bird catches the worm, as the rather ambiguous proverb has it—ambiguous, I mean, as to the moral to be conveyed. For while early rising is obviously advantageous to the bird, it is obviously disadvantageous to the worm. He had better have stayed in bed a little longer. However, here you are, and it will be all to the good if we get our arrangements completed in advance.”

He pulled out a prosperous-looking gold watch (apparently, he didn’t trust the clock) and having looked at it thoughtfully, continued: “I shall want you to sit at a desk in my outer office, and you are to try to look as if you’d been there all your life. You are supposed to be one of my clerks. Do you understand?”

I assured him (but not in those words) that I ‘rumbled him’, as our packer would say, and he went on: “I am expecting some visitors presently. They will come to the outer office and you will take down their names on a slip of paper and then come into my office and announce them. And while you are taking down their names, I should like you to have a good look at them so that you will be able to recognise them if you should see them again.”

This sounded agreeably mysterious, and once more, I assured him—in suitable terms—that I ‘ogled’ perfectly.

“If anyone asks you any questions,” he continued, “be as evasive as you can. Don’t give any information.”

I remarked that I hadn’t much to give, to which he replied that perhaps I had more than I realised. “But in any case,” said he, “keep your own counsel. If they should ask you who you are, say you are my clerk.”

“That won’t be quite correct, sir,” I ventured to remind him.

“Bless the boy!” he chuckled, “we aren’t as particular as that in the law. But, in fact, you are my clerk. I appoint you to the post this very instant. Will that satisfy your scruples?”

I agreed that it would, though the appointment was obviously a legal fiction, and, the preliminaries being thus arranged, I was presently inducted into the outer office of which I seemed to be the sole occupant, and installed at a handsome mahogany desk, furnished with blotting-pad, an inkstand with three ink bottles—black, green and red—a pile of paper slips and a number of quill pens.

At ten o’clock precisely, Mr. Brodribb entered his private office and shut the door; and there descended on the premises a profound silence, through which I could hear faintly the sound of movement in the inner office with an occasional squeak of a quill pen; by which I judged that the communicating door was by no means sound-proof. But I discovered later that there was a second, baize-covered door which could be shut when required to ensure privacy.

The minutes ran on. Soon the novelty of the situation exhausted itself. I began to be bored by the continued occupancy of the leather-seated stool and to be sensible of a faint yearning for a parcel to deliver. Sitting still was well enough when one was tired, but it was no sort of occupation for an active youth at ten o’clock in the morning. However, it had to be; so failing any opportunity for physical exercise, I directed my attention to the quill pens and the three bottles of ink. I had never used a quill pen and had no consider able experience of coloured inks. Now I proceeded to make a few experiments and was greatly pleased with the results. Beginning with a spirited portrait of Mr. Gomorrah, I discovered the surprising potentialities of a polychromatic medium. The green ink enabled me to do full justice to his complexion, while the red ink imparted a convincing surgical quality to his bandaged head.

I was adding the finishing touches to this masterpiece of portraiture when I became aware of sounds penetrating the door—not Mr. Brodribb’s door, but another which apparently gave access to an adjoining room. The sounds conveyed the impression of several persons moving about on an oil-covered floor and were accompanied by the dragging of chairs. But after a short time these sounds died away, and I had just returned to my polychrome portrait when the crescendo music of a pair of creaky boots informed me that someone was approaching the outer door. A moment later, that door was flung open and a largish gentleman with a puffy face, not unadorned with pimples, stamped into the room, and having bestowed on me a disparaging stare, demanded: “Is Mr. Brodribb disengaged?”

I sprang up from my stool and spluttered at him ambiguously. Meanwhile he stood, holding the door open and looking out into the lobby.

“Come along!” he exclaimed impatiently addressing some person outside; whereupon the person addressed came along, and in a moment completed my confusion.

I recognised her instantly, which was the more remarkable since she was strikingly changed since I had last seen her; changed as to her habiliments and even in her person, for then her hair had been jet black whereas now it was of a glaring red. But I knew her all the same. Hers was a face that no make-up could disguise. And if her hair had changed, her eyes had not; and now I saw why they had appeared different in colour. The pupil of the left eye, instead of being a round black spot, was drawn out to the shape of a key hole. Nor did her handsome clothing make any essential change in her appearance. From the moment when my glance fell on her as she entered the room, I never had the shadow of a doubt that she was the ill-omened nurse at whom I had peered through the gutter-hole in Pentecost Grove.
I suppose I must have gone even beyond Mr. Brodribb's instructions to 'have a good look at' the visitors, for the odd silence was broken by her voice demanding angrily and with a faint foreign accent: "Well! what are you staring at me like that for?"

I mumbled a semi-articulate apology which she ignored, continuing: "Go at once to Mr. Brodribb and tell him that Mr. and Mrs. Hardcastle wish to see him."

I pulled myself together rapidly, but incompletely, and, dimly recalling Mr. Brodribb's directions concerning the slips of paper, I grabbed up the portrait of Gomorrah, and, blundering into his private office without knocking, slapped it down on his writing-table. He regarded it for a moment with a stupefied stare and then exclaimed: "What the dev—"

But at this point his eye caught the two visitors, who, waiving ceremony, now appeared in the doorway. He rose to receive them, and I hastily made my escape, leaving the door open; an omission the enormity of which I realised when I saw—and heard—Mr. Hardcastle ostentatiously slam it.

I crept back to my stool and drew a deep breath, conscious that I had made rather a hash of the business, so far. Well, every man to his trade. One couldn't expect the practice of parcels delivery to produce expertness in the duties of a lawyer's clerk. Still, I must manage the next visitors better; and having formed this resolution, I fell, naturally enough, into deep reflection on the astonishing thing that had just happened.

So this woman's name was Hardcastle. But Miss Stella's name was Hardcastle too. Very odd, this. They must be relatives, but yet they had seemed to be strangers, for Miss Stella had referred to her simply as "a woman." But at this point my train of thought was interrupted by Mr. Hardcastle's voice, penetrating the door. He was speaking in a loud, excited tone—not to say shouting—and I could hear quite distinctly what he was saying.

"But, damn it, Brodribb, the man is dead! Been dead a matter of fifteen years or more. You know that as well as I do."

There followed a sudden silence, and then I heard the thud of a closing door which I judged to be the baize inner door of Mr. Brodribb's office; a conclusion that was confirmed by the fact that, thereafter, Mr. Hardcastle's rather raucous voice percolated through only in a state of extreme attenuation. Even this I tried to ignore, and I had just resumed my speculations on the possible relationship of Mrs. Hardcastle and Miss Stella when I was rendered positively speechless by a new, and even more astonishing, arrival. For, without any warning of premonitory foot-falls, the outer door opened softly and gave entrance to none other than Miss Stella herself.

She was not alone. Closely following her was a very pleasant-looking lady whom I judged, from a recognisable resemblance, to be her mother, and who asked me if Mr. Brodribb was at liberty. Before I could collect my wits to reply, Miss Stella uttered a little cry of surprise and ran to me holding out her hand.

"You haven't forgotten me, have you?" she asked, as I took her hand rather shyly.

"No, indeed, miss," I answered emphatically. "I shouldn't be likely to forget you."

"This is fortunate!" she exclaimed. "I was afraid that I should never see you again and never be able to thank you."

Here she turned to the other lady, who was gazing at us in evident astonishment, and explained: "This is the gentleman who rescued me and brought me home that night. Let me introduce my knight-errant to my mother."

On this, the elder lady darted forward and seized both my hands. I thought she was going to kiss me, and shouldn't have minded if she had. What she was about to say I shall never know, though it is not difficult to guess; for at this moment the door of Mr. Brodribb's office flew open and Mr. Hardcastle's voice, raised to an infuriated shout, was heard proclaiming: "It's a damned conspiracy! You are setting up this impostor for your own ends. But you had better have a care, my friend. You may find it a dangerous game."

He stamped out, purple and gibbering with wrath, and close behind him came his wife. Her ghastly white face was indescribable in its concentrated malice and fury; but as soon as I caught sight of it, I knew why Zichlinsky's face had stirred my memory. She might have been his sister. But this recognition came only in a half-conscious flash, for the sight of her strung me up to readiness for the inevitable clash. And the next moment it came. Mr. Hardcastle had pushed roughly past the two ladies and his wife was following, when, just as they came abreast, Miss Stella turned her head and looked at the woman. As their eyes met, she uttered a cry of terror and shrank back, seizing my arm and making as if she would have taken shelter behind me.

For a moment there was a strange effect of arrested movement in the room, all the figures standing motionless as in a tableau. Mr. Hardcastle had turned and was staring in angry astonishment; his wife stood glaring at the terrified girl, and Mr. Brodribb looked on with frowning curiosity from the doorway of his office. It was he who broke the silence. "What is it, Miss Stella?"

"The woman," she gasped, pointing at Mrs. Hardcastle. "The nurse who took me to that dreadful house."

"What the devil does she mean?" demanded Mr. Hardcastle, looking in bewilderment from Miss Stella to his wife.

"How should I know?" the latter snarled. "The girl is an idiot. Let us get away from this den of swindlers and lunatics."

She moved towards the door with an assumed air of unconcern, though I could see that she was mightily shaken by the encounter. Mr. Hardcastle preceded her and wrenched the door open. Then he stood for a moment with the open door in his hand looking out.
“Don’t block up the door like that, man,” he said, irritably. “Come in or get out of the way.”

The unseen person elected to come in, and having come in, he promptly shut the door and turned the key. Mr. Hardcastle looked at him fiercely and demanded: “What the devil is the meaning of this, sir?”

“I take it,” replied the newcomer, “that you are Mr. David Hardcastle?”

“And supposing I am. What then?”

“And this lady is Mrs. David Hardcastle, formerly Marie Zichlinsky?”

Mrs. Hardcastle glared at him with an expression that reminded me of a frightened cat. But she made no reply. The answer came from Mr. Brodribb.

“Yes, Superintendent, she is Mrs. David Hardcastle; and she has been identified by Miss Stella Hardcastle, who is here.”

The woman turned on him furiously. “So,” she exclaimed, “this is a trap that you had set for us, you sly old devil! Well, Superintendent, what do you want with Mrs. David Hardcastle?”

The Superintendent looked at Miss Stella and asked:

“What do you say, Miss Hardcastle? Do you recognise this lady, and if so, what do you know about her?”

“She is the woman who was dressed as a nurse and who enticed me by false pretences to a house where I was imprisoned and bound with rope and from which this gentleman rescued me.”

If a look could have killed, ‘this gentleman’ would have been a dead gentleman. As it was, he was only a deeply interested gentleman.

“This,” exclaimed Mrs. David, “is a parcel of foolery. The girl is mistaking me for some other person if she isn’t merely lying.”

“We can’t go into that here,” said the Superintendent. “We are not trying the case. I am a police officer and I arrest you for having abducted and forcibly detained Miss Stella Hardcastle, and I caution you that anything that you say will be taken down and may be used in evidence against you.”

Mrs. Hardcastle was obviously terrified but she maintained a certain air of defiance, demanding angrily: “What right have you got to arrest me? Where is your warrant?”

“No warrant is necessary in a case of abduction,” the Superintendent explained civilly.

“But you have only a bare statement. You cannot arrest without an information given on oath.”

The lady struck me as being remarkably well informed in the matter of police procedure. But the Superintendent knew a thing or two for he replied, still in the same patient and courteous manner: “Miss Hardcastle has already laid a sworn information as to the facts. I assure you that the arrest is perfectly regular and the less difficulties you make, the less unpleasant it will be for us all.”

During these proceedings Mr. Hardcastle had looked on with an air of stupefaction. All the bluster had gone out of his manner and his puffy face had suddenly turned white and haggard. He now broke in with the bewildered enquiry: “What is this all about? I don’t understand. What are they talking about, Marie?”

She gave him a single wild, despairing look, and then she made a sudden dash for the door of communication. In a moment she had wrenched it open, only to reveal the presence of two massive plain-clothes officers standing just inside. For one moment she stood gazing at them in dismay; then she turned back and faced the Superintendent. “Very well,” she said, sullenly. “I will come with you if I must.”

“I am afraid you must,” said he; “and, if you take my advice, you will not make a disagreeable business worse by any sort of resistance.”

He glanced at the two officers and asked: “Have you got a cab waiting?” and on receiving an affirmative reply, he said, addressing the older of them; “Then you will take charge of this lady, and of course, you will avoid any appearance of having her in custody, provided she accompanies you quietly. You know where to go.”

As the two officers entered the room and shut the door Mr. Hardcastle turned to the Superintendent. “Is it possible for me to accompany my wife?” he asked.

The Superintendent shook his head. “I am afraid that is quite impossible,” said he; “but you can attend at the police court and apply for her to be admitted to bail. I will give you the necessary directions presently.”

Here the senior of the two officers indicated to Mrs. Hardcastle that he was ready to start; whereupon her husband stepped towards her, and, laying his hands on her shoulders, kissed her livid cheek. She pushed him away gently without looking at him, and, with a set face and a firm step, followed the first officer out of the room and was in turn followed by the other.

As soon as they were gone Mr. Hardcastle looked at my employer, gloomily, but with none of his former bluster. “Is this your doing, Brodribb?” he asked.

Mr. Brodribb, who looked considerably upset by what had just happened, replied gently: “There was no choice, Mr.
Hardcastle. If there had been, you would have been spared the distress of witnessing this catastrophe.”

“Yes,” said the Superintendent, who had taken possession of my desk and was writing on one of the paper slips, “we are all very sorry that this trouble has fallen on you. But the trouble was not of our making. Now, here are the particulars that you will want and the directions as to what you had better do. But I must warn you that the magistrate may refuse bail. Still, that is his affair and yours. The police can’t accept bail in a case of this kind.”

He handed the paper to Mr. Hardcastle, who glanced through it, put it in his pocket, and, without another word, walked dejectedly to the door and passed out of our sight. And with his disappearance there seemed to come a general relaxation of tension. Mr. Brodribb especially appeared to feel the relief, for, as the door closed, he drew a deep breath and murmured: “Thank God that’s over!”

“Yes,” said Miss Stella’s mother, “it was a dreadful experience, though it is difficult to feel any sort of sympathy except for her unfortunate husband. May I take it, Mr. Brodribb, that this was the business that required my presence here and Stella’s?”

“Yes,” was the reply. “There were other matters, but they will have to wait. But I shall hope to do myself the honour of calling on you in the course of the next day or two.”

“Then our business here is finished for to-day?”

Mr. Brodribb glanced at the Superintendent, who replied: “I shall want Miss Hardcastle to identify one or two of the persons who will be charged with the abduction, but it is not urgent, as we have Mr. Gray here and enough evidence of other kinds to cover the arrests. So we need not detain these two ladies any longer.”

The two ladies accordingly made their adieux to Mr. Brodribb and then bade me a very cordial farewell. As she shook my hand, the elder lady said with a smile: “We have found you at last, Mr. Gray, and we are not going to lose sight of you again. We shall hold Mr. Brodribb responsible for you.”

With this and a gracious bow to the Superintendent, she passed out of the door which I held open for her, her arm linked in Miss Stella’s, and both acknowledged my bow with a valedictory smile.

“Yes,” said the Superintendent, glancing at his watch, “it is time for us to be moving, Mr. Brodribb. I told Dr. Thorndyke that we should be there by half-past eleven and it’s nearly that now.”

Mr. Brodribb went into his office where, besides securing his hat and stick, he apparently rang a bell, for a dry-looking gentleman—a genuine clerk—made his appearance from a communicating door and looked at his employer enquiringly.

“I am going now, Bateman,” said Mr. Brodribb. “Did you order the cab?”

“The cab is now at the door, sir,” replied Mr. Bateman; on which the Superintendent went out and Mr. Brodribb followed, pushing me in front of him. I was naturally somewhat curious as to our destination, but, as I had only to wait until our arrival to satisfy my curiosity, I wasted no effort on speculation, but gave my attention to my fellow passengers’ conversation; from which, however, I did not gather very much.

“I don’t know why you want me to come,” Mr. Brodribb remarked. “I don’t know anything but what Dr. Thorndyke has told me.”

The Superintendent chuckled. “You are in much the same position as the rest of us,” said he. “But you may as well see how far we can confirm his information. We’ve got most of these birds in the hand now, and it remains to be seen how much we shall get out of them.”

“But you can’t interrogate prisoners concerning the crimes that they are charged with.”

“No, certainly not. But we can let them talk after they have been cautioned, and we can let them make statements if they want to.”

“Do you think they will want to?” asked Mr. Brodribb.

“I shall be very surprised if some of them don’t. You see, out of this batch, one or two, or perhaps three, are the actual principals. The rest are accessories. But an accessory, when he sees the rope dangling before his nose, is going to take uncommon care that he isn’t mistaken for a principal in the first degree. He’ll probably lie like Ananias, but it is tolerably easy to sort out the lies and separate the facts.”

At this point the cab, which had been rumbling down Whitehall, turned in at a large gateway and drew up at the entrance to a building which I decided to be the police headquarters, judging by the constabulary appearance of all the visible occupants. Here we disembarked and made our way to a barely furnished room containing a large table, furnished with writing materials, and a few chairs. Seated at the table with their backs to the windows were Dr. Thorndyke, Dr. Jervis, and a gentleman whom I did not know. Exactly opposite the table was a door, at each side of which a police officer in uniform stood stiffly on guard, which led me to surmise that ‘the birds in hand’ were not very far away.

“Now,” said the Superintendent when the brief greetings had been exchanged, “the first thing will be for Mr. Gray to identify the various parties. It is a mere formality, but it is necessary to connect his statements with actual persons. You will just look at the prisoners, Mr. Gray, and if you recognise any of them, you will tell us who they are and what you know about them.”
With this, he led me to the door, which was then thrown open by one of the guardians.

XVII. — SOME STATEMENTS AND A TRAGEDY

(JASPER GRAY'S NARRATIVE)

AS I stood for a moment in the open doorway and looked through into the large room beyond, I was sensible of an uncomfortable thrill. The grim spectacle on which I looked was an impressive illustration of the omnipotence of the law and its inexorable purpose when once set in motion. The room was as bare as the other, containing only a central table and a number of chairs ranged along the walls, on six of which, spaced at wide intervals, the prisoners were seated, each guarded by two constables. A single comprehensive glance took them all in; and then my eyes wandered back to Mrs. Hardcastle, and I hoped that Mr. Brodribb had not seen her.

She sat, rigid and ghastly, a very image of despair. The misery and deadly fear that her haggard face expressed wrung my heart in spite of my knowledge of her wickedness, though, to be sure, the whole extent of her wickedness was not then known to me. But even if it had been, her dreadful condition would still have shocked me.

"I recognise this lady," I said huskily in answer to the Superintendent’s question. "I saw her in Pentecost Grove the day I escaped with Miss Stella Hardcastle. She was then dressed as a nurse."

"It is a lie!" she exclaimed, casting a tigerish glance at me. "This young fool has mistaken me for some stranger."

The Superintendent made no comment and we passed on to the next chair.

"This is James Trout," I said. "All I know about him is that he gave me a bad half-crown and that he tried to prevent the other man from stabbbing me."

"Have you ever seen this man before?" the Superintendent asked when we came to the next prisoner. The man looked at me wolfishly, and as I answered in the affirmative, he uttered a sort of snarl. And again I was struck by his resemblance to Mrs. Hardcastle.

"He gave the name of Jacob Silberstein to the policeman," I said, "but I heard some of the people address him as Mr. Zichlinsky."

The three remaining prisoners were Ebbstein, Gomorrah, and the cab-driver, Louis, and when I had identified them we went back to the other room and once more the door was shut. The Superintendent took his seat at the table between Dr. Thorndyke and Mr. Brodribb, the strange gentleman laid a large note-book on the table before him and uncapped a fountain-pen, and I was given a chair next to Mr. Brodribb and provided with a blotting-pad, paper and pens and ink.

"You will listen to any statements that are made, Mr. Gray," said the Superintendent, "and if any of them appear to you to be incorrect you will make no remark but write down the correction for our information later. And I need not say that you are to regard anything that you may hear as strictly secret and confidential."

I signified that I clearly understood this, and the Superintendent then addressed Dr. Thorndyke.

"I think we had better begin with Trout. He is the most likely subject."

As Dr. Thorndyke agreed, the Superintendent gave the name to one of the constables on guard, who then opened the door, and, entering the large room, presently returned accompanied by Trout, who was given a chair opposite the middle of the table and facing the Superintendent. The latter looked at him doubtfully for a moment or two as if considering how he should begin; but Trout solved the problem by opening the proceedings himself.

"You are makin’ a rare to-do about that bit of rope, sir," he complained. "I don’t see why I’ve been brought here along o’ them foreign crooks. Suppose I did pinch that rope—which I didn’t. But suppose I did. It’s nothin’ to make all this fuss about."

"You are quite right, Trout," said the Superintendent. "The mere stealing of the rope is no great matter. We could let the dock company deal with that. It is a much more serious matter that we are concerned with; and the way the rope question comes into it is this: a piece cut off that rope—how long did you say that piece was, Doctor?"

"Thirteen feet," Dr. Thorndyke replied.

"A piece thirteen feet long was cut off that rope, and this piece was taken to a house at Stratford—Number Five, Piper’s Row."

He paused and looked steadily at Trout, who in his turn gazed at the Superintendent with an expression of astonishment and unmistakable alarm.

"The persons who took that piece of rope to that place," the Superintendent continued, "also conveyed there the body of a man who had been murdered and they used the rope to hang that body from a beam."

"But," protested Trout, "that man hadn’t been murdered. The inquest found that he hung himself."

"Yes, but we have since ascertained that he was murdered—drowned in a very unusual way. Now wait a moment, Trout. Before you say anything I must caution you that whatever you say will be taken down in writing and may be used in
trembled an officer and brought up to the doorway. From where I sat I got a glimpse of a row of prisoners and constables craning forward with horrified faces, and opposite to them Mrs. Hardcastle supported by two officers. When I first saw her, she was sitting bent forward with her head nearly on her knees; but then the officers raised her until she leaned back in her chair, when her arms fell down at her side, her head fell back and her chin dropped, leaving her mouth wide open. That was the last that I saw of her, for at that moment the door closed; and when, after a considerable interval, it opened again, her chair was empty.

As the Superintendent and the two doctors returned to their places Mr. Brodribb looked at them enquiringly.

"Too late," said the Superintendent. "She was dead when the doctor got to her."

"Dear, dear!" Mr. Brodribb murmured in a shocked tone. "Poor creature! I suppose her death was not—er—"

"Natural?" said Dr. Thorndyke. "No. It was apparently cyanide poisoning. She must have kept a little supply concealed on her person in case of an emergency. Probably one or two tablets."

"Yes," growled the Superintendent, "and we might have expected it. Ought to have had her searched. However, it's too late to think of that now."

But in spite of these expressed regrets, I had the feeling that he was less disturbed by the tragedy than I should have expected. And so with the others. Even the sensitive, soft-hearted Mr. Brodribb took the catastrophe with singularly calm resignation. Indeed, it was he who gave voice to what was probably the general view.

"A shocking affair. Shocking. And yet, perhaps, in view of what might have been—"

He did not finish the sentence, but I gathered that he was rather more relieved than shocked by what had happened. And, later, I understood why.

After a decent pause, the business was resumed. Once more the door opened and now the cabman, Louis, was led out by an officer and brought up to the table; and a glance at him told me that, on him, at least, the recent tragedy had fallen with shattering effect. His face was blanched to a tallowy white and damp with sweat, his eyes stared and his thin, bandy legs trembled visibly.

The Superintendent regarded him with a critical eye, and addressed him in passionless but not unfriendly tones.

"Sit down, Shemrofsky. The officer who arrested you has cautioned you that anything that you say may be used in evidence against you. Now, bear that caution in mind."

"Yes," replied Shemrofsky, "I shall remember. But zere is noding against me. I drive a cab. Zere is no harm to drive a
cab.

Mr. Miller nodded but made no comment, and Shemrofsky continued: “Zey say I take away ze young lady, but zat is not true. Ze young lady get into ze cab by herself. Madame tell me vere to drive and I drive zere. Ze young lady get out of ze cab and go into ze house. I do not make her go. Madame could tell you I know nothing of vot she do. But now Madame is dead and zere is nobody to speak for me.”

“Very well,” said the Superintendent. “We will let that pass. But there is another charge; and I caution you again that anything you say may be used in evidence against you. Don’t forget that.”

Shemrofsky turned, if possible, paler and stared apprehensively at the officer. “Anozer charge!” he exclaimed.

“Yes. It refers to a gentleman who was brought from Piccadilly, near Dover Street, to Number Fifty Pentecost Grove. In that house he was murdered, and his body was taken to Number Five Piper’s Row, Stratford. The murder was committed by Maurice Zichlinsky, Solomon Gomorrah and certain other persons; and I charge you with being one of those other persons. Now, remember my caution.”

For a few moments Shemrofsky gazed at the Superintendent in speechless consternation. Then he broke out, passionately: “You charge me zat I help to kill zat chentleman! I tell you I haf noding to do vid zat. I did not know zat anybody kill him. Somebody tell you lies about me. If Madame vas here, she woud tell you zat I chust drive ze cab vere I am told. Zat is all. I know noding of vot zey do.”

The Superintendent wrote down these statements, though the gentleman at the end of the table was apparently the official scribe. But he made no remark, and presently Shemrofsky continued: “Somebody have tried to put ze blame on me. But I shall tell you zat all I know. Zen you vill see zat I haf noding to do vid killing zis chentleman.”

“Do you mean,” said the Superintendent, with ill-concealed satisfaction, “that you wish to make a statement? You are not bound to say anything, you know. But if you wish to make a statement, you may; and it will be taken down in writing, and, when you have read it and find it correct, you will be required to sign it. But do exactly as you think best.”

“I shall tell you all vot I know,” said Shemrofsky, whereupon the Superintendent glanced at the recording officer—who took a fresh sheet of paper—and advised the prisoner to stick to the truth and begin at the beginning.

“You had better start,” said he, “by telling us what you know as to how this gentleman came to Pentecost Grove.”

“He came in my cab,” said Shemrofsky. “I vill tell you how it vos. Vun morning—it was a Wednesday—Madame say to me zat a friend is coming to see Mr. Zichlinsky—zat vas her brother—and as he would not know ze vay she woud fetch him in my cab. So she get in ze cab and tell me to drive to Dover Street, Piccadilly. Ven ve get zere, I valk ze horse slowly. Zen ze chentleman come. Madame push up ze trap vid her umbrella and I stop. Ze chentleman get into ze cab and I drive to Pentecost Grove as I haf been told. Madame and ze chentleman get out and go into Mr. Ebbstein’s house.”

“Ebbstein’s!” exclaimed the Superintendent. “I understood it was Gomorrah’s.”

“No, it vos Ebbstein’s. Vel, zey go in and I take my cab to ze yard. I see ze chentleman no more and I hear noding about him. Zen, on Sunday, Gomorrah come to me and say zat Mr. Zichlinsky want me to take ze chentleman to Stratford. He tell me to come for him at night a liddle before eleven. Ven I come to ze house—Mr. Ebbstein’s—Gomorrah tell me ze chentleman haf got drunk. He vos very drunk; so Gomorrah and Ebbstein haf to help him out to ze cab.”

“What do you mean by ‘help him out’?” asked the Superintendent. “Was he able to walk?”

“No, he vos too drunk. Zey haf to carry him out. Zey sit him in ze cab and zen Mr. Zichlinsky get in and sit by his side. Zey tell me to let down ze glass front, so I let it down and zen I drive to Stratford. Zey tell me to go up Stratford High Street, and ven I get zere I pull up ze trap and Mr. Zichlinsky tell me vich vay to go. Presently ve come to a row of houses which seem to be empty, all but vun, vere I see a man standing at an open door. He make a sign to me and I stop and pull up ze glass front. Zen ze man get in and help Mr. Zichlinsky to take ze chentleman out of ze cab and carry him into ze house. Zey shut ze door and I drive away and go home.”

“Was there any light in the house?” the Superintendent asked.

“Zere vos a lantern on ze floor chust inside.”

“With regard to this man,” said Mr. Miller. “Was he anyone that you knew?”

“It vos very dark,” Shemrofsky replied, evasively. “I could not see him plainly.”

“Still,” said the Superintendent, “he was quite close to you when he got into the cab. I don’t want to press you, but if you know who he was you had much better say so.”

“Vell,” Shemrofsky replied, reluctantly. “It vos very dark. I could not see vell, but ze man seem to look a liddle like Mr. Trout.”

“Ha! And what happened after that?”

“Noding. I go home and zat is all I know.” The Superintendent reflected awhile. Then he held out his hand to the scribe, who passed him the written statement. When he had glanced through it he read it slowly aloud, including the questions.

“Now, Shemrofsky,” he said, “is that all you know? Or would you like to add anything to it?”
“Zat is all I know,” was the reply; whereupon “the deponent” was provided with a pen, an instrument with which he seemed unfamiliar, but with which he contrived to make some sort of mark, which the Superintendent countersigned as witness. Then Shemrofsky was conducted back to the other room, whence Trout was brought forth to take his place.

“Well, Trout,” the Superintendent said, genially. “Have you thought it over?”

“Yus,” was the reply: “and I am going to make a statement. I ain’t going to lump in with them foreign crooks. I don’t ‘old with their ways and I’ve told ‘em so over and over again.”

“Then I take it that you are going to tell us all that you know about this affair and that you are going to make a true statement.”

“I am,” replied Trout, “though, mind you, I don’t know anything but what I’ve been told.”

“What you have been told,” said the Superintendent, “is not evidence. Still, it is your statement, so you can say what you please. You had better begin at the beginning and take the events in their proper order.”

“The beginning of the affair, as I understand,” said Trout, “was when this gent came to Ebbstein’s house. He came in Shemrofsky’s cab with Madame—she was Zichlinsky’s sister, I believe. They went in together, but Madame came out again almost at once and went into Gomorrah’s house. Shemrofsky told me this. The rest of the story I had from Gomorrah.

“It seems that Madame took the gent into Ebbstein’s work-room. There was no work being done there that day, so the women who worked for him had been given a day off. There was three men there: Zichlinsky, Ebbstein and Gomorrah; and as soon as Madame was gone, the whole three set about the gent. But he gave ‘em more trouble than they had bargained for. They had meant to hang him and they’d got the rope ready, but they couldn’t manage him; and all the time, he was fairly raising Cain—hollering ‘murder!’ fit to fetch the roof off. Just then a woman runs in and says there was two coppers coming up the street. Ebbstein wanted to knife the gent straight away, but Zichlinsky wouldn’t let him; but as they was close to the pickle tub, they got him bent down and Zichlinsky shoved his head down into the brine and held it there while the other two lifted his legs. They held on like that until the coppers had passed out of the street, and when they took his head out of the brine he was dead.”

“You had better say what you mean by ‘the pickle tub’,” said the Superintendent.

“It is a big tub of brine what they pickle their herrings and cabbage in. There wasn’t much in it but brine just then. They filled it up with fish and cabbage the next day.”

“And about this rope that you say they had ready. What do you know about that?”

“It was a bit about a couple of fathoms long that was cut off a rope that belonged to Gomorrah. I don’t know where he got it. But I know the rope because he brought the piece to me and asked me to show him how to make a noose in it. That was the day before they did the gent in. Of course, I didn’t know what he wanted it for, so I made a running bowline in the end just to show him.”

“I see,” said the Superintendent (and no doubt he did); “what happened next?”

“Well,” replied Trout, “when they’d done him in, they’d got to dispose of the body. For the time being they stowed it away in the cellar, and a rare fright they got while it was there; for some coves brought an egg-chest to the house in a mighty hurry. They thought Powis was inside it, but when they opened it a strange young man popped out. I fancy it was this young gentleman,” he added, indicating me, “and a pretty narrow squeak he had; for Ebbstein thought he was a spy, and, being in a blue funk about the body that he’d got in his cellar, he wanted to do the young man in to make things safe. But the bloke what had brought the case wasn’t going to be mixed up with any throat slitting—of course, he didn’t know anything about the body downstairs—so they locked the young man up in Jonas Markovitch’s room, and he got out of the window and hiked off.

“However, that’s another story. To come back to this job: the night they did the gent in, Gomorrah comes to me and says that him and Ebbstein is in difficulties. He says the gent was took ill—had a stroke, or somethink—and died suddenly, and they don’t know what to do with the body. He asks me if I know of any safe place where they could plant it, where it wouldn’t be found for a little while. Of course, he didn’t say anything about the murder at that time. If he had, I wouldn’t have had anything to do with the business. But as it seemed to be just an accident, I didn’t see no harm in giving ‘em a bit of advice.

“Now, I happened to know Stratford pretty well. Got a married sister what lives there. And I knewed about those empty houses in Piper’s Row, so I told Gomorrah about them and he thought they’d suit to a T. So he asked me to take Zichlinsky and Shemrofsky down to the place and show ‘em the way; and he gave me a bunch of skeleton keys and some tools to get in. But I didn’t want ‘em; for when I went down there that night with Zichlinsky and Shemrofsky and picked out a likely-looking house, I found I could open the door with my own latch-key. So I told Zichlinsky that I would lend him the latch-key when he wanted to get into the house. And I did. I lent him the key on the Sunday afternoon and he give it me back the next morning.”

“You didn’t go with him to Stratford when he took the body there?”

“Me! Not much. He wanted me to, but I wasn’t going to be mixed up in the business.”

“Do you know who did go with him?”
“No. I don’t know as anybody did. Anyhow, it wasn’t me.”

“When did you first hear about the murder?”

“Not until after the body was found. When I heard about it being found hanging in the wash’us, I smelt a rat. So I asked Gomorrah about it and then he let on by degrees. He wasn’t quite himself just then on account of a knock on the head that he got from this young gentleman. First he put it all on to Zichlinsky, but afterwards I got the whole story out of him.”

The Superintendent waited for some further observations, but as none were forthcoming, he asked: “Is that all you’ve got to tell us?”

“That’s the lot, sir,” Trout replied with cheerful finality, adding, “and quite enough too.”

“Not quite enough, Trout,” the Superintendent corrected. “There’s one other little matter that we want some information about. Have you got that small object about you, Mr. Brodribb?”

Mr. Brodribb had, and presently produced it from an envelope which he took out of his letter case. As he laid it down on the clean, white blotting pad, I recognised with something of a thrill my long-lost and deeply lamented emerald.

Mr. Trout regarded it stolidly, and, when the Superintendent asked him what he could tell us about it, he promptly replied: “Nothing.”

“That isn’t much,” the officer remarked. “Perhaps if I tell you something about it you’ll remember something more. You probably know that Powis is in detention awaiting his trial. Now, this stone was in his possession, and he says that you sold it to him.”

“Well,” protested Trout, “supposing I did. It ain’t got nothin’ to do with this other business.”

“But it has a great deal,” said the Superintendent. “This stone was in a ring which is known to have been on the person of the gentleman who was murdered. This is the ring that it came from;” (here the Superintendent took from his pocket and laid on the blotting pad a rather massive gold ring in which was an empty oval space) “and this ring was found in the possession of Jonas Markovitch, who says that he bought it from you.”

“He’s a liar,” exclaimed Trout, indignantly. “He sold me the stone, himself. He took it out of the ring because it wasn’t no good to him, as he was going to melt down the metal. I gave him a bob for it and I sold it to Powis for five bob. Markovitch told me he found the ring on the work-room floor.”

“Well, why didn’t you say so at first, Trout?” said the Superintendent in a tone of mild reproach.

“I forgot,” replied Trout, adding irrelevantly: “besides, I couldn’t see that it mattered.”

As it appeared that he had nothing further to communicate, his statement was read over to him, and, when he had suggested one or two trifling alterations, he signed it with considerable effort and the addition of a few obvious lies, they are identical. The only weak spot was the murder charge against ‘Madame,’ as they call her; and she has solved that difficulty by throwing in her hand. Her suicide almost amounts to a confession—for although she hadn’t been charged with the murder, she must have seen that she was going to be—and it will have put the fear of God into the others.”

“What about Singleton?” Dr. Thorndyke asked. “Will he swear to Zichlinsky’s finger-print?”

“Yes,” the Superintendent answered. “He would have sworn to it before, only that it seemed impossible, and that he has such a holy terror of you since that Hornby case. But now he is ready to swear to it and give details as to the agreement of the separate features. So we have got a strong case even without these statements. But, Lord! Doctor, you haven’t left us much glory. Here is your information,” (he took a paper from his pocket and opened it before him) “describing the whole crime in close detail, and here are these two statements; and, making allowance for a few obvious lies, they are identical. The only weak spot was the murder charge against ‘Madame,’ as they call her; and she has solved that difficulty by throwing in her hand. Her suicide almost amounts to a confession—for although she hadn’t been charged with the murder, she must have seen that she was going to be—and it will have put the fear of God into the others.”

“Speaking of the others,” said Dr. Thorndyke, “do you propose to offer the three principals the opportunity to make voluntary statements?”

“Of course, they can if they like,” the Superintendent replied, “but I have advised them to say nothing until they have consulted their Rabbi or a lawyer. As they will be on trial for their lives, it would not be proper to encourage them to talk at this stage. No doubt they will elect to give evidence at their trial, and each of them will try to clear himself by incriminating the others. But that is their look-out.”

“With regard to David Hardcastle,” said Mr. Brodribb, “I assume that you take the same view as I do: that he had no hand in the affair at all.”
“That is so,” was the reply. “We have nothing against him. He seems to be right outside the picture. He would be, you know. This is not an English type of crime. It is pretty certain that Madame kept him entirely in the dark about the whole affair. And now, gentlemen, I think we have finished for the present and I am very much obliged to you for your help. You will be kept informed as to any further developments.”

With this, the meeting broke up; and as it seemed that my valuable services were no longer in demand at Mr. Brodribb’s office, I was released (with a substantial fee for my attendance), after a cordial hand-shake with the four gentlemen, and went forth to view the neighbourhood of Westminster and to reflect upon the surprising circumstances in which I had become involved.

---

XVIII. — THE WHEEL OF FORTUNE

(JASPER GRAY’S NARRATIVE)

TO most of us a retrospect of life presents a picture of a succession of events each of which is visibly connected with those that have gone before. Times change indeed and we change with them; but the changes are gradual, progressive, evolutionary. The child grows up to manhood and in so doing reacts on his environment in such a way as to set up in it responsive changes. But he remains the same person and his environment remains substantially the same environment. Though both alter insensibly from day to day and from year to year, there is no point at which the connection of the present with the past is definitely broken.

This is the common experience; to which my own offers a striking exception. For into my life there came a break with the past so sudden and complete that in a few moments I not only passed into a totally new environment but even seemed, in a sense, to have acquired a new personality.

The break came on the third day after my attendance at the police headquarters. I can recall the circumstances with the most intense vividness; as well I may, for, with the material gain was linked an irreparable loss that has left a blank in my life even unto this day. I was still on leave from Sturt and Wopsalls, ‘standing by’ at Mr. Brodribb’s request, for possible, and unknown, duties, and having nothing to do on this particular morning had taken up my position in a reasonably comfortable chair to listen while Pontifex expounded the Latin language to one of his pupils.

How clearly the picture rises before me as I write! The shabby room, ill-furnished and none too clean; the deal table—its excessive dealiness partially cloaked by a threadbare cover—invitingly furnished with one or two books and a little pile of scribbling paper; and the two figures that faced one another across the table—Pontifex, sitting limply in his Windsor elbow-chair and looking strangely old and frail, and the stolid pupil with eyes sullenly downcast at his book. I watched them both, but especially Pontifex, noting uneasily how he seemed to have aged and withered within the last week or two and wondering how much of the change was attributable respectively to Mr. Brodribb or Johnny Walker; and noting, further, that the latter was conspicuously in abeyance at the moment.

Mr. Cohen, the present recipient of instruction, was not a promising pupil. It was not that he was a fool. By no means. I had seen him conducting the business of the paternal pawnbroker’s shop and could certify as to his being most completely on the spot; so much so that my mission (as Ponty’s agent) turned out a financial failure. But Mr. Cohen’s genius was exclusively commercial. As a classical scholar he was hopeless. Poor Ponty groaned at the sound of his footsteps on the stair.

This morning the subject of study was Virgil’s Georgics, Book Four, of which the opening paragraph had been dealt with, painfully and incompletely, in the previous lesson.

“Now, Mr. Cohen,” said Pontifex, with a cheerful and encouraging air, “we begin with verse eight, which introduces the subject of the poem. Princípio sedes apibus statioque petenda. Let us hear how you render that into English.”

Mr. Cohen glared sulkily at his book, but rendering there was none beyond certain inward mutterings which had a suspiciously expletive quality. Pontifex waited patiently awhile, and then, as no further sound was forthcoming, he made a fresh start.

“Perhaps we shall simplify matters if we attack the translation word by word. Let us take the first word, Princípio. How shall we translate Princípio, Mr. Cohen?”

Mr. Cohen reflected and at length pronounced the word “Principal,” possibly influenced unconsciously by some reminiscence of the three golden balls.

“No,” said Pontifex, “that will hardly do. Possibly, if you recall the opening sentence of the Gospel of St. John in the Vulgate. In principio erat verbum—ahem—” here Ponty pulled up short, suddenly realising that Mr. Cohen was probably not familiar with the Gospel of St. John in the Vulgate or any other form. After a short pause he continued: “Shall we say ‘to begin with’ or ‘in the first place?’”

“Yes,” Mr. Cohen agreed promptly, “that’s all right.”

“Very well,” said Ponty. “Now take the next word, sedes.”

“Seeds,” suggested Mr. Cohen.

“Not seeds,” Ponty corrected mildly. “We must not allow ourselves to be misled by analogies of sound. Think of the word
sedentary. What is the distinguishing characteristic of a sedentary person, Mr. Cohen?

“Doesn’t take enough exercise,” was the reply.

“Very true,” Ponty admitted; “and for the reason that he usually occupies a seat. ‘Seats’ is the word we want, not seeds. ‘In the first place seats’ statioque—seats and a—and a what, Mr. Cohen?”

“Station,” was the confident answer.

“Excellent!” exclaimed Ponty. “Perfectly correct. Seats and a station petenda,” he paused for a moment and then, despairing of Cohen’s grammar, translated, “must be procured, or more correctly, sought. In the first place, seats and a station must be sought apibus the—for the what, Mr. Cohen?”

“Apes,” replied Cohen, promptly.

“No, no,” protested Ponty. “Not apes. Similarities of sound are misleading us again. Think of the English word, apiary. You know what an apiary is, Mr. Cohen?”

Mr. Cohen said that he did, and I didn’t believe him. “Well now,” said Ponty, persuasively, “what does one keep in an apiary?”

“Apes,” was the dogged answer.

What the end of it would have been I shall never know, for at this point footsteps became audible, ascending the stairs. Pontifex listened uneasily and laid down his book as they reached the landing. There was a short pause, and then a soft, apologetic tapping at the door. I sprang up, and, crossing the room, threw the door open, thereby disclosing the astonishing apparition of Mr. Brodribb and Miss Stella’s mother.

For a moment, I was so disconcerted that I could only stand, holding the door open and staring vacantly at our visitors. Not so Pontifex. At the first glance he had risen and now came forward to receive them with a dignified and rather stiff bow, and having placed chairs for them excused himself and turned to his gaping and inquisitive pupil.

“I am afraid, Mr. Cohen,” said he, “that we shall have to suspend our studies for this morning.”

“Right you are,” replied Cohen, rising with unscholarly alacrity. Gleefully he snatched up his book and was off like a lamplighter. As his boots clattered down the stairs, Pontifex faced Mr. Brodribb with an air of polite and rather frosty enquiry; and the latter, who had not seated himself, showed less than his usual self-possession.

“I feel, sir,” he began hesitatingly, “that I should apologize for what must appear like an intrusion, especially after your clearly expressed desire to be left untroubled by visitors.”

“You need have no such feeling,” replied Pontifex, “since I have no doubt that I am indebted for the honour of this visit to some unusual and sufficient circumstances.”

“You are quite right, sir,” rejoined Mr. Brodribb. “Circumstances have arisen which have made it imperative that I should communicate with you. I should have hinted at them when I had the pleasure of meeting you the other day, but your reception of me was not encouraging. Now, I have no choice, and I have ventured to ask Mrs. Paul Hardcastle to accompany me in the hope that her presence may—ha—lessen the force of the impact.”

Pontifex bowed to the lady and smiled a frosty smile. I looked at him in astonishment. The familiar Ponty seemed to have suffered some strange transformation. This cool, dignified, starchy old gentleman was a new phenomenon. But Mrs. Paul would have none of his starch. Starting up from her chair, she ran to him impulsively and took both his hands.

“Why are you so cold to us, Sir Gervase?” she exclaimed. “Why do you hold us at arm’s length in this way? Are we not old friends? It is true that the years have drifted in between us. But we were friends when we were young, and nothing has ever befallen to weaken our friendship. We both loved dear Philippa and we both treasure her memory. For her dear sake, if for no other, let us be friends still.”

Pontifex softened visibly. “It is true, Constance,” he said, gently, “that my heart should warm to you for the sake of that sweet saint, of whose devotion I was so unworthy. Pardon a crabbed old man who has made the world his enemy. One does not gather gratefully the harvest of one’s own folly. Forgive me, cousin, and let us hear about your mission.”

“It is not my mission, Sir Gervase,” she replied. “I came because Mr. Brodribb thought that my presence might make things easier for you.”

“That was most kind of you,” said he. “But why do you call me Sir Gervase?”

“The answer to that question,” interposed Mr. Brodribb, “explains the occasion of this visit. I have to inform you with deep regret that your brother, Sir Edward, died some weeks ago. If I had then known your whereabouts, I should, of course, have communicated with you, not only as his brother but as his heir.”

Pontifex looked at Mr. Brodribb in a queer, bewildered fashion and then seemed to fall into a sort of half-conscious dreamy state.

“Dear, dear,” he muttered, “so brother Edward is gone—and I am left. My old playmate gone and no word of farewell spoken.”

Suddenly he came out of his reverie and addressed Mr. Brodribb sharply. “But you spoke of me as his heir. How can that
be? He had children."

"He had one child," said Mr. Brodribb, "a son. That son died some ten years ago. Consequently, the title and the settled estate devolve on you. I may say, have descended, since there is no question as to the succession."

Pontifex listened to him attentively, but with the same curiously bewildered air. He seemed thunderstruck. After a moment or two he dropped into his chair and sat slowly shaking his head and muttering. Presently he looked up at Mr. Brodribb, and said in a weak, shaky voice: "No, no, Mr. Brodribb. It is too late. This is not for me."

I stood somewhat in the background, watching Pontifex with growing anxiety. Like him, I was astounded by Mr. Brodribb's news. But in that moment I did not feel deeply concerned at the moment. My entire attention was concentrated on the change which had come over my father. It had been in the very instant when our visitors had appeared in the open doorway. In spite of his cool, stiff bearing, I could see by his sudden change of colour, and the trembling of his hands, that he was intensely agitated. And now, Mr. Brodribb's announcement had inflicted a further shock. It was evident to me that the sudden accession to rank and fortune, so far from giving him pleasure or satisfaction, was profoundly repellent. And dear Mrs. Paul, with the kindest intentions, did but make matters worse and intensify the shock.

"It is not too late, cousin," said she. "How can it be when there are years of prosperity and ease before you? Think, dear Sir Gervase, think of the bright future which begins from to-day. You will leave all this"—she glanced round the shabby room—"the poverty and ill-paid labour and the struggle for mere daily bread, and go to live in modest affluence in your own fine house with your park and woodlands around you and your servants to minister to your comfort. And you will come back to your place among your own people in the station of life which properly belongs to you. Think, too, of this dear boy—Phillipa's own boy, and so like her—who, in his turn, shall carry on the honourable traditions of our family. And think of her, who loved you and him and would have been so rejoiced to see you both come back to the inheritance of your fathers."

Pontifex listened to her gravely, and, as she concluded, he looked at me with one of his rare, affectionate smiles.

"Yes, Constance," he said weakly, "you are right. He is Phillipa's own boy. Faithful and loving and good like his mother."

Once more, he lapsed into reverie and I stood gazing at him in dismay with a growing terror at my heart. For a horrible pallor was spreading over his face and even his poor old nose had faded to a sickly mauve. I think my alarm began to be shared by the others, for an uneasy silence settled on the room. And even as we looked at him he seemed to shrink and subside limply into his chair with his chin upon his breast, and so sat for a few moments. Then he rose slowly to his feet, his face turned upward and his trembling hands thrust out before him as one groping in the dark. I heard him murmur, "Domine non sum dignus!" and sprang forward to catch him in my arms as he fell.

* * * * *

How shall I write of that time of sorrow and desolation? Of the emptiness that came upon my little world now that my earliest and dearest companion—almost, as he had sometimes seemed, my child—was gone from me for ever? But need I write of it at all? My tale is told; the tale of the destiny that came to me, all unsuspected, in the egg-chest. My father's death wrote Finis to one volume of my life. With that the old things passed away and all things became new. Jasper Gray was dead, and Sir Jasper Hardcastle had stepped into his shoes.

Yet must I not make my exit too abruptly. The world which I had left lived on, and the drama in which I had played my part still claimed me as a dramatis persona. I pass over the quiet funeral and the solemn procession to the great vault in the shadow of the flint-built tower of the village church at Bradstow; my translation to the house at Dorchester Square, where the white-headed footman (whose deceptive powder I now detected) shattered my nerves by addressing me as "Sir Jasper," and where my cousin, Stella, openly worshipped me as her incomparable Galahad. It was all encompassed by an atmosphere of unreality through which I wandered as one in a dream.

More real was the scene at the Old Bailey—the grimly sordid old Sessions House that is now swept away—where I gave my evidence amidst a breathless silence and afterwards, as the representative of the deceased, sat with Mr. Brodribb at the solicitors' table and listened to Dr. Thorndyke as, with deadly clarity, he set forth the crushing tale of incriminating facts. Quite unmoved, I remember, by any qualm of pity, I heard those wretches frantically striving to cast the guilt on one another and each but hurrying himself to his own doom. Clearly, but still without a qualm, I recall the penitent shrinks for mercy as the black-capped judge consigned the three murderers to the gallows; and the blubberings of Shemrofsky and the sullen protests of Trout as their terms of penal servitude were pronounced.

It was a memorable experience, and it affected me with a curious, impersonal interest. As I sat at the table, I found myself again and again reflecting on the irony of it all; on the singular futility of this crime. For it was the means of defeating, finally and completely, its original object. The wretched woman who, in her greed and impatience to possess, had planned and directed it, had extinguished her husband's claim for ever. If she had but held her hand, poor Pontifex would have lived and died in his hiding-place, his very existence unsuspected, and she would in due course have become the Lady of Bradstow. It was the murder of my uncle Edward that brought my father into view.

The years have rolled away since these events befell. They have been prosperous years of sober happiness; as they must needs have been; for a man can hardly fail to achieve happiness who is a hero in his wife's eyes. And such is my lot, though undeserved. To this day I am Stella's incomparable Galahad.

Yet, though I would not undervalue the gifts of Fortune, I am fain often to reflect on the inconsiderable part that mere
material possessions play in the creation of human happiness. As I survey the fine old mansion, the shady park and the wide domain which is all my own, I find them good to look upon and to possess. But, nevertheless, there are times when I feel that I would gladly give much of them to look once more on dear old Ponty, sitting in his shabby dressing-gown, delicately tending the frizzling scallops. How little it cost to give us pleasure in those days! Mr. Weeks's salary would have made us rich, and we could have had scallops every night. But perhaps the habitual scallop would not have had the same flavour.

THE END
THE DISCOVERY WHEN THE ROGUES FALL OUT

BOOK I: THE 3 ROGUES

I. — THE BACKSLIDING OF MR. DIDBURY TOKE

THERE is nothing so deceptive as a half-truth. The half that is true has a certain suggestive power that lends to the other half a plausibility and a credibility that it does not possess in its own right. This interesting psychological fact was realized, at least subconsciously, by Mr. Didbury Toke. For Mr. Toke was a collector of antique and other works of art, a connoisseur and a dealer. He really was. It was not a pose or a pretence. He was a bona fide collector, and a connoisseur who had that genuine love of fine and beautiful works that is the indispensable condition of real connoisseurship. But Mr. Toke was also a fence. And that was where the illusory element came in. Any person who, not being a known collector and a recognized dealer, should have been seen, as he frequently was, in the company of definitely shady characters, would inevitably have attracted the attention of the guardians of the law. But everyone knows that the really enthusiastic collector must needs seek his quarry where it is most likely to be found; and there is no need to watch him, for no crook or fence would be so foolish as to sell doubtful merchandise to a collector who is going to expose it forthwith in his show-cases, or a dealer who is going to offer it in the open market. So Mr. Didbury Toke went about his lawful occasions unmolested and unsuspected, and, under the cover of them, did a little unlawful business if it happened to come his way.

It came his way pretty often in these latter days.

But this was a comparatively new development. For many years he had carried on his activities in the most scrupulously correct manner. And so he might have continued to the end, but for some exceptional circumstance. We are all, indeed, the creatures of circumstance. But circumstances are not entirely beyond human control. Their control is, however, largely proportionate to our control of ourselves. And that was where Mr. Toke had failed. At a critical moment he found himself unable to resist a sudden temptation. But let us have done with generalities and consider the circumstances in detail.

The descent to Avernus is proverbially easy; and, in practice, it is usually somewhat gradual. But there are exceptions; and the case of Mr. Didbury Toke furnishes an example. For his start upon that famous decline was the result of an incident quite unforeseen, and, to a certain extent, beyond his control. At any rate, the determining cause—or perhaps we should say the predisposing cause—was a convulsion of nature for which he certainly could not be held responsible; being, in fact, no less than a thunderstorm. Mr. Toke did not like thunderstorms. Few of us do; especially when they come on us in the open country, in which the only refuge visible is the illusory shelter offered by scattered hedgerow elms.

At the moment Mr. Toke was pursuing his way along the rather unfrequented road that led from the village in which his house was situated to the neighbouring market town of Packington. As he walked at an easy pace on the grass verge of the road, his thoughts were pleasantly occupied by reflections on a little windfall that he had recently picked up at a country auction; so much so that his immediate surroundings received but the vaguest attention. Suddenly, he was aroused from his meditations by a low rumble from the far distance behind him, and, turning sharply, became aware of an obvious inkiness of the sky, and, low down, an arched edge of blackness surmounting a pale area in which, even as he looked, jagged streaks of light shot up from the dim horizon.

Mr. Toke looked about him uneasily. He had passed no habitation, so far as he could remember, for the last mile; and Packington lay some two miles farther on. But, clearly, it was useless to think of turning back. His only chance of shelter, apart from the treacherous elms, was in some possible inn or cottage that might lurk unseen by the roadside ahead. Accordingly, he resumed his progress in that direction, mending his pace appreciably as his ears were smitten by a sound as if a Brobdingnagian tea-tray had been kicked by a Titanic foot.

Swiftly Mr. Toke padded along the solitary, inhospitable road while the leaves of the elm trees shivered audibly and elemental bangings from behind announced the approach of the storm. And then, just as the first big drops began to fall with an audible plop on the earth, a slight turn of the road revealed a cottage, hitherto hidden by a clump of trees. It was but a humble labourer’s dwelling, timber-built and roofed with thatch, but to Mr. Toke’s eagerly searching eyes it was more grateful than a baronial mansion. As a resounding crash from behind mingled with the hiss of a sudden deluge, he frantically unfastened the button of the gate and darted up the path to the small porch that sheltered the door. Nor did he come as a mere supplicant doubtful of his welcome; for, on the jamb of the door hung a small board bearing the single word “TEAS.” It was a laconic announcement; but brevity is the soul of wit; and to Mr. Toke it was as a charter of freedom conferring the right to enter unquestioned.

The door was opened in response to his rather urgent thumps by an elderly labourer, who looked first at Mr. Toke and then at the sky, as if he suspected the former of some responsibility for the unfavourable state of the weather. But he uttered no word; and, as the rain was playing freely on Mr. Toke’s back, that gentleman proceeded bluntly to state his wants.

“Can I have some tea?” asked Mr. Toke.

The man seemed surprised at the request. “Tea, you wants,” said he. He took another critical survey of the landscape, and then replied cautiously: “I’ll ask the’ old woman.”

As “the old woman” was plainly in view, sitting by the fire and obviously attentive to the conversation, the precaution seemed hardly necessary. In fact, she anticipated the question.
“Why, certainly, Tom; I can get the gentleman a cup of tea if he wants one.” She rose stiffly from her chair and cast an enquiring glance at the kettle which reposed in unpromising silence on the hob.

“You have a notice by your door that you supply teas,” Mr. Toke ventured to remark.

“Yes,” the master of the house admitted; “that there board was put up by my darter. She’s gone and got married, so we don’t do much in that line nowadays. Never did, in fact. Oo’s coming out ‘ere for tea?”

Mr. Toke agreed that the road was not actually congested, and, meanwhile, under the guidance of his host, squeezed himself past an obstructive table towards a Windsor arm-chair which he distinguished with some difficulty in the prevailing gloom. For, now that the door was closed, the room was almost in darkness, the small window, obscured by dirt and invading creepers, admitting only a fraction of the feeble light from the inky sky.

“Seems as if we was going to have a bit of rain,” the host remarked, by way of making conversation. Mr. Toke agreed that there was a suggestion of moisture in the air, and ventured to express the hope that it would do the country good.

“Ay,” said his host, “a bit of rain is allers useful at this time o’ year. In reason, mind yer. Yer don’t want it a-comin’ down like brickbats, a-flattenin’ down the crops. A nice, soft, steady rain is what ye wants for the land. Keeps it miste, d’ye see.”

Mr. Toke assimilated this lucid explanation as he watched the old woman coaxing the unresponsive kettle with sticks of firewood. By degrees, his eyes were becoming accustomed to the obscurity. Already, he had converted the sound of harsh, metallic ticking into the visual impression of a drum clock, perched on the mantelshelf, and now let his glance wander questingly round the dim interior, it was not an idle glance. By no means, Not, it is true, that he was ordinarily much concerned with the simple domestic antique. But all is fish that comes to a collector’s net; and experience had taught him that if “Honesty lives in a poor house, like your fair pearl in your foul oyster,” so was it occasionally with the treasures that the past has bequeathed to the present. So Mr. Toke had made it a rule of life to “keep his weather eyelid lifting” even in the most unlikely surroundings.

“Main lucky for you, it is,” remarked his host, as a resounding crash shook the door and made the window-frames rattle, “that you struck this house in time. There ain’t another this side of The Rose and Crown, and that’s a good mile and a half further on down the road. You’d a-caught it proper if you’d a-been out in it now.”

“Yes, indeed,” said Mr. Toke. “Holy water in a dry house is better than this rain-water out of doors.”

His host did not, apparently, recognize the quotation, for he looked at him suspiciously, and replied in a somewhat surly tone:

“There ain’t no holy water in this house. We’re Baptises, we are.”

“Ha,” said Mr. Toke; “I was merely repeating an old saying. And there is some truth in it, you know.”

“So there may be,” was the grudging reply. “I don’t hold with none of them there superstitions. Lord! Look at that!”

“That” was a blinding flash that flooded the room with violet light, and was instantly followed by a shattering crash directly overhead, as if some aerial three-decker had fired a broadside straight down the chimney. The instantaneous flash, followed by what seemed to the dazzled eye a period of total darkness, left Mr. Toke with a strangely vivid impression of the cottage interior, in which all its details were clearly visible: the seated figure of his host, the old woman, standing by the fire, the tea-pot poised in her hand, the little dresser with its modest crockery set out in an orderly array, and one or two pictures on the wall. But all these things lay, as it were, on the margin of his field of vision, seen, indeed, but only half-consciously perceived. For it happened that, at the moment of the flash, Mr. Toke’s eyes had been fixed upon a dim square patch of paleness that was just barely discernible in the darkest corner of the room, and he had been speculating on the nature of the object to which it appertained. The flash solved that problem. The pale, square patch was the dial of a long-case clock. Anyone could have seen that much. But Mr. Toke saw a good deal more. It is true that the object was seen only for an infinitesimal fraction of a second (plus a further sixteenth of a second for what the physiologists call “the persistence of visual impressions”), and that in that instant of time it had revealed little more than a dark silhouette. But a silhouette may be highly significant. It was to Mr. Toke. The square-headed hood, flanked by twisted pillars, the slender body, the low plinth, taken together, suggested a date before the time of good Queen Anne. There were, indeed, two hands—pointing to an impossible hour and clearly indicating that the clock was not a “going concern”—but there was nothing incongruous in this, for two-handed clocks and even eight-day movements, were made before the dawn of the eighteenth century.

But what really did worry Mr. Toke was the appearance of the dial. It was obviously white. Now the seventeenth-century clock-maker had a soul above a painted dial. If this dial was painted, as it appeared to be, there were two possibilities; either the old dial had been barbarously covered with paint, or, at some time, the clock had fallen into the hands of a Philistine and had its original movement replaced by a new one.

It was a momentous question, and Mr. Toke debated it anxiously as he stirred his tea and kept up a rambling conversation with his host. Of course, it was none of his business—at least one would have said so. But one would have been wrong. Mr. Toke intended to make it his business. There are, indeed, some who maintain that to strike a keen bargain with an ignorant man who happens to possess some valuable object is a base act almost tantamount to robbery. This was not Mr. Toke’s view. He held most emphatically that the expert was fully entitled to the usufruct of his knowledge. And there is something to be said for this point of view. A man does not become a connoisseur without the expenditure of time, effort, and money: and as to the person who, by chance inheritance, happens to possess a Rembrandt or a Leonardo and elects to use it as a tea-tray or to cover up a damp place on the wall, it is not easy to grow sentimental over his rights. After
all, the base collector rescues the treasure from imminent destruction, and preserves it for the benefit of mankind at large.

At any rate, Mr. Toke, recalling the fugitive vision of that elegant silhouette, kept an acquisitive eye on the dim, pale square, which, like the grin of the Cheshire cat, persisted when all else had vanished, and cast about for some mode of strategic approach to the subject. Presently his host, all unconsciously, gave him an opening.

“You takes your tea early,” he remarked (it had just turned half-past three).

Mr. Toke pulled out his watch and glanced at the drum clock on the mantelshelf.

“Is your clock right?” he asked.

“Ay—leastways as near as I can tell. I sets him by the carrier’s cart. He go past every morning at nine o’clock, sharp.”

“Ha,” said Mr. Toke, “and does it keep good time—the clock, I mean?”

“Ay, he do that; wunnerful good time he keeps. And I only give three shillings for him, brand noo.”

“Really,” said Mr. Toke. “It’s surprising how cheap clocks are nowadays.”

“Ay,” agreed the host, “times has changed. It’s what they calls progress. Now, that old clock in the corner, he wasn’t never bought for three shillings; no, nor for three pund.”

Mr. Toke stared into the dark corner indicated, as if he had not noticed the clock before. But the corner was less dark now; for, with the last crash, the storm seemed to have spent its wrath, and now a gleam of sunshine stole in at the window and so brightened up the room that the shape of the clock became distinctly visible.

“No,” Mr. Toke concurred, “there were no three-shilling clocks in the days when that was made. Have you had it long?”

“Had him from my old woman’s grandfather. And he had him from the squire who was coachman to. So he wasn’t made yesterday. He’s like my old woman and me: he’s one of the has-beens.”

“Does it keep good time?” Mr. Toke asked, regardless of the wildly erroneous position of the hands.

His host chuckled. “Don’t keep no time at all. Won’t go. My darter’s husband has a tinker at him now and again—he’s a plumber and gas-fitter by trade—but it ain’t no use. The’ old clock’s wore out. Takin’ up room to no purpose. Chap offered me five shillin’ for him, and I’d a-took it. But my old woman said no. So we kep’ him.”

“It wasn’t a very liberal offer,” Mr. Toke remarked.

“That’s what I thought,” said the old woman. “Twasn’t enough for a good old clock, even if it won’t go. I said so to Tom at the time.”

“Well,” growled Thomas, “who’s a-going for to pay good money for a clock what won’t even tick?”

Mr. Toke decided that the time had come to open negotiations.

“There are such people,” said he. “I have a friend who has quite a fancy for old clocks. He would probably be willing to give you a couple of pounds for it.”

“Then,” said Thomas, “I be glad if you’d send him along this way. What d’you say, Susan?”

“Two pounds ‘ud be very useful,” replied the old woman. “But I doubt if he’d give it when he see the clock. It be terrible old.”

Mr. Toke rose and strolled across to the corner. The light was now quite good, and at close quarters it was possible to make out the details. And at some of those details Mr. Toke’s gorge rose, and he half regretted the liberality of his offer. The venerable time-piece had received the most shocking treatment from some Vandal. The case was encrusted with varnish, apparently applied with a tar brush, and the brass dial had received a thick coat of white paint. Yet, through the treacly depths of the varnish and the layer of paint, other details were faintly discernible which he noted with deep satisfaction.

The clock had been an aristocrat in its day. The dark wood of the case was richly ornamented with marquetry, and a framed panel seemed to enclose some initials and a date, though Mr. Toke could not actually decipher them. But their presence hinted at a possibly traceable history, which would greatly enhance the value of the piece. A glance at the dial showed it to be undoubtedly the original one. The corner ornaments—simple cherubs’ heads—were quite characteristic of the period, as were the hour and minute figures, where they were distinguishable, and the hands, though their form was obscured by a thick coat of black enamel paint, showed the simple elegance that marks the work of the earlier makers. Mr. Toke, seeking in vain to decipher the maker’s name, was reassured. Perhaps, after all, the plumber’s contribution did not go beyond the paint and the varnish.

“Do you happen to remember the name of the squire who originally owned the clock?” Mr. Toke enquired.

“His name was Hawkwood,” the old woman replied. “Sir John Hawkwood.”

Mr. Toke made a mental note of the name and announced: “I am inclined to think that my friend would be willing to give a couple of pounds for this clock, if you are prepared to sell it.”

Thomas was undoubtedly prepared to sell, and said so with some emphasis; and the old lady opined that two pounds would be more useful than the clock.
“Very well,” said Mr. Toke, “then we will consider the matter settled. How am I to get the clock to my house?”

“Where is your house?” the practical-minded Thomas demanded.

“I live at Hartsden Manor; just outside the village.”

“I knows him,” said Thomas. “A tumbledown old house just alongside the old church what is shut up. ‘Tain’t fur from here. A couple of mile. I could run th’ old clock down in my barrer.”

“When?” asked Mr. Toke.

“Now, if yer like. I suppose yer pays on delivery?”

“Certainly. When I receive the clock, you’ll receive the money.”

With this stimulus, Thomas awoke to strenuous activity. The clock was hauled out of its corner, and, while Mr. Toke detached the pendulum and secured the weights in a packing of spare garments, old Susan went in search of a blanket, and Thomas retired to fetch the “barrer.” In a few minutes all was ready. The clock, decently swathed in the blanket, and faintly suggesting an impending inquest, was tied firmly on the barrow and Thomas signified that the procession was ready to start.

The journey to Hartsden was, for the most part, uneventful. One or two wayfarers on the road greeted the barrow and its burden with surprised grins, and, at the entrance to the village, a group of schoolboys, just released from bondage, formed up into an orderly procession and followed the barrow, two by two, with bare and bowed beads and uneasily giggles; a proceeding that attracted unnecessary attention, and added appreciably to the gaiety of the neighbourhood for the time being.

“Passel o’ grimmin’ fules,” said Thomas, casting a resentful and contemptuous glance at the little party of smiling bystanders as he drew up at the gate of the house while Mr. Toke unfastened it to admit him to the short drive. As the gate swung open, he stooped to grasp the handles of the barrow at the moment when one of the juvenile mourners advanced, with his hand kerchief held to his eyes, to drop a dandelion on the shrouded clock.

The business was soon concluded to mutual satisfaction. The clock was conveyed to a disused room at the back of the house and deposited on a rough table. Then Mr. Toke wrote out a receipt in such terms as amounted to a formal conveyance of the property, and, when the vendor had subscribed his sign manual, two sovereigns were laid on the table.

“Thank ye, sir,” said Thomas, transferring them to his pocket. “I hopes the clock will suit your friend. I shouldn’t like to think of it being left on your hands.”

“He’ll have to take it now that I have paid for it,” replied Mr. Toke. “But you needn’t worry. He’ll be quite satisfied.”

In point of fact, the “friend” was more than satisfied. A rapid inspection showed that the case was in excellent condition under the crust of varnish; and through the latter, it was now possible to see that the dark walnut was adorned with marquetry of a richness unusual in such early work. For, in the strong light, the date was clearly legible as well as the initials, grouped in a triangle around a heart—J. H. M. 1692, the H being uppermost, and, as Mr. Toke reasonably surmised, representing the name, Hawkwood. The dial and hands, too, were of appropriate style and of the same excellent workmanship; and on the former could now be deciphered, through the paint: “Robert Cooke, Londini, fecit.”

From this general, preliminary inspection Mr. Toke proceeded to the consideration of details. He had already noticed that the case was closed at the bottom. Now, on opening the door, he observed a partition closing the interior space at an appreciably higher level. This was rather remarkable, for the position of this upper partition was such as possibly to interfere with the proper fall of the weights. But what was still more remarkable was the way in which it was secured. There were four screws; but, though the wood of the partition appeared to be old, the screws certainly did not. Their bright, clean heads seemed to shout, “Nettlefold.”

Mr. Toke was quite interested. Between those two partitions there must be a space. That space might be an ancient hiding-place. But the screws hardly supported that view. At any rate, the question could soon be set at rest. And the first turn of the screwdriver settled it. The readiness with which the screw turned suggested a touch of tallow; and a greasy stain on the wood around the hole was clear confirmation. The other three screws followed with the same ease, and then, by inserting a bradawl into one of the holes, it was possible to prise up the loose partition.

Now, whether this had or had not been an ancient hiding-place, it was quite clear that the contents were modern; consisting of a parcel wrapped in undeniable newspaper. Mr. Toke lifted it out, and, having cut the string, carefully opened it. And then he got the surprise of his life. There were several layers of paper, the innermost being of clean tissue paper; and, when the last of these was turned back, there was revealed to Mr. Toke’s astonished gaze a magnificent diamond necklace and a still more magnificent pendant.

For some moments he stood staring at the gorgeous bauble, lost in amazement. Then a slow grin stole over his face. Now he understood how it was that the “tinkerings” of the plumber and gas-fitter had failed to make the clock go. “My darter’s husband” had had other fish to fry. But that estimable artisan seemed to have taken unnecessary risks, for the door had a lock. Apparently it was not in working order, and the key was missing (perhaps in the plumber’s possession). Common prudence would have suggested a repair to the lock. But, possibly, it had been left for fear of attracting attention. Thomas was not, it had seemed, gifted with a peculiarly enquiring mind. Perhaps the plumber had adopted the more prudent course.
But the obvious question arose, What was to be done? Mr. Toke believed that he recognized the necklace. He thought that he recalled a daring daylight robbery at a great London house when the thief had entered a bedroom by way of a stack-pipe while the family were at dinner and got away unseen with a diamond necklace—presumably this very one—said to be worth £20,000. There would therefore be no difficulty in discovering the owner. Indeed, there was no need for him to do anything of the kind. All that was necessary was to report the discovery to the police. And this was what occurred to Mr. Toke as the obvious thing to do.

But was it so very obvious, after all? Mr. Toke looked at the necklace, and somehow the obviousness of that course of action seemed to grow less. In the course of his rather varied life, Mr. Toke had been connected for a year or two with the diamond and gem trade. That tended strongly to influence his point of view. It was not that he was a great judge of gems. He was not; though, of course, he could price a stone approximately. But the vital fact, in regard to the present transaction, was that he knew the ropes. The man who had stolen this jewel had been reduced to the necessity of hiding it until such time as he should find a “fence” who would take the incriminating treasure off his hand and ask no questions. And what would that fence pay him for it? No more than a paltry fraction of its real value. Now he, Mr. Toke, could dispose of it at something like its market price.

He looked at it with a calculating eye. It was a fine necklace. Probably report had not greatly over estimated its value. Every stone in it was a valuable stone. But there was no one of those fine brilliants that was of spectacular value. Not one of them was of a size that would involve questions or possibly lead to identification. He could safely deal with any of them in the ordinary market.

And, after all, why not? He had not stolen the necklace. So far as he was concerned, it was a case of treasure trove, pure and simple. So he told himself, casuistically trying to smother his not very lively scruples. Of course, he knew quite well that he was contemplating a theft. But, although, up to this time, he had been a least conventionally honest, he was, if not actually avaricious, highly acquisitive by nature, as is apt to be the case with collectors. He had the passion to possess; and, even if he had been unable to dispose of these diamonds, he would still have been reluctant to give them up.

The conflict in his mind was not a long one. There were the diamonds—ten thousand pounds’ worth of them, at a moderate estimate—staring him in the face and inviting him to accept the gifts of Fortune. There was absolutely no danger. The transaction was as simple and safe as an ordinary commercial deal. Suppose the plumber should denounce him to the police. It was wildly improbable; but suppose he did? Well, who was going to prove that the diamonds were ever there? The plumber’s unsupported testimony would go for nothing; and apart from him, there was, presumably, no one who had any knowledge of their whereabouts—unless it was “my darter.” But neither of these was in a position to swear that the diamonds were in the clock-case when it was removed from its late owner’s custody. Mr. Toke’s position was impregnable. He simply knew nothing about the matter.

But he was not going to leave it at that. No sooner had he taken the fateful resolution to treat this gorgeous derelict as treasure trove than the inevitable psychological effect began to manifest itself. The contemplation of a criminal act immediately began to generate the criminal mentality. Safe as the enterprise was, he was going to make it safer. The tracks, already confused, must be further confounded. His intention had been to clean the case himself. He was a fairly expert french polisher. Not that he had contemplated french polishing this old case. On the contrary, his intention had been to un-french-polish it. But now he realized the inexpediency of meddling with it at all. It should go, just as it was, for treatment to some third party. Thus would the issues be further confused.

Having made his decision, he acted promptly. The very next day he conveyed the clock to a roomy closed car that he had lately adopted, and bore it up to town. There he deposited the movement at the premises of a reliable “chamber worker” in Clerkenwell for a careful over haul, and then carried the case to Curtain Road and handed it to a skillful cabinet-maker with the instruction that it was to be cleaned and wax-polished, but left structurally intact, with the exception of any trifling repairs that might be unavoidable. The lock was to be repaired and fitted with a key of the correct pattern according to the date on the panel.

When he had done this, Mr. Toke felt that he had made his position unassailable. He allowed himself to hope that he would be left in undisputed possession of his treasure trove. But his hopes were tempered by a suspicion that he had not heard the last of the worthy Thomas’s too-ingenious son-in-law. And subsequent events justified his suspicions.

II. — ENTER MR. HUGHES

It was a little over a week after his acquisition of the clock that Mr. Toke’s forebodings began to be realized. On that day, about eleven in the forenoon, his house keeper, Mrs. Gibbins, came to him as he sat in his study writing letters, and announced with something of an air of mystery that a man wished to see him.

“A man?” Mr. Toke repeated. “Do you mean a gentleman?”

Mrs. Gibbins made it extremely clear that she did not.

“Did he say what his business was?”

“No, sir. I asked him, but he said he wanted to see you on private business. He wouldn’t say what it was. He is waiting in the hall. I told Margaret to keep an eye on him.” (Margaret was Mrs. Gibbins’s niece and functioned as housemaid.)
“Well,” said Mr. Toke, “I suppose you had better bring him in here. But I can’t imagine who he can be”; which was not perfectly candid on Mr. Toke’s part. He had a strong suspicion that the visitor would turn out to be an exponent of the plumbing and gas-fitting arts. And even so it befell. When Mrs. Gibbins returned, she was accompanied by a somewhat seedy stranger of truculent aspect, whose appearance suggested a Labour agitator or a working man of strongly political leanings.

“Well,” said Mr. Toke, when the housekeeper had retired, “what is it that you want to see me about?”

His visitor crept towards him with an air of mystery and secrecy, and replied impressively:

“It’s about a clock what you bought off of my father-in-law, Mr. Hobson.”

“Yes,” said Mr. Toke, “I remember. An old clock, a good deal out of repair. Yes. What about it?”

“Well, you see, Mr. Hobson hadn’t got no right for to sell you that clock. ’Twasn’t his for to sell. That clock belongs to my wife. It was give to her as a wedding present.”

Mr. Toke reflected rapidly. It would be perfectly practicable to restore the clock, since its contents were now securely concealed in an undiscoverable hiding-place. The clock, itself, valuable as it was, had become, by comparisons negligible. Nevertheless, Mr. Toke’s strongly acquisitive temperament made him reluctant to disgorge. Besides, to what purpose should he restore the clock? Its return, empty, would not dispose of the business. It was not the clock but the necklace that this worthy craftsman was seeking. And then there was the practical certainty that his statement was a barefaced untruth. No; there was nothing to be gained by an attempt to compromise.

“This is very unfortunate,” said Mr. Toke; “but I am afraid you will have to settle the matter with Mr. Hobson. He has the money. I have no doubt that, if you put it to him, he will hand it over to you.”

“But my wife don’t want to sell the clock, nor more don’t I.”

“Ha,” said Mr. Toke, “that is a pity; because, you see, the clock has been sold. I bought it in a perfectly regular manner, and I have Mr. Hobson’s receipt for the price of it.”

“But don’t I keep telling yer that old Hobson hadn’t no right for to sell it?”

Mr. Toke admitted that the matter had been mentioned. “But,” he continued, “that is really not my concern. You must settle the affair with your father-in-law.”

“Ho, must I? Fat lot of good it ’ud be talking to him. No, Mister, I’m going to settle with you, I am. You’ve got my clock, and you’re going to hand it over. I’ve got the barrer outside.”

Mr. Toke complimented him on his providence, but declined to consider the demand.

“Look here,” the stranger exclaimed in a threatening tone, “if you don’t want any trouble, you just hand that clock over. I’m going to have it, you know. I’m going to make you hand it over. See? You think I; can’t, but I tell you I can.”

“I am sure you can,” Mr. Toke agreed. “That is just my point. If the clock is yours, you can compel me to return it. All you have to do is to go to your solicitor, give him proof of your title to the property and instruct him to recover it in the ordinary way. He will make no trouble about it.”

“Gawd!” exclaimed the other. “I don’t want all that trouble and fuss. And I don’t want no solicitors. I shall just inform the police.”

“Yes,” said Mr. Toke, “you could do that. If your father-in-law did actually sell a clock that was not his property, he undoubtedly was guilty of a criminal act. You might prosecute him. So might I, for obtaining money from me by false pretences. But you would have to prove that the clock was yours, in any case. It would be less trouble to instruct a solicitor, and you would avoid the scandal.”

Mr. Toke’s calm, detached attitude seemed rather to nonplus his visitor, for the latter stood for some time gazing at him, breathing hard but uttering no word. At length he resumed, in a milder, even pacific tone:

“I don’t want to make no trouble for old Hobson, seeing as he is my wife’s father. And I don’t want no truck with solicitors. I’ll tell you what I’ll do. You hand me back that clock, and I’ll give you the two quid what you paid for it. I can’t say no fairer than that.”

But Mr. Toke shook his head regretfully. “I am sorry, Mr.—I didn’t quite catch your name—”

“My name is Dobey, Charles Dobey, if you want to know.”

“Thank you. I was saying that I am extremely sorry that I can’t accept your offer. But, to begin with, the clock is not here; and as I have already spent a substantial sum of money on it, I should not be prepared to sell it at the price that I gave for it.”

“What do you mean about spending money on it?” Mr. Dobey asked with evident uneasiness.

“Well, you see,” said Mr. Toke, “in the first place, I had to send the case to a cabinet-maker’s—”

“What!” gasped Dobey. Then, controlling himself, he demanded, huskily: “What was the cabinet maker going to do to it? There wasn’t nothing the matter with the case.”
“Nothing structural,” Mr. Toke agreed. “But it wanted a clean up. I told him to clean off all the old varnish and put on a slight wax polish. That was all. And I have had the movement put in order. So you see, the clock is now worth a good deal more than I gave for it.”

“And where is it now?” Mr. Dobey asked, gloomily.

“I have sent it to Messrs. Moore and Burgess, the eminent auctioneers, and I understand that it will be put up for sale next Thursday—a week from to-day.”

Mr. Dobey reflected on this statement with an expression compounded of dejection and bewilderment. And, meanwhile, Mr. Toke looked him over, critically. He was not much to look at. He presented none of those interesting “stigmata” that distinguish the criminal countenance in the plates of Lombroso’s treatises. He was just a common “low-grade” man of the type that may be seen by the dozen, taking the air in the exercise yard of any local prison; with darkish red hair and—not unusually—a nose to match; hands suggestive of deficient washing rather than excessive labour and a noticeably shifty and furtive cast of countenance.

At length he pulled himself together for a final effort.

“This is all very well, you know, Mister, but I can’t allow you to put up my clock to auction just as if it was your own. You’ll have to get it back; and I’ll make you an allowance for what you’ve spent on it.”

“I’m afraid I can’t agree to that.” said Mr. Toke. “You seem to be forgetting that, at present, I am the legal owner of that clock. The receipt that I hold establishes my ownership; and if you claim that the clock is yours, it is for you to produce evidence of ownership. You haven’t done that, you know; and, if you haven’t any papers to prove that it was given to your wife, I don’t think you would be able to do it.”

“I could swear a affidavit,” said Mr. Dobey.

“M’yes,” agreed Mr. Toke. “But you have to be a bit careful about affidavits. There is such a thing as perjury, you know. I shouldn’t recommend an affidavit.”

Mr. Dobey received this advice with a bewildered stare. He could make nothing of it. Mr. Toke’s bland, impersonal attitude left him, for the moment, speechless. At length, he asked, namely:

“Well, what am I to do? I ought to be able to get my own clock back—leastways, my wife’s clock.”

“So you are,” said Mr. Toke. “There’s nothing to prevent you from going to the auction and bidding.”

For some moments Mr. Dobey was too much over come to be capable of any reply. At last, he exclaimed, hoarsely:

“Well, I am blowed, I reely am. You’ve got the blinkin’ sauce to tell me to go to the blinkin’ auction and buy in my own clock. And you to take the money. I never heard the likes of it!”

“I merely threw out the suggestion,” said Mr. Toke. “I thought you were anxious to get the clock. You could always sell it and get your money back, you know.”

Futile as the suggestion seemed, it was craftily conceived; and Mr. Toke, furtively watching his visitor, saw that it had taken effect. The aggressive expression faded out of Mr. Dobey’s countenance and gave place to one indicative of reflection.

“Where do these auction blokes hang out?” he asked after a longish pause.

Mr. Toke took out from his letter case a card on which was inscribed, “MR. DIDBURY TOKE, 151 QUEEN SQUARE, BLOOMSBURY. TUESDAY AND FRIDAY, 11 to 5, OR BY APPOINTMENT.” On the back of this he wrote the address of the auctioneers, and handed it to Mr. Dobey; who, having read what was written, turned the card over and studied the printed inscription.

“I’ll have to think over this,” he remarked gloomily; and then, as if a new idea had struck him, he demanded:

“What is the name of the cabinet-maker what did the clock up?”

“His name,” said Mr. Toke, writing on a slip of paper as he spoke, “is Levy, Maurice Levy, and his place is in Curtain Road.”

“Sounds like a sheeny,” Dobey remarked, disparagingly.

“He is, as you have guessed, of the Jewish faith,” Mr. Toke admitted. “A most excellent workman and a thoroughly honest man.”

“Ho,” said Mr. Dobey, in a tone of obvious scepticism. But he seemed to get some comfort from the description, nevertheless. He gazed reflectively at the slip of paper for a while, and then, slowly and reluctantly, rose.

“Well,” he remarked in an aggrieved tone, “this ain’t what I expected, but I suppose there’s no use staying here chin-waggin’ to no purpose.”

He moved dejectedly towards the door, and Mr. Toke piloted him to the hall and launched him with a suave “Good morning” from the front door, watching him with a faint smile as he slouched down the short drive. He was not dissatisfied with the result of the interview. His subtle hint had evidently taken effect. And, though there would certainly be trouble if Dobey really bought the clock, it would be better so than that some other purchaser should have his house burgled, with
the possibility of a capture and awkward explanations.

On the following Wednesday, the day before the sale, Mr. Toke arrived betimes at the rooms of Messrs. Moore and Burgess to watch the company of dealers and connoisseurs who had gathered to view the goods that were to be sold on the following day. There were two large rooms, connected by a wide doorway; and, immediately opposite the doorway, the clock was standing, ticking solemnly in proof of its perfectly restored health. Mr. Toke halted before it and surveyed it with not unpardonable pride. By the joint efforts of Mr. Levy and the Clerkenwell artist, the shabby outcast that had cumbered the floor of Thomas Hobson’s cottage had been restored to its rightful status as an aristocrat among clocks. The fine, dark walnut case with its rich marquetry had emerged from the crust of varnish as a butterfly comes forth from its pupa-shell; the brass dial with its cherub-heads and its silver hour-circle had been cleansed of the paint, and yet not cleansed too much, and the hands once more showed the fine, simple workmanship of their period.

Mr. Toke stood and let his eyes travel over its revived beauties with the genuine pleasure of the connoisseur, congratulating himself on having been the means of rescuing it from its unworthy surroundings and the risk of destruction. But, even as he gloated, he kept a watchful eye on the entrance through which new-corners were constantly pouring in; and it was, perhaps, just as well that he did; for, even as he held the narrow door of the clock open and peered in to see that the partition had not been tampered with, the countenance of Mr. Dobey came into view among the little crowd of new arrivals.

Now there was really no reason why Mr. Toke should have made any secret of his presence in the rooms. As a collector, it was quite natural that he should be there. But recent transactions had engendered in him a new furtiveness and secrecy. He didn’t want Dobey to see him, and he did want to keep an eye on Dobey. Accordingly, having shut the clock-case, he made his way, as well as the crowded state of the rooms would let him, through the doorway into the other room, and looked about for some means of concealment. A large French armoire seemed to offer the best cover, for, from the shadow behind it, he could get a good view of the adjoining room in a large mirror.

Here, then, he established himself, and soon the bereaved artisan came into view. He was quite respectfully dressed, and would have been unnoticed but for the self-consciousness which caused him to move stealthily and suspiciously among the crowd. Very soon he spied the clock and crept up to it with ill-assumed unconcern. Mr. Toke watched him with grim amusement. Evidently, the changed appearance of the clock puzzled him considerably. The distinctive characteristics, now so striking, had been hidden by the varnish, and were unfamiliar to him, He stared at the clock, and then gazed about in search of another. But this was the only clock in the room. Finally, after a furtive glance to right and left, he ventured to open the door of the case and peer in. Then, evidently, some chord of memory was struck. No doubt the four Nettlefold screws were old friends. At any rate, he closed the door with an air of decision, and once more began to look about him furtively and uneasily, while Mr. Toke watched expectantly to see what his next move would be.

For some time Dobey crept to and fro rather aimlessly, gazing at the exhibits, but keeping in the neighbourhood of the clock, and Mr. Toke had the feeling that he was waiting for someone. And so it turned out, presently. The meeting was singularly unostentatious but Mr. Toke, watching narrowly, noted the mutual recognition. The new-corner was a well-dressed man, obviously of a superior class to Mr. Dobey, who walked in confidently, and, having looked round, glanced at the catalogue that he held and then walked straight up to the clock. He stood before it and surveyed it critically, point by point; tried the lock, opened the door of the case, gazed into the interior and reclosed it. And it was at this moment that the meeting took place. There was no sign of recognition; but, as the stranger stood inspecting the clock, Dobey sidled up, and for a moment stood by his side. Nothing appeared to be said, but the stranger made an entry in his catalogue. Then Dobey moved away, and, after a few vague glances at some of the exhibits, faded away towards the entry and vanished into the outer world.

With the disappearance of Mr. Dobey, concealment became no longer necessary. Mr. Toke emerged boldly, and made his way into the other room with the purpose of getting a closer look at Mr. Dobey’s friend. The circumstances were favourable for getting, at least, an unobserved back view; and the observant Mr. Toke, beginning with a minute inspection from the rear, arrived at the decision that the unknown wore a wig. It was an exceedingly good wig; so good and well-fitting as to suggest a bald or shaved head underneath. Having made this interesting observation, Mr. Toke contrived to obtain a view of the stranger’s face. It impressed him as a rather curious face; but he presently realized that the peculiarity of expression was due to the absence of eyebrows. Either they were naturally deficient or they had been shaved off. The presence of the wig suggested the former, but the meeting with Mr. Dobey made the latter possibility quite conceivable. At any rate, the dark-brown wig, with eyes to match, and the curiously blank forehead, rendered the stranger easy to recognize; which was satisfactory, as Mr. Toke intended to keep an eye on him, if, as seemed likely, he should turn up at the sale on the following day.

And turn up he did. Mr. Toke, keeping a bright look-out, saw him come in, catalogue in hand, and select a seat well in view of the auctioneer. Mr. Toke saw him fairly seated and then found a place for himself, where he could command an uninterrupted view of the stranger without making himself conspicuous. As he was not going to bid, he had no need to be in a position to catch the auctioneer’s eye.

His vigil was not unduly prolonged, for the clock came early in the list. As the number approached, he watched the wigged stranger; but his queer blank face showed no sign of uneasiness. He watched the proceedings stolidly, and did not even glance at his catalogue. Evidently, he was not a jumpy man.

At length the fateful number was reached. The auctioneer cleared his throat and announced, not without gusto:
“Long-case clock by Robert Cooke of London, dated 1692, in a case of fine walnut wood, enriched with elaborate marquetry. A most exceptional lot, this, gentlemen. It is really a museum piece. I have never seen a clock of this early period in such perfect condition. It is virtually untouched. With the exception of a modern partition in the bottom of the case, there are no restorations or repairs. It is in the very condition in which the maker turned it out. And I understand that an authentic history accompanies it. The initials on the case are those of Sir John Hawkwood and the Lady Margaret, his wife. Now, gentlemen, what shall we say for this unique clock?”

Almost before he had finished speaking, a voice answered:

“Fifty pounds.”

Mr. Toke grinned. This was, in effect, an ultimatum. The speaker meant to have the clock, and made no secret of his intention. But he was not the only pebble on the beach, as the vulgar saying has it. His challenge was immediately taken up by another enthusiast.

“Fifty-five.”

“Sixty.”

“Sixty-five.”

The bids followed one another with hardly a moment’s interval, and the price hopped up by fives until it reached a hundred and ninety. Then there was a slight slackening; but still the bidding went on, at a reduced pace. And all the time the gentleman in the wig sat gazing stolidly before him and uttering not a word. Mr. Toke began to be uneasy. Was he not going to bid, after all? Had he merely come to get the name of the purchaser with a view to a subsequent burglary? That was an unpleasant position. Not that it mattered very much; but, still, Mr. Toke didn’t want a burglary. No one could say what disagreeable results might follow. But at this point his anxieties were dissipated by a sudden activity on the part of the wigged gentleman. The price had reached two hundred and five, and, after the last bid, a somewhat lengthy pause occurred. The auctioneer repeated the bid, solemnly, and his hand stole towards his hammer. But at this moment, the wigged stranger looked at the auctioneer and nodded.

“Two hundred and ten,” the latter chanted, and repeated the refrain three times with increasing emphasis. But now there was no answer. The appearance of a new competitor at the eleventh hour was too much for the others. After a long and anxious pause, the hammer came down with a sharp rap and Mr. Toke drew a deep breath.

The name of the wigged gentleman, it transpired, was Hughes. As soon as he had communicated this fact, he rose and walked over to the clock and stood for a while surveying it with apparent satisfaction. Then he turned the key in the lock, put it in his pocket and sauntered out of the room; and, as the purchase of the clock left Mr. Toke with no further interest in the proceedings, he also presently rose and left the premises. And, as he wended his way to his office, he speculated, not without a shade of anxiety, on the probabilities of the immediate future. Messrs Hughes and Dobey were going to suffer a somewhat severe disappointment. It was not likely that they would suffer in silence. He had a strong presentiment that he had not heard the last of that necklace or of its quondam owners. As to Dobey, he was a negligible ass. But Mr. Hughes was in a rather different class. His conduct at the auction showed considerable judgment and self-restraint. He was clearly a gentleman who knew his own mind; a man of courage and resolution.

Mr. Toke was rather sorry that Mr. Hughes had come into the affair.

III. — AN UNHOLY ALLIANCE

LOVERS of paradox assure us that it is the unexpected that happens. Perhaps they are right. But the unexpected holds no monopoly. Sometimes the expected happens. It did, for instance, on a certain Friday afternoon—the very day, in fact, after the auction. On that day, in accordance with the announcement on his cards, Mr. Toke was in attendance at his professional premises. At the moment he was seated at the writing-table in the inner room—it was hardly an office—writing one or two letters. He was quite alone, for he had no clerk or secretary. He had no use for one, since his business was entirely personal and his transactions few, though the amounts involved were usually substantial. So there he sat, writing his letters, but by no means engrossed with the matter thereof.

To tell the literal truth, Mr. Toke was just a shade nervous. The auction had not gone quite according to plan. He had reckoned on Mr. Dobey, whereas he now had to deal with Mr. Hughes; which was a slightly different proposition. Accordingly, he sat, making shift to write, but with an attentive ear on the outer door.

It was within a few minutes of five o’clock, and he was preparing for a scrupulously punctual departure, when the expected happened. The outer door opened, and, through the slight opening of the door communicating with the outer room, he saw a man enter. He rose, and, stepping out into the other room found himself confronting Mr. Hughes. The visitor looked at him critically and affirmed:

“I wish to see Mr. Didbury Toke.”

“Fortunate man!” said Mr. Toke. “Your wish is realized even as you utter it. In what way can I be of service to you?”

“I should like to have a few words with you in private,” was the reply.
“Again,” said Mr. Toke, with genial facetiousness, by way of keeping up his spirits, “you are favoured. For here we are, solus cum solo, with none to supervise, as the poet expresses it. You can say anything you like and no one will be the wiser.”

He led the way into the inner room, and, shutting the communicating door, indicated a chair adjoining the writing-table, resumed his seat at the table, and looked expectantly at his visitor.

“I have come to see you on behalf of Mr. Charles Dobey,” said the latter. “My own name is Hughes.”

“I hope Mr. Dobey is not unwell,” said Mr. Toke.

“He is not,” was the reply; “but he wished me to act on his behalf, as being more experienced in business affairs. The matter is this: a short time ago you purchased from a certain Thomas Hobson an antique clock. Dobey states that the clock was actually his property, but I am not going into that. The point is, that there was certain property, which certainly was Dobey’s, concealed in that dock. He had been in the habit of using it as a safe.”

“What an extraordinarily stupid thing to do!” exclaimed Mr. Toke.

“I agree,” said Mr. Hughes. “But he did. He stowed this property in a cavity between two partitions, the upper of which was secured with screws.”

“Was this property of any considerable value?” Mr. Toke asked.

“I understand that it was.”

“Dear me!” exclaimed Mr. Toke, “I wish I had known. May I ask what was its nature?”

“I understand that it consisted of jewellery,” replied Mr. Hughes. “But the point is, that it has disappeared. Acting on Dobey’s instructions, I bought the clock, and Dobey removed the partition in my presence. The cavity underneath was empty.”

“Dear me,” said Mr. Toke. “Was it, indeed? Now, I wonder how it can have disappeared.”

“Dobey assumes that you removed it, and it seems a reasonable supposition. I have come to ask you what you propose to do about it.”

Mr. Toke leaned back in his chair, and, placing his finger-tips together, looked steadily at Mr. Hughes. He had, indeed, been looking at him throughout the interview, and, as the light from the window fell full on the queer, rather sinister face, he had been able to study it advantageously. I use the word “study” advisedly; for at the first glance he had been aware of a faint stirring of memory. Mr. Toke had an exceedingly good memory for faces; and, although this face was strange to him, yet, as he looked, it seemed to set some chord of memory vibrating.

“May I ask what leads you to suppose that I removed this property?” he asked, without any sign of resentment.

“It is obvious enough,” Hughes replied. “The property was there when the clock came into your possession, and it isn’t there now.”

“But,” protested Toke, “you seem to be over looking the number of hands through which the clock has passed. There is the cabinet-maker, the clock-maker who fitted the movement to the case, and various unknown persons who had access to it at the auction rooms.”

“And there is yourself, the only one of the lot who happens to have the means of disposing of valuable jewellery.”

“That is quite true,” Mr. Toke agreed. “If Dobey had offered me the jewellery, I could certainly have disposed of it to advantage. Unfortunately, he did not. And you must see that my professional standing has no bearing on the question as to who found the jewellery, assuming it to have been really there. The fact is that I, of course, saw the partition, and I saw that it had no business to be there. But I make it a rule, when I buy a piece with the intention of selling it, to leave it exactly as I find it. And I instructed the cabinet-maker to make no structural changes in the case; otherwise, he would, no doubt, have removed the partition, as it might be thought to stand in the way of the weights. Still, it might be worth while to ask him if he did remove it.”

“I have,” said Mr. Hughes, “and he states very positively that he did not. And I believe him.”

“So do I,” said Mr. Toke. “He is a most respectable man, and would, I am sure, have reported to me if he had made any discovery. And so, I think, would the clock-maker. If the property was really there, it must have been abstracted by someone after it was delivered at the auction rooms.”

Mr. Hughes received this statement in gloomy silence, but with a lowering of the brows—or, at least, of the region where the brows should have been—that plainly expressed his unbelief. But he did not leave it at mere facial expression. After a somewhat lengthy pause, he said, in low, emphatic tones:

“Look here, Mr. Toke, all this evasion is no good. You have got those jewels. It is of no use your telling me that you haven’t. I am perfectly sure that you have.”

“Very well,” Mr. Toke replied calmly, “then there is no more to be said. You have your legal remedy, you know.”

“You know that we have nothing of the sort,” replied Hughes. “I realize that you can stick to them if you like. The question is, do you intend to hold on to them, or are you willing to make some sort of arrangement with Dobey?”
Mr. Toke reflected. Once before, when he had discovered the jewels, he had stood at the cross-roads; and he had taken the wrong turning. Now he stood at the cross-roads again. Should he share the loot with these two rascals, or should he accept the gifts of Fortune and snap his fingers at them?

It was a momentous question; more momentous than he knew. If he could have looked into the future and seen the consequences that hung on his decision, that decision might have been very different. But Mr. Toke was like the rest of us. He could be wise enough after the event. But the future was a matter of guess work. And it is always possible to guess wrong. Probably Mr. Toke guessed wrong on this occasion. At any rate, he made the fateful decision; and the future was to show that it was the wrong one.

“I cannot be committed to any opinions that you may have formed,” said he. “As to these jewels, I feel no conviction that they were ever there. Mr. Dobey is a plumber and gas-fitter. Now, what has a gas-fitter to do with valuable jewels?”

“We need not go into that,” Mr. Hughes said, brusquely.

“Very true. We need not,” Mr. Toke agreed. “There is certainly a particular kind of gas-fitter who comes into the possession of valuable jewels. But he is not an honest kind of gas-fitter, whose word could be accepted without proof. I am very doubtful about those jewels.”

“Then I take it that you don’t mean to make any kind of arrangement?”

“I am willing to make one concession,” Mr. Toke replied. “As I assume that you bought the clock for the purpose of recovering the jewels, I am ready to take it back at the price that you paid, subject to its being in the same condition as when it was sold.”

“Well,” said Hughes, “I suppose we must be thankful for small mercies. We don’t want to drop a couple of hundred on an empty shell. I will accept your offer. The clock shall be delivered here in good condition next Tuesday, if that will suit you.”

“It will suit me perfectly,” replied Mr. Toke. “And as to payment? Will a crossed cheque do?”

“Certainly,” Hughes replied; and, for the first time, his rather unprepossessing countenance was illuminated by the ghost of a smile.

Mr. Toke was secretly surprised, but he concealed the fact and rejoined:

“One naturally prefers to draw crossed cheques. Shall I give the cheque to the person who delivers the clock?”

“No,” replied Hughes. “I will come with it, or soon after.”

Mr. Toke nodded, and, as the other rose to depart, said facetiously, and perhaps a little un tactfully:

“I am sorry that things have turned out so unsatisfactorily for Mr. Dobey; but, if he had brought his heirlooms to me, instead of hiding them in a clock in someone else’s house, we might have made some mutually satisfactory arrangement—that is, if he wished to dispose of them. You might mention the fact to him for his future guidance.”

It was not a tactful thing to say, under the circumstances, and, for a moment, Mr. Hughes looked decidedly vicious. But, if he was an angry man, he was also a politic man. He was not going to let temper stand in the way of self-interest. Just as the great difficulty of the murderer is the disposal of the body, so the great difficulty of those who acquire unlawful goods is the disposal of the loot. Now Mr. Toke undoubtedly had the means of disposing of valuable property. Mr. Hughes had not. For though, like Mr. Toke, he knew the ropes, there were circumstances that hindered his appearance in the places where precious things were bought and sold. Therefore, to Mr. Toke’s surprise, instead of resenting the advice, he replied, dryly:

“He will be grateful for the tip. Shall I tell him that you are prepared to waive the question of title deeds?”

Mr. Toke smiled blandly. “When I am offered property for purchase,” he said, “I assume that the vendor is the owner. It is a reasonable assumption.”

“Quite,” agreed Hughes. “But suppose there seems to be a flaw in the title. How would that affect the transaction? I suppose it would be a case of a knock-down price, at any rate?”

“My dear sir,” said Mr. Toke, “you know very well that property which is hampered by conditions that hinder its sale in the open market is of less value than property not so hampered. That has to be allowed for in order to leave a reasonable profit to the purchaser. But the allowance need not be excessive.”

Hughes reflected with a calculating eye on Mr. Toke. After a considerable pause, he said, rather suddenly:

“Look here, Mr. Toke. I want to ask you a plain question. I don’t know a great deal about Dobey’s affairs, but I fancy that he sometimes comes by oddments of property—jewellery, for the most part—that are not quite negotiable in the regular markets. I don’t know where he picks them up. It isn’t my affair. Now the question is, in plain language, would you be prepared to take them off his hands and give him a fair price for them?”

“If I bought them, I should give a fair price, allowing for difficulties of disposal. But I couldn’t have Dobey coming here, you know, or at my private house.”

“I realize that,” said Hughes. “But that could be arranged. May I take it that you would be willing to buy the goods and ask no questions?”

Mr. Toke was a little staggered by the bluntness of the phrase, but he answered with belated caution:
“My business, hitherto, has been of a strictly legitimate kind. My reputation in the trade is spotless. Still, if the affair could be arranged with absolute discretion, I might be prepared to consider a deal of the kind that you propose.”

“Very well,” said Hughes, “I will tell Dobey. And, if he should happen to pick up any chance trifles, we must consider how the negotiations could be carried out.”

With this Mr. Hughes took his leave and departed with very mixed feelings. On the one hand, he was possessed by a murderous hatred of Mr. Toke. That the latter had the diamonds—that he had quietly annexed the product of an almost unique coup—he had no doubt. But he was equally sure that Mr. Toke’s position was impregnable. By no means that he could think of could that discreet gentleman be made to disgorge. On the other hand, much to his surprise, Toke seemed quite willing to act as a receiver of stolen property. That was all to the good; for Toke would probably pay better prices than the wretched pittances offered by the regular “fences.” And he would be much safer to deal with, provided the transactions were kept on the discreet lines that both of them desired. So Mr. Hughes was not displeased, especially as the arrangement promised, sooner or later, to give him a chance to settle accounts with Mr. Toke.

The latter gentleman, left alone in his office, was also a little surprised at himself. After years of blameless dealing, he had suddenly proposed to embark on the perilous activities of the “receiver.” Why this sudden change of outlook? He was a little puzzled, though he dimly perceived the explanation; which was, in reality, fairly simple. He had dismantled the diamonds from their settings, and had made an estimate of their marketable value. The amount that he could safely reckon on pocketing by their sale came out at the highly satisfactory figure of seven thousand pounds. Now, seven thousand pounds takes a great deal of earning by legitimate industry. Naturally he was impressed by this “easy money”—the immemorial lure that has drawn so many on to the broad road that leadeth to destruction. But the really potent influence was the fact that he was already in actual possession of stolen property, and making preparations to dispose of it. The first step had been taken; and, in taking it, he had made a curious discovery. He had discovered that, apart from the attraction of easily won wealth, there was a certain element of excitement and adventure in the acquirement and sale of illicit property that was only feebly present in lawful dealing.

On the following Tuesday the clock was duly delivered, and Mr. Toke was in the act of winding it when Mr. Hughes arrived. His greeting was not effusive, nor was it in any way hostile. He merely stated that he had come for the cheque.

“A crossed cheque, you said, drawn to your own name, I suppose?”

“Yes. Arthur Hughes.”

Mr. Toke wrote out the cheque and handed it to Hughes with the remark:

“Well, you’ve got your money back, at any rate.”

“Some of it,” responded Hughes, adding: “Are you sure you won’t reconsider the other little matter?”

But Mr. Toke’s heart was hardened. Already, in effect, he had his hand on that seven thousand pounds. “If you mean the problem of the alleged lost property in the clock,” said he, “I can only repeat that I know nothing about it, and that I am profoundly sceptical as to its having been there, at any rate when the clock came into my possession.”

“Very well,” said Hughes, “then we must leave it at that. And now as to the other matter—the question of your negotiating some of Dobey’s unconsidered trifles. Have you considered the question of procedure?”

“In a general way,” replied Mr. Toke. “In the interests of us both, we must avoid jeopardizing my position as a reputable dealer. You realize that?”

Hughes realized it perfectly. Not that he was in the least tender about Mr. Toke’s reputation in the abstract, but he saw clearly that a reputable dealer could obtain, and pay, better prices than a common fence. He said so, and Mr. Toke continued:

“To that end, there must be as little contact as possible. I can’t have Dobey coming here; and the less you come here, yourself, the better. We must avoid leaving tracks.”

“Certainly,” Hughes agreed, “if you can see how to avoid leaving them.”

“I think I can. We will go into that presently. But there is another point. We shall simplify matters a great deal if we try to treat one another quite fairly and honestly.”

Mr. Hughes’s thoughts turned, inevitably, towards the despoiled clock, and he grinned openly and undisguisedly. Nevertheless, he assented to the proposition. Mr. Toke observed and interpreted the grin, but continued unabashed:

“What I mean is, that if the vendor and purchaser are each content with actual, realizible values, contacts, even by post, will be reduced to a minimum.”

Hughes nodded with the air of one waiting for further details, and Toke continued:

“Supposing, for instance, Dobey submits a parcel of goods with a specified price. Now, if that price is a fair one it can be paid, and there is the end of the matter. But if he makes an excessive claim, the goods must be returned, or there must be a course of bargaining, involving, in either case, an undesirable number of contacts. Or, if he should submit a parcel for an offer, and I make such an offer as, in my judgment, is the best that is practicable; if he accepts that offer without haggling, again contacts are reduced to a minimum. You see my point?”
“Yes, and I agree in principle. One can’t do more until one sees how things work out in practice. How do you suggest that samples should be submitted? You don’t want them left by hand, and the post is not very safe—an accident is always possible. Have you any plan?”

“A simple method occurs to me,” said Mr. Toke “It is this. On receiving notice in some prearranged manner that a sample is to be delivered, I draw my car up at night in a quiet place, opposite a blank wall, with the doors locked, but the rear window open. I then leave it for a few minutes unattended. It would be quite easy for a passer-by to drop a small parcel in at the window unobserved and pass on. A few suitable localities could be designated by numbers for greater safety in making arrangements.”

Mr. Hughes considered this proposal, and, on the whole, approved.

“It would work all right,” said he, “provided both parties keep to the principle of a square deal. Otherwise, the party who dropped his goods into the other man’s window would take a biggish risk.”

“Quite so,” agreed Mr. Toke. “That is why I emphasized the necessity for scrupulous fair dealing on both sides.”

They spent some time in settling a few details and in arranging a simple code for use in unavoidable letters. Then Hughes rose as if to depart. But, as he was turning away from the table, he paused and then sat down again.

“There is one little affair that we might settle as I am here,” said he. He unbuttoned his coat and from an inner pocket produced a little wash-leather bag. From this he extracted a ring set with a single large emerald and laid it down on the table.

“Any offers?” he asked.

Mr. Toke took it up and examined it.

“A fine stone,” he remarked, approvingly; “a very fine stone. Well cut, too. These step-cut stones often have the table too large. I can offer you thirty pounds for this ring.”

“It is worth a good deal more than that,” said Hughes.

“It is,” agreed Mr. Toke. “It might fetch sixty at a suitable auction. I will give you forty-five if I may sell it publicly and say where I got it. Is that possible?”

“No,” replied Hughes. “I am selling it on commission, and I don’t know where the vendor got it.”

“Then,” said Toke, “thirty is the outside price. You see, this is an important stone. Someone is sure to have the particulars of it—the measurements and weight—so it could be identified. If I take it, I shall either have to have it re-cut or put it into store for a year or two. Still, you might get a better price from someone else.”

Hughes, however, knew that he certainly would not; having tried a fence, who offered him ten pounds. But he did not mention this fact. He merely replied:

“Very well. I suppose you know best. I’ll take thirty, if you can’t offer any more.”

Accordingly the amount was paid—in cash—and Mr. Hughes took his leave.

We need not pursue the details of the subsequent transactions. The visible parties to those transactions were Toke and Hughes; and, as both of them were reasonable men, the necessary conditions were loyally observed and everything went fairly smoothly. Toke made it a rule to give the best prices that were economically possible; and these were so much better than those obtainable from the regular fences that Hughes found it practicable to purchase illicit goods from certain practitioners other than Dobey, with the result that Mr. Toke was almost embarrassed by the magnitude of the transactions. Yet it was all to the good. For the increased amount of capital at his disposal enabled him not only to make more important purchases in his own legitimate line, but to indulge in the luxury, dear to the true collector’s heart, of keeping specially choice pieces which he would otherwise have had to sell.

But it had another effect; and a very queer effect it was. There was a side to Mr. Toke’s character which we have not had occasion to mention, because, in the ordinary affairs of life, it did not show itself. But the fact is, that there was in Mr. Toke’s mental make-up a very definite streak of the miser. It was very strange. In his daily business of life, and even in his domestic affairs, he was a perfectly normal man, with a banking account and investments, an ordered financial system, and a completely rational sense of values. Yet, behind it all was that queer mental twist; and, when it showed itself, Mr. Didbury Toke was a miser—a genuine miser, too, of the real “Blackberry Jones” brand.

But perhaps it was not so very strange, after all. For Mr. Toke was a born collector; and what is a miser but a collector of a rather irrational kind? A collector whose joy is in mere possession, regardless of the qualities—other than intrinsic value—of the things possessed? At any rate, there it was; and it must be mentioned because certain consequences, directly traceable to it, have to be recorded hereafter. And, for the same reason, it is necessary to describe briefly the ways in which this queer trait manifested itself.

In the good old days before the war, Mr. Toke was accustomed to keep, in one of the rooms adjoining the gallery at the Manor House, in which his collection was lodged, a drawer filled with sovereigns. It was a secret hoard, not provided for current use, but, like the rest of the collection, a treasure to be enjoyed by mere gazing and contemplation. At night, when the gallery door was locked, he would bring it out and set it on the table. Then, in the genuine “Blackberry Jones” manner,
he would sit himself down to gloat over its glittering contents, taking up handfuls of the shining coins or spreading them out on the table in rows or geometrical patterns.

Perhaps there was something to be said for this rather odd pursuit. The Sovereign was a handsome coin, particularly as to the reverse, which displayed Pistrucci's magnificent St. George. But, though Mr. Toke was far from unappreciative of Pistrucci's masterpiece, it was not that work of art which endeared the coins to his heart, as subsequent events proved. For, in the days that followed the war, he was compelled to make inroads on his treasure to carry out some of his foreign deals, and to furnish himself for his journeys abroad. Gradually, the golden contents of the drawer dwindled, until only a hundred or so of the coins were left.

It was at this point that the inflow of ill-gotten wealth came to his relief. The parcels of jewellery that Mr. Hughes dropped periodically in through the window of his car consisted principally of "trade" articles, which, however valuable intrinsically, were of no artistic merit. Mr. Toke's procedure was to pick out the stones and dispose of them through the ordinary trade channels. Their sale yielded him a modest profit, and with this he was content, at least for a time. But presently the gold mountings began to accumulate. If the transactions had been lawful ones, he would simply have taken these mountings to a bullion dealer and realized the value of the gold. But the gold mounts were precisely the most recognizable parts of the "swag." It was quite impracticable to dispose of them in the state in which they came to him.

Then he decided to melt them down; and, to this end, he provided himself with a small crucible furnace that burned coke or charcoal—there was no gas at the Manor House—and was fitted with a foot bellows. He also obtained a few crucibles, one or two jewellers ingot moulds, and the necessary tongs and other implements; and with these appliances he set to work to reduce the miscellaneous collection of stoneless jewellery to neat little ingots, each of which he carefully marked with a punch to show its "fineness" in carats.

But even this did not quite solve the difficulty. For, as we have seen, Mr. Toke was an eminently cautious gentleman, and it was borne in on him that the sale of gold ingots on a somewhat considerable scale was a proceeding that might, in the course of time, lead to inconvenient enquiries. He was known as a dealer in stones. But gold ingots were things that needed to be accounted for. He decided, at least for the present, not to run the risk.

So, by degrees, the ingots accumulated. But Mr. Toke was not disturbed. On the contrary, the larger his stock grew—and it grew apace—the less desirous did he become to dispose of it. For a curious change had come over him. Gradually, the affection that he had felt for the sovereigns transferred itself to the growing pile of ingots; and at nights, when he had turned out the surviving remnants of coins from the drawer, he would bring forth the ingots from the cupboard where they were secreted and lay them out on the table or build them up into little stacks. And as the stacks grew steadily in size and number, he would think of his partners and their mysterious activities with pleasant anticipations of yet further additions to his hoard; which was rapidly becoming more real to him than the less visible wealth that was represented by the figures in his bank books and his lists of investments.

Occasionally he found himself speculating on the part that Mr. Hughes played in this curious, unlawful business. Was he a receiver, pure and simple, or was he an actual operator? On the rare occasions when they met, Hughes maintained the most profound reticence. Mr. Toke's view was that Hughes and Dobey formed a small firm to which Hughes contributed the brains and power of contrivance, and Dobey the manual skill and executive ability.

Possibly he was right. At any rate, as we have said, all went well and smoothly, and Dobey, more fortunate than most of his fellow practitioners, continued to keep out of the clutches of the law.

IV. — MR. TOKE'S INDISCRETION

IN a remote corridor at the top of a large building in Holborn the rather infrequent visitors might have seen a door, glazed with opaque glass, on which was painted the name of Mr. Arthur Hughes. No further information was vouchsafed; but if the directory had been consulted it would have been ascertained that Mr. Hughes was a patent agent. His practice was not extensive; but still, on certain rare occasions, stray members of that peculiarly optimistic class, prospective patentees, discovered his existence by means of the directory aforesaid, and subjected him to a mild surprise by appearing in his office.

Their visits were not unwelcome; for, though the business that they brought was of little enough value, they rendered possible the keeping of books which could be produced in evidence of a bona fide industry.

The visitor, however, who appeared on a certain afternoon was not one of these clients, nor was he connected with the patent industry; being, in fact, none other than Mr. Didbury Toke. Mr. Toke was a good deal out of breath, having climbed the long staircase as a matter of precaution, and now sat panting across the table behind which Mr. Hughes was seated, regarding him with undisguised impatience.

"It's a devil of a way up," said Mr. Toke.

"It is if you are fool enough to walk," was the ungracious reply. "Why the deuce don't you use the lift?"

"Well," Mr. Toke explained, "one is apt to meet people in a lift, or at least be seen and possibly remembered, by the lift girl, at any rate. It is better to avoid contacts as far as possible."

"You're mighty careful," said Hughes, sourly. "You're glad enough to mop up the profits of our little enterprises, but you
don't mean to take any of the risks."

"Not if I can help it," Toke admitted. "Why should I? And what good would it be if I did?"

The question was so obviously reasonable (since the safety of each member of the firm was essential to the well-being of the others) that Hughes was reduced to a non-committal snort; and might have left it at that had not Toke rather untactfully added: "And I am not aware that you are in the habit of exposing yourself unnecessarily."

Mr. Hughes was apparently in a somewhat irritable state of mind, for he took needless umbrage at this remark.

"Oh," he exclaimed, "so you think so, too, do you?"

"Too?" repeated Toke, interrogatively.

"Yes. You are taking up the same position as that infernal Dobey."

"I hope not," said Mr. Toke. "But what is Dobey's position?"

"In effect the same as yours. He says that he takes all the risks while we take most of the profits."

"I did not say that," Mr. Toke protested. "I admit that I keep out of harm's way to the best of my ability. And, really, I suppose, as a matter of fact, Dobey does take more risks than we do."

"Do you?" snarled Hughes. "How do you know what risks I take?"

Mr. Toke had to admit that he knew very little about the matter. "But," he continued, "there is no use in mutual fault-finding. We each have our respective parts to play, and each of us is indispensable to the others."

"That isn't Dobey's view," said Hughes. "I have discovered that he has been doing some jobs on his own, and what is worse, he has found some other market for the swag. He is a slippery devil. Thanks to me, he has been able to work in safety, and do uncommonly well. Now he thinks he knows all there is to know, and he is going to work on his own and stick to all the stuff that he collects—the ungrateful bounder!"

Mr. Toke expressed his profound disgust at this base conduct of the unappreciative gas-fitter. "But, after all," he added optimistically, "I suppose he is not the only pebble on the beach."

"No," Hughes admitted, "but he is a pretty big pebble, from our point of view. We can't afford to lose his little contributions. But it is not only that. Now that he seems to have gone off on his own, and knows that I have spotted him, he may give us trouble, especially if he should get into a tight place. As I said before, he is a slippery devil. But he had better look out. If I see any signs of his making trouble, I shall make things most unpleasantly lively for him. However, he hasn't starved us out yet. I have got quite a nice little collection from another artist. Got it here, too. I don't usually bring stuff to this place, but I had to, on this occasion. So here it is, all ready for you to take away when we have settled preliminaries."

"Oh, dear!" exclaimed Mr. Toke, "how very unfortunate! I can't possibly take it now. I called to tell you that I am just starting on a longish tour on the Continent."

"Well, you'll just have to put off the start for a day. I can't have the stuff here, and I certainly can't store it while you are browsing about the Continent."

"But," protested Mr. Toke, "I have made all my arrangements. I have shut up the wing of my house where I keep my collection and sealed the doors, and I have notified my solicitor that I have started."

"I suppose you can alter your arrangements if you please. You are your own master."

Mr. Toke shook his head, and was about to add some confirmatory remarks when Hughes suddenly lost what little patience he had and broke out, angrily:

"Look here, Toke, you are going to take that stuff. You have got to. I am not going to keep it in store for months. Besides, I want the money for it. There is a hundred and fifty pounds' worth in this parcel. You can look at it now, and, if you are afraid to take it away with you, I will plant it in your car later."

"But," pleaded Toke, "I haven't got my car. I took it to the garage this morning to be overhauled and taken care of while I am away. I should have to go by train with the confounded stuff in a hand-bag."

Mr. Hughes was on the point of demanding what the occasion of the train journey might be, seeing that the "stuff" was presumably to be deposited either at Mr. Toke's bank or in his safe-deposit. That was how he had always understood that Mr. Toke secured his valuables. But the reference to the train journey seemed to offer a rather curious suggestion. And, Mr. Hughes being a decidedly reticent, not to say secretive, gentleman, refrained from either comment or question. But he stuck to his point, and continued to insist that the property must be transferred. If he had done so in a polite and tactful manner, all might have been well. Unfortunately, he adopted a bullying, hectoring tone that jarred heavily on Mr. Toke's already ruffled feelings. As a result, his customary suavity gave place to a slightly forbidding manner.

"I think," he said stiffly, "you misunderstand the nature of our relations. I purchase from you at my convenience. You are addressing me as if I were some sort of subordinate, as you might address Dobey—who, by the way, doesn't seem to have found your manners endearing."

"He will find them a good deal less endearing if, he doesn't take care, and so will you. Don't you come here with your damned superior airs. You are one of the firm, and I am the boss of the firm, and you have got to understand that."
“And suppose I don’t accept that relationship? Suppose I retire from the firm, as you call it, and wash my hands of you? Would that suit you?”

“It wouldn’t suit you if the police got to know that the eminently respectable Mr. Didbury Toke had been doing a roaring trade in stolen gems.”

Mr. Toke’s face hardened. “It is a great mistake to utter threats,” he said in a warning tone. And then, in total disregard of the admirable principle that he had just laid down, he continued: “And, in fact, it would not suit you particularly well if the police should be induced to take an interest in you.”

“But they couldn’t,” retorted Hughes. “You couldn’t prove anything against me. I’ve made it my business to see to that. In regard to this swag, the man who collected it is at one end and the man who marketed it—that’s you—is at the other. I don’t appear in it at all.”

Mr. Toke smiled sourly. “I see,” he said, quietly, “that you don’t remember me. But my memory is better.”

“What the devil do you mean?” Hughes demanded angrily, but with a startled expression which he failed to control.

“Of course,” Mr. Toke continued, calmly, “I am a good deal changed. So are you since the days when you used to have a sandy moustache and a bushy head of hair. But, all the same, I recognized you at the first glance.” (Which was not quite correct. It had taken him some three months to convert a vague sense of familiarity into a definite identification.) “The sight of you carried me back to the time when I used to have connections with the assaying industry, and when a good deal was heard about a certain famous thumb-print.”

He stopped rather abruptly—and wished that he had stopped sooner, as he noted the effect of his foolish speech. Hughes did not trouble to contest the statement, but sat gazing fixedly at the speaker; and the concentrated malignity that expressed itself in that look brought Mr. Toke suddenly to his senses. The gentle art of making enemies is an art that is practised only by fools. But Mr. Toke was not a fool, and he certainly did not want to make an enemy of Mr. Hughes. He saw clearly that reconciliation was the necessary policy, and proceeded forthwith to swallow his pride.

“This won’t do, Hughes,” he said in a conciliatory tone. “We are behaving like a couple of fools. Of course we sink or swim together. I understand that. I was annoyed at having my arrangements upset and lost my temper. Let us have a look at that stuff.”

Without a word, Hughes rose and walked across to a small safe which he unlocked and threw open. From some inner recess in it he produced a parcel which he laid on the table. Then he stepped over to the door, and, having slipped the catch of the lock, came back and began methodically to untie the string of the parcel. When the various wrappings were loosened, there was exposed to view a miscellaneous collection of jewellery which Mr. Toke diagnosed as probably the pooled swag from several different robberies. He looked at it over with tepid interest, being anxious chiefly to get the business over and bring the rather unpleasant interview to an end.

“Well,” he said, “there’s nothing sensational about it. You say you want a hundred and fifty for this lot. It’s quite enough, but it isn’t worth while to haggle over a trifle. I'll give you what you ask. I suppose a cheque won’t do for you?”

“No,” Hughes replied gruffly, “of course it won’t.”

“It’s infernally inconvenient,” Toke grumbled. “This will eat up the greater part of the cash that I had provided for travelling.”

He produced a fat wallet from his pocket, and sorted out its contents; a process that was watched by Hughes with a curious, avid interest as he retrieved the string of the parcel.

“Fifteen tens,” said Toke. “Will that do? I would rather keep the fives for use on the road.”

As Hughes made no reply, but silently held out his hand, Toke placed in the latter the sheaf of crisp, rustling notes, and closed his wallet, fastening it and returning it to his pocket.

“Now, Hughes,” he said as he dropped the parcel into his hand-bag and put on his hat, “let us forget the nonsense that we talked just now and bury the hatchet. We shan’t see each other again for a month or two. Don’t let us carry away unpleasant memories.”

He held out his hand genially, and Hughes, relaxing with an effort the grimness of his expression, took it and gave it a formal shake.

“I suppose,” said he, “you will spend the night at Hartsden?”

“No,” replied Toke, “I can’t do that. I want to catch the night—or rather early morning—train to Dover.”

“You will have some trouble in making the various connections,” Hughes remarked. “There aren’t so very many trains to and from Hartsden. It is a pity that you didn’t keep your car for another hour or two.”

“Yes,” Toke agreed reflectively. “I think you are right. The trains will be an awkward complication. I rather think that I will just get the car out again or borrow another. That will make me independent of trains.”

“But what will you do with the car?” asked Hughes, who was beginning to take an interest in Toke’s movements.

“I dare say I shall be able to run it down to the garage. Or perhaps I shall be able to get a taxi driver to run it round from
the station. It will only take him a few minutes."

"Yes," Hughes agreed, "that will be quite simple. And the car will enable you to take your own time. Much better than the suburban trains. Well, so long. I hope you will have a pleasant and profitable trip."

He gave a sort of valedictory grin—the nearest that he could get to the semblance of a friendly smile—and accompanied Toke out into the corridor, where he stood, watching the retreating figure of his associate in iniquity. And, even as he looked, the grin faded from his features and was replaced by a scowl of the most intense malice.

He went back into his office, still scowling forbiddingly, and with the air of one wrapped in profound thought. Which was, in fact, his condition. For Mr. Toke’s indiscreet outburst had furnished him with the matter for anxious cogitation. That Toke could or would “blow on” the little transactions that took place between them had never occurred to him. Nor did it now. He had made his position at least as safe as that of Mr. Toke himself. Neither of them could effectively blow on the other. But now it appeared that Mr. Toke could, by merely uttering a few words in the proper quarter, send him, Mr. Hughes, to a term of penal servitude. This was quite a different affair. The sudden appearance of Mr. Toke as a potential accuser was, to put it very mildly, an extremely disagreeable surprise. Up to this time, Hughes had believed that one person only in the whole world had penetrated the very effective disguise with which a natural affliction had furnished him as a free gift. For Mr. Hughes’s wig was, in any case, a necessity. An attack of the complaint known as Alopecia areata had produced large bald patches which had to be covered up by a wig; and this, together with the loss of his eyebrows, and aided by the removal of his beard and moustache, had so metamorphosed him that, though he avoided all old haunts and old acquaintances, he was almost completely secure from recognition. But, as we have said, there was one person who had appeared, at least, to suspect his identity, and whose existence kept him in a state of constant watchfulness and anxiety. And now there was another.

Mr. Hughes was not a scrupulous man; and if he was a cautious man, he was ready to take a present risk for the sake of future safety. In the very moment when Mr. Toke had foolishly proclaimed his power, he had made a decision. He was not going to walk abroad with this everlasting menace at his elbow. One dangerous enemy was more than enough. Two were more than could be borne. The plain fact was that Mr. Toke knew too much; and that fact pointed to the obvious remedy. So much Hughes had decided even while Toke was speaking. The rest was only a question of ways and means.

Apparently, this question also was in course of being settled, for Mr. Hughes, after pacing up and down the office for a few minutes, began, in a leisurely and deliberate fashion, to make certain changes in his visible characteristics that suggested a definite purpose. It is one of the compensations of being compelled to wear a wig that one can choose one’s wig and even, on occasion, change it. Of this privilege Mr. Hughes proceeded to avail himself. From a locked drawer in a locked cupboard he took out a wig of a pronounced red and of a fluffy, rather ragged texture, strikingly different from the sleek, dark brown one that he was wearing. Having locked the door, he put on the new wig, and then produced from the drawer a reddish moustache, a small bunch of hair of the same colour, and a bottle of spirit gum. With some of the latter, he anointed the base of the moustache (which was not one of those artless devices used by the amateur actor, but a workmanlike affair, made by a regular theatrical wig-maker) and carefully affixed it to his upper lip with the aid of a small mirror.

When he had fixed it securely in position he cut off some wisps of hair from the bundle, and, having stuck them along the upper margin of the moustache, combed them over the latter and finally trimmed them off with scissors. The effect was extremely realistic; and, when in the same way, a pair of darkish eyebrows had been attached, the transformation was complete.

But Mr. Hughes was too old a hand to trust a make up, no matter how excellent, farther than was unavoidable. The afternoon was already merging into evening. Another half-hour and the dusk would have fallen. Then not even close inspection would penetrate the disguise. So Mr. Hughes proceeded with caution. Having tidied up the office, he put away the bottle and the other materials and appliances which he had been using, and was in the act of locking the cupboard when he seemed to remember something that he had forgotten, and hastily reopened the door. Then that something was searched for and found in another locked drawer; revealing itself as a sheath-knife of the kind used by old-fashioned sailors (and commonly known as a “Green river knife”), furnished with a narrow waist-strap. Having slipped the knife inside the waistband of his trousers, he secured it in place by means of the strap. Then he took a glance at a time table and jotted down a few figures on a slip of paper which he put in his pocket, after which he walked over to the window and stood for a while, looking down into the fast-emptying street.

Already the daylight was beginning to fade, and the quiet of evening was settling down on the city. Judging that the time had come, he emerged cautiously into the dim corridor, locked the door behind him and set forth. Emulating Mr. Toke’s discretion, he avoided the lift, taking his way down the unfrequented staircase, from the bottom of which he hurried along the lower corridors, and so out into the street. Even there he preserved his attitude of caution, threading his way through the quieter back thoroughfares, and maintaining that incessant watchfulness that has to be habitual with those who are on unsatisfactory terms with the law.

By the time that he reached the station the daylight was visibly weakening. He walked confidentially to the booking-office, where he took a first-class single ticket to Hartsden Junction, which, as he knew, was some three-quarters of a mile from the hamlet which gave it its name. He was by no means unacquainted with the locality, for, if the truth must be told, he and Dobey had reconnoitred the neighbourhood with the idea of a possible nocturnal visit to Mr. Toke’s premises on some occasion when that gentleman was absent on one of his periodical excursions abroad. That visit had never been made, for
the reason that Mr. Toke had let it be very clearly understood that he kept on those premises nothing but the “pieces” that formed his collection—porcelain figures, bronzes, and other objects, valuable enough in themselves, but of no use to merchants of the class to which Hughes and Dobey belonged. All negotiable property, he had explained, was kept securely in the strong room of his bank or in the safe that he rented at the safe-deposit establishment; and this had seemed such an obvious precaution that both rascals had accepted the statement and abandoned the idea of the nocturnal raid.

But now, by the light of the admission that Mr. Toke had so incautiously made, that he was proposing to convey this parcel of stolen property to his house, evidently with the intention of leaving it there during his absence abroad, Mr. Hughes began to reconsider the situation. The main object of his journey was not irreconcilable with certain other transactions; and, as he was borne by the fast express to the neighbourhood of Mr. Toke’s residence, he turned over quite a number of interesting possibilities.

The night had definitely fallen when Mr. Hughes approached the hamlet of Hartsden by the road from the Junction. He looked about him with his habitual wariness, but there was little need; for, as he passed through the single street, not a soul was to be seen, and, but for the lighted windows, the place might have been uninhabited. Beyond the hamlet the old manor house stood in dignified isolation, and adjoining it was the disused churchyard, enclosing the ruinous church—now also disused and replaced by a new building at the other end of the village.

It was towards the churchyard that Hughes directed his steps, making for the gateway without hesitation as if by a considered plan. On arriving there, he paused for a moment to glance down the road—of which the gateway commanded a clear view; then he pushed open the rickety gate and entered. Slowly he walked along the narrow path that led to the church, looking back from time to time to see that he still had an uninterrupted view of the road. Presently the path turned slightly to the right, and, passing into the shadow of a great yew tree, was encompassed by darkness so complete that Hughes was able only with the greatest difficulty to grasp his way along it. Here, by the side of a large sarcophagus tomb which stood between the yew tree and the wall, he stopped and looked about him. Finding that the road was now no longer in sight, he slowly retraced his steps until he was, able once more to look out through the gateway along the road that formed the only approach to the village. And here he selected a spot where he could keep a look-out, secure from the observation of any chance wayfarer who might pass along from the village.

He was prepared for a long vigil, for it was possible that Toke might be delayed; and, in any case, the car would take considerably longer to cover the distance than the fast train by which Hughes had travelled. To beguile the time, he produced his cigarette-case and took out a cigarette. But his habitual caution warned him not to light it in view of the road. Accordingly, he retired past the yew tree into the darkest corner of the churchyard, behind the great tomb, and there, crouching low against the plinth of the tomb, he struck a match, held it for a moment to the cigarette and blew it out. But even then he held the cigarette shrouded in his hand; and when he returned to his look-out, he was careful to ensconce himself behind the tall headstone that he had selected as cover so that the glow of the cigarette should not be visible from outside.

But it was a tedious business, waiting in the gloom of the darkening churchyard for the coming of the man who could send him to penal servitude. And it was rendered none the more pleasant by a somewhat acute anxiety. For, though he had a perfectly clear purpose, the carrying into effect of that purpose could not be planned in exact detail. The precise method of procedure must be determined by Mr. Toke’s actions; and these could not be foreseen.

Time ran on. One by one, the lights in the windows of the few houses that were visible from the churchyard went out, and the chime of the clock in the new church at the end of the village, borne faintly on the night air, told out quarter after quarter. It was just striking the hour of ten when Hughes, having lighted his sixth cigarette, came out from behind the sarcophagus tomb and crept back to his look-out; and at that moment the lights of a car came into sight far away down the road.

Hughes was not a nervous man. But the message that those glimmering lights conveyed to him set his heart thumping and his hands trembling so that the cigarette dropped unheeded from his fingers. It is one thing to contemplate an atrocious deed from afar, but quite another to feel the irrevocable moment of action drawing nigh. With a feeling of shuddering dread, but yet never for an instant abandoning his dreadful intent, he watched the lights gradually wax brighter until the approaching car was actually entering the village. Apparently it was fitted with a powerful but silent engine, for no throbbing or hum of mechanism was borne to his ears.

Suddenly the lights went out, and for a few moments the car was perceptible neither to eye nor ear. Then it became faintly visible as a dim spot of deeper darkness. Nearer and nearer it came, now growing into a defined shape, and recognizable as a large, closed car. Hughes craned out from behind the headstone to watch it as it passed the gate. But it did not pass the gate. Just as it reached the farther wall of the churchyard, it slowed down suddenly and turned off to the left and was instantly lost to view.

To Hughes, in his state of extreme nervous tension, this unexpected behaviour was highly disconcerting. He had assumed that Mr. Toke would drive up to his gate, get out, and open it, and then run the car up the drive to the door of the house. Much puzzled and somewhat alarmed, he crept out from behind the headstone and began to steal softly and cautiously down the path towards the gate. But he had gone only a few steps when he was startled by the sudden appearance of Mr. Toke within a few paces of the gate and walking briskly towards it with the evident intention of entering the churchyard.

Sweating and trembling from the sudden shock, Hughes staggered back to the headstone and crouched down behind it,
cursing silently and for the moment overcome by terror. A step or two more and he must have been seen; and who could say what would have happened then? Toke could hardly have failed to grasp the situation; and Toke was no weakling. It had been a near thing.

From his lurking-place he saw Mr. Toke, hand-bag in hand, walk up the path with the assured manner of a man who is making for a definite destination. When he had passed the headstone Hughes craned out to watch the retreating figure; and, as it disappeared into the darkness under the yew tree, he rose and followed stealthily, crouching low to keep out of sight among the crowded tombstones. Presently he halted just at the edge of the patch of shadow and watched from the shelter of a crumbling tower that was enclosed by an ivy-covered railing. From the impenetrable darkness under the yew tree there came a faint grinding or creaking sound. It lasted but a few moments, but, after a brief interval it was repeated. After yet another short interval, Hughes rose and came out from behind the railed tomb. Then he, too, disappeared into the darkness under the yew tree.

The minutes passed, but no sound came from that eerie corner of the churchyard over which the yew tree cast its sinister shadow. The clock of the distant church told out a quarter and then another. The reverberations of the bell had just died away when the silence was broken once more by that curious faint grinding or creaking sound. It was followed, almost immediately, by what sounded like a muffled cry. Again there was a brief space of silence. Then the grinding sound was repeated. And, after that, again silence.

The time ran on. Save for the murmur of the trees, as the leaves were gently stirred by the soft breeze, and the faint, indefinite voices of the night, not a sound disturbed the stillness that brooded over the churchyard. Away in the distance, the clock of the new church made its announcements to the sleeping village of the passage of the minutes that perish for us and are reckoned. But among the grey headstones and under the solemn yew tree, nothing stirred and no sound broke in to disturb the peace of the dead.

So the time passed, measured out impassively, quarter by quarter, by the distant chimes. More than an hour had slipped away since those two figures had been swallowed up in the dark cavernous depths under the yew tree, when the silence of the night was at last broken by the faint grinding creak. After the lapse of a few seconds, it was repeated. Then a figure appeared creeping stealthily out of the shadow and down the path towards the gate, which, as it emerged into the dim light, revealed itself as that of Mr. Hughes.

There was something curiously secret and furtive in his demeanour. He walked slowly, setting down his foot at each step with evident care to make no sound, and every few seconds he paused to listen and look about him. Thus he crept down to the gate, where again he halted and stood, listening intently and gazing into the darkness, first up the village street, and then across at the old manor house, sleeping among its trees. But it seemed that in the whole village there was no living creature besides himself waking and moving.

From the gate he turned to the right, and, in the same silent, furtive manner, stole along the wall of the churchyard towards the place into which the car had seemed to disappear. Short as the distance was, it seemed interminable in the agony of suspense that possessed him. For the car was indispensable. It had been the keystone of his plan—the appointed means of safety and escape. But suppose it had been seen, or, still worse, taken away! The fearful possibility brought the sweat afresh to his already clammy brow, and set his trembling limbs shaking so that he staggered like a drunken man.

At length he reached the corner of the wall. Beside the churchyard ran a narrow, leafy lane, enclosed between the high wall and a tall hedgerow, and as dark as a cellar. He peered desperately into the dense obscurity, but at first could see nothing. With throbbing heart he stole up the lane as quickly as he dared, still craning eagerly forward into the darkness, yet still careful not to trip on the rough ground. Suddenly he gave a gasp of relief; for, out of the darkness ahead, a shape of deeper darkness emerged, and, as he hurried forward, he recognized the big covered car with which he had had so many dealings in the past.

Shaken as he was, he still had all his wits about him, and he realized that there must be no false start. Once he was on the move, he must get straight away from the neighbourhood. It would never do to be held up on the road by any failure of the engine or other occasion of delay. Accordingly, he went over all the working parts with the aid of a small electric lamp that he produced from his pocket and satisfied himself that all was in order. Then he threw the light back along the lane to see that the way was clear for steering out in reverse. That was the immediate difficulty. There seemed to be no room to turn round. He would have to back out; and to back out at the first attempt.

At length he prepared for the actual start. Getting into the driver’s seat, he switched on the lights and the ignition and pressed the electric starter. Instantly, the silence was shattered by a roar that seemed fit to rouse the whole countryside, and brought the sweat streaming down his face. Still, though the hand that held the steering wheel shook as if with a palsy, he kept his wits under control. The lane was practically straight and the car had been run straight in. By the dim light of the rear lamp he could see through the rear window well enough to back the car down the lane to the road.

At last, he was out in the open, as he could see by the light from the front lamps shining on the corner of the churchyard wall. He put the steering-wheel over and started forward, now quite noiselessly, through the village street and so out on to the London road.

It was getting on for two o’clock when he drove into the small car-park attached to the garage.

“Late, ain’t you?” said the night watchman. “They told me Mr. Toke was going to bring her back by half-past eleven. Did he miss his train?”
“No,” replied Hughes. “He caught his train all right. It was my fault. I had to go somewhere else and couldn’t bring her along any sooner.”

“Well,” was the philosophical response, “better late than never.”

“Very much better,” Hughes agreed. “Good night—or rather, good morning.”

He paused for a moment to light a cigarette, and then walked out into the street and was lost to sight.
BOOK II: INSPECTOR BADGER DECEASED

V. — THE TRAGEDY IN THE TUNNEL

MR. SUPERINTENDENT MILLER was by no means an emotional man. He had his moments of excitement or irritation, but in general he was a person of a calm exterior, and gave the impression of one not easily ruffled. That was my view of him, born of years of intimacy. But the Superintendent Miller whom I admitted to our chambers in response to a somewhat peremptory knock was a new phenomenon. His flushed, angry face and lowering brow told us at once that something quite out of the ordinary had occurred, and we looked at him expectantly without question or remark. Nor was there any occasion for either; for, without seating himself or even taking off his hat, he came instantly to the point.

“I want you two gentlemen to come with me at once, if you can. I've got a car waiting. And I want you to bring all your wits and knowledge to bear on this case as you never brought them before.”

Thorndyke looked at him in surprise. “What is it, Miller?” he asked.

The Superintendent frowned at him fiercely, and replied in a voice husky with passion: “It is Badger. He has been murdered. And I look to you two gentlemen as officers of the law to strain every nerve in helping us to bring the criminal home to the villain who committed it.”

We were profoundly shocked; and we could easily understand—and indeed share—his wrathful determination to lay hands on the murderer. It is true that Inspector Badger had been no favourite with any of the three of us. His personal qualities had not been endearing. But now this was forgotten. He had been, in a sense, an old friend, if at times he had seemed a little like an enemy. But especially, he was a police officer; and to a normally constituted Englishman, a police officer’s life is something even more sacred than the life of an ordinary man. For the police are the guardians of the safety of us all. The risks that they accept with quiet matter-of-fact courage are under taken that we may walk abroad in security and rest at night in peace and confidence. Well may we feel, as we do, that the murder of a police officer is at once an outrage on the community and on every member of it.

“You may take it, Miller,” said Thorndyke, “that we are at your command, heart and soul. Where do you want us to go?”

“Greenhithe. That is where the body is lying and where the murder must have been committed. There is a fairly good train in a quarter of an hour, and the car will get us to the station in five minutes. Can you come?”

“We must,” was the reply; and without another word Thorndyke rose and ran up to the laboratory to notify our assistant, Polton, of our sudden departure. In less than a minute he returned with his “research case” in his hand, and announced that he was ready to start; and as I had already made the few preparations which were necessary, we went down to the car.

During our brief journey to the station nothing was said. As we arrived at the platform from the booking office, the train came alongside, and the passengers poured out. We took up our position opposite a first-class coach, and, when the fresh passengers had all bestowed themselves and the train was on the point of starting, we entered an empty compartment and shut ourselves in.

“It is very good of you gentlemen,” said Miller, as the train gathered speed, “to come off like this at a moment’s notice, especially as I have not given you any inkling of the case. But there will be plenty of time for me to tell you all I know—which isn’t very much at present. Probably we shall pick up some fresh details at Greenhithe. My present information is limited to what we have heard over the telephone from there and from Maidstone. This is what it amounts to.

“Yesterday morning poor Badger went down to Maidstone to look over a batch of prisoners for the assizes and see if there were any old acquaintances lurking under an alias. But principally his object was to inspect a man who had given the name of Frederick Smith, but whom he suspected of being a certain crook whose real name was unknown to us. We were a good deal interested in this man. For various reasons we associated him with a number of burglaries of a rather clever type—one-man jobs, which are always the most difficult to deal with if they are efficiently carried out. And we had something to go on in one case, for Badger saw the man making off. However, he got away, and neither he nor the stuff was ever traced. So our position was that here was a man whom we suspected of quite an important series of crimes, but who was, so to speak, in the air. He was not even a name. He was just a ‘person unknown.’ Whether we had his finger-prints under some name we couldn’t guess, because nobody knew him by sight excepting Badger; and his opinion was that the man had never been in custody, and couldn’t be identified—excepting by himself.”

“But,” said I, “surely Badger could have put a description of him on record.”

“M’yes,” replied Miller. “But you know what Badger was like. So beastly secretive. One doesn’t like to say it now, but he really didn’t play the game. If he got a bit of information, instead of passing it round for the benefit of the force and the public, he would keep it to himself in the hope of bringing off a striking coup and getting some kudos out of it. And he did bring it off once or twice, and got more credit than he deserved. But to come back to this Maidstone business. Badger gleaned something from the reports concerning the prisoners there that made him suspect that this man, Smith, might be the much-wanted burglar. So down he went, all agog to see if Smith was the man he had once got a glimpse of.”

“I shouldn’t think a recognition of that kind, based on a mere passing glance, would have much value as evidence,” I objected.
“Not in court,” Miller admitted. “But it would have had considerable weight with us. Badger had a devil of a memory for faces, and we knew it. That was his strong point. He was like a snapshot camera. A single glance at a face and it was fixed on his memory for ever.”

“Do you know if he recognized the man?” Thorndyke asked.

“He didn’t,” replied Miller, “for the man wasn’t there. In some way he had managed to do a bolt; and up to the present, so far as I know, they have not been able to find him. It is quite likely that he has got clean away, for, as he was wearing his own clothes, he won’t be very easy to track. However, Badger seems to have satisfied himself that the man was really the one he was looking for—probably he thought he recognized the photographs—and this morning he started for Town with the papers—the personal description, photographs, and finger-prints—for examination and comparison at the Criminal Record Office. But he never arrived; and about eleven o’clock his body was found near the middle of the Greenhithe tunnel. The engine driver of an up train saw it lying across the rails on the down side, and reported as soon as he got into Greenhithe. But it seemed that at least one train had been over it by then. I gather that—but there! I don’t like to think of it. Poor old Badger!”

“No,” Thorndyke agreed sympathetically. “It is too horrible to think of. But still, as we have to investigate and ascertain what really happened, we must put aside our personal feelings and face the facts, terrible as they are. You spoke of his having been murdered. Do you know if there were any signs, apart from the mutilation caused by the train passing over him, that he had met a violent death? Is it clear that it was not an accident?

“Quite clear, I think,” replied Miller. “I know nothing about the condition of the body, but I know that there was no open door on the off side of the train that he travelled by.”

“That would seem to be conclusive,” said Thorndyke, “if the fact can be established. But it isn’t always easy to prove a negative. A passenger, getting into an empty compartment and finding the door open, would naturally shut it and might not report the circumstance. The point will have to be enquired into.”

“Yes,” Miller agreed; “but I don’t think there is much doubt. You must remember that the train passed through Greenhithe station and past the signal boxes both there and at Dartford. An open door on the off side would be very noticeable from the down platforms. Still, as you say, the point will have to be settled definitely. Probably it has been by now. We shall hear what they have to say when we get to Greenhithe. But for my part I have no doubt at all, door or no door. Badger was not the sort of fool who leans out of the window of a moving train without seeing that the door is fastened. It is a case of murder, and the murderer has got to be found and dealt with.”

If the Superintendent may have seemed to have formed a very definite opinion on rather slender evidence, that opinion received strong confirmation when we reached Greenhithe. Awaiting us on the platform were a detective sergeant and one of the senior officers from Maidstone Prison. They had travelled up from Maidstone together, apparently comparing notes and making enquiries by the way.

“Well, sir,” said the Sergeant, “I think we can exclude the suggestion of accident, positively and certainly. It was unlikely on the face of it. But we have got some definite facts that put it out altogether. This officer, Chief Officer Cummings, whose duties include all matters relating to descriptions and records, handed to Inspector Badger the papers relating to the prisoner, Frederick Smith—finger-prints, description, and photographs—and saw him put them into his letter wallet. Now, I have been through that wallet with the greatest care, and there is not a trace of any of those papers in the wallet or in any of his pockets.”

“Ha!” exclaimed Miller in a tone of grim satisfaction, “that settles it. I take it, Cummings, that there is no possible doubt that the Inspector had those papers in his pocket when he started from Maidstone?”

“Not a shadow of doubt, sir,” replied Cummings. “I gave him the papers, carefully folded, and saw him put them into his wallet—just into the open wallet, as they were both too large to go into the pockets without further folding. He stowed the wallet away in his inside breast pocket and buttoned his coat. And I can swear that it was in his pocket when he started, for I walked with him to the station and actually saw him put it into the train. He asked me to walk down with him, as there were various questions that he wanted to put to me respecting the prisoners, especially this man, Smith.”

“Yes,” said Miller, “we shall have to have a talk about Mr. Smith presently. But the fact that the Inspector had those papers on his person when he got into the train, and that they were not on the body, makes it certain that he was not alone in the carriage.”

“It does, sir,” the Sergeant agreed. “But apart from that, we have got direct evidence that he was not. The station-master at Strood gave us the particulars. The Inspector’s train stopped there, and he had to get out and wait a few minutes for the London train. The station-master saw him standing on the platform, and, as they knew each other, he went up to him, and they had a few words together. While they were chatting the London train came in and drew up at the platform. Inspector Badger was just moving off to find a compartment when a man came along from the entrance. As soon as the Inspector saw this man, he stopped short and stood watching him. The man walked rather quickly along the train, looking in at the windows, and got into an empty first-class smoking compartment. But the station-master noticed that, before he got in, he looked into each of the adjoining compartments, which were both empty. As soon as he had got in and shut the door after him, the Inspector wished the station-master ‘Good morning,’ and began to saunter slowly towards the compartment that the stranger had got into. A few paces away from it he stopped and waited until the guard blew his whistle. Then he walked forward quickly and got into the compartment where the strange man was.”
“Could the station-master give you any description of the man?”

“No, sire. No description that would be of any use. He said he was a middle-aged man of about medium height, not noticeably stout or thin, moderately well-dressed in a darkish suit, and wearing a soft felt hat. He thought that the man had darkish red hair and rather a red nose. But that isn’t very distinctive. And he thought he was clean-shaved.”

“Did you ask him if he would know the man again if he saw him?”

“I did, sir, and he said that he might or he might not, but he didn’t think he would, and he certainly wouldn’t swear to him.”

The Superintendent emitted a growl of dissatisfaction, and, turning to the Chief Officer, asked: “What do you say, Cummings? Does the description suggest anything to you?”

The officer smiled deprecatingly. “I suppose, sir, you are thinking of Frederick Smith, and it does seem likely. Smith certainly has darkish red hair and a reddish nose. And he is about that age and about that height and he hasn’t got a beard, and when I last saw him he was wearing a darkish suit and a soft felt hat. So it might have been Smith. But as the description would apply to a good many men that you might meet, it isn’t much good for identification.”

“No,” growled Miller, “not enough details. And now that the finger-prints and detailed description are gone, it might be difficult to prove his identity even if we should get hold of him.”

“It isn’t as bad as that, sir,” said Cummings. “As it happens, luckily, we have a duplicate of the finger-prints, at least of some of them. The officer who took the finger-prints made rather a mess of one of the rolled impressions. So he had to waste that form and start over again. Fortunately, the spoiled form wasn’t destroyed. So we’ve got that, and of course we’ve got the negatives of the photographs, and the officer who took the description can remember most of the items. There will be no difficulty in proving the identity if we can get hold of the man. And that ought not to be so very difficult, either. There are several of us who have seen him and could recognize him.”

The Superintendent nodded. “That’s all to the good,” said he; “but before we can recognize him we’ve got to find him. The train didn’t stop here, I understand.”

“No, sir,” the Sergeant replied. “The first stop after Strood was Dartford. We’ve been over there, but we had no luck. There were a lot of people waiting for the train, so the platform was pretty crowded, and it was not easy to see who got out of the train. None of the porters noticed any first-class passengers getting out, though there must have been one, for a first-class ticket was collected—from Maidstone.”

“Maidstone!” exclaimed Miller. “Well, that couldn’t have been our man. He came onto the Strood platform from the entrance.”

“So the station-master says. But the booking-office clerk there doesn’t remember issuing any first-class ticket, or any ticket at all to Dartford.”

“Hm,” grunted Miller. “Looks rather as if he didn’t get out at Dartford. May have chanced it and gone on to London. We must have all the tickets checked. Did you make any enquiries from the ticket collector?”

“Yes, sir. But it was no go. He hadn’t noticed any of the passengers particularly. Two or three of the men who passed out answered the station-master’s description more or less. Of course they would. But he didn’t really remember what any of them was like, and he couldn’t say whether either of them was a first-class passenger. I suppose he just looked at the tickets and didn’t see anything else.”

“Yes,” Miller agreed. “But we will go into this matter presently. We mustn’t keep these gentlemen waiting.” He turned to Thorndyke and asked:

“What would you like to do first, Doctor? I suppose you will want to inspect the tunnel, and I should like you to take a look at the body.”

“The body has been examined, sir,” said the Sergeant, “by one of the local doctors. He was rather cautious in his opinions, but I understood that he found no marks of violence—no wounds or injuries excepting the accidental ones.”

“Where is the body?” the Superintendent asked.

“In an empty store, sir, down below. They put it there out of sight until it could be moved to the mortuary.”

Miller looked at us enquiringly, and Thorndyke reflected for a few moments.

“I think we had better take the tunnel first and see if we can pick up any traces from which we can gather a hint. It isn’t very likely. The inside of the carriage, if we could have identified and examined it, would have been more hopeful as a source of information. However, the carriage is not available and the tunnel is. Will it be safe to explore it now?”

As he asked the question he glanced at the station-master, who took out his watch and consulted it.

“There is a down train due in a couple of minutes,” said he. “We had better let that go through. Then the line will be clear for a full hour on the down side.”

“You have pretty long intervals,” Miller remarked.

“We have,” the station-master admitted, “but they will be a good deal shorter when the electrification is completed. At
present only the steam trains come on from Dartford. There goes the signal."

We waited until the train had drawn up at the platform, discharged its two or three passengers and proceeded on its way. Then we walked on to the end of the platform, descended to the permanent way, and, marching in a procession, headed by the station-master, along the rough side-path, presently entered the mouth of the tunnel, advancing along the space between the down-side rails and the smoke-blackened wall.

There is always something rather eerie about a tunnel, even a comparatively short and straight one like that at Greenhithe, in which the light is never completely lost. It is not the obscurity only or the strange reverberating quality that the vaulted roof imparts to the voice. The whole atmosphere is weird and uncanny, there is a sense of remoteness from the haunts of living men, heightened by the ghostly, whispering sounds which pervade the air, confused and indistinguishable echoes from the far-away world of light and life.

The light from the entrance followed us quite a long way, throwing our indefinitely elongated shadows into the twilight before us until they were lost in the deeper gloom ahead. Gradually, the warm glow of the station-master's lantern and the whiter circles of light from the electric lamps carried by Thorndyke and the Superintendent replaced the dwindling daylight and told us we were approaching the middle of the tunnel. The combined lights of the three lamps illuminated the ground with a brilliancy that was accentuated by the encompassing darkness, lighting up the rails and sleepers and the stones of the ballast, and bringing into view all the little odds and ends of litter that had been jettisoned from passing trains; scraps of newspaper, match-boxes, spent matches, cigarette-ends—trivial by-products of civilized human life, insignificant and worthless, but each scanned attentively by six pairs of eyes.

It was in the heart of the tunnel that Miller remarked, in a hollow voice with an accompaniment of chattering echoes:

"Someone has chopped away a pretty good cigar. Shocking waste. He hasn't smoked a quarter of it."

He spoke feelingly, for it was just the type of cigar that he favoured: a big, dark-coloured cigar of the Corona shape. Thorndyke let the light from his inspection lamp fall on it for an instant, but he made no reply, and we continued our slow progress. But, a few moments later, I suddenly missed the light from his lamp (we were marching in single file and he brought up the rear of the procession), and, looking round, I saw that he had gone back and was in the act of picking up the cigar with his gloved left hand. As he evidently did not wish his proceedings to be noticed by the others, I continued to walk on at a slightly reduced pace until he overtook me, when I observed that he had carefully enclosed the cigar in two of the seed envelopes that he invariably carried, and was now tenderly wrapping it in his handkerchief before disposing of it in his breast pocket.

"Any special significance in that cigar?" I asked.

"It is impossible to say," he replied. "A half-smoked cigar must have some significance. It is for us to see whether it has any significance for us."

The answer was a little cryptic and left me with the suspicion that it did not really disclose the motive for his evidently considered act. To one unacquainted with Thorndyke and his methods of research, the salvaging of this scrap of jetsam must have appeared entirely foolish, for there seemed no more reason for taking and preserving this cigar than for collecting the various empty match-boxes and cigarette that lay strewn around.

But I knew Thorndyke and his ways as no one else knew him. I knew that it was his principle to examine everything. But the word "everything" has to be construed reasonably. There was always some selection in the objects that he examined; and I had the feeling that this cigar had presented to him something more than its mere face value.

So I reflected as we walked on slowly, scanning the ballast by the light of our lamps. But no other object came into view to engage our attention until we reached the spot where the tragedy had occurred. Here we halted with one accord and stood looking down in silence at the gruesome traces of the disaster. Miller was the first to break the silence.

"There seems to have been a lot of blood. Doesn't that suggest that he was alive when the train went over him?"

"Yes," replied Thorndyke, "in a general way, it does. But we shall be able to judge better from an examination of the body." Then, turning to the station-master, he asked: "How long could he have been lying on the line when the down train came along?"

"Not more than a minute," was the reply. "Perhaps not that. The two trains passed in the tunnel."

"And how was the body lying? You came with the search party, I think?"

"Yes, I directed the search party. The body was lying across the rails slantwise with the feet towards the Greenhithe end. It was lying nearly on its back. But, of course, the train passing over it may have changed its position. Still, it is rather curious that the feet should have been pointing that way. If a man steps out of a moving train, his feet come to the ground and catch, and he flies forward head first. The position of the body almost seemed to suggest that he fell out head downwards."

"Yes," agreed Thorndyke. "But there isn't much in it, for he certainly did not step out. And a man who falls out by the unexpected opening of the door may fall, in almost any position. Have you had any detailed report from the driver of the down train?"

"Yes, I had a talk with him when he brought the train back from New Brompton. But he had very little to tell. He never
saw the body at all, and he wouldn’t have known of the accident if it hadn’t been for the chance that the fireman happened to look over the near side of the foot-plate and caught just a passing glimpse of a pair of feet sticking out from under the engine. He shouted out as soon as he saw them, but of course there was nothing to be done. It was a fast train, and it couldn’t have been pulled up in its own length, even if that would have been any good.”

“And where did he pass the up train?”

“He was just passing the rear of it when the fireman shouted.”

“Did he notice any open door?”

“No. But that is not to say that there was not an open door. He didn’t really see the other train at all. They had just opened the furnace door and the light from that must have dazzled him. It was the light from the furnace reflected from the roof and walls of the tunnel that enabled the fireman to see the body.”

“It is unnecessary to ask in what part of the train Badger was travelling,” said Thorndyke. “He must have been near the front unless it was a very long train.”

“It was rather a long train,” said the Sergeant. “The station-master at Strood told us that, though he couldn’t say exactly how many coaches there were. Of course, we can easily find out, and we shall have to. But he was able to tell us where Inspector Badger’s compartment was. It was right up in front, in the second coach—rather an unusual position for a first class compartment.”

While this interrogation was proceeding, we had been walking on slowly towards the east end of the tunnel, scrutinizing the ground as we went but without any further result. We now came out into the open in a cutting, and, on the station-master’s advice, continued our examination of the permanent way as far as Swanscombe Halt; but nothing came into view that threw any light on the tragedy. At the halt we waited a few minutes for an up train that was then due, in which we travelled back to Greenhithe; an arrangement that not only saved time and effort, but gave Thorndyke the opportunity of observing, with his head out of the window, the conditions of light prevailing in the tunnel and the visibility of one part of the train from the others.

As we came out on to the platform at Greenhithe, Miller looked wistfully at my colleague.

“Did you think of having a look at the body, Doctor?” he asked, adding: “I should feel more satisfied if you would. A local doctor hasn’t had the experience of criminal cases that you and Dr. Jervis have.”

“I don’t suppose that the local doctor would have missed any signs that bore on the cause of death,” said Thorndyke. “But still, an additional examination is at least an extra precaution. Perhaps the station-master will direct someone to show us the way.”

The station-master elected to show us the way himself, and preceded us down the stairs. Reluctantly, I followed Thorndyke, leaving the others on the platform and, as I descended the stairs, I was, for the first time in my professional life, conscious of a shrinking repugnance to the atmosphere of tragedy and death. After all, a doctor has his human feelings. It is impossible to look on the mutilated corpse of an old acquaintance as the mere “subject” of an investigation. But, as a matter of fact, I took no part in the actual examination. I saw that the body still lay on the tarpaulin-covered stretcher and that part of the clothing had been removed, but I stood aloof by the door, leaving the inspection to Thorndyke; who evidently realized my state of mind, for he made his examination in silence and with no suggestion that I should join him.

One thing, however, I did observe, and with considerable surprise. When he had completed his examination of the body, he opened his research case, and took from it the portable finger-print outfit that formed part of its permanent equipment. Taking out the ready-inked copper plate and a couple of cards, he proceeded, in his neat, methodical way, to make a set of ten prints, one of each digit.

“Why are you taking his finger-prints?” I asked. “Does anything hinge on them?”

“No at present,” he replied. “But it is possible that some finger-prints may be found; and, if they may be, it might be very important to be able to say if they were or were not Badger’s. So I am securing the means of comparison while they are available.”

Thus stated, the motive for the proceeding seemed reasonable enough; but yet the explanation left me wondering if there was not something more definite in Thorndyke’s mind. And this vague suspicion was strengthened when, as I helped him to repack the research case, I saw him deposit in it, and pack with extreme care, the derelict cigar which he had picked up in the tunnel. But I made no comment, and as the gruesome business was now completed, I took up the research case and led the way out of the store.

“Apparently,” he said as we ascended the stairs, “the local practitioner was right. There are no signs of any injuries that might have been inflicted before he fell on the line. But one thing is clear. He was certainly alive when the train ran over him and for at least a few seconds after.”

“Then,” said I, “it might really have been an accident.”

“So far as the appearances and condition of the body are concerned, it might. But if there was another person in the compartment and that person has not reported an accident, the probabilities are overwhelmingly in favour of either a
crime or what we may call an incriminating misadventure.”

“What do you mean by an incriminating misadventure?” I asked.

“I mean a misadventure which would probably not have been accepted as such. Miller believes that the other passenger was the escaped prisoner, Frederick Smith. Suppose that Miller is right. Suppose that Badger recognized the man and tried to arrest him. That the man resisted and a struggle occurred. I don’t see why it should unless Badger had handcuffs with him and tried to put them on. But suppose a struggle to have occurred, in the course of which the door became unfastened and Badger fell out. That would have been a pure misadventure. But it is not likely that the man would have reported it, for he would realize the improbability of his statement being believed. He would trust rather to the probability of his presence in the carriage being unknown.”

“I have no doubt that he would,” I agreed, “and wisely, too. For no one would believe his statement. He would be charged with murder and most probably convicted. But you don’t entertain the possibility of a misadventure, do you?

“As a bare possibility, yes. But it is wildly improbable; and still more so if those documents were really in Badger’s pocket and have really disappeared. That is a crucial point. For, if it is certain that they were removed from the wallet, that is not only evidence of a conflict having taken place, but suggests in the strongest possible way that Badger had been rendered unconscious or helpless. But that suggestion at once raises the question, How was he rendered unconscious or helpless? The state of the body seems to exclude physical violence such as throttling or a knock on the head. Yet it is difficult to think of any other means.”

“Very difficult,” I agreed, “particularly in the alleged circumstances—the casual and unexpected meeting of two men in a railway carriage; and if one of those men was, as the theft of the documents seems to imply, a man just escaped from prison, the difficulty is still greater. Such a man would presumably, be unprovided with anything but his fists, indeed the mystery is how he could have procured his ticket.”

“Yes,” Thorndyke assented, “that calls for explanation. But we must not mix up hypothesis and fact. Miller assumes that the man was the prisoner, Smith, and it is possible that he was. But we must not let that possibility influence us. We have to approach the inquiry with a perfectly open mind.”

As he concluded, we came out on to the platform, where we found our friends awaiting us. In a few words Thorndyke communicated to them the results of his inspection, at which Miller was visibly disappointed.

“It is an extraordinary thing,” said he. “Badger was a pretty hefty fellow and a skilled wrestler and boxer. I can’t imagine even a strong man putting him out through the door unless he had disabled him first. And, in any case, you would expect to find some signs of a scrap. Did you propose to make any further examination?”

“It doesn’t seem very necessary,” Thorndyke replied. “But perhaps you might like me to be present when the local doctor does the post-mortem. There are other possibilities besides gross physical injury.”

“That is what I was thinking,” said Miller; “and I should be glad if you could be present at the post mortem. Then I could feel satisfied that nothing had been overlooked. I understand that the inquest is to be held to-morrow afternoon at four o’clock and the post-mortem at two. Can you manage that?”

“I shall have to, if you think it important,” was the reply.

As Miller was making grateful acknowledgments, the station-master approached to convey to us the welcome tidings that a fast train to London was due in a few minutes.

“Are you coming back with us, Superintendent?” Thorndyke asked.

“I may as well,” Miller replied. “The Sergeant will carry on with the case, and I must set some inquiries going at the London end. And, by the way, Cummings, are you returning to Maidstone to-day?”

“Yes, sir,” answered the Chief Officer. “I shall take the next train back.”

“Then,” said Miller, “you had better have those finger-prints of Smith’s photographed and send either the photographs or the original up to Headquarters with the portrait photographs and the personal description. See to it at once, for we may want the information at any moment. In fact we want it now.”

“Very well, sir,” replied Cummings. “I expect the photographs have been done already, but in any case, I will see that you get them some time to-morrow.”

The short remaining interval was occupied by Miller in the delivery of detailed instructions to the Sergeant. Then the train came hissing into the station, and Thorndyke, Miller, and I took our places in a compartment to which we were escorted by our three coadjutors.

VI. — THORNDYKE EXAMINES HIS MATERIAL

ON the way up to Town little was said on the subject of our investigation and that little was mainly contributed by Miller. Thorndyke, unwilling as he always was to go far beyond the ascertained facts, maintained a tactful reticence tempered by a sympathetic interest in the Superintendent’s comments and suggestions.
“What I can’t understand,” said Miller, “is how that fellow managed to get Badger out of the door. It wouldn’t be easy in the case of an ordinary man, but in the case of a man like Badger—a trained police officer and a pretty hefty one at that—it seems incredible.”

“It would seem,” I suggested, with little conviction, “that he must have been taken unawares.”

“But how could he?” retorted Miller. “He knew that he was shut in with an escaped prisoner and that the other man probably knew that he knew it. You can take it that Badger would have watched him like a cat with a mouse. And the other fellow would have had to get the door open. That’s rather a noticeable proceeding. No; when you think of the circumstances, it seems impossible that Badger could have been caught off his guard, and in a tunnel, too, of all places. What do you say, Doctor?”

“I agree with you,” replied Thorndyke, “that it seems impossible that Badger could have been put out by mere physical violence.”

“Are you quite sure that there were no signs of any injury? No bullet wound or marks of a life-preserver or sand-bag, or anything of that sort?”

“I think I can say positively,” Thorndyke answered, “that there was no bullet wound and no bruises on the head, though I shall examine the body more minutely to-morrow when I attend at the post-mortem. As to a sand-bag, that would probably leave no external marks. But it is an infinitely unlikely weapon to be used in a railway carriage, even in a tunnel. The carriage was presumably lighted like this one; and although that lamp gives a mere glimmer, hardly visible in daylight, the carriage would not be dark enough to make the use of a sand-bag practicable.”

“No,” Miller agreed, “it wouldn’t. I was just feeling around for some sort of explanation. What about chloroform? Have you considered that?”

“Yes,” replied Thorndyke, “and I think we can exclude it. At any rate I could discover no trace of it. But, as a matter of fact, it is really not practicable to administer chloroform forcibly to a strong man. The whiff from a handkerchief, producing instant unconsciousness, appertains to fiction. In practice the forcible use of chloroform involves a rather prolonged struggle, and results in very characteristic marks on the skin around the mouth and nose. There were no such marks in this case, nor any other signs what ever.”

“Then,” Miller rejoined disconsolately, “I’m done. There must be some sort of explanation, but I’m hanged if I can think of one. Does anything occur to either of you gentlemen?”

For my part, I was as much in the dark as the Superintendent and had to admit it; and Thorndyke, as I expected, refused to commit himself to any speculative opinions.

“There isn’t much use in theorizing at this stage,” said he, “We want more facts, and we want confirmation of the assumptions that we have been treating as facts. For instance, the identity of the man who was seen to get into the carriage at Strood.”

“M’yes,” Miller agreed reluctantly. “I don’t think there’s much doubt, but, as you say, a little direct proof would be more satisfactory. Probably we shall get some more details in the course of a day or two. Meanwhile, I’m afraid I’ve taken up a lot of your time to very little purpose. We don’t know much more than we did when we started.”

“Apparently we do not,” Thorndyke admitted. “But I don’t regret the expedition. It was desirable for our own satisfaction to go over the ground at once and make sure that we had not missed anything.”

“I’m glad you take that view, Doctor,” said Miller, “but, all the same, you’ve got mighty little for your pains; nothing, in fact, excepting what you have gleaned from your examination of the body, and that doesn’t seem to help us much.”

“It doesn’t,” Thorndyke agreed. “But we must not forget that negative evidence has its value. The exclusion of one possibility after another leaves us eventually with the one that has to be accepted.”

Miller received this rather academic observation without enthusiasm, remarking, truly enough, that the early stages of that sort of investigation were apt to be a little discouraging. “Possibly,” he added, “some thing new may come out at the inquest, though it isn’t likely. And it is just possible that, when we get those finger-prints from Maidstone, we may find that we are dealing with a known criminal. But even that would not prove the fact of the murder.”

“As to that,” said I, “if it can be proved, as apparently it can, that this man was alone with Badger in the compartment when the disaster occurred, that will create a pretty strong presumption of murder.”

“No doubt,” agreed Miller. “But presumption is a different thing from proof. If he should give a plausible account of an accident—such as leaning out of the window of an unfastened door—we shouldn’t believe him, but we couldn’t disprove his statement, and you might find it hard to get a jury to convict. If there is any doubt, the accused is entitled to the benefit of it. What we want is something in the way of positive evidence; and all that we have got is that certain documents have apparently been taken from the person of the deceased.”

“I should call that pretty weighty positive evidence,” said I, “especially as the documents included the suspect’s finger-prints and description. What do you think, Thorndyke?”

“I think,” he replied, “that we shall be in a better position to form opinions after the inquest, when we shall know what facts are really available. And, speaking of the inquest, Miller, what is to be done with regard to notes of the evidence? Are
you employing a shorthand reporter, or shall I bring or send my own man?"

"I don't see that either is necessary," replied Miller. "We can get a copy of the depositions if we want one."

"That may meet your requirements," said Thorndyke, "but it may not suit me so well. I think I will send a reporter of my own, and you can have a copy of the notes if you have any use for them."

The Superintendent accepted this offer with suitable acknowledgments, and the subject dropped for the time. As the train moved out of London Bridge Station, however, I ventured to raise another subject of more immediate interest, at least to me.

"What are we going to do in the matter of food, Thorndyke?" I asked. "Does Polton know when to expect us?"

"Obviously not," was the reply, "as we did not know ourselves. I told him that we should get some food on the way, and I suggest that the Coffee Room at the Charing Cross Hotel will be the best place to stoke up. Perhaps the Superintendent will join us."

"Very good of you, Doctor," said Miller, "but I think I must get on to my office to finish up one or two odd ends. Possibly we shall travel down together to-morrow, but, if not, we shall meet at the inquest. By that time I shall probably have seen those finger-prints from Maidstone."

Accordingly, we separated at Charing Cross, Miller striding away towards the entrance while Thorndyke and I made our way to the Hotel Coffee Room, where, with one accord, we demanded whatever might be ready at the moment. The long fast that our various activities had entailed had disposed us both to find a better use for our jaws than conversation. But as the entée dish emptied and the level in the claret bottle sank, my interest in our quest revived and I began cautiously to put out feelers. It had been evident to me that Thorndyke was not prepared to accept Miller's interpretation of the facts, and the question that I asked myself—and by implication put to him—was, Had he any alternative theory? But my feelers felt nothing but a steady, passive resistance to discussion, which, however, was not entirely unilluminating; for long experience of Thorndyke had taught me that when he was more than usually uncommunicative, he had something up his sleeve.

Now, could he have anything up his sleeve on the present occasion? Was there something that he had seen and the rest of us had overlooked? Naturally, I could not be sure, but there had been so little to see that it seemed hardly possible. His examination of the body could not have yielded any fact that he had not disclosed. It was quite unlike him to withhold any observed fact when he made a report. As I turned over the events of the day, I could recall only two that seemed to involve any obscurity or uncertainty. Thorndyke had taken the dead man's finger-prints. I did not see why. But it was a simple and reasonable proceeding and Thorndyke's explanation had seemed adequate. But was it possible that he had something more definite in his mind?

Again, he had picked up a half-smoked cigar in the tunnel. That I could make nothing of. I could imagine no possible bearing that it could have on the case. The subsequent taking of the finger-prints suggested a suspicion that the cigar had been smoked by Badger. But supposing it had? What light could that fact conceivably throw on the crime? I could perceive no relevancy at all. Nevertheless, the more I reflected on these two incidents, the more strongly did I suspect that they were connected with something definite in Thorndyke's mind; something connected with Badger's finger-prints, or even with those of the other man—which would, indeed, furnish highly relevant and important evidence.

That suspicion deepened when, on our arrival at our chambers, he made his way straight up to the laboratory with an air of evident purpose. There we found our laboratory assistant, Polton, apparently engaged in a post-mortem examination of the dismembered remains of a clock. He greeted us with a crinkly smile of welcome, and, scenting some more alluring activity, abandoned the autopsy and slipped off his stool.

"Is there anything that you are wanting, sir?" he asked, as Thorndyke ran a seeking eye along the shelves.

"Haven't we a holder for objects that are to be photographed?" Thorndyke enquired.

"Yes, sir. The stand forceps," was the reply; and, opening a cupboard, Polton produced an appliance somewhat like an enlarged edition of the stage forceps of a naturalist's microscope—a spring holder supported on a heavy foot and furnished with a universal joint. As Polton set the appliance down on the bench, Thorndyke opened his research case, and, taking from it the envelope containing the cigar, extracted the latter with a pair of forceps and fixed it in the jaws of the holder, which grasped it near the pointed end. Anticipating the next move, I repaired to the cupboard and brought forth an insufflator, or powder spray, and a wide-mouthed bottle filled with a fine, white powder, both of which I placed on the bench without remark. Thorndyke acknowledged the attention with a smile, enquiring:

"What are the odds that we draw a blank?"

"You are gambling on the chance of finding Badger's finger-prints?" I suggested.

"It is hardly a gamble, as we don't stand to lose anything," he replied. "But I thought it worth while to try. There is at least a possibility."

"Undoubtedly," I agreed. "And the probability is not so very remote. What I don't see is the relevancy of their presence or absence. Does it matter to us or to anybody else whether Badger was or was not smoking a cigar when he met his death?"

"That question," he replied, "we may leave until we see what luck we have. The might-have-beens certainly do not
As he was speaking, he filled the container of the spray with the white powder, and, starting the bellows, blew a jet of powder on to the cigar, turning the latter round by degrees until every part of it was covered with a white film. Then, swinging up the arm of the holder until the cigar was upright, he took a little box-wood mallet that Polton had picked out of a rack and handed to him, and began rapidly and lightly to tap the foot of the holder. As the slight concussions were transmitted to the cigar, the film of powder on its surface crept gradually downward, uncovering the dark body by degrees, but leaving a number of light-coloured patches where the powder had adhered more closely. Slowly, as the tapping continued, the loose powder became detached until only the lightest dusting remained; and meanwhile the light patches grew more distinct and defined, and began to show faintly the characteristic linear patterns of finger-prints. Finally, Thorndyke blew gently on the cigar, rotating it as before by means of the universal joint. And now, as the last vestiges of the loose powder were blown away, the finger-prints—or at least some of them—grew suddenly quite clear and distinct.

Polton and I pored eagerly over the curious markings (though it had been almost a foregone conclusion that some finger-prints must appear, since somebody had held the cigar in his fingers) while Thorndyke once more opened his research case and took from it a couple of cards, each bearing five finger-prints and each scribed with the name of Inspector Badger. Laying the two cards on the bench beside the holder, he took a magnifying glass down from a nail on the wall and carefully scanned through it first the prints on the card and then those on the cigar. After several prolonged comparisons he seemed to have reached a conclusion, though he made no remark but silently handed me the glass.

I began with a thorough inspection of the prints on the cards. They were beautifully distinct, having been skillfully executed with finger-print ink, and showed, with the sharpness of an engraving, not only the ridge-pattern but the rows of tiny white dots on the black lines which represented the mouths of the sweat glands. When I had to some extent memorized the patterns, I turned my attention to the cigar, selecting first a rather large print which looked like that of a thumb. It was slightly blurred as if the thumb had been damp, but it was quite legible; and when I compared it with the two thumb prints on the card, I recognized it pretty confidently as that of the left hand.

Having reached a positive result, I felt no further examination was worthwhile. But before giving my decision, I handed the glass to Polton, who took it from me with a wink of satisfaction and bent eagerly over the cards. But I think he had already made his observations with the naked eye, for, after a very brief inspection, he delivered his verdict.

"It's a true bill, sir." He pointed at the large print with a pencil and added:

"That is Mr. Badger's left thumb."

"That was my opinion, too," I said in confirmation.

"Yes," Thorndyke agreed, "I think there is no doubt of it, though it will have to be verified by a detailed comparison of the separate characters. But it establishes a prima facie case. There are a number of other, less distinct prints, but we need not examine them now. The important thing is to secure a permanent record which can be safely handled. How many photographs shall we want, Polton?"

"You will want to show every part of every finger-print free from distortion," said Polton, stating the problem and slowly rotating the cigar as he spoke. "Six photographs would do it at a pinch, but if it is important, I should do twelve and make it safe. That would give you about four views of each finger-print."

"Very well, Polton," said Thorndyke, "we will make twelve exposures. And if you have the plates ready, we will get them done at once."

As the making of twelve exposures promised to be a tedious business and my assistance was not required, I took one or two sheets of paper from the rack, and, laying them on the work-bench, proceeded to occupy myself usefully in drawing up a summary of the day’s experiences and the facts, such as they were, which had transpired during our investigations. But they were few and apparently not very significant, so that I was not long in coming to the end of my summary; when I laid down my pen and transferred my attention to Thorndyke’s proceedings.

It was evident that the discovery of Badger’s thumb-print had not exhausted his interest in the derelict cigar, for, as each negative was developed and washed, he put it to the bench, and, holding it over a sheet of white paper under the lamp, scrutinized it through his lens and compared it with the prints on the cards. I did not quite understand the object of this detailed comparison, for the identification of the one print had established the fact that the cigar had been smoked by Badger, whatever the significance of that fact might be. The identification of further prints seemed rather like flogging a dead horse. Eventually I was moved to make a remark to that effect.

"That is true enough," said he, "but we have to get all the information that our material will yield. As a matter of fact, I am not looking for the remainder of Badger’s prints; I am looking to see if there are any prints which are not his."

"And are there?"

"Yes, there is at least one and a problematical second one, but that is practically obliterated by the heat from the burnt end. The other is a fairly clear print, apparently a thumb; and it is certainly not either of Badger’s thumbs."

"From which, I presume, you infer that the cigar was given to Badger by someone else?"

"That is the reasonable inference; and as he was alone with another man in the carriage, the further inference is admissible that the giver of the cigar was that other man. That, however, is only a probability which will have to be
considered in relation to the other facts."

"Yes," I agreed. "It might have been given to him at Maidstone to smoke in the train. I don’t see how you are to prove either view, or that you would be much forrader if you did."

I was, in fact, rather puzzled by the intense interest that Thorndyke displayed in this cigar. For, surely, nothing could be less distinctive or more hopeless for purposes of identification than a commodity which is manufactured in thousands of identical replicas. But as Thorndyke must necessarily realize this, I could only suppose that there was some point the significance of which I had overlooked; and with this probability in my mind, I followed my colleague’s proceedings closely in the hope that the point which I had missed would presently emerge.

When the last of the negatives had been developed and examined, Thorndyke took the cigar out of the holder and wiped it clean of all traces of the powder.

"That," he remarked, "is the advantage of carrying out these investigations ourselves. If Miller had seen those fingerprints, he would have insisted on annexing the cigar to produce as an ‘exhibit’ at the trial—if there ever is one. Whereas our photographs, properly attested, are equally good evidence, and the cigar is at our disposal for further examination."

The advantage was not very obvious to me, but I discreetly abstained from comment, and he continued:

"It is a rather unusual cigar; considerably above the ordinary dimensions. The part which remains is five inches and an eighth long. Judging by the thickness—a full three-quarters of an inch—the complete cigar was probably well over six inches in length. How much over we can’t say. There are some enormously long cigars made for civic banquets and similar functions."

"No doubt," said I, "a cigar merchant could identify the type and give us the actual dimensions."

"Probably," he agreed. "But it is enough for us to note that it was an exceptionally large cigar and pretty certainly an expensive one. And then, as if the size were not enough, there is the strength of the tobacco. The appearance of the leaf tells us that it is an uncommonly strong weed. Taking the size and the strength together, it would be rather more than enough for an ordinary smoker."

All of this was doubtless true, but it seemed to have no bearing on the question as to how Inspector Badger had met with his death. I was still puzzling over Thorndyke’s apparently irrelevant proceedings when I received a sudden enlightenment. Having finished his examination of its exterior, Thorndyke laid the cigar on the bench and with a long thin knife, cut it cleanly lengthwise down the middle. The action set a chord of memory vibrating, and incidentally engendered in me a desire to kick myself. For, years ago, I had seen a cigar cut open another cigar.

"Ha!" I exclaimed. "You are thinking of that poisoned cheroot that Walter Hornby sent you."

"That we inferred to have been sent by him," Thorndyke corrected. "We were pretty certainly right, but we had no actual proof. Yes, it seemed possible that this might be a similar case."

I looked closely at the cut surfaces of the two halves. In the case of the cheroot, the section had shown a whitish patch where the alkaloid—it was atoxine, I remembered—had dried out of the solution. But nothing of the kind was visible in these sections.

"I don’t see any signs of the cigar having been tampered with," said I. "There doesn’t seem to be any trace of a hypodermic needle, as there was in the cheroot, or any crystals or foreign matter of any kind."

"As to the needle," said Thorndyke, "the heat and the steam from the burning end would probably obliterate any traces. But I am not so sure of the absence of foreign matter. There is certainly no solid material, but the whole of the inside has a greasy, sodden appearance which doesn’t seem quite natural, and the smell is not like that of a normal cigar."

I picked up one of the halves and cautiously sniffed at it.

"I don’t make out anything abnormal," said I. "It is devilish strong and rather unpleasant, but I can’t distinguish any smell other than that of virulently rank tobacco."

"Well," said Thorndyke, "there is no use in guessing. We had better ascertain definitely. And as the foreign matter, if there is any, appears to be a liquid, we will begin by making an attempt to isolate it."

He glanced at Polton, who, having put the negatives to drain, had now reappeared and was casting wistful glances at the divided cigar.

"Will you want any apparatus prepared, sir, or any reagents?" he asked.

"A fairly wide-mouthed ten-ounce stoppered bottle and some sulphuric ether will do for the start," replied Thorndyke; and as Polton went to the chemical side of the laboratory in search of these he laid a sheet of paper on the bench, and, placing on it one of the halves of the cigar, proceeded to cut it up into fine shreds. I took possession of the other half and operated on it in a similar manner; and when the whole cigar had been reduced to a heap of dark-brown, clammy “fine-cut” tobacco, we shot it into the bottle, which Thorndyke then half-filled with ether.

"This is going to be a long job," I remarked, looking a little anxiously at my watch. "This stuff ought to macerate for two or three hours at least."

"We need not complete the examination to-night," Thorndyke replied, reassuringly, as he gave the bottle a shake. "If we
can decide whether there is or is not any foreign substance present, that will be enough for our immediate purposes; and we ought to be able to settle that in half an hour."

Thorndyke's estimate seemed to me rather optimistic, unless—as I was disposed to suspect—he had already decided that some foreign substance was present and had formed some opinion as to its nature. But I made no comment, contenting myself with an occasional turn at shaking the bottle or prodding the mass of sodden tobacco with a glass rod.

At the end of half an hour, Thorndyke decanted off the ether—now stained a brownish yellow—into a beaker which he stood in a pan of warm water to hasten the evaporation, while Polton opened the windows and door to let the vapour escape.

"It's an awful waste of material, sir," he remarked, disapprovingly. "We ought to have done this in a retort and recovered the ether."

"I suppose we ought," Thorndyke admitted, "but this is the quicker way, and time is more precious than ether. Dr. Jervis wants to get done and go to bed."

As he was speaking, we all watched the beaker, in which the liquid dwindled in bulk from minute to minute, growing darker in colour as it grew less in volume. At length it was reduced to a thin layer at the bottom of the beaker—less than half a teaspoonful—and as this remained unchanged in volume, and the odour of ether became rapidly less intense, it was evident that evaporation had now ceased. Thorndyke took up the beaker, and, having smelled the contents, turned it from side to side to test the fluidity of the liquid; which flowed backwards and forwards some what sluggishly like a thinnish oil.

"What do you say it is, Jervis?" he asked, handing the beaker to me.

"Probably a mixture," I replied. "But it smells like nicotine and it looks like nicotine, excepting as to the colour; and as it has been extracted from a cigar, I should say that it is nicotine, stained with colouring matter."

"I think you are right," he said, "but we may as well confirm our opinions. The colour test will not answer very well owing to the staining, but it will probably work well enough to differentiate it from coniine, which it resembles in consistency, though not very much in smell. Can we have a white tile, Polton, or the cover of a porcelain capsule?"

From the inexhaustible cupboard Polton produced a small white, enamelled tile which he laid on the bench, while Thorndyke picked up a glass rod which he dipped into the liquid in the beaker and then touched the middle of the tile, leaving a drop on the white surface.

"I have rather forgotten this test," said I, leaning over the tile, "but it seems to me that this drop shows quite a distinct green tint in spite of the staining. Is that what you expected?"

"Yes," he replied. "The green tint is characteristic of nicotine. Coniine would have given a pink colour. But we had better try Roussin's test and settle the question quite definitely. We shall want two test tubes and some iodine."

While Polton was supplying this requisition, Thorndyke took up a clean filter paper and laid it on the drop of liquid on the tile, which it immediately soaked up, producing an oily spot of a distinct green colour.

"That," said he, "further supports the suggestion of nicotine. But it is not conclusive in the way that a chemical test is."

Once more I had the feeling that he was flogging a dead horse, for there seemed to be no reason whatever for doubting that the liquid was nicotine. However, I kept this view to myself, taking the opportunity to refresh my memory as to the procedure of Roussin's test, while Polton followed the experiment with breathless interest.

It was quite a simple test. Into one test tube Thorndyke dropped a few particles of iodine and poured on them a small quantity of ether. While the iodine was dissolving, he poured a little ether into the other test tube, and, with a pipette, dropped into it a few minims of the liquid from the beaker. When the iodine was dissolved, he poured the solution into the other tube. Almost immediately a brownish-red precipitate separated out and began to settle at the bottom of the tube.

"Is that according to plan?" I asked.

"Yes," he replied. "The result is positive, so far, but we must wait a few minutes for the final answer to our question. If this liquid is nicotine, the precipitate will presently crystallize out in long, slender needles of a very characteristic colour—ruby red by transmitted light and dark blue by reflected light."

He stood the test tube in a stand, and, seating himself on a high stool, proceeded to fill his pipe, while Polton stationed himself opposite the test tube stand and kept an expectant eye on the little mass of sediment. Presently I saw him pick up the magnifying glass, and, having drawn down an adjustable lamp, make a closer inspection. For three or four minutes he continued to watch the test tube through the glass, assisting his observations by placing a sheet of white paper upright behind the stand. At length he reported progress.

"It is beginning to crystallize—long, thin blue crystals."

"Try it against the light," said Thorndyke.

Very slowly and carefully, to avoid disturbing the formation of the crystals, Polton lifted the tube from its stand and held it between the lamp and his eye.

"Now they are red," he reported, "like thin splinters of garnet."
I took the tube from his hand and examined the growing mass of fine, needle-like crystals, crimson against the light and deep blue when the light was behind me, and then passed it to Thorndyke.

“Yes,” he said when he had verified our observations, “that is the characteristic reaction. So now our question is answered. The liquid that we extracted from the cigar is nicotine.”

“Well,” I remarked, “it has been a very interesting experiment, and I suppose it was worth doing, but the result is not exactly sensational. Nicotine is what one might expect to extract from a cigar, though I must say that the amount is greater than I should have expected, especially as we haven’t got the whole of it.”

Thorndyke regarded me with an indulgent smile.

“My learned friend,” said he, “has allowed his toxicology to get a little rusty, and thereby has missed the point of this experiment. It is not a question of quantity; there ought not to have been any nicotine at all.”

As I gazed at him in astonishment and was beginning to protest, he continued: “The nicotine that we dissolved out with the ether was free nicotine. But there is no free nicotine in a cigar. The alkaloid is combined with malic acid. If this had been a normal cigar, we should have got no free nicotine until we had treated the cigar—or a decoction of it—with a caustic alkali, preferably caustic potash.”

“Then,” I exclaimed, “this nicotine had been artificially introduced into the cigar.”

“Exactly. It was a foreign substance, although it happened to be a natural constituent of a cigar. Probably it was injected into the open end with a hypodermic syringe. But at any rate there it was; and I think that its presence disposes of Miller’s question as to how Inspector Badger was put out of the carriage on to the line.”

“You think that he was suffering from nicotine poisoning?”

“I have no doubt of it. We have seen that he smoked at least an inch of this cigar. The cigar contained naturally anything up to 8 per cent of combined nicotine, part of which would pass into the smoke. To this had been added not less than half a fluid drachm of free nicotine. Now, when we consider that the lethal dose of nicotine is not more than two or three drops, and that more than that amount must have been contained in the part that was burned, we are pretty safe in assuming that the smoker would have been reduced, at least, to a state of physical helplessness.”

“You have no doubt that he was alive when the train went over him?”

“No. But though he was undoubtedly alive, I think it quite likely that he was moribund. He had apparently taken nearly, if not quite, the full lethal dose.”

“It is a little surprising,” I remarked, “that he went on smoking so long; that he did not grow suspicious, seeing that he knew who his fellow passenger was, as apparently he did.”

“I don’t think it is very surprising,” replied Thorndyke. “The procedure had been so well calculated to avert suspicion. Let us suppose—as probably happened—that the stranger produces a cigar-case. There are two cigars in it—one, no doubt, bearing a private mark. The stranger takes the marked cigar and holds out the case to Badger. Now Badger, as we know, usually smoked a pipe, but he was very partial to a cigar, and he preferred a strong one. He would certainly have taken the cigar and would have been impressed by its strength. Probably, owing to the presence of the free nicotine, the cigar would not have burned freely. He would have had to draw at it vigorously to keep it alight, and so would have drawn into his mouth a large amount of the vaporized nicotine.

“Presently he would begin to feel unwell, but at first he would feel nothing more than ordinary tobacco-sickness, and before he had time to become suspicious, he would be in a state of collapse. Nicotine, you will remember, is probably, with the exception of hydrocyanic acid, the most rapid of all poisons in its action.”

“Yes: but if Badger was really in a moribund state, it would seem that it was a tactical mistake to throw him out on the line. If the murderer had simply sat him up in a corner and got out at the next station, no suspicion of any crime would have arisen. The body might not have been observed until the train reached London, and when it was discovered and examined, death would have appeared to have been due to natural causes, or to excessive smoking, if the nicotine poisoning had been detected.”

“I don’t think that would have done,” Jervis, Thorndyke replied. “Your plan would have involved too many contingencies. The next stop was at Dartford—a fairly busy junction. Someone might quite probably have got in there and seen the murderer getting out. And again, Badger might have recovered. You can usually tell when a man is dead, but it is difficult even for an expert to be certain that an insensible man is dying. No, this man was taking no risks, or as few as possible. And he was a desperate man. Probably, Badger was the only officer who knew him, and he was aware of the fact. His safety depended on his getting rid of Badger.”

“I gather,” said I, “that you don’t accept Miller’s view as to the identity of the other passenger. It struck me that he was rather jumping at conclusions.”

“He was, indeed,” Thorndyke agreed, “in a most surprising manner for so shrewd and experienced an officer. It was a positive obsession. I never entertained the idea for a moment, for, apart from the total absence of evidence, it bristled with impossibilities. The man was a runaway prisoner. He was, it is true, wearing his own clothes, but he would probably have no hat and his pockets would almost certainly be empty. How could such a man have got a first-class ticket? And how could
he have got away from Maidstone to make his appearance so promptly at Strood? The thing is inconceivable.

“But we had better adjourn this discussion. It is past midnight, and Polton is yawning in a way that threatens us with the job of reducing a dislocation of the lower jaw. The rest of the nicotine extraction can wait till the morning, if it is necessary to pursue the question of quantity. The actual amount is of no great consequence. The presence of free nicotine is the essential fact, and we have established that.”

“And thereby,” said I, as the meeting broke up, “prepared quite a pleasant little surprise for Superintendent Miller.”

---

**VII. — THE PERSISTENCE OF SUPERINTENDENT MILLER**

As I undressed, and for the short time that I lay awake, I revolved in my mind the amazing events of the evening; and in the morning, no sooner was I in possession of my waking senses than the question presented itself afresh for consideration. What was it that had impelled Thorndyke to secure and preserve that cigar? It had looked like a mere chance shot. But all my knowledge and experience of Thorndyke and his ways was against any such explanation. Thorndyke was not in the habit of making chance shots. Moreover, the act had been deliberate and considered. He had seen the cigar by the instantaneous flash of the lamp; he had walked on for a few paces, and then he had slipped on a glove and gone back to pick up the cigar and bestow it in his pocket with evident care. In those few instants of reflection, something must have occurred to him that suggested the incredible possibility that had been turned into ascertained fact in the laboratory. Now, what could that something have been?

When we met at the breakfast-table, I proceeded without delay to present my problem for solution.

“I have been wondering, Thorndyke,” said I, “what made you pick up that cigar. Evidently, the results of the examination were not entirely unexpected.”

I could see that my question, also, was not unexpected. But he did not reply immediately, and I continued:

“That cigar was perfectly normal to look at. Yet it seems as if some intuition had suggested to you the possibility of its amazingly abnormal qualities. It is an utter mystery to me.”

“I pray you, Jervis,” he replied, smilingly, “not to accuse me of intuitions. I have always assumed that intuitions are for those who can’t reason. But let us consider the circumstances surrounding that cigar. We will take first the prima facie appearances, disregarding, for the moment, our own personalities and our special knowledge and experience.

“Here was a cigar which had been lighted and thrown away, less than half-smoked. Now, its condition offered evidence, at a glance, of some sudden change in the state of mind of the smoker. That would be true even of a cigarette. Normally, a man either wants a smoke or he does not. If he does, he lights the cigarette and smokes it. If he does not, he doesn’t light it. But if he lights it and then throws it away, that act is evidence of a change of purpose; and that change is almost certainly determined by some change in his circumstances or surroundings.

“But what is true of a cigarette, which costs about a penny, is more emphatically true of a cigar of an expensive type, which must have cost at least half a crown. There must have been some definite reason for its having been thrown away. But within a few yards of the place where the cigar was lying, a man had been murdered. There had been two men in a smoking-compartment. If deceased had been smoking a cigar, he would obviously not have finished it; and the same is almost certainly true of the other. Hence there was an appreciable probability that this cigar had some connection with the murder. But, since a cigar which has been smoked is practically certain to bear finger-prints, it would have been reasonable in any case to secure the cigar and see, if possible, whose finger-prints it bore.

“So much for the general aspects of the incident—which I should have thought would have been obvious to Miller. We, however, were not concerned only with the general aspects. We had special knowledge and special experience. I have told you how, in the early days of my practice, when I had little to do, I used to occupy myself in the invention of crimes of an unusual and ingenious kind and in devising methods of detection to counter them. It was time and effort well spent; for each crime that I invented—and circumvented—though it was imaginary, yet furnished actual experience which prepared me to deal with such a crime if I should encounter it in real life. Now, among the criminal methods which I devised was the use of a cigar as the means for administering poison.”

“Yes,” said I, “I remember; and very fortunate it was for you that you did. The fact that the possibility was in your mind probably saved your life when our friend, Hornby, sent you that poisoned cheroot.”

“Exactly,” he agreed. “The imaginary case had the effect of a real case; and when the real case occurred, it found me prepared. And now let us apply these facts to the present case. You heard Miller’s sketch of the tragedy as he had heard it told through the telephone, and you will remember that he put his finger on the point that most needed explanation. How had Badger been put out of the carriage on to the line? According to the report, no gross injuries had been found. He had not been shot or stabbed or bludgeoned. He seemed simply to have been thrown out. Yet how could such a thing be possible? A Metropolitan police-officer is a formidable man, and Badger was a fine specimen of his class—big, powerful, courageous, and highly trained in the arts of offence and defence. He could not have been off his guard, for he knew that he was travelling with a criminal and must have been prepared for an attack. How then could he have been thrown out? That was Miller’s difficulty, and it was a real one, assuming that the report had given the true facts.

“The train journey down gave us time to think it over. That time I employed in turning over every explanation that I
we have actually ascertained
But they were murder and effectually excludes the possibility of misadventure. convicted him of the murder beyond any was a very strong motive.
and leave no trace. What is the second objection?
I was thinking of the fact—if it is a fact—that he took the risk of stealing Smith's finger-print papers from the body. It was a very serious risk. For if he had been stopped and searched and they had been found on his person, that would have convicted him of the murder beyond any question. And, moreover, the very fact that they were taken furnishes evidence, of murder and effectually excludes the possibility of misadventure. The taking of such a risk points to a very strong motive. But they were Smith's finger-prints; and if he were not Smith, what strong motive could he have had for taking them?" "Admirably argued," Thordyke commented. "But perhaps we had better postpone the consideration of that point until we have actually ascertained that the papers were really taken from the body. The point is of importance in more than one
respect. As you, very justly remark, the taking away of these papers converts what might have been accepted as a misadventure into an undeniable murder. And the man who took them—if he did take them—could not have failed to realize this. You are certainly right as to the strength of the motive. The question that remains to be solved is, What might have been the nature of that motive? But I think we shall have to adjourn this discussion."

As he spoke, I became aware of footsteps ascending the stairs, and growing rapidly more audible. Their cessation coincided with a knock at the door, which I instantly recognized as Miller’s. I sprang up and threw the door open, whereupon the Superintendent entered and fixed a mock-reproachful eye on the uncleared breakfast-table.

“Well, gentlemen,” he said, by way of greeting, “I thought I would just drop in and give you the news in case you were starting early. You needn’t. The post-mortem is fixed for two-thirty, and there is nothing else for you to do.”

“Thank you, Miller,” said Thorndyke. “It was good of you to come round. But, as a matter of fact, we are not going—at least, I am not, and I don’t think Jervis is.”

The Superintendent’s jaw dropped. “I am sorry to hear that,” said he in a tone of very real disappointment. “I was rather banking on your getting us some thing definite to go on. We haven’t got much in the way of positive evidence.”

“That,” Thorndyke answered, “is why we are not going. We have got some positive evidence; and we think—and so will you—that we had better keep it to ourselves, at least for the present.”

The Superintendent cast an astonished glance at my colleague.

“You have got some positive evidence!” he exclaimed. “Why; how the deuce—but there, that doesn’t matter. What have you discovered?”

Thorndyke opened a drawer and produced from it a pack of mounted photographs and the two cards bearing Badger’s finger-prints, which he laid on the table.

“You may remember, Miller,” he said, “pointing out to me in the tunnel that someone had thrown away a half-smoked cigar.”

“I remember,” the Superintendent replied. “An uncommon good weed it looked, too. I had half a mind to pick it up and finish it—in a holder, of course.”

“It’s just as well that you did not,” Thorndyke chuckled. “However, I picked it up. I thought there might possibly be some finger-prints on it. And there were. Some of them were Badger’s. But there were some others as well.”

“How were you able to spot Badger’s finger-prints?” Miller demanded in a tone of astonishment.

“I took the records from the body,” Thorndyke replied, “on the chance that we might want them.”

Miller stared at my colleague in silent amazement.

“You are a most extraordinary man, Doctor,” he exclaimed, at length. “You seem to have the gift of second sight. What on earth could have made you—but there, it’s no use asking you. Are these poor Badger’s prints?”

“Yes,” Thorndyke answered, “and these are the photographs of the cigar with the prints developed on it.”

Miller pored eagerly over the photographs and compared them with the prints on the cards.

“Yes,” said he, after a careful inspection, “they are clear enough. There is poor old Badger’s thumb as plain as a pikestaff. And here is one—looks like a thumb, too—that certainly is not Badger’s. Now we are going to see whose it is.”

He spoke in a tone of triumph, and as he spoke, he whisked out of his pocket, with something of a flourish, a large leather wallet. From this he extracted a blue document and spread it out on the table. On it, among other matter, were four sets of finger-prints—the “tips” of the two hands, both sets complete, and the two sets of “rolled impressions,” of which those of the right hand consisted only of two perfect impressions and a smear. Miller confined his attention principally to the tips, glancing backward and forward from them to the photographs, which were spread out on the table. And, watching him, I was sensible of a gradual change in his demeanour. The triumphant air slowly faded away, giving place, first to doubt and bewilderment, and finally to quite definite disappointment.

“Nothing doing,” he reported, handing the paper to Thorndyke. “They are not Smith’s finger-prints. Pity. I’d hoped they would have been. If they had been, they would have fixed the murder on him beyond any doubt. Now we shall have to grub about for some other kind of evidence. At present, we’ve got nothing but the evidence of the station-master at Strood.”

Thorndyke looked at him with slightly raised eyebrows.

“You seem,” said he, “to be overlooking the importance of those other finger-prints. If they are not Smith’s, they are somebody’s; and the person who made them is the person who gave Badger that cigar.”

“No doubt,” Miller agreed. “But what about it? Does it matter who gave him the cigar?”

“As it happens,” Thorndyke replied, “it matters a great deal. We have analysed that cigar and we found that it contained a very large dose of a deadly volatile poison.”

Miller was thunderstruck. For some moments he stood, silently gazing at Thorndyke, literally open-mouthed. At length, he exclaimed in a low, almost awe-stricken tone:
“Good God, Doctor. This is new evidence with a vengeance! Now we can understand how poor old Badger was got out on to the line. But, how in the name of fortune came you to analyse the cigar?”

“There was just the bare possibility,” Thorndyke replied. “We thought we might as well make the trial.”

Miller shook his head. “It’s second sight, Doctor. There’s, no other name for it. It looks as if you had spotted the poison in the cigar as it lay on the ground in the tunnel. You are a most astonishing man. But the question is, how the deuce he got hold of that cigar?”

“Who?” demanded Thorndyke. “You don’t, surely, mean Smith?”

“But,” Thorndyke protested with a shade of impatience, “you have just ascertained, beyond any reasonable doubt, that the cigar was given to Badger by some other person.”

But the Superintendent was not to be moved from the conviction that apparently had possession of his mind. “Those other prints,” he insisted, “must be the prints of the man from whom Smith got the cigar. We shall have to find out who he is, of course. But it is the murderer we want. And the murderer is Frederick Smith, or whatever his real name is.”

Thorndyke’s sense of humour apparently got the better of his vexation, for he remarked with a low chuckle:

“It seems odd for me to pose as the champion of finger-print evidence. But, really, Miller, you are flying in the face of all the visible facts and probabilities. There is absolutely nothing to connect the man Smith with that cigar.”

“He may have worn gloves,” suggested Miller.

“He may have worn a cocked hat,” retorted Thorndyke. “But there is no reason to believe that he did. Why do you cling to the unfortunate Smith in this tenacious fashion?”

“Well,” rejoined Miller, “look at the description on his paper and then recall what the station-master at Strood said.”

Thorndyke took up the paper and read aloud:

“Height, 67 inches; weight, 158 pounds; rather thick-set, muscular build. Hair, darkish red; eyes, reddish brown; complexion, fresh; nose, straight, medium size, rather thick and distinctly red. Yes, that seems to agree with the station-master’s description. I see that he gives no address, but describes himself as a plumber and gas-fitter.”

“Probably that is right,” said Miller. “A considerable proportion of the men who take to burglary started life as plumbers and gas-fitters. Their professional training gives them an advantage.”

“It must,” I remarked a little bitterly, recalling the ravages of a gas-fitter on my own premises. “There seems to be a natural connection between gas-fitting and house-breaking.”

“At any rate,” said Thorndyke, who was now inspecting the photographs—one profile and one full face—“the description fits the man’s presumed avocation, without insisting on the gas-fitting. It is a coarse, common face. Not very characteristic. He might be a burglar or just simply a low-class working-man.”

“Exactly,” the Superintendent agreed. “It’s the sort of mug that you can see by the dozen in the yard at Brixton or in any local prison. Just a common, low-grade man. But that hasn’t much bearing on our little problem.”

“I don’t think I quite agree with you there, Miller,” said Thorndyke. “The man’s general type and make up seem to have a rather important bearing. We are dealing with a crime that is distinctly subtle and ingenious, and which seems to involve a good deal more knowledge than we should expect an ordinary working-man to possess. The face fits the assumed character of the man; but it does not fit the crime. Don’t you agree with me?”

“I’ll not deny,” the Superintendent conceded, grudgingly, “that there is something in what you say. Probably, we shall find that there was some man of a different class behind Smith.”

“But why insist upon Smith at all? The poisoned cigar is the one solid fact that we have and can prove. And, as you have admitted, we have not a particle of evidence that connects him with it. On the contrary, the evidence of the finger-prints clearly connects it with someone else. Why not drop Smith, at least provisionally?”

Miller shook his head with an air of resolution that I recognised as hopeless.

“Theory is all very well, Doctor,” he replied, “and I realise the force of what you have pointed out. But you remember the old story of the dog and the shadow. The dog who let go the piece of meat that he had in order to grab the other piece that he saw reflected in the water was a foolish dog. I’m not going to follow his example. This man, Smith, was seen to get into the carriage with Badger. He must have been in the carriage when Badger was killed; and no one else was there. If he didn’t murder Badger, it’s for him to explain how the thing happened. And I fancy he’ll find the explanation a bit difficult.”

Thorndyke seemed, for a moment, inclined to pursue the argument. But then he gave up the attempt to convince the Superintendent and changed the subject.

“What was the charge against Smith?” he asked.

“He was charged with uttering counterfeit paper money,” Miller replied. “It was a silly affair, really. I can’t think how the magistrate came to commit him. It seems that he went into a pub in Maidstone for a drink and tendered a ten-shilling
note. The publican spotted it at once as a bad one and he gave Smith in charge. At the police station he was searched and two more notes were found on him. But they were both genuine and so was the rest of the money that he had about him. His statement was that the note had been given to him in change, and that he did not know that it was bad; which was probably true. At any rate, I feel pretty sure that the Grand Jury would have thrown out the bill. He was a mug to complicate matters by bolting.”

“So, as an actual fact, there is no evidence that he was a criminal at all. He may have been a perfectly respectable working-man.”

“That is so,” Miller agreed rather reluctantly, “excepting that Badger seemed to have been satisfied that he was the crook that he had been on the look-out for.”

“As he never saw the man,” said Thorndyke, “that is not very conclusive. Do you know how the escape was managed?”

“Only in a general way,” replied Miller. “It doesn’t particularly concern me. I gather that it was one of those muddles that are apt to occur when prisoners are wearing their own clothes. Got himself mixed up with a gang of workmen. But he’d better have stayed where he was.”

“Much better,” Thorndyke agreed with some emphasis. “But, to return to the case of the unknown man who prepared the poisoned cigar, I think you will agree with me that we had better keep our own counsel about the whole affair.”

“I suppose so,” answered Miller. “At any rate, I think you are right to keep away from the inquest. The coroner might ask you to give evidence, and then you’d have to tell all you know, and the story would be in every blessed newspaper in the country. I take it you are prepared to swear to the poison in that cigar?”

“Certainly; and to produce the poison in evidence.”

“And you are going to let me have a photograph of those finger-prints?”

“Of course. There is a set ready for you now, including two of Badger’s. And, as to those from the cigar, it is just possible that you may find them to be those of some known person.”

“It’s possible,” Miller admitted, “but I don’t think it very likely.”

“Nor do I,” said Thorndyke, with a faint smile; by which I judged that he realized, as I did, that Miller’s suspicions, even in the matter of the cigar, were still riveted on the elusive Smith.

“With regard to this paper of Smith’s,” said Thorndyke, as he handed Miller the set of photographs that had been reserved for him; “I should like to take a copy of it for reference. A photographic copy, I mean, of the portraits and the finger-prints.”

Miller looked a little unhappy. “It wouldn’t be quite in order,” he objected. “An official document, you know, and a secret one at that. Is it of any importance?”

“It is impossible to say, in advance,” replied Thorndyke. “But I shall be working at the case on your behalf and in collaboration with you. It might be important, on some occasion, to be able to recognize a face or a finger-print. Still, if it is not in order, I won’t press the matter. The chances are that the copy will never be needed.”

But Miller had reconsidered the question. He was not going to put any obstacles in Thorndyke’s way.

“If you think a copy would be helpful,” said he, “I’ll take the responsibility of letting you have one. But I can’t let the document go out of my possession. Can you take it now?”

“Yes,” Thorndyke replied. “It will be only a matter of a minute or two, to make one or two exposures.”

Without more ado, he took the document and went off with it to the laboratory. As he disappeared, the Superintendent commented admiringly on the efficiency of our establishment.

“Yes,” I replied, with some complacency (though the efficiency was none of my producing), “the copying camera is a great asset. There it is, always ready at a moment’s notice to give us a perfect facsimile of any thing that is set before it—an infallible copy that will be accepted in any court of law, But you have quite as good an outfit at the Yard.”

“Oh yes,” Miller agreed, “our equipment and organization are good enough. But, in a public department, you can’t get the flexibility and adaptability of a private establishment like yours, where you make your own rules and use your own judgment as to obeying them. This can’t be the Doctor, already.”

It was, however, Thorndyke had just made the exposures and left the development to be done later. He now returned the document to the Superintendent, who, having carefully bestowed it in his pocket with the photographs, rose to take his departure.

“I hope, Doctor,” he said, as he shook hands with Thorndyke, “that I haven’t seemed unappreciative of all that you have done. That discovery of yours was a most remarkable exploit—a positive stroke of genius. And it has given us the only piece of real evidence that we have. Please don’t think that I’m not grateful.”

“Tut, tut,” said Thorndyke, “there is no question of gratitude. We all want to catch the villain who murdered our old friend. Are you going to the inquest?”

“No,” replied Miller. “I am not wanted there; and, now that you have given me this new information, I feel, like you, that
I had better keep away, for fear of being compelled to let the cat out of the bag. You said you were sending a shorthand reporter down to take notes for you."

"Yes," said Thorndyke; "Polton has made all the arrangements, and has told our man to type the notes out in duplicate so that you can have a copy."

"Thanks, Doctor," said Miller. "I think they may be useful, after all, particularly the station-master's evidence concerning the man he saw at Strood."

"Yes," agreed Thorndyke. "It will be a great point if he can recognize the prison photograph—and an almost equally great one if he cannot."

I seemed to gather from the Superintendent's expression that he did not view the latter contingency with any great enthusiasm. But he made no rejoinder beyond again wishing us "Good morning," and at length took his departure, escorted to the landing by Thorndyke.

VIII. — A REVIEW OF THE EVIDENCE

WHEN Thorndyke re-entered the room, closing the oak door behind him, he appeared to be in a thoughtful and slightly puzzled frame of mind. For a minute or more, he stood before the fireplace filling his pipe in silence and apparently reflecting profoundly. Suddenly he looked up at me and asked:

"Well, Jervis; what do you think of it all?"

"As to Miller? I think that he has his nose glued to the trail of Mr. Frederick Smith."

"Yes," said he. "The Smith idea almost amounts to an obsession; and that is a very dangerous state of mind for a detective superintendent. It may easily lead to a bad miscarriage of justice."

"Still," I said, "there is something to be said for Miller's point of view. The man who got into the train at Strood did certainly agree, at least superficially, with the official description of the man Smith."

"That is quite true," Thorndyke admitted. "The report of the evidence at the inquest will show what sort of description the station-master is prepared to swear to. But I don't feel at all happy as to Miller's attitude. We shall have to watch events closely. For we are deeply concerned in this investigation. And it will be just as well if we go over the facts that are known to us and consider what our own attitude must be."

He took up a pencil and a note-block, and, dropping into an easy chair, lit his pipe and opened the discussion.

"I think, Jervis," he began, "we are justified in assuming that the man who got into the carriage at Strood is the man who murdered Badger."

"I think so," I agreed. "That is, if we assume that it was really a case of murder. Personally, I have no doubt on the subject."

"I am assuming that the document was really in Badger's pocket when he started, and that it was not there when his body was examined by the surgeon. The inquest notes will confirm or exclude those assumptions. At present, our information is to the effect that they are true. And if they are true, the document must have been taken from Badger's pocket; and that fact furnishes prima facie evidence of murder. But if Badger was murdered, the Strood man must be presumed to be the murderer, since no other possibility presents itself. Hence, the question that we have to settle, or at least to form a definite opinion on, is, Who was the Strood man?"

"Now, our information is to the effect that he had red or reddish hair and a noticeably red nose. But the man Smith has dark-red hair and a noticeably red nose. Then it is possible that the Strood man may have been Smith. But mere coincidence in these two characteristics does not afford positive evidence that he was. For two men resembling one another in these respects might be otherwise very different."

"That is so," said I. "But you must admit that it is a rather remarkable coincidence. And you have often pointed out, with great justice, that coincidences call for very careful consideration."

"Precisely," said he. "And that is what I am going to insist on now. We have to note the coincidence and ask ourselves what its significance may be. It is, as you say, a quite remarkable coincidence. Neither of these peculiarities is at all common. If you were to examine any considerable collection of men, such, for example, as a battalion of infantry, how many men with dark-red hair would you find in it? Not more than one or two. Perhaps not one. But, of the one or two, or say half a dozen, that you found, how many would have noticeably red noses? Most probably none. Improbabilities become rapidly cumulative as you multiply the characteristics that are postulated us appearing coincidentally."

"The position, then, in regard to the Strood man is this: In two salient personal characteristics, he resembled the man Smith. That resemblance can be accounted for by three hypotheses, one of which must be true:

"1. That the Strood man was Smith."

"2. That he was another man who happened to resemble Smith."

"3. That he was another man who had been purposely made up or disguised so as to resemble Smith."

"Is that so?" I asked. "I think that is a very remarkable coincidence. And you have often pointed out, with great justice, that coincidences call for very careful consideration."

"Precisely," said he. "And that is what I am going to insist on now. We have to note the coincidence and ask ourselves what its significance may be. It is, as you say, a quite remarkable coincidence. "The position, then, in regard to the Strood man is this: In two salient personal characteristics, he resembled the man Smith. That resemblance can be accounted for by three hypotheses, one of which must be true:..."
“Those are the only possibilities and, as I said, one of them must be true. Let us take them in order and consider their respective probabilities. We begin with the first hypothesis, that the Strood man was Smith. Now, in order to judge of the probability of this, we have to consider what we know of the personality of Smith and of the Strood man respectively and to decide whether what we know of the one is compatible with what we know of the other.

“Now, what do we know of Smith? First, we have the fact that he described himself as a plumber and gas-fitter. As that description seems to have been accepted by the prison officials, we may assume that it fitted his appearance and manner; and we see that his face is of the type characteristic of the lower class of working-man. We know, further, that he had just escaped from prison, and that he was known and could have been recognized by several persons at the prison, including Chief Officer Cummings. It is probable that when he escaped, his pockets were empty and he may have been hatless.

“Now as to the Strood man. It is almost certain that he had a first-class ticket; that he travelled from Maidstone in Badger's train, and, if so, he must have been on the platform at Maidstone at the same time as Badger and Cummings. He carried in his pocket a cigar which had been treated with a poison which is practically unprocurable commercially and which he must almost certainly have prepared himself. Now, Jervis, does it seem to you possible that those two descriptions could apply to one and the same person?”

“No,” I replied, “it certainly does not, though you omitted to mention that Smith is probably a burglar.”

“That is not known to us, though I admit that it is not improbable. But it really has no bearing. Even if we knew that he was a burglar, all the obvious discrepancies would remain. I submit that the hypothesis that the Strood man was the escaped prisoner, Smith, must be rejected as untenable.

“We pass on, then, to the next possibility, that the Strood man was not Smith, but was a man who happened to resemble Smith these two physical characteristics. In order to state the probabilities, it is necessary to note that the Strood man was apparently in this train with the premeditated purpose of murdering a police officer, and that a few hours previously a man with dark-red hair and a noticeably red nose had escaped from a Maidstone prison and was still at large. Bearing in mind the rarity of this combination of physical characters, what do you think of the probability of the coincidence?”

“Well,” I replied, “obviously, the chances against are a good many thousands to one. But that is not quite the same thing as certainty.”

“Very true, Jervis,” he agreed, “and very necessary to remember. It is by no means safe to apply the laws of chance to individual cases. A prize of £30,000 in a lottery or sweepstake necessarily implies sixty thousand ten-shilling tickets, of which all but one must be blanks; so that the chances against any ticket holder are fifty-nine thousand nine hundred and ninety-nine to one. Nevertheless, in spite of that enormous adverse chance, someone does win the prize. You are quite right. Long odds against do not exclude a possibility. But, still, we have to bear the odds in mind; and, if we do, we shall be very indisposed to accept this coincidence.

“We are left with the third hypothesis: that the Strood man was an unknown man, deliberately disguised or made up to resemble the escaped prisoner, Smith. This suggestion, though it has certain positive elements of probability, has also certain weighty objections, as I have no doubt you have noticed.”

“I see one objection,” said I, “that seems to exclude the suggestion altogether. If the Strood man had made up to resemble Smith, he must have had the means with him, provided in advance. He couldn’t have gone about, habitually, with a red wig and a bottle of rouge in his pocket. But the escape of Smith was a contingency that couldn’t have been foreseen. If we accept the idea of the make-up, we have to suppose that, after hearing of Smith’s escape, this man was able to provide himself with the wig and the rouge. That seems to be quite incredible.”

Thorndyke nodded, approvingly.

“Very true,” said he. “My learned friend has made a palpable hit. It is a very serious objection, and, as you say, it appears, at the first glance, to be insuperable—to render the hypothesis quite untenable. But if you consider the circumstances more thoroughly, you will see that it does not. The probability is that we are dealing with one of those combinations of chance and design that are always so puzzling and so misleading. Let us exercise our imaginations a little further and make one or two more hypotheses. Let us suppose that this man had already decided to avail himself of Smith’s conspicuous peculiarities and to personate him to that extent—presumably for some unlawful purpose. He would then have had the wig and the rouge in readiness. Suppose that he is staying in Maidstone, perhaps keeping a watch on Smith. Smith, however, is in custody, with the certain result that his personal peculiarities will be noticed in detail and recorded.

“This will make him much better worth personating. If the stranger is keeping a watch on Smith, he will know about the prosecution, and he will know that there is a good chance of an acquittal. Suppose, now, at this point, two unforeseen events happen: Smith makes his escape, and then Badger turns up in Maidstone. The stranger has, as the murder pretty clearly proves, some strong reason for getting rid of Badger. But here is a set of unforeseen circumstances that creates a first-class opportunity. The apparent impossibility of the disguise is an additional favourable factor.”

I was impressed by my colleague’s ingenuity and said so, perhaps with some faint suggestion of irony in my tone.

“Of course,” I hastened to add, “all that you suggest is quite possible. The trouble is, that it is quite imaginary. There is not a particle of direct evidence to suggest that it is true—that what you postulate as having possibly happened, really did happen.”

“No,” Thorndyke admitted, “there is not. It is hypothesis, pure and simple. So far, I do not contest your objection. But I
remind you of our position. We have three hypotheses which represent all the imaginable possibilities. One of the three must be the true one. But we have already excluded two as being quite untenable on the grounds of extreme improbability. The third is admittedly difficult to accept; but it is far less improbable than either of the other two. And you notice that, if we make the assumptions that I suggest, what follows presents a high degree of probability. I mean that a man, setting out to commit a murder, under circumstances in which he must be seen in the company of his prospective victim, would be taking a very ordinary precaution if he should so alter his appearance that a description of the murderer would not be a description of himself. And if he had the opportunity to make up so as to resemble some other person, and that other person an escaped prisoner, it would be very much to his advantage to take it. How great the advantage would be, we can see for ourselves by the attitude of our old friend, the Superintendent.”

“Yes, by Jove!” said I. “The deception, if it is one, has operated most effectively on Miller. And, if your suggestion is correct, it will explain another rather incomprehensible thing—I mean the taking from the body of the prison record. That naturally suggested that the murderer was the man whose description was on the stolen document. In fact, my impression is that it is the document as much as the personal resemblance that is sticking in Miller’s gullet.”

“I think you are right,” said Thorndyke. “At any rate, the combined effect of the two facts—the theft of the document and the personal characteristics—is undoubtedly responsible for his state of mind. But, to return to our discussion, I think that, out of the three hypotheses from which we have to choose, we are forced to adopt the third, at least provisionally: that the man who murdered Badger is not Smith, but is some unknown man who had deliberately made up to the end that he might be mistaken for Smith.”

“Yes,” I agreed. “I suppose we are, since the other two suppositions cannot be reasonably entertained. But I could wish that it were a little more easy to accept. It involves an uncomfortable amount of unproved assumptions.”

“So it does,” he admitted. “But there it is. All three hypotheses seem to be full of improbabilities. But, as one of them must be the true one, since there are no others, we have no choice but to adopt the one that presents the smallest number of improbabilities and the greatest number of probabilities. Still, as I have said, our acceptance is only provisional. We may have to revise our opinions when we have the evidence of the witnesses at the inquest before us.”

In the event, however, we did not. On the contrary, when, late in the evening, our very expert stenographer delivered the copy of his notes—typed in duplicate—the report of the witnesses’ evidence tended rather to confirm Thorndyke’s conclusions. There was nothing very definite, it is true; but the few additional facts all pointed in the same direction.

There was, for instance, the station-master’s evidence. It seemed that, in the interval, he had thought matters over, and his statements were now more decided. He was able, moreover, to amplify his description of the suspected stranger. The latter he described as a well-dressed man of about middle age, carrying a good-sized hand-bag of brown leather, but no stick or umbrella, and wearing a soft felt hat. The man had a rather conspicuously red nose. He had noticed that particularly—“thought the gentleman looked as if he were in the habit of taking a drop.” And he was quite clear about the colour of the man’s hair. He noticed it as the stranger was getting into the carriage and the sun shone on the back of his head. It was distinctly red; dark red or auburn—not bright red, and certainly not sandy. Probably, in the sunlight, it may have looked rather redder than it really was. But it was definitely red hair.

“Do you think that you would recognise the man if you were to see him?” the coroner asked.

“I don’t much think I should,” was the cautious reply. “At any rate, I shouldn’t be able to swear to him.”

Here the coroner apparently produced the prison form with the two photographs and handed it to the witness.

“I want you to look at those two portraits,” said he, “and tell us whether you recognize them.”

The witness examined them and replied that he did not recognize them.

“Does the face that is shown in those photographs seem to you to resemble the face of the red-haired stranger?”

“I don’t see any resemblance,” the witness replied.

“Do you mean,” the coroner pursued, “that you simply don’t recognize the face, or that it seems to you to be a different face?”

“I should say that it is a different face. The man I saw looked more like a gentleman.”

“You are definitely of opinion that these photographs are not portraits of the man that you saw. Is that so?”

“Well, sir, I shouldn’t like to be positive, but these photos don’t look to me like the man I saw on the platform.”

That was all that was to be got out of the station-master; and, so far, it tended to support Thorndyke’s view; as also did the evidence of the ticket collector at Dartford, who was the next witness. He, like the station-master, seemed to have turned the matter over in his mind, though he was not able to give much more information. He did, however, remember collecting a first-class ticket, and recalled noticing that it was from Maidstone to London.

“That,” said the coroner, “is a point of some significance. This passenger started from Maidstone with the intention of going to London, but at Dartford—the next station after Greenhithe—he suddenly changed his mind. It is a fact to be noted. Do you remember what this man was like?”

“I can’t say that I remember him very clearly,” the witness answered. “You see, sir, I was looking at the tickets. But I do
remember that he was carrying a largish brown hand-bag."

"Do you remember anything peculiar in his appearance? You have heard the last witness’s description of him. Can you say whether this passenger agreed with that description?"

"I wouldn’t like to say positively whether he did or whether he didn’t. I can only say that I didn’t notice that he had a particularly red nose, and I didn’t notice the colour of his hair. As far as I remember him, he seemed an ordinary, gentlemanly sort of man; the sort of man that you would expect to hand in a first-class ticket."

So much for the ticket collector. His evidence did not carry us very far. Nevertheless, such as it was, its tendency was to support Thorndyke’s suggestion. There could be little doubt that the man who had given up the first-class ticket was the Strood man; and the fact—though it was only a negative fact and of little weight at that—that the special peculiarities of nose and hair had not been observed, seemed to lend a faint support to Thorndyke’s further suggestion that, as soon as the murder had been committed, those special peculiarities would be eliminated.

There was little else in the evidence that was of interest to us. The engine-driver’s evidence had practically no bearing; for poor Badger’s body was unquestionably on the line, and the details as to how long it could have been there did not affect our enquiry. As to the body itself, the fact that no injuries could be discovered other than those inflicted by the train now caused us no surprise, though, to the coroner, it was naturally rather puzzling. Indeed, the problem that had so exercised the mind of Superintendent Miller was the problem that the coroner discussed at the greatest length and with complete failure to find any plausible solution. I read his very just and reasonable comments with considerable sympathy, not without a twinge of compunction as I reflected on the way in which we had withheld from him the one conclusive and material fact.

"The greatest mystery in this strange case," he observed, "is the absence of any traces of injury. Here was a powerful, highly trained police-officer, flung out on the line by a man whom he had apparently intended to arrest. He had not been shot, or stabbed, or stunned by a blow on the head, or in any way disabled. He had been simply thrown out. It seemed incredible; but there were the facts. But for the known presence in that carriage of another person, and that person a suspected criminal, the condition of the body would have pointed to an accident of a quite ordinary kind. But the presence of that other man, and especially the fact—which has been quite conclusively proved by the evidence of Chief Officer Cummings—that a certain document was taken from the pocket of the deceased, puts accident entirely out of the question.

"But it adds enormously to the difficulty of understanding how this crime could have been committed. For, obviously, deceased would not have allowed this document to be taken from him without very energetic resistance. The great mystery is how any ordinary man could have taken this document forcibly from this powerful, capable officer and then opened the door and thrown him out on to the line. I must confess that I cannot understand it at all.

"However, our failure to unravel the mystery of the actual method employed by the murderer does not leave us in any doubt as to how deceased met his death; which is the subject of our inquiry. The presence of that unknown man, his immediate disappearance at the very first opportunity, and the theft of that document, are facts that are too significant to allow of any but one interpretation."

"The next question presents much more difficulty—the question as to the identity of that man. If we think that we can give him a name, it is our duty to do so. But it is not the concern of a coroner’s inquest to prove the guilt of any particular person. That is the office of a court of criminal jurisdiction. Unlike such a court, we have the choice of returning an open verdict—open, that is to say, as regards the identity of the criminal. And, if we have any doubt as to his identity, that is our proper course. Now, you have heard the evidence relating to the identity of the man who shared the compartment with deceased. You cannot have failed to notice the conflicting nature of that evidence, nor can you have failed to be impressed by the unlikeliness of an escaped prisoner showing himself openly on the platform of Maidstone Station. Still, if you are satisfied with such proof of his identity as has been given, your finding must be to that effect; but, if you have any doubts, you will be wiser to leave the investigation of that point to the police."

This eminently judicious advice the jury accepted, eventually returning a verdict of “Murder by some person unknown.”

"Well," said Thorndyke, as I handed him back the copy of the notes, “has my learned friend any comments to make?"

"Only," I replied, “that the evidence, such as it is, seems rather to justify your choice of the third hypothesis."

"Yes," he agreed. "There is not much that is new. But there is one point that I dare say you noticed. The Strood man was carrying a fair-sized hand-bag. That supports the ‘make-up’ theory to this extent: that a hand-bag would be almost a necessity, seeing that a wig is a rather bulky article, and one that must not be too roughly treated, as it would be by being stuffed in the pocket. Then, the ticket collector's evidence, little as it was worth, leaned to our side. He did not notice that the passenger had either a red nose or red hair; which might mean either that those characters were not there to notice, or simply that he took no note of the man’s appearance. There isn’t much in it either way.

"But there is one other point that emerges—a slightly speculative point, but very important in its bearing if we accept it, though rather obvious. If we assume that this man was made up to pass, at least in a printed description, as Frederick Smith, that points to some kind of connection between him and Smith. He must, as you very justly observed, have made his preparations in advance. That is to say, he had decided, at least a few days previously, and probably more, to adopt Smith’s peculiarities to cover some unlawful proceedings of his own. Now, it is highly improbable that he would have selected a complete stranger as the model for his disguise; and, as a stranger, he could not have known that Smith was
under suspicion of being a member of the habitual criminal class. But it was this suspicion that gave the disguise its special value. The evident probability is that he had some rather intimate knowledge of Smith."

"That does seem to be so," I agreed. "But, if it is true, another interesting probability emerges. If he knew something about Smith, then there must have been something to know. That is to say, our friend Badger’s suspicions of Smith were not without some real foundation. And, again, the connection that you suggest might account for the theft of the fingerprint document. It might not suit the murderer to have the finger-prints of his under-study—or over-study—at Scotland Yard."

"I think you are right," said Thorndyke, "as to the probable facts, though I am doubtful about your view of the motive. The theft of the document threw the suspicion at once on Smith, since they were his finger-prints and description. That would appear to have been the object of the theft as it was the object of the disguise."

"If it was," said I, "it was a diabolical scheme."

"Very true," Thorndyke agreed; "but murderers are not a peculiarly scrupulous class, and this specimen seems to have been even below the average in that respect. But, to revert to your suggestion that Badger’s suspicions probably had some foundation, you notice that the fact of Smith’s having taken the chance to escape tends to confirm your view. Taking his position at its face value, that escape was really not worth while. He was apparently innocent of the offence with which he was charged, and pretty secure of an acquittal. His escape merely complicated the position. But, if he was a regular criminal who ran the risk of being recognized by some visiting detective, it might well have appeared to him to be worth while to try the chance of getting away in the hope that he might keep away."

At this point our discussion was interrupted by the sound of a visitor approaching our landing. A moment later the identity of that visitor was disclosed by a characteristic knock at the door.

"I happened to be passing this way," said Miller, as I let him in, "so I thought I would just drop in and see if your shorthand notes were available. I have seen the newspaper reports of the inquest."

"Then you will have seen that the station-master did not recognise the prison photographs," said Thorndyke, as he handed the Superintendent his copy of the typed notes.

"Yes," growled Miller. "That’s rather disappointing. But you can’t expect an ordinary, unskilled person to spot a face after just one casual glance. Of course, Badger spotted him. But he was a genius in that way. It was a special gift."

"A rather dangerous one, as it turned out," I remarked.

"It was, under the circumstances," said Miller. "But what made it dangerous was poor Badger’s secretiveness. He liked to hold the monopoly—to feel he was the only detective officer who could identify some man who was wanted but unknown. Even in cases that he was not really concerned in, he would keep a criminal’s personal description up his sleeve, as it were. I remember, for instance, in that Hornby case—the Red Thumb Mark case, as they called it—how close he was."

"But he wasn’t on that case, was he?" I asked.

"No. That was my case, and a pretty mess I made of it. But Badger was in court on another case, and it seems that, for some reason, he kept an eye on that man, Hornby—the man I had a warrant for, you know—while the experts were giving their evidence. Well, as you remember, Hornby slipped off, and I went after him and missed him; and when it came to making out a description of him, I had to apply to you for details. I doubt if I could have spotted him if I had met him in the street. But long afterwards, Badger told me that he had a perfectly clear mental picture of the man’s face, and that he was certain that he could spot him at a glance if ever they should meet. And he was like that with quite a number of crooks of the more uncommon kind. He could recognize them when no one else could. It was a valuable gift—to him. Not so valuable to us. And, as you say, it has its dangers. If a really vicious crook got to know what the position was, he might show his teeth, as this man did in the train. Badger would have been wiser in several respects to have shared his information with his brother officers."

"Yes," said Thorndyke, "it is not very safe to be the sole repository of a secret that threatens another man’s life or liberty. I have had reason to realize that more than once. By the way, have you had an opportunity of getting that strange fingerprint examined—the one, I mean, that we found on the cigar?"

"Yes; and drawn another blank. I took it to the Finger-print Bureau, but they haven’t got it in any of the files. So your poison-monger is a ‘person unknown’ at present. What you might expect. Probably sits in the background and supplies his infernal wares to crooks of a less subtle kind. However, your photo has been filed in the ‘Scene of the Crime’ series of single finger-prints. So we shall be able to place him, if we ever get him in custody. That will be quite a nice little surprise for him. But I mustn’t stay here gossiping. I’ve got a lot to do before I knock off for the day. Among other things, I must go carefully through these notes that you have been so kind as to let me have, though I am afraid there is nothing very helpful in them."

As he retired down the stairs, Thorndyke stood looking after him with a faint smile.

"You observe," he remarked, "that our friend is still under the influence of the Smith obsession. I have never known Miller to be like this before. We have given him a piece of evidence of cardinal importance, and he treats it as something merely incidental. And that thumb-print, which is, almost beyond any doubt, the thumb-print of Badger’s murderer, he files away as a thing that may possibly be of some slight interest on some unvisualized future occasion. It is an astonishing state of mind for an officer of his experience and real ability. We shall have to watch this case for his sake as well as our
own. We must try to prevent him from making a false move; and we have got to find poor Badger’s murderer, if any efforts of ours are equal to a task that looks so unpromising.

“It certainly looks unpromising enough,” said I. “The man whom we have to find is a mere phantom, a disembodied finger-print, so to speak. We don’t know his name; we don’t even know what he is like, since the only description we have of him is the description of a disguise, not of a man. We can only assume that he has neither red hair nor a red nose. But that description applies to a good many other people.”

Thorndyke smiled at my pessimism, but was fain to agree that I had not overstated the case. “Still,” he continued, hopefully, “things might have been worse. After all, a finger-print is a tangible asset. We can identify the man if we are ever able to lay hands on him.”

“No doubt,” I agreed, less hopefully, “but the laying hands on him is the whole problem. And it seems to be a problem with no solution.”

“Well,” he rejoined, “what we have done before we can do again. We have had to deal with unknown quantities, and we have resolved them into known quantities. It is not the first time that we have been confronted with the uncompleted equation, ‘x=?’.”

“No, indeed,” said I. “You used that very formula, I remember, in the case of that man whom Miller was speaking of just now, Walter Hornby, and on the very occasion he referred to. I recall the incident very vividly. Don’t you remember? When you passed me that slip of paper with the scribbled note on it, ‘x=Walter Hornby?’”

“I remember it very well,” he replied. “And I have quite good hopes that we shall complete the equation in this case, too, if we are patient and watchful.”

“Knowing you as I do,” said I, “and remembering those other cases, I, also, am not without hope. But I cannot imagine how you are going to get a start. At present there is absolutely nothing to go on.”

“We shall have to wait for some new facts,” he rejoined, “and remember that the force of evidence is cumulative. At present, as you say, the whole case is in the air. But I have a strong feeling that we have not heard the last of Mr. Frederick Smith. Now that his finger-prints and description are extant, I think we may look for him to make another appearance; and when he does, I suspect that we shall make a step forward.”

At the moment, I did not quite perceive the bearing or significance of this statement; but, later, as had so often happened, I looked back on this conversation and marvelled at my obtuseness.

IX. — THORNDYKE DISCOURSES ON FINGER-PRINTS

THORNDYKE’S prediction was verified with a promptitude that neither of us expected, for little more than fortnight had elapsed after our conversation on the subject when the elusive figure of Mr. Frederick Smith once more flitted across our field of vision. It was but a fleeting and spectral appearance and disappearance—at least that was what we gathered from the news paper. Indeed, we might have missed it altogether had not Thorndyke’s eye been attracted by the heading of the small and inconspicuous paragraph: “ESCAPED PRISONER BREAKS INTO HOUSE.”

“What, already!” he exclaimed; and as I looked up enquiringly he proceeded to read out the brief account.

“A daring robbery—or rather, attempted robbery—was committed yesterday in broad daylight by a man who escaped a short time ago from Maidstone Gaol. The scene of the attempt was a detached house in Sudbury Park, N.W., which had been left unoccupied owing to the owners having gone out for a day’s motoring. Apparently the man was disturbed, for he was seen making off hurrriedly; but, though he was immediately pursued, he disappeared and succeeded in making good his escape. However, he was seen distinctly by at least two persons, and the description that they were able to give to the police enabled the latter to identify him as the escaped prisoner.”

As he laid down the paper, Thorndyke looked at me with a faint smile.

“Well,” he said, “what does that announcement convey to my learned friend?”

“Not very much,” I replied, “excepting a red head with a red nose affixed to it. Obviously, the observers noted his trademarks.”

“Yes,” he agreed. “And you observe that he elected to do this job in broad daylight. He must be a conceited fellow. He seems to be unduly proud of that nose and those auburn locks.”

“Still,” said I, “he had to enter the house when it was unoccupied, and that happened to be in the day time, when the owners were out in their car. Only, what strikes me is that the identification is not very satisfactory, even allowing for the rarity of red hair in combination with a red nose.”

“Wait until you have heard Miller’s account of the affair,” he rejoined. “I am prepared to hear that the identification was more complete than one would gather from the paper. But we shall see.”

We did see, a few days later, and, as usual, Thorndyke was right. When, about eight o’clock at night, the Superintendent’s well-known knock sounded on the door, I rose expectantly to admit him; and, as he strode into the room, something of satisfaction and complacency in his manner suggested that he was the bearer of news that he was going to
enjoy imparting to us. Accordingly, I hastened to dispose of the preliminaries—the whisky decanter, the siphon, and the inevitable box of cigars—and when he was comfortably settled in the arm-chair, I gave him the necessary “lead off.”

“I am sorry to see that our friend, Freddy, has been naughty again.”

He looked at me for a moment enquiringly, and then, as the vulgar phrase has it, he “rumbled” me.

“Ah,” said he, “you mean Frederick Smith of Maidstone. Saw the paragraph in the evening paper, I suppose?”

“Yes. And we thought it uncommonly smart of your people to spot Mr. Frederick Smith from the casual description of one or two persons who caught a glimpse of him as he was making off.”

Miller evidently felt himself to be in a position to ignore the hardly veiled sarcasm, for, without noticing it, he replied:

“Ah, but it was a good deal more than that. Of course, when we heard the description, we pricked up our ears. But we soon got some clues that made us independent of the description. I’ve come in to tell you about it, since you are really interested parties.

“I dare say you know this place, Sudbury Park. It is one of the queer old London survivals—a row of detached houses, each standing in its own grounds, with gardens backing on the Regent’s Canal, and little lanes here and there running up from the tow-path between the gardens to the road on which the houses front. The grounds that surround them are mostly pretty thickly wooded—sort of shrubberies—and they are enclosed by fairly high walls, the tops of which are guarded in the old-fashioned way by broken bottles and bits of glass set in cement.

“Now, it seems that our friend first drew attention to himself by breaking one of the back windows and making a good deal of noise in doing it. Then a couple of women, attracted by the noise, saw him trying to get in at the window. They were at a back window of one of the houses on the opposite side of the Canal. Naturally as soon as they saw what he was up to, they raised a philaloo and ran down to the garden to watch him over the wall. Their squawking brought a party of bargees along the tow-path, and when the bargees had been ‘put wise’ about the house-breaker, off they started, full gallop, towards a bridge that crosses the Canal two or three hundred yards farther down.

“Meanwhile, our honest tradesman, hearing the hullabaloo, concluded that the game was up, and came tumbling out through the window like a harlequin, and was in such a hurry that he left his cap inside, and so displayed his beautiful auburn hair to the best advantage. He had been working in his shirt-sleeves, and, when he started to run, the reason was obvious. He wanted his coat—which he carried on his arm—to lay on the broken bottles on the top of the wall so that he could climb over without tearing his trousers. And that is what he did. He laid the coat over the party wall, and over he went into the next shrubbery. But, unfortunately for him, as he dropped down on the farther side, the coat slipped off the wall and dropped down into the garden that he had left. For a moment he seemed disposed to go back for it. But by that time the bargees were running across the bridge, bellowing like bulls of Bashan. So our friend thought better of it, and bolted away into the shrubbery and was lost to sight.”

“Was he not seen by the occupants of that house?” Thorndyke asked.

“No—because there weren’t any. It was an empty house. So all he had to do was to slip up by the side way and go out by the tradesmen’s entrance. But it is odd that no one saw him in the road. You would think that a red-headed man in his shirt-sleeves, legging it up a quiet road, would attract some attention. But, apparently, no one saw him, so he got clear away—for the present, at any rate.

“But we shall have him, sooner or later. Sooner, I fancy. For, I tell you we mean to have him. And the traces that he left will make him a valuable catch when we do get him. A capture will mean a conviction to a dead certainty.”

“That is putting it rather strongly,” I remarked.

“Not too strongly,” he replied, confidently. “Let me tell you what we found. First there was the broken glass. We went through that carefully, and on one of the pieces we found a most beautiful impression of Mr Frederick Smith’s right thumb. And thereby hangs a tale which I will tell you presently. Then there was the coat. That looked hopeful. But what it actually yielded was beyond our wildest hopes. Most of the contents of the pockets were of no particular interest. But there was one treasure of inestimable value—an empty envelope that had apparently been used to carry some hard object, for there were some sharp, rubbed marks on it. But they did not interest us. What set us all agog was the address—Mr. Charles Dobey, 103 Barnard’s Buildings, Southwark.

“I need not tell you that we went off like record-breaking lamplighters to Barnard’s Buildings. There, at the office, we learned that the tenant of number 103, Mr. Dobey, was a gentleman with a red head and a nose to match. So up we went to number 103. We had provided ourselves with a search warrant, and the officer who went with me took with him a little battery of skeleton keys. So we soon had the door open.”

“What kind of key opened it?” asked Thorndyke.

“Oh, just a common pipe key with the bit filed away. The sort you generally use, I expect,” Miller added with a grin. “It was only a common builder’s latch. Well, when we got inside we had a look round, but at first there didn’t seem to be much to see. It was just common, squalid sort of room with hardly any furniture in it. Looked as if it was not regularly lived in; which agreed with what the man in the office said—that he didn’t very often see Mr. Dobey. However, presently we discovered, hidden under the bed, a good-sized oak box. It had a quite good lever lock which gave my colleague no end of trouble to open. But it was worth the trouble. When, at last, he got it open, we saw that we had struck it rich. It was a
regular treasury of evidence.

"First there was a full outfit of good-class burglar's tools, and there were one or two little packets of jewellery which we have since been able to identify from our lists as part of the swag from a burglary at a jeweller's shop. Well, that was all to the good. But the real prize was at the bottom of the box. I wonder if you can guess what it was?"

He looked a little anxiously at Thorndyke, and did not seem particularly gratified when the latter suggested:

"It did not chance to be a document?"

"That is just what it did chance to be," Miller admitted, adding: "You are a devil at guessing, Doctor. But you are quite right. It was the paper that was taken from poor Badger's pocket in that infernal tunnel at Greenhithe. So now we have got conclusive evidence as to who murdered Badger. Of course, we shall have to look into the meaning of that cigar of yours. But we shan't want to produce it in evidence or rely on it in any way for the purposes of the prosecution; which is as well, for it wouldn't have been particularly convincing to the jury. But there is one more point which makes this find extraordinarily complete. It is in connection with this finger-, or rather, thumb-print. You probably know that we started, some time ago, a special collection of finger-prints—mostly single impressions—known as the 'Scene of the Crime Series.' They are either originals or photographs of prints that have been found at places where a crime has been committed, but where the criminal has got away without being recognized. Most of them are, naturally, the prints of known men. But there are a few prints that we cannot associate with any known criminal. We can't put a name to them.

"Now, in this collection we had three sets of prints which had been found on premises that had been broke into, evidently by a burglar of rather exceptional skill and ingenuity, who seemed to have worked alone, and whose technique we thought we recognized in several other jobs in which no finger-prints were found. For some reason, when we got Smith's finger-prints from Maidstone and found that they were not in the general collection, the officer in charge omitted to try them with the 'Scene of the Crime Series.' But, since then he has made the comparison, and it turns out that those three sets of prints are undoubtedly Mr. Charles Dobey's. So, now, we are able to identify him as that peculiarly talented burglar."

"Is there any special advantage in being able to do so?" Thorndyke asked. "I take it that you will proceed on the murder charge."

"Certainly we shall," Miller replied. "But there is the question of identification. We have got to make it quite clear that the man who got into the train at Strood was this same Charles Dobey. And then there is the question of motive. Badger was the only officer who knew Dobey by sight. He went down to Maidstone that very day for the express purpose of identifying him."

"You are not forgetting that you cannot produce any evidence that he ever did identify him?"

"No, I am not forgetting that. But he went down, having judged from the description that Frederick Smith was the man who had committed those various burglaries. And it now turns out that he was right. These finger-prints prove that Dobey was the man."

"It seems to me," said I, "that the fact that the stolen paper was found in his possession will be sufficient, unless it can be rebutted, to establish the case for the prosecution, without referring to the burglaries at all. You can't include them in the indictment—not in an indictment for murder—and if you attempt to introduce them, and if the court allows you to, you will have to prove them, which will complicate the issues."

The Superintendent admitted the truth of this, but said that he was not going to take any chances.

"And, at any rate," he concluded, "you must agree that we have got a remarkably complete case."

Thorndyke did agree, and with so much emphasis that, once more, Miller looked at him with a shade of anxiety.

"I know what you are thinking, Doctor," said he. "You are thinking that it is too good to be true."

"Not at all," Thorndyke disclaimed with a smile, "though you must admit, Miller, that he has made things as easy for you as he could."

"He certainly behaved rather like a fool," Miller conceded; "that is often enough the way with crooks. You don't see any snags, do you?"

"No," replied Thorndyke. "It looks all perfectly plain sailing. All you have to do now is to catch your hare; and he doesn't seem to be a particularly easy hare to catch."

"I don't think we shall have very much difficulty about that," said Miller. "He is an easy man to describe, and we shall circulate his description all over the country; in fact, we have done so already."

"Yes," said Thorndyke, "that was what I meant. You had him placarded at all the police-stations throughout the land, and then you found him engaged in breaking and entering in the very heart of London."

Yet again, Miller glanced with a trace of uneasiness at Thorndyke; but he made no comment on what sounded a little like a rather cryptic hint, and shortly afterwards rose and took his departure.

When he had gone, I was disposed to continue the discussion, but my colleague showed no enthusiasm. Yet I could see that he was reflecting profoundly on what the Superintendent had told us; which encouraged me to make a last effort.
“After all,” I said, “we can’t ignore plain fact. This story of Miller’s is difficult to reconcile with we know—with regard to that cigar, for instance—but it is a consistent body of evidence, each item of which can be proved beyond question. And the discovery of that paper in the man’s possession seems conclusive as it is possible for evidence to be. In view of your very convincing argument, it does really appear as if the solution of your problem is, x = Charles Dobey. Or is there some fallacy in Miller’s case?

“There is no obvious fallacy,” Thorndyke replied. “The case presents, as you say, a perfectly consistent body of evidence. Taken at its face value, Miller’s case is conclusive. The real question is whether the completeness and consistency are the results of unaided chance or of an ingeniously devised plan. It is a question we are, at present, unable to decide. Perhaps, when Dobey is brought to trial, he may be able to produce some new facts that may help us to come to a conclusion.”

As this seemed to close the discussion, I knocked out my pipe and glanced at my watch.

“Time for me to be moving on,” said I, “if I am to get home within the permitted hours. I told Juliet that I should be home to-night. And, by the way, I have a message for you. I am instructed to remind you that it is quite a long time since you paid your last visit.”

“So it is,” he admitted. “But we have not had many spare afternoons lately. However, to-morrow afternoon is free. Do you think it would be convenient to Juliet if I were to call and pay my respects then?”

“I happen to know that it will, as I took the precaution to ask what afternoons were unengaged. Then I will tell her to expect you, and you had better turn tip as early as you can. She always looks for a long pow-wow when you come.”

“Yes,” he replied, “she is very patient of my garrulousness. Then I will come as early as possible, and prepare myself for a special conversational effort. But it is really very gracious of her to care for the friendship of an old curmudgeon like me.”

“It is,” I agreed. “Odd, too. I can’t imagine why she does.”

With this Parthian shot, and without waiting for a rejoinder, I took myself off en route for the Temple station.

Here, perhaps, since my records of Thorndyke’s practice have contained so little reference to my own personal affairs, I should say a few words concerning my domestic habits. As the circumstances of our practice often made it desirable for me to stay late at our chambers, I had retained there the bedroom that I had occupied before my marriage; and, as these circumstances could not always be foreseen, I had arranged with my wife the simple rule that the house closed at eleven o’clock. If I was unable to get home by that time, it was to be understood that I was staying at the Temple. It may sound like a rather undomestic arrangement, but it worked quite smoothly, and it was not without its advantages. For the brief absence gave to my homecomings a certain festive quality, and helped to keep alive the romantic element in my married life. It is possible for the most devoted husbands and wives to see too much of one another.

Thorndyke redeemed his promise handsomely on the following afternoon, for he arrived shortly after three o’clock, having, I suspect, taken an early lunch to that end; for it presently transpired that he had come straight from Scotland Yard, where he had been conferring with the experts of the Finger-print Bureau.

“Was your pow-wow concerned with any particular case that we have in hand?” I ventured to enquire.

“No,” he replied. “I went there to get some further information respecting the new system of dealing with single finger-prints that was devised by Chief Inspector Battley. I have been studying his book on his method of classification and making a few tentative trials. But I wanted to make sure that my application of the method yielded the same results as were obtained by the experts. So I went to Scotland Yard and asked them to check my results.”

“I suppose,” my wife suggested, “you are still a good deal interested in finger-prints?”

“Yes,” he replied, “almost necessarily, since they so constantly crop up in evidence. But apart from that, they are curious and interesting things in a number of ways.”

“Yes,” she agreed, “interesting and curious and rather horrible—at least that is how they appear to me. I never hear of a finger-print but my thoughts go back to that awful trial, with Reuben in the dock and poor Aunt Arabella in the witness-box giving evidence about the Thumbograph. What a dreadful time it was!”

I am afraid I was disposed to grin at the recollection, for poor Mrs. Hornby had brought the proceedings as near to farce as is humanly possible in a criminal trial where an honourable gentleman stands indicted for a felony. But I controlled my features, and, as to Thorndyke, he was, as usual, gravely sympathetic.

“Yes,” he agreed, “it was an anxious time. I was not at all confident as to how my evidence would be received by the judge and the jury; and, if they had failed to be properly impressed, Reuben would certainly have gone to penal servitude. By the way, we sent the Thumbograph back to Mrs. Hornby after the trial. Do you happen to know what she did with it?

“She didn’t do anything with it,” Juliet replied, “because I annexed it.”

“What for?” I asked, rather foolishly, perhaps.

“Can’t you imagine?” she demanded, flushing slightly. “It was a little sentimental of me, I suppose, but I kept it as a souvenir. And why not? It had been a terrible experience, but it was over, and it had ended happily, for me, at any rate. I have something to thank the Thumbograph for.”

“It is very nice of you to say that, Juliet,” said I. “But why have you never shown it to me? I have at least as much to be
thankful for, though, to tell the truth, I had overlooked the fact that it was the Thumbograph that introduced us to one another."

"Well," said Thorndyke, "suppose you produce this disreputable little matchmaker and let us revive our memories of those stirring times. I haven’t seen a Thumbograph for years."

"I am not surprised," said Juliet. "The report of your evidence at the trial was enough to kill the demand for them for ever. But I will go and fetch it."

She went away and returned in a minute or two with the souvenir, which she handed to Thorndyke; a little oblong volume, bound in red cloth with the name "Thumbograph" stamped in gold on the cover. I looked at it with a new interest as Thorndyke turned over the leaves reminiscently while Juliet looked over his shoulder.

"Doesn’t it bring all those horrors back?" saic she, "and especially poor Mrs. Hornby’s evidence. Here is Miss Colley’s thumb-print, which Reuben was supposed to have smeared, and here is Aunt Arabella’s, and here is mine, and there is that wretch Walter’s."

"Characteristically, the best impression in the book," said Thorndyke. "He was a remarkably capable scoundrel. He did everything well."

"I wonder if we shall ever see him again?" I mused. "When he slipped away from the court, he seemed to vanish into thin air."

"Yes," said Thorndyke; "another instance of his capability. It is not so very easy for a man who is badly wanted by the police to disappear, once and for all, as he did."

He turned over the leaves once more until he came to the one which bore the print of Reuben Hornby’s thumb. Underneath it Reuben’s name was written in pencil and, below this, the signatures of the two witnesses, "Arabella Hornby" and "Juliet Gibson."

"Do you remember," said Juliet, "the night Aunt Arabella and I brought the Thumbograph to your chambers? It was a thrilling experience to me."

"And to Thorndyke too, I imagine," said I. "For it was then that he knew for certain that the Red Thumb Mark was a forgery. I saw him make the discovery, though I did not know at the time what the discovery was. Wasn’t it so, Thorndyke?"

"It was," he replied. "And what was even more important, I thought I had found the means of convincing the court. You are quite right, Juliet; it was a memorable occasion for me."

As he continued to turn over the leaves and scrutinize the various thumb-prints, I reverted to our previous conversation.

"I don’t quite understand what you were doing at the Yard to-day," said I. "The classification of finger-prints is interesting enough in its way. But it doesn’t specially concern us."

"It doesn’t concern us at all," he agreed. "But identification does. And that is where Battley’s method is valuable to us. The beauty of it is that, apart from classification for index purposes, it affords a means of rapid identification, and moreover makes it possible to express the distinctive characters of a given finger-print in a formula. Now this is an immense convenience. We often have occasion to identify a finger-print with an original or a photograph in our possession. But we can’t always carry the print or photograph about with us. But if we can express the characters of the print in a formula, we can enter that formula in our note-books, and have it ready for reference at any moment."

"But," I objected, "a formula would hardly be sufficiently definite for a reliable identification."

"Not, perhaps, for a final identification to swear to in evidence," he replied, "though you would be surprised at the accuracy that is possible. But that is not the purpose aimed at. The use of the method at the Bureau is principally to enable the searchers to find a given finger-print quickly among the thousands in the collections of single finger-prints. Our use of it will be to form an opinion rapidly on the identity of a print in which we happen to be interested. Remember, we don’t have to give evidence. Finger-print evidence, proper, is exclusively the province of the regular experts. We have only to form an opinion for our own guidance. Come," he continued, "I have the apparatus in my bag, which is in the hall, and here is the Thumbograph with a selection of prints to operate on. Why shouldn’t we have a demonstration of the method? You will find it quite amusing."

"It does sound rather thrilling," said Juliet; and, thus encouraged by the vote of the predominant partner, Thorndyke went out to find his bag.

"Let me first explain the general principle of the method," said he, when he returned with a small leather bag in his hand. "Like all really efficient methods, it is essentially simple though extremely ingenious. This is the sole apparatus that is necessary."

As he spoke, he opened the bag and took out a magnifying glass, which was mounted on three legs, the feet of which were fixed into a brass ring which enclosed a plate of glass.

"This circular glass plate," he explained, "is the essential part of the instrument. If you look through the lens, you will see that the glass plate has engraved on it and coloured red a central dot surrounded by seven concentric circles. The first
circle is three millimetres from the dot; the other circles are each two millimetres from the next. The central space is denoted by the letter A. The spaces between the other circles are denoted, successively, by the letters B, C, D, E, F, and G; and the space outside the outermost circle is denoted by H. The letters are, of course, not marked on the glass; but I have here a diagram which shows their position.”

He laid on the table a card on which were described the seven circles, each marked with its appropriate letter, and then, taking up the Thumbograph, once more turned over the leaves.

“I think,” said he, “we will select the estimable Walter’s thumb-print as the corpus vile for our experiment. It is the best print in the book, and it has the further advantage of being a peculiarly distinctive type with a rather striking pattern. It has the general character of a whorl with a tendency towards that of a twinned loop—that is, a pair of loops folded into each other with the convexities turned in opposite directions. But we will call it a whorl, and treat it as such, merely noting the alternative character. You will see that the pattern is formed by a number of black lines, which are the impressions of the ridges on the thumb. In this print the centre of the patterns, or ‘core,’ consists of a pair of little loops, from which the lines meander away in a rather irregular spiral. At a little distance from the core, these lines meet another set of lines at an angle, forming a Y-shaped figure known as a ‘delta.’ There will be another delta on the opposite side of the thumb, but it is too far round to appear in this print. It would be visible in a ‘rolled impression’—that is, a print made by rolling the inked thumb over on a card or paper; but in this print, made by a single contact, only the right delta appears.

“And now as to the use of the instrument. We lay the glass plate on the print, so that the dot just touches the top of the upper loop. And now you see the masterly simplicity of the method. For, since a circle has no right or wrong way up, when once you have set the dot in the appointed place, all the other lines must be correctly placed. Without any further adjustment, they show with absolute accuracy the distance from the centre of any part of the pattern. And this distance can be expressed, quite unmistakably, by a single letter.”

He placed the instrument on the thumb-print in the book, and, having carefully adjusted it, drew out his note-book and looked at my wife.

“Now, Juliet,” said he, “just look through the lens and tell me the letter that indicates the position of the delta—which is actually the right delta, though it is the only one visible.”

Juliet peered through the magnifying glass and studied the print for a while. At length, she looked up a little doubtfully and announced:

“It seems to me that the third line cuts right through it. So it lies half in the space C and half in D. Which of the two would you call it?”

“The rule,” he replied, “is that if a character is cut by a line, it is reckoned as lying in the space outside that line.”

“Then this delta lies in the space D,” she concluded.

“Quite right,” said he. “We will mark it D; and, as the other delta is not in the print, we must mark it simply with a query. And now we proceed to the rest of the examination, the ridge-tracing and ridge-counting. We will take the tracing first. What you would have to do if both the deltas were visible would be to follow the ridge that runs from the left delta towards the right. Obviously, it must take one of three courses: it may pass below, or outside, the right delta, or below, or inside, or it may meet, or nearly meet, the corresponding ridge from the right delta. Those are the three categories: outside, inside, or meeting, by the initials, I, M, O.”

“But,” objected Juliet, “as the left delta is not visible, it is impossible to trace a ridge from it.”

“That might be true in some cases,” replied Thorndyke, “but it is not in this, for, if you look at the print, you will see that, wherever the left delta may have been, a ridge passing from it towards the right must have passed well outside the right delta.”

Juliet examined the print again and agreed that it was so.

“Very well,” said Thorndyke, “then we will mark it O, and proceed to the ridge-counting, which will complete the formula. You have to count the ridges between the centre of the core and the delta. Put aside the measuring glass and use my lens instead; and I will give you a point to help you to count the ridges.”

He handed her his pocket lens, and produced from his bag what looked suspiciously like a dentist’s excavator, with the sharp point of which he indicated the ridges that were to be counted. Then he laid a visiting-card on the print to give a straight line from the centre to the delta, and she proceeded to count along its edge with the point of the excavator. Having gone over the ground twice, she announced the result.

“I make it twelve. But I am not quite sure, as some of the ridges fork, and might be counted as one or two. Will you count them?”

Thorndyke took the excavator from her and rapidly checked her result.

“Yes,” said he, “I agree with you. I think we may safely put it down as twelve, though the bifurcations do, as you say, create a slight ambiguity. If the other delta had been visible there would, of course, have been a second circle-reading and a second ridge-count, which would obviously have been an advantage for identification. Still, what we have done gives us the main distinctive characters of this print, and we can express them by a simple formula of a few letters and numbers. Thus,
the type of pattern is a whorl, with something of the character of a twinned loop. Accordingly, we put down a W with T.L. in brackets. The core, or central character—the pair of little, loops—lies entirely in the circle A. Now, there are five kinds of 'A' cores: the plain eye—just a tiny circle—the eye enclosing some smaller character, the left-hand spiral, the right-hand spiral, and any other 'A' form of unclassifiable type. Now, in this print, the core is a left-hand, or anti-clockwise spiral, and accordingly belongs to the category A3. The delta, we agreed, lies in the space D. The ridge-tracing was outside—O—and the ridge-count twelve. We can express all these facts in a formula, thus:

"That is concise enough," I remarked. "But, after all, it gives you only a skeleton of the pattern. It would not enable you to identify a print with any approach to certainty."

"It does not aim at certainty," he replied, "but merely at such a degree of probability as would justify action or further research. But I think you hardly appreciate the degree of probability that this formula expresses. It records five different positive characters and one negative. Now, taking the five only, if we accept the very modest chance of four to one against each of these characters being present in a print which is not Walter Hornby's, the cumulative effect of the five together yields a chance of over a thousand to one against the print being that of some person other than Walter Hornby.

"But, for our purposes, we are not obliged to stop at these five characters. We can add others; and we can locate those others either by the use of Battley's circles or by ridge-counting with a direction-line. For instance, in this print, to the left of the core and a little downwards, the seventh ridge shows one of those little loops known as 'lakes,' the ninth bifurcates, and the eleventh has another, larger lake. To the right of the core the third ridge has a small lake, the fifth ridge bifurcates, the eighth has a free end, and the tenth bifurcates. There are seven additional characters which we can add to our formula, giving us twelve characters in all, the cumulative effect of which is a probability of over sixteen millions to one against the print being the thumb-print of any person other than Walter Hornby, and that is near enough to certainty for our purpose. It would undoubtedly justify an arrest; and we could leave the final proof or disproof to the experts."

He added the extra characters to the formula in his note-book, and showed us the completed entry; which certainly afforded convincing testimony to the efficiency of the method. In fact, it impressed me—and my wife, too—so profoundly that, in an access of enthusiasm, we fell upon the Thumograph forthwith, and with the aid of Chief Inspector Battley's ingenious instrument, proceeded to construct formulas to express the characters of the other thumb-prints in the book, while Thorndyke smoked his pipe regarded our activities with benevolent interest, seasoned by occasional advice and criticism of the results.

"It is quite an amusing game," Juliet remarked. "If only the inventors of the Thumograph had known of it and printed directions in the book, it might have become a fashionable drawing-room pastime, and they would have made a fortune."

"Perhaps it is as well that they did not," said I. "The Thumograph was a dangerous toy, as we discovered—or rather, as Thorndyke did."

"Yes," Thorndyke agreed, "it was a mischievous plaything. But don't forget that it acted both ways. If it supplied the false accusation, it also supplied the conclusive answer. Walter Hornby had more reason than any of us to regret that he ever set eyes on the Thumograph. And it may be that he has not yet come to the end of those reasons. He has evaded justice so far. But the debt is still outstanding."
BOOK III: THE THREE ROGUES

X. — MR. WOODBURN’S STORY

INVENTORS are a much-misunderstood class. The common man, in his vanity and egotism, supposes that they exist to supply him with various commodities of which he dimly perceives the need. But this is an entirely mistaken view. The inventor produces his invention because, in the existing circumstances, it has become possible. It is true that he, himself, tends to confuse the issues by persuading himself optimistically that his invention has a real and important utility. His inventive mind goes so far as to create an imaginary consumer, so that he sees life in a somewhat false perspective. The genius who devised a family Bible which could be opened out to form a billiard table, no doubt envisaged a pious type of player who had need of some means of combining the canon of scripture with a cannon off the red; while, to the inventor of a super magic-lantern which could throw pictures on the clouds, the night sky was no more than a suitable background on which to declare the glory of Blunt’s Milky Toffee.

But this is mere self-delusion. In reality, the inventor is concerned with his invention. Its use is but a side issue which hovers vaguely on the periphery of his mental field of vision. I emphasise the fact, because it has a bearing on the events which I am recording. For our invaluable laboratory assistant, Polton, was an inveterate inventor, and, being also an accomplished and versatile craftsman, was able to turn out his inventions in a completely realised form.

So it happened that a certain large cupboard in the laboratory was a veritable museum of the products of his inventive genius and manual skill; examples of ingenuity—sometimes fantastically misguided—the utility of which he would expound to Thorndyke and me with pathetic earnestness and appeal to "give them a trial." There were spectacles which enabled the wearer to see behind him, there was a periscope walking-stick with which you could see round a corner, a large pedometer with movable dials for metres and yards and a micrometer adjustment of impracticable accuracy, and all sorts of clockwork devices and appliances for out-of-the-way photographic operations. But optical instruments were his special passion, whence it followed that most of his inventions took an optical turn.

I am afraid that I did not treat these children of Polton’s imagination with the respect that they deserved. Thorndyke, on the other hand, made a point of always examining even the wildest flights of the inventor’s fancy with appreciative attention, realizing—and pointing out to me—that their apparent oddity was really due to the absence of appropriate circumstances, and that those circumstances might arise at any moment and give an unexpected value to what seemed to be a mere toy. And that was what happened on the present occasion. One of Polton’s most eccentric productions suddenly revealed itself as an invaluable instrument of research. But perhaps I am beginning the story at the wrong end. I had better turn back and take the incidents in their proper order.

It was rather late one afternoon when there arrived at our chambers a dapper, well-dressed gentleman of distinctly horsey appearance, who gave the name of Woodburn, and who, rather to my surprise, turned out to be a solicitor. He presented Mr. Brodribb’s card, on which were scribbled a few words of introduction.

"I have come to see you," he explained, "on the advice of my friend Brodribb. I came up to Town expressly to confer with him on a rather queer case that has turned up in my practice. We talked over the legal issues without coming to any very definite conclusion, but Brodribb thought that there were certain points in the case that were more in your line than in either his or mine. And I am certainly inclined to agree with him to the extent that I am decidedly out of my depth."

"And what about Mr. Brodribb?" Thorndyke asked. "He is a pretty acute lawyer."

"He is," Mr. Woodburn agreed, heartily. "But this is not altogether a question of law. There are some other points on which he thought you would be able to help us. I had better give you an outline of the case. But, first, I had better explain that I am a country practitioner with my principal office at Packington in Kent, and that my clients are chiefly the farmers and country gentlemen of the surrounding district.

"Now, one of these clients is a gentleman named Mr. Didbury Toke. He is a sort of superior dealer in works of art and antiquities. He has an office in Town, but he resides at an ancient house called Hartsden Manor in the village of Hartsden and usually spends a good deal of his time there. But from time to time he has been in the habit of taking more or less prolonged trips to the Continent for the purpose of rooting about for antiques and works of art. On these occasions it has been his custom to shut up that part of the house in which his collection is lodged, and seal all the doors and windows in any way giving access to it.

"Well, about two months ago, he set forth on one of these expeditions, and, according to his usual custom, he locked up and sealed all the approaches to the rooms containing the collection and gave the keys into my custody."

"What happened to the seal?" asked Thorndyke.

"That I can’t tell you," replied Mr. Woodburn. "He didn’t give it to me, but I have an impression that he deposited it at his bank in London. I know that he did on a previous occasion. Still, he may have carried it on his person. I happen to know that it is a large, clumsy, antique ring, which he was certainly not in the habit of wearing.

"Well, as I said, he handed the keys to me, but, at the same time, he gave me very definite instructions—in writing—that the rooms were not on any account to be entered or the seals tampered with in any way. You see that his instructions were quite explicit, and, in fact, decidedly emphatic."
“Apparently,” said Thorndyke, “he allowed you no discretion and provided for no contingencies. Is that not so?”

“That is so,” replied Mr. Woodburn. “His instructions amounted to an absolute prohibition of any interference with the seals or any attempt to enter the enclosed rooms. That is the matter which I have been discussing with Mr. Brodribb, and which I want to discuss with you. Because this prohibition has become highly inconvenient. Circumstances have arisen which seem to make it very desirable to enter those enclosed rooms. But before I go into those circumstances, I had better tell you a little more about the arrangements of the house and those particular rooms.

“The main part of the closed premises consists of a very large room—about forty feet long—called the great gallery; but adjoining this are three or four smaller rooms, some of which are used to house part of the collection, and some are kept as workrooms, in which Mr. Toke does his mending and other odd jobs connected with the collection. The great gallery and the rooms attached to it occupy the whole of a wing which runs at right angles to the rest of the house; and, as there is only one door giving access to the gallery and its annexed rooms, the whole group of apartments is completely cut off and isolated.

“Now the circumstances to which I referred are these. Mr. Toke’s household ordinarily consists of his housekeeper and her niece, who acts as housemaid; but, when he is away from home, a nephew of the housekeeper usually comes to stay there, so that there may be a man on the premises. He is there now; so there are three persons living in the house; and those three persons are agreed that, from time to time, they have heard sounds at night apparently coming from the great gallery. It sounds incredible, and I must admit that when they first reported the matter to me, I was disposed to be sceptical. I am not entirely sceptical now. But they are extremely positive, and, as I said, they are all agreed. So I thought it my duty to go over to the manor house and make an inspection; and the result of that inspection was only to make the whole affair more incomprehensible. For the seals were all intact, and there was not a sign anywhere of anyone having broken into the place.”

“You examined the windows, of course?” said Thorndyke.

“Yes. There are five large windows, and I examined them all from outside by means of a ladder. They certainly had not been opened, for I could see that the catches were all in their places. But I may say that the windows are all secured from inside with screws, and those screws are sealed. Mr. Toke leaves nothing to chance.”

“Could you see into the room?” asked Thorndyke.

“No. The shutters were not closed, but the windows are covered by lace or net curtains, so that, although the gallery is quite light, it is impossible to see in from the outside.”

“You have spoken of the collection,” said Thorndyke. “Perhaps you had better tell us something about its nature and value.”

“As to its value,” said Mr. Woodburn, “I believe that is very considerable, but as it consists chiefly of pottery and porcelain, Bow and Chelsea figures, bronzes, and small statuary, it would be of no interest, to a burglar—at least, that is what I understood from Mr. Toke.”

“I am not sure that I agree with Mr. Toke,” said Thorndyke. “Of course, since you cannot melt down porcelain figures into unrecognizable ingots, they are not suitable for the common type of burglar. The ordinary ‘fence’ would not trade in them, and they could not be offered in the open market. But they are really valuable things and fairly portable, and they would not be so very difficult to dispose of. The ordinary collector is not always as scrupulous as he might be, but there is one kind of collector who is not scrupulous at all. One may take it that a millionaire who has made his millions by questionable transactions, may be prepared to spend them in a like manner. The point is of some importance; for, whereas the repeated occurrence of these sounds—assuming them to have occurred—is not consistent with the idea of an ordinary burglary, it does suggest the bare possibility of some enterprising persons quietly removing the more valuable parts of the collection piecemeal.”

“You do, then, really entertain the possibility that these sounds are not merely imaginary?”

“I have an entirely open mind,” replied Thorndyke. “But I understood you to say that you had gone into the question of fact on the spot, and that you were satisfied that the reports were sufficiently convincing to justify serious enquiry.”

“That is so,” said Mr. Woodburn. “But I may say that Brodribb scouted the idea. He was incredulous as to the sounds having been heard at all, seeing that the closed rooms are so completely isolated and so distant from the rest of the house; and he suggested that if there had been any sounds, they were probably due to rats. I don’t agree with him as to the rats. Of course, I enquired whether that could be the explanation, but I think it can be excluded. The noises that rats make are pretty characteristic, and they don’t at all agree with the description of the sounds that these people gave. And they tell me that there are no rats in the house, which seems to settle the question; for, although rats will harbour in empty rooms, they don’t stay there. They must come out for food. But Brodribb’s other objection is more weighty. The great gallery is a good distance from the rest of the house. What do you really think of the probabilities?”

“Well,” replied Thorndyke, “the answer to your question involves the statement of a rather bald truism. If there is no access to the closed rooms other than the door of which you spoke, and that door is still locked and the seal is still unbroken, evidently no one can possibly have entered those rooms. On the other hand, if sounds have been heard of such a nature as to make it certain that someone had entered those rooms, then it follows that there must be some means of access to those rooms other than those which are known to you. I apologize for the obviousness of the statement.”
“You needn’t,” said Mr. Woodburn. “It puts the matter into a nutshell. I saw the dilemma myself. But what do you suggest?”

“In the first place,” said Thorndyke, “may I ask if it is impossible to get into touch with Mr. Toke?”

“Ah,” said Mr. Woodburn, “there you have raised another point. Apparently, it is impossible for me to get into touch with my client; and that is a matter that I am not entirely happy about. Mr. Toke is by no means a good correspondent. But, when he is travelling, as a rule, he sends me a short note now and again, just to give me the chance of communicating with him if the occasion should arise. And he has been in the habit of sending me parcels—purchases that he has made—to put in my strong room or to deposit at his bank. But this time, I have had not a single line from him since he went away. It is really rather strange, for Mr. Toke is a methodical, business-like man, and he must realize that it is most undesirable that his solicitor and man of business should have no means of communicating with him. It might be extremely awkward; even disastrous. It is extremely awkward now. If I could get into touch with him, I would pretty certainly authorize me to break the seals and see if his collection is all as it should be. As he can’t, the question arises as to what I ought to do. Should I, for instance, take it that these exceptional circumstances absolve me from the obligation to abide literally by his instructions? Brodribb thought not. What is your view of the case?”

“I am disposed to agree with Brodribb. The difficulty seems to be that you have not established the exceptional circumstances. There is only a suspicion; and Mr. Toke might think, as Brodribb does, that the suspicion was not a reasonable one. You have said that Mr. Toke’s instructions were very explicit and even emphatic. He was clearly most anxious that those rooms should not be entered or the seals broken. He has said so, and he has given quite definite instructions on the subject. This being so, we must assume that he had good and sufficient reasons for giving those instructions. We cannot judge what those reasons were, or how strong they were. But it is always safe to assume that a man means what he says, especially when he says it quite clearly and unmistakably.

“Suppose you ‘interpret’ his instructions and proceed to break the seals and enter the rooms. Suppose you find everything normal, and, at the same time, find something that shows you that the rooms ought not to have been entered by anyone except Mr. Toke himself. That might create a very awkward situation.”

Mr. Woodburn laughed. “You think it possible that Mr. Toke may have something hidden in those rooms that he wouldn’t like anyone else, to see? Well, of course, it may be so. But I may mention that Mr. Didbury Toke is a most respectable gentleman.”

“I am not suggesting the slightest reflection on Mr. Toke’s moral character,” said Thorndyke, laughing in his turn. “Probably, his motive was nothing more than extreme solicitude for his collection. Still, he may have things locked up in his gallery the existence of which, in that place, he might well wish to keep secret; things, for instance, of great intrinsic value which might invite the attentions of burglars.”

“Yes,” said Woodburn, “I suppose you are right. He always swore that there was nothing there that a burglar would look at. But that may have been a mere precaution. Which brings us back to the question, What is to be done?”

“I think the answer to that is fairly simple,” said Thorndyke. “These statements certainly call for investigation. Two points require to be cleared up. First, is it certain that there is really no possibility of access to these rooms other than the door that you mentioned? And, second, assuming the first to be true, is it certain that access has not been obtained by means of that door?”

“But how could it have been?” Mr. Woodburn exclaimed. “The door is sealed. I examined it most carefully, and I can assure you that the seals are undoubtedly intact.”

“That is not absolutely conclusive,” Thorndyke replied with a faint smile. “Seals are not difficult to counterfeit. For instance, if, for any legitimate purpose you asked me to enter those rooms and replace the seals when I came out, I should find no difficulty in doing so.”

“Really!” exclaimed Mr. Woodburn. Then, subsiding into a grin, he added: “You are a rather dangerous sort of person, but I am not surprised that Brodribb has so much confidence in you. Perhaps you can suggest some way in which I might set about testing the correctness of these statements; or, better still, perhaps you would be willing to undertake the investigation yourself? I do feel that something ought to be done.”

“So do I,” said Thorndyke. “Incredible as the statements sound, what is stated is by no means impossible. And, if we should find that some persons either could have effected an entrance or had actually done so, the position would be entirely changed. You would then certainly be justified in breaking the seals and entering the rooms.”

“And asking you to replace the seals after, eh?” suggested Woodburn, with a broad grin. Apparently, Thorndyke’s accomplishments had made a profound impression on him.

Thorndyke smilingly dismissed the suggestion and enquired: “Is there no way, so far as you know, of getting a glimpse into the room from the outside?”

“No way at all,” was the reply. “I tried peering in at the windows, but it was impossible to see any thing through the curtains. I even tried the keyhole. There is a monstrous great keyhole in the door. I myself should think the key must be quite a formidable weapon, though I have never seen it. The door is secured by a Chubb lock, of which I have the key. Well, I peered through that keyhole, but all I could see was a patch of wall on the side of the room opposite. Naturally; because the door opens into the room at the extreme end of one side.”
“Could you give me a description of the room, or, preferably, a sketch?” Thorndyke asked.

“I have an architect’s plan of the house in my bag,” Woodburn replied. “I brought it up to show Brodribb, but he was not interested, as he did not believe the story. However, you are not so sceptical. I’ll get it out.”

He rummaged in his bag and presently produced a small roll of tracing-cloth, on which was a clearly drawn plan of the house and its immediate surroundings.

“The scale of the particular room,” he remarked, “is not as large as we should like. But you can see the main features. This crooked corridor leads to the gallery wing, and you see that it ends in a turn at right angles. So, when the door is open, you look in across the end of the room. The door opens inwards, and there are three steps down to the floor level. You can see for yourself that a keyhole in that door is of no use for the purpose of inspection.”

“Can you tell us anything about the furniture, or how the floor space is occupied?” Thorndyke asked.

“With the exception of a few chairs and a large table across the farther end of the room, there is practically no furniture excepting the wall-cases. There is range of them along each side wall between the windows, and the two doors that open into the four small rooms at the side of the gallery.”

“There seems to be no access to those rooms excepting through the doors from the gallery.”

“No, there is not. Those rooms seem to have been originally a corridor, which has been divided up by partitions. They all open into one another—at least, each opens into the next. Two of them have cabinets full of pottery and porcelain, and the other two are work-rooms in which Mr. Toke does jobs such as mending and cleaning the pieces.”

“What is there above and below the gallery?” asked Thorndyke.

“Above, I suppose, are lofts. I don’t know how you get to them, but I don’t think they would help us. You couldn’t see through the floor, and you couldn’t bore holes in it, as the gallery has a fine seventeenth-century plaster ceiling. Under the gallery is a range of cellars, but they are not accessible, as they are all secured with good padlocks, and both the padlocks and the doors are sealed.”

“Mr. Toke was certainly pretty thorough in his methods,” Thorndyke remarked. “It would be a serious responsibility to break into his Bluebeard chambers.”

“Yes, confound him,” Woodburn agreed. “I wish to goodness it was possible to communicate with him and let him take the responsibility. I wonder why the deuce he has never sent me a line. I hope nothing has happened to him abroad. You can never be sure in these days of motors and sudden death.”

“When did you say he went away?” Thorndyke asked.

“On the ninth of August,” replied Woodburn, “at least that is the date he gave me. He came to my office on the eighth to give me the keys and his final instructions, and he then said that he intended to start for Paris on the following night.”

“Do you know if he did actually start then?”

“Well, yes—indirectly. I happen to use the same garage to put up my car, when I come to town, as Mr. Toke uses. He recommended it to me, as a matter of fact. There I ascertained that he deposited his car on the morning of the ninth of August. But, oddly enough, he took it out again in the evening, and it was not returned until some time in the small hours of the following morning.”

“Then,” I said, “he couldn’t have caught his train.”

“I think he did. He did not return the car himself. It was brought in by a stranger, whom the night watchman described, picturesquely, as a ‘ginger Lushington,’ and this person reported that Mr Toke had caught his train, and that the lateness of the delivery of the car was due to some fault of his own.”

“I wonder what the watchman meant by a ‘ginger Lushington’?” said I.

“Yes,” said Woodburn, “it is a quaint expression. I asked him what it meant in common English. Apparently, it was a term of inference. The word ‘ginger’ referred to the colour of the man’s hair, and, as his nose was tinted to match, the watchman inferred the habitual use of stimulants. But apparently Toke caught his train all right.”

As Mr. Woodburn interpreted the watchman’s description, I caught Thorndyke’s eyes for a single instant, and I saw that he had noted the significance of that description. It was probably the merest coincidence, but I knew that it would not pass without close scrutiny. And I could not but perceive that thereafter his interest in Mr. Woodburn’s affairs became appreciably more acute.

“Do I understand,” he asked, “that you feel an actual uneasiness about your client?”

“Well,” was the reply, “I must admit that I am by no means happy about him. You see, this prolonged silence is a complete departure from his usual habit. And time is running on. This is the eleventh of October, and he has made no sign. All sorts of thing may happen to a man who is in a strange country and out of all touch with his friends. I don’t like it at all. However, it was not about Mr. Toke that I came to consult you, though I may have to ask for your assistance later. It is about these queer happenings at the Manor House. Now, what do you suggest? I should like you, as an expert, to take up the inquiry yourself. Do you care to do that?”
XI. — HARTSDEN MANOR HOUSE
As the train moved out of the station, Thorndyke lifted his invaluable green canvas research case from the seat to the rack, and then, with the tenderest care, disposed similarly of a walking-stick of the most surpassing hideousness.

“That,” I remarked, eyeing it with profound disfavour, “looks like one of Polton’s contraptions.”

“It is,” he replied, “if the word ‘contraption’ can be accepted as the proper designation of an extremely efficient and ingenious optical instrument. He made it many years ago; but an instrument of virtually identical construction was produced during the war under the name of ‘trench periscope.’ It is really a modern version of the ancient device of parallel inclined mirrors, which you may see in any old book on physics; only the mirrors are replaced by total-reflection prisms.”

“Have you ever used it before?” I asked.

“Yes, on one or two occasions, and found it to answer its purpose perfectly. I have brought it to-day on the chance that we may find some chink or hole through which we can poke it to get a view of the inside I of the gallery.”

“You won’t get it through that keyhole that Woodburn spoke of, large as it is,” said I.

“No,” he agreed. “But, as to that, we are not at the end of our resources—or rather Polton’s. He has devised an instrument for the express purpose of looking through awkwardly placed keyholes. I have it in my case.”

He lifted the case down, and, having opened it, produced from it a small cylindrical wooden case with a screw cap. The latter being removed, he was able to draw out what looked like a brass pencil holder.

“This,” he explained, “is a little Galilean telescope magnifying about one and a half diameters. In front of the object glass is fixed a small, oblong mirror, which is pivoted so that it can be set at any angle by turning this milled ring at the eyepiece end. Of course, it has to be parallel to the tube when the instrument is passed into the keyhole.” He handed it to me, and I put it to my eye, after setting the mirror at a suitable angle.

“It doesn’t seem a very efficient affair,” I remarked, “it has such a wretchedly small field.”

“Yes,” he admitted, “that is the trouble with keyholes. But this is only an experimental form. If it seems suitable in principle, we can easily devise something more efficient. What we have to ascertain first of all is whether we can see through the keyhole at all. Looking at the plan, there seems to be nothing structural in the way; but there may be some piece of furniture that will cut off the view of the room. If there is, the keyhole will be of no use to us.”

I handed the little toy back to him with a shade of impatience. “But why,” I asked, “all this fuss? Why go about a perfectly simple inquiry in this complicated, roundabout way? If there is good reason to believe that someone has entered the room, why not just walk in and investigate in a reasonable, straightforward manner? It seems to me that you and Brodribb are standing on rather pedantic legal scruples.”

He shook his head.

“I don’t think so, Jervis,” said he. “When you get clear instructions, you ought to assume that the instructor means what he says. But there is another matter, which I could only hint at to Woodburn. This man, Toke, is extraordinarily secretive. He has not only fastened up every opening with locks and bolts and screws, and put seals on the fastenings, but he has forbidden his solicitor, in the most emphatic way, to enter those rooms. Now, seals furnish no security against burglars. Their security is against his own trusted man of business. You or I or any reasonable person would have left the seal with Woodburn and asked him to inspect the place from time to time to see that all was well. Why has he shut out Woodburn in this secretive fashion? We must assume that he has his reasons. But what can they be? It may be mere crankiness, or it may not. Mr. Toke may be, and probably is, a most respectable gentleman. But supposing he is not? Supposing that his activities as a dealer in works of art cover some other activities of a less reputable kind? And supposing that the products of those other activities should happen to be hidden in those sealed rooms? It is not impossible.

“But if Woodburn—or we, as his agents—should enter in the face of explicit instructions to the contrary, and discover something illicit, the position would be extremely awkward. Professional secrecy does not cover that kind of thing.”

“Still,” I objected, “you are prepared to enter if you find evidence that someone else has.”

“Certainly,” he replied. “We should have to enter or inform the police. But we should then have no choice, whereas we have at present. And that raises another question. If we break in and find traces of unlawful visitors, we shall probably spoil our chances of making a capture. We are not ready now, and our entry would almost certainly leave some traces that would warn them not to reappear. Whereas, if we should discover evidences of visitors before we make our own entry, we should be able to make arrangements to catch them when they make their next visit.”

I agreed without much enthusiasm, for it seemed to me that Thorndyke was taking a mere rumour much more seriously than the circumstances justified. In fact, I ventured a hint to that effect.

“That is quite true, Jervis,” he admitted. “It is a mere report, at present. Yet I shall be a little surprised if we find a mare’s nest. There is something distinctly abnormal about the whole affair. But we shall be better able to judge when we have got a statement from the servants.”

“We have heard what they have to say,” I replied, still extremely sceptical of the whole affair. “But, possibly, cross-examination may elicit something more definite. As you say, we shall see.”

With this the discussion dropped, and we smoked our pipes in silence as we watched, from the window, the gradual
transition from the grey and rather dreary suburbs to the fresh green of the country. At Hartsden Junction, Mr. Woodburn was waiting on the platform, looking more like a smart livery stable keeper than a lawyer, and evidently keenly interested in our arrival.

“I am glad to see you,” he said, as we walked out to the approach, “for, the more I think about this affair, the more do I suspect that there is something amiss. And I have been reflecting on what you said about the seals. I had no idea that it was possible to forge a seal.”

“I don’t think,” said Thorndyke, “that you need attach much weight to the forgery question. It is merely a possibility that has to be borne in mind. In the present case, it is highly improbable, as an intruder would have to pass through the house to reach the sealed door.”

“Still,” objected Mr. Woodburn, “that door seems to be the only way in. Otherwise, why should Mr. Toke have sealed it?”

There was a fairly obvious reply to this, but Thorndyke made no rejoinder; and by this time we had reached the car, into which Mr. Woodburn ushered us and then took his place at the steering-wheel, looking as unsuitable for his post as if he had been at the tiller of a fishing smack.

As the car was of the saloon type, we saw little of our surroundings and nothing of the house until, entering through an open gate, we passed up a shady drive and stopped opposite a handsome stone porch. The door stood open and framed the figure of a pleasant-looking middle-aged woman.

“This,” said Mr. Woodburn, introducing us, “is Mr. Toke’s housekeeper, Mrs. Gibbins. I have told her about you, and she is as much interested in you as I am.”

Mrs. Gibbins confirmed this by a smile and a curtsey. “I am sure, gentlemen,” said she, “we shall all be very grateful to you if you can find out what these mysterious sounds are, and put a stop to them. It is very uncomfortable to feel that strangers—and dishonest strangers, too—are creeping about the house in the dead of the night.”

“It must be,” Thorndyke agreed, warmly. “But, before we start to find out what those sounds are, we want to be quite sure that they really exist.”

“There is no doubt about their existing,” Mrs. Gibbins rejoined, with intense conviction. “We have all heard them. And they certainly come from the gallery wing, for my nephew, Edward, got out of bed on two occasions and went part of the way down the corridor and listened; and he was quite sure that the sounds came from the gallery or the rooms that open out of it. And it wasn’t rats. Everybody knows the kind of sound that rats make, scampering about an empty room. It wasn’t like that, at all. It was like someone moving about quietly and, now and again, moving things. But there is another thing that can’t be explained away. This house is supplied with water from an Artesian well. The water is pumped up by a windmill into a tank, which is on the level of the top floor, and it runs from the tank into the pipes that supply the house. The tank being so high up, the pressure of the water is quite considerable, and whenever a tap is running in any part of the house, you can hear a distinct hum in the main pipe. Of course, you can hear it much more distinctly at night when every thing else is quiet.

“Now, I am a rather light sleeper, especially towards morning, and, on several occasions—over and over again—I have heard the water humming in the pipe when all the household were in bed and asleep. And always about the same time—just before it begins to get light.”

“That is very remarkable, Mrs. Gibbins,” said Woodburn. “You did not tell me about the water. It is a most striking fact. Don’t you think so, Doctor?”

“I do,” replied Thorndyke, “especially when taken with the other sounds. I take it, Mrs. Gibbins, that there is water laid on in the gallery wing?”

“Yes, sir. There is a lavatory with a fixed basin and a cold-water tap over it, and there is also a peculiar sort of sink—Mr. Toke calls it a chemical sink, I believe—in the work-room.”

“And you say that the sound of running water occurs always at the same time? Do you never hear it at other times?”

“Oh, yes,” she replied, “we hear it occasionally at other times. Not very often, though. But it seems to occur always when we have heard the other sounds. It is just as if the person had been doing some job and had a wash before he went away.”

Mr. Woodburn laughed cheerfully.

“Tidy fellow, this,” said he. “I wonder what he does in there. It’s a quaint situation. He’ll be ringing for his breakfast next.”

“Can you form any idea,” Thorndyke asked, “how often these sounds occur?”

“I should say,” replied Mrs. Gibbins, “that they happen pretty regularly twice a week—generally on Wednesdays and Fridays.”

Mr. Woodburn laughed heartily. Thorndyke’s appearance on the scene had evidently acted favourably on his spirits.

“Quite a methodical chap,” he chuckled. “Keeps regular hours, and has a wash and brush up before he goes home.”

“We mustn’t take him too much for granted,” Thorndyke reminded him. “We have got to establish his existence as a matter of undoubted fact, though I must admit that Mrs. Gibbins’s account is extremely circumstantial and convincing. It
establishes a case for a very thorough investigation and I think we had better begin by having a look at the door of the gallery. What will be about the height of that keyhole that you spoke of?"

Mr. Woodburn indicated the height by reference to a point on his own waistcoat. "But I am afraid the keyhole won't help you much," he added. "As I think I told you, I couldn't see anything through it, excepting a patch of the opposite wall."

"Perhaps we can manage to get a better view," said Thorndyke; "that is, if there is nothing in the way. Probably, Mrs. Gibbins can tell us about that. How was the furniture arranged when you were in there last?"

"There is very little furniture in there, at all," the housekeeper replied, "unless you call the wall-cases furniture. There is a large table across the end of the room, and there are three chairs, one arm-chair and two ordinary dining-room chairs. The arm-chair is behind the table, nearly in the middle, and the other two are at the ends of the table."

"You say they 'are'," Thorndyke remarked. "Do you mean that that is how they were placed when you were last in the room?"

"Yes, sir. But I think they must be like that still, because the last time I was in there was on the day when Mr. Toke went away. I helped him to shut up the room and seal the door. They couldn't very well have been moved after that."

"Apparently not," Thorndyke admitted. "Then, in that case, we may as well go and have a look at the door and see if it is possible to get a glimpse of the inside of the room. And perhaps we had better take a chair with us, as the keyhole is at a rather inconvenient height."

Mr. Woodburn picked up a chair and led the way out of the morning room in which we had been holding our conversation, across the hall and into a narrow passage, which became almost dark as a sharp turn cut off the light from the doorway by which we had entered.

"Queer old place," he remarked as the corridor took another turn. "All holes and corners. I am wondering how you are going to see into that room. I couldn't; but I suppose a man who can produce another man's seal out of a top hat won't make any difficulty about seeing round a corner."

"We have only undertaken to try," Thorndyke reminded him. "Don't let us take credit prematurely."

The disclaimer was not entirely unnecessary; for, when the corridor took yet another abrupt turn and brought us to a blind end in which was a massive door it became clear to me, from the manner both of Mrs Gibbins and Mr. Woodburn, that there was an expectation of some sort of display of occult powers on Thorndyke's part. So much so that, for the first time, I felt quite grateful to Polton.

"There you are," said Mr. Woodburn, placing the chair in position, and standing back expectantly to watch the proceedings, as if he had some hopes of seeing Thorndyke put his head through the keyhole, "Let us see how you do it."

My colleague seated himself with a deprecating smile, and, laying the research case on the floor, unfastened the catch and raised the lid; whereupon Mr. Woodburn and Mrs. Gibbins craned forward to peer in. Having taken a preliminary peep through the keyhole, Thorndyke produced the little wooden case and drew out Polton's diminutive spy-glass, which he inserted easily enough into the roomy opening. As he applied his eye to the tiny eyepiece and turned the milled ring to adjust the mirror, the two observers watched him with bated breath; as, indeed, did I, and with no small anxiety. For, apart from the importance of the result, a complete failure would have been a shocking anticlimax. Great, therefore, was my relief when Thorndyke announced:

"Well, at any rate, there is no obstruction to the view, such as it is. But it is not easy to make out the arrangement and relative positions of things with such a very restricted field of vision. However, as far as I can see, there are no signs of any appreciable disturbance. I can see the wall-cases at the end of the room, and their shelves are filled with what look like Bow and Chelsea figures. So there has been no robbery there. The cases at the sides of the room are not so easy to see, but I think I can make out the contents, and they appear to contain their full complement. Evidently, so far as the collection is concerned, there has been no robbery on any considerable scale.

"Then the position of the furniture corresponds generally with Mrs. Gibbins's description. There is an arm-chair behind the table and an ordinary dining-chair at each end. I can also see what looks like a shallow box or case of some kind on the table."

"A box on the table?" exclaimed Mrs. Gibbins. "That is curious. I don't remember any box, or anything else, on the table."

"Perhaps Mr. Toke put it there after you left," suggested Mr. Woodburn.

"But he couldn't," Mrs. Gibbins objected. "I went out with him and helped him to seal up the door. He couldn't have gone back after that."

"No. That is obvious," Woodburn objected. "So it looks as if someone had been in the room, after all."

"Do you say, positively, Mrs. Gibbins, that there was nothing on the table when you left the room with Mr. Toke?" Thorndyke asked.

"Well, sir," the housekeeper replied, "one doesn't like to be too positive, but I certainly thought that there was nothing on the table. In fact, I feel sure that there wasn't."
“That seems pretty conclusive,” said Woodburn. “What do you think, Doctor?”

“It is conclusive enough to us,” Thorndyke replied, diplomatically. “But, as a lawyer, you will realize the difficulty of coming to a definite decision on negative evidence. To justify you in acting in direct opposition to your client’s instructions, you ought to have undeniable positive evidence. We are not considering our own beliefs, but the legal position.”

“Yes, that is true,” Mr. Woodburn conceded, evidently interpreting Thorndyke’s polite hint that ladies are sometimes apt to confuse the subjective with the objective aspects of certainty.

“Do you see anything else?”

“No. I think that is the sum of my observations, But remember that the room is strange to me. Perhaps if you, who know the room, were to take a look through the instrument, you might detect some change that would not be apparent to me.”

To say that Woodburn jumped at the offer would be to understake the case. In his eagerness to occupy the seat of observation, he nearly sat on Thorndyke’s lap. But, apparently, Polton’s “contraption” did not come up to his expectations, for, after peering in at the eyepiece for some seconds, he said in a tone of slight disappointment:

“I don’t seem to make much of it. I can only see a tiny bit at a time, and everything looks in its wrong place. The table seems to be right opposite this door instead of where I know it to be.”

“You must disregard the positions of things,” Thorndyke explained. “Remember that you are looking into a mirror.”

“Oh, I hadn’t realized that,” said Woodburn, hastily. “Of course, that explains the odd appearance of the room.” He reapplied his eye to the instrument, and now was able to manage it better, for he presently reported:

“I think the cases look all right and everything else appears as usual. As to that box, of course, I can say nothing. I have never seen it before, and I can’t quite make out what sort of box it is. It looks like metal.”

“That was what I thought,” said Thorndyke. “Perhaps Mrs. Gibbins may recognize it.” The suggestion was evidently acceptable, for the housekeeper “outed” Mr. Woodburn with great promptness, and, having seated herself, applied her eye to the instrument. But she was even less successful than her predecessor, for, after a prolonged stare through the eyepiece, she announced that she could see nothing but the carpet, which appeared, unreasonably, to have affixed itself to the opposite wall. However, Thorndyke came to her aid, and eventually enabled her to see the mysterious box on the table; concerning which she again asserted with deep conviction that, not only was she quite sure that it had not been there when she and Mr. Toke had vacated the room, but that she was equally certain that she had never seen the box before at all.

When she had finished her observations (which seemed to concern themselves principally with the floor and the ceiling), I came into the reversion of the chair, by way, ostensibly, of confirming the previous observations. And, when I came to look through the little instrument in the conditions for which it was designed, I was disposed to be apologetic to Polton. The field of view was, indeed, extremely small, but the little circular picture at which one looked was beautifully clear and bright; and the fine adjustment for moving the mirror enabled one to shift the field of vision gradually and preserve a continuity in the things seen that had, to some extent, the effect of a larger field.

“Well,” said Woodburn, as I rose from the chair, “what have we arrived at? Or haven’t we arrived at any conclusion?”

“I think,” said Thorndyke, “that we must conclude that our observations tend to confirm the suspicion that someone had obtained access to this room. But I do not think that we have enough evidence to justify us in disregarding Mr. Toke’s very definite instructions.”

“Then,” said Woodburn, “what do you suggest that we ought to do?”

“I suggest that we make a careful survey of the house to see if we can find any means of access to this room that the seals do not cover; and if, as I expect, we fail to find any such means, then we must make some more exact and continuous observations from this door.”

“You don’t suggest that we post someone at this keyhole to keep watch continuously, do you?” exclaimed Woodburn.

“No,” replied Thorndyke. “That would be impracticable. But I think we could achieve the same result in another way. At any rate, I will take the preliminary measures before we go away from here, in case they may be needed.”

He withdrew the “spy-glass” from the keyhole, and, having put it away in the research case, produced from the latter a small cardboard box which, when the lid was removed, was seen to contain a number of little cylinders of hardwood about six inches long and of varying diameters, from a quarter of an inch up to five-eighths.

“These,” he explained, “are gauges that my assistant has made to obtain the exact dimensions of the keyhole, so that he can make a more efficient instrument.”

“The instrument that you have got is efficient enough,” said Woodburn. “The trouble will be to get someone to stay here to use it.”

“Perhaps we can produce an instrument that will do its work without an attendant,” replied Thorndyke. “But we will talk about that when we have made our survey. Now, I will just take these measurements.”

He seated himself once more and proceeded to pass the larger cylinders one by one through the keyhole. All of them passed through fairly easily excepting the two largest, which were returned to the box.
“The internal diameter of the keyhole,” said Thorndyke, “is nearly nine-sixteenths of an inch. Probably it has been a little enlarged by wear, but even so the key must have been an out-size. I shall call it half an inch.”

He marked, with a pencil, the approved cylinder, and, having returned it to the box, announced that he was ready to proceed to the next item in the programme.

“Perhaps,” he suggested, “we had better take a glance at the lofts which are over the gallery.”

Mr. Woodburn looked interrogatively at the housekeeper, who volunteered the information that the entrance to them was at the top of the back staircase, and that the key was on her bunch.

“The entrance to the lofts is not sealed, then?” Thorndyke remarked.

“Apparently not,” said Woodburn; “which suggests that we are not likely to find anything of interest in them. Still, we may as well have a look at them and satisfy ourselves.”

We followed the housekeeper through a surprising labyrinth of passages and rooms, which seemed to be on all sorts of levels, with steps up and down, which made it necessary to approach all doors with caution to avoid being tripped up or stepping into empty air. Eventually, we came to an unlocked door which gave entrance to the back staircase, up which Mrs. Gibbins preceded us in a dim twilight. At each landing, open doors gave glimpses into dark and mysterious corridors which apparently burrowed among the bedrooms, and the top landing showed us, in addition, a locked door with an enormous keyhole, into which the housekeeper inserted a ponderous key. The door creaked open, and revealed a flight of narrow, ladder-like stairs, upon which we crawled painfully and cautiously, Thorndyke bringing up the rear, encumbered with his research case and the Poltonic walking-stick.

There was no door at the top of the stairs (which seemed a lost opportunity on the part of the architect), and only a pretence of a landing outside the narrow doorway which gave entrance to the lofts. Here we stood for a few moments, looking into the long range of well-lighted lofts that stretched away on either side. There was something a little weird and impressive in the aspect of those great, wide attics with their rough oaken floors, littered with the cast-off household gods of forgotten generations, stretching away into the distance among the massive and almost unhewn timber of the great roof. Each of the two ranges—for we stood at the angle of the body and the wing of the house—was lighted by a pair of dormer windows on each side, filled with little panes of greenish glass set in leaded casements, so that we were able to see the whole extent with the exception of a few dark corners at the extreme ends.

“Well,” said Woodburn, looking a little distastefully at the littered floor, covered, as it seemed, with the dust of centuries, “is it worth while to go in? Looks a bit dusty,” he added, with a glance at his brilliantly polished boots.

“I think I will just walk down the lofts,” said Thorndyke, “as a matter of form, though it is pretty clear that there have been no recent visitors. But there is no need for you to come.”

That it was but a mere formality became evident as soon as we had started; for, glancing back, I could see that we had left plain and conspicuous footprints in the impalpable dust that lay in an even coating on the bumpy floor. Evidently, we were the first visitors who had trod that floor for, at least, some years.

“Still,” said Thorndyke, when I made a remark to this effect, “we had to establish the fact. If there is some secret way into the gallery, our only chance of discovering it will be by excluding, one by one, all the places in which it is not to be found. This is evidently one of them.”

“Well,” said Woodburn, as we emerged; “we can write off the lofts, I think. Dust has its uses, after all. What are we going to explore next?”

“I suppose,” Thorndyke replied, “we had better examine the outside of the premises.”

“Yes,” Woodburn agreed, “that seems to be the reasonable thing to do, seeing that, if there have been any visitors, that is where they must have come from. But there is mighty little to see. I can tell you that much, for I have made a thorough inspection, myself.”

Mr. Woodburn was right. There was very little indeed to see. The gallery stood above a range of what were now cellars, but had formerly been rooms, as we gathered from the windows, some entirely bricked up, while others were reduced to small openings, glazed with glass and protected by stout iron bars. The only approach to them was from within the house, by a massive door at the bottom of a flight of stone steps; and that door was not only sealed, but also secured by a heavy padlock of the Yale type, of which the minute key-slit was covered by a sealed label.

From outside the house, there was no entrance of any kind to the gallery wing. The windows of the gallery, itself, looked on the garden at the back of the house; but an inspection of them by means of the ladder, which had been put there for our convenience, only served to confirm Woodburn’s account of them. They were obviously untouched; and the lace curtains on the inside made it impossible to get the faintest glimpse into the room. The windows of the rooms which communicated with the gallery were equally impossible as a means of access. We examined them with the aid of the ladder from the narrow strip of garden that separated the side of the wing from the high wall that enclosed the whole domain. They, also, were evidently intact, and were guarded internally by massive shutters that effectually excluded the possibility of seeing in.

“That seems to be the lot,” said Woodburn, as we put the ladder back where we had found it, “unless there is anything else that you would like to see.”
Thorndyke looked up at the house, inquisitively, and then glanced along the wall down the garden. “I think,” said he, “I understood you to say that there was a churchyard on the other side of that wall.”

“Yes. Do you want to see it? I don’t know why you should.”

“We may as well take a look at it,” was the reply. “Any visitors, entering the house at night, would probably come over that wall rather than through the front grounds, particularly if there is a churchyard to take off from. A country churchyard is pretty secluded at night. It would even be possible to use a portable ladder.”

“So it would,” agreed Woodburn. “And this is a disused churchyard. They have built a new church at the other end of the village, the Lord knows why. They had better have restored the old church. But any visitors to the old churchyard would have the place to themselves at night.”

“Then let us go and inspect it,” said Thorndyke. “If there have been repeated visits, there ought to be some traces of the visitors.”

We went back through the house and out by way of the drive and the front gate. Turning to the right, we walked along the front of the Manor House grounds to the end of the enclosing wall where it was joined by the lower wall of the churchyard. Presently, we came to a dilapidated wooden gate which yawned wide open on its rickety hinges. Passing in through this, we took our way along an overgrown path, past a tall headstone and a decayed altar tomb, enclosed by rusty, ivy-grown railings. In front of us, a great yew tree cast a deep shadow across the path; and beyond, a smallish, ancient-looking church, with gaping windows from which the tracery had disappeared, huddled under a dense mantle of ivy, looking the very picture of desolation and decay. As we walked, Thorndyke looked about him critically, keeping an attentive eye on the ground beside the path, the high, neglected grass which everywhere sprang up between the graves being obviously favourable to a search for “traces.”

So we advanced until we entered the gloomy shadow of the great yew tree. Here Thorndyke halted to look about him. “Somewhere in this neighbourhood,” said he, “would be the most probable place for a nocturnal operator to make his arrangements. That is the Manor wall in front of us. I can see the roof of the gallery wing through the trees. That big sarcophagus tomb will be nearly opposite the end of the wing.”

“Yes,” I said. “It seems to mark the position that would be most convenient for negotiating the wall; and if you notice the grass, there seems to be a faint, rather wide track, as if it had been walked over by someone who had been careful not to tread it down all in one place.”

“I think you are right,” said Woodburn. “Now you mention it, I think I can make out the track quite plainly. It seems to lead towards that tomb.”

“The grass has certainly been walked over,” Thorndyke agreed, “and I see no signs of its having been trodden anywhere else. But don’t let us confuse matters by walking over it ourselves. Let us strike across the graves and approach along the wall.”

We followed this course, keeping close to the wall as we approached the great tomb. The latter stood about ten feet from the wall, and, as we drew near, I was surprised to notice that the grass between the tomb and the wall appeared quite untrodden.

Thorndyke had also noticed this rather unexpected circumstance, and, when we were within a yard or two of the tomb, he halted and looked curiously along the ground at the foot of the wall.

“There is certainly no sign of the use of any ladder,” he remarked. “In fact, there is no indication of any one having approached close to the wall. The track, if it really is one, doesn’t appear to go beyond the tomb.”

“That is what it looks like to me,” agreed Woodburn, “though I am hanged if I can see any reason why it should. They couldn’t have jumped from the top of the tomb over the wall.”

“It looks,” I suggested, “as if this place had been used rather as a post of observation, or a lurking-place where the sportsman could keep out of sight until the coast was clear.” We approached the tomb from the direction of the wall and sauntered round it, idly reading the inscriptions, which recorded briefly the life-histories of a whole dynasty of Greenlees, “late of Hartsden Manor in this Parish,” beginning with one John Greenlees who died in 1611. At length he turned away and began to retrace his steps down the path towards the gate.

“They were a turbulent family, these Greenlees,” said Woodburn. “Always in hot water. Bigoted Papists in early days, and, of course, Jacobites after the Revolution. From what I have heard, Hartsden Manor House must have seen some stirring times.”

While he was speaking, I was glancing through the inscriptions on the back of the tomb. Happening to look down, I noticed a match in the grass at my feet, and stooped to pick it up. As I did so, I observed another; on which I made a search and ultimately salvaged no less than six.

“What have you found, Jervis?” Thorndyke asked, as I rose.

I held out my hand with the six matches in it. “All from the same place at the back of the tomb,” said I. “What do you make of that?”

“It might mean five failures on a windy day or night,” he replied, “or six separate cigarettes; and the operator may have
come here to get a ‘lee side,’ or he may have got behind the tomb so that the light should not be seen from the road. But we must not let our imaginations run away with us. There is nothing to show that the person or persons who came to this tomb have any connection with our problem. We are looking for some means of access to the gallery, and, up to the present, we have not found any. The fact, if it were one, that some persons had been lurking about here, waiting for a chance to enter, wouldn’t help us. It would not tell us how they got in; which is what we want to know.”

Nevertheless, he continued, for some time, to browse round the tomb, dividing his attention between the inscriptions and the grass that bordered the low plinth.

“Well,” said Woodburn, “we seem to have exhausted the possibilities, unless there is anything else that you want to see.”

“No,” replied Thorndyke, “I don’t think it is of any use to prolong our search. I suspect that there is some way into the house; but, if there is, it is too well hidden to be discoverable without some guiding hint, which we haven’t got. So the answer to our first question is negative, and we must concentrate on the second—does anyone, in fact, effect an entrance to the gallery?”

“And how do you propose to solve that problem?” enquired Woodburn.

“I propose to install an automatic recorder which will give us a series of photographs of the interior of the room.”

“And catch ’em on the hop, eh?” said Woodburn. “But it doesn’t seem possible. Why, you would have to take a photograph every few minutes; and then you wouldn’t bring it off, because the beggars seem to come only at night.”

“I am not expecting to get photographs of the visitors themselves,” Thorndyke explained. “My idea is that, if any persons do frequent those rooms, they will almost certainly leave some traces of their visits. Even the moving of a chair would be conclusive evidence, if it could be proved, as it could be by the comparison of two photographs which showed it in different positions. I shall send my assistant, Mr. Polton, down to set up the apparatus, and perhaps you will give Mrs. Gibbons instructions to give him all necessary facilities, including the means of locking up the corridor when he has fixed the apparatus and set it going.”

To this Mr. Woodburn agreed, gleefully, and, as a train was due in a quarter of an hour, we embarked in his car without re-entering the house.

——

XII. — THE UNKNOWN COINER

FROM Charing Cross we walked home to the Temple, entering it by way of Pump Court and the Cloisters. As we were about to cross King’s Bench Walk, I glanced up at the laboratory window, and caught a momentary glimpse of Polton’s head, which, however, vanished even as I looked; and, when we arrived at our landing, the door of our chambers was open, and he was visible within, making a hypocritical pretence of laying the dinner-table, which had obviously been laid hours previously. But his pretended occupation did not conceal the fact that he was in a twitter of anxiety and impatience, which Thorndyke proceeded at once humanely to allay.

“It had to be a cold dinner, as I didn’t know what time you would be home,” Polton explained; but Thorndyke cut short his explanations and came to the essential matter.

“Never mind the dinner, Polton,” said he. “The important point is that your automatic watcher will be wanted, and as soon as you can get it ready.”

Polton beamed delightedly on his employer as he replied:

“It is ready now, sir, all except the objective. You see, the clock and the camera were really made already. They only wanted a little adaptation. And I have made an experimental objective, and done some trial exposures with it. So I am ready to go ahead as soon as I have the dimensions of the keyhole.”

“I can give you those at once,” said Thorndyke, opening the research case and taking out the wooden cylinders. “The keyhole will take a half-inch tube fairly easily.”

Polton slapped his thigh joyfully. “There’s a stroke of luck!” he exclaimed. “You said it would be about half an inch, so I used a half-inch tube for my experimental objective. But I never dared to hope that it would be the exact size. As it is, all I have got to do is to fix it on to the camera. I can do that tonight and give it a final trial. Then it will be ready to set up in place to-morrow. Perhaps, sir, you will come up presently and see if you think it will do. I shall have got it fixed by the time you have finished dinner.”

With this, having taken a last glance at the table, he retired in triumph, with the box of cylinders in his hand.

“What is this ‘automatic watcher’?” I asked, as we sat down to our meal. “I assume that it is some sort of automatic camera. But what is its special peculiarity?”

“In its original form,” replied Thorndyke, “it consisted of a clock of the kind known as an English Dial, with a magazine camera fixed inside it. There was a simplified striking movement which released the shutter at any intervals previously arranged. It also had an arrangement for recording the time at which each exposure was made. It was quite a valuable appliance for keeping a watch on any particular place. It could be set up, for instance, opposite the door of a strong room or in any similar position.”
“But suppose the thief made his visit in the interval between two exposures?”

“That was provided for by a special attachment whereby the opening of the door was made to break an electric circuit and release the shutter. So that whenever the door was opened an exposure was made and the time recorded. But, for our present purpose, although we have retained the principle, we have had to modify the details considerably. For instance, we have separated the clock from the camera, so that it can be fixed far enough away from the door to prevent its tick from being heard in the gallery. The releasing mechanism of the clock is connected with an electromagnet in the camera which actuates the shutter and the film roller. The lens is in a tube five inches long, with a reflecting prism at the farther end, which will, of course, be passed through the keyhole, and the camera screwed on to the door. That is a rough sketch of the apparatus. You will see the details of it when we go up to make our inspection.”

“And how often do you propose to make an exposure?” I asked.

“One exposure every twenty-four hours would do for us,” he replied, “as we merely want a daily record of the positions of the various objects in the room. But that does not satisfy Polton. He would like an exposure every hour. So we have arrived at a compromise. There will be an exposure every six hours. Of course, those made at night will show nothing, and both of those made in daylight, when the room will be unoccupied, will, presumably, be alike. But I can see that Polton will not be happy if there is not a good string of exposures.”

“Supposing the exposures are all alike?” I suggested.

Thorndyke laughed grimly. “Don’t be a wet blanket, Jervis,” said he, “But I must admit that it would be something of an anticlimax and distinctly disappointing, though not entirely unexpected. For, if there are really visitors, it is quite possible that they do not go to the gallery at all. Their business, what ever it may be, is, quite conceivably, carried on in one of the rooms that open out of the gallery. So a negative result with the camera would not prove that no one ad entered the gallery wing.”

It was my turn to smile, and I did so. “It is my belief, Thorndyke,” said I, “that you don’t mean anything to disprove it. You are not approaching the investigation with an open mind.”

“Not very open,” he admitted. “The housekeeper’s statement, together with all the other circumstances of the case, make a very strong suggestion of something abnormal, so strong that, as you say, I am not prepared to be easily satisfied with a negative result. And now, if we have finished, we had better go up to the laboratory and have a look at Polton’s masterpiece.”

We rose, and were just moving towards the door when a firm tread became audible on the landing, and was followed by a familiar knock on the brass knocker of the inner door.

“Miller, by Jove!” I exclaimed. “How unfortunate! But I can entertain him while you go up to Polton.”

“Let us hear what he has to say, first,” replied Thorndyke; and he proceeded to throw open the door.

As the Superintendent entered, I was impressed by a certain curious mixture of jauntiness and anxiety in his manner. But the former predominated, especially as he made his triumphant announcement.

“Well, gentlemen, I thought you would be interested to hear that we have got our man.”

“Dobey?” asked Thorndyke.

“Dobey it is,” replied Miller. “We’ve got him, we’ve charged him, and he is committed for trial.”

“Come and sit down,” said Thorndyke, “and tell us all about it.”

He deposited the Superintendent in a comfortable arm-chair, placed on the little table at his elbow the whisky decanter, the siphon, and the box of the specially favoured cigars, and while the tumbler was being charged and the cigar lighted, he filled his pipe and regarded his visitor with a slightly speculative eye.

“Where did you catch him?” he asked, when the preliminary formalities were disposed of.

Miller removed the cigar from his mouth in order the more conveniently to smile.

“It was a quaint affair,” he chuckled. “We caught him in the act of picking the lock of his own front door. Rum position, wasn’t it? Of course, the key was at the police station at Maidstone. We had been keeping a watch on the flat, but it happened that day that one of our sergeants was going there with a search warrant to have another look over the premises in case anything should have been missed at the first search. When he got up to the landing, there was my nabs, angling at the keyhole with a piece of wire. He was mightily surprised when the sergeant introduced himself, and still more so when he was told what he was charged with.”

“Was he charged with the murder or the house breaking?”

“Both. Of course, the usual caution was administered, but, Lord, you might as well have cautioned an oyster.”

“Did he say nothing at all?”

“Oh, the usual thing. Expressed astonishment—that was real enough, beyond a doubt. Said he didn’t know what we were talking about, but was perfectly sure that he didn’t want to make any statement.”

“I suppose he pleaded ‘not guilty’ at the police court?”
“Yes. But he wouldn’t say anything in his defence, excepting that he knew nothing about the murder and had never heard of Inspector Badger, until he had got legal advice. So the magistrate adjourned the hearing for a couple of days, and Dobey got a lawyer to defend him—a chap named Morris Coleman.”

“Of Kennington Lane?”

“That’s the man. Solicitor and advocate. Hebrew, of course. Downy bird, too, but quite a good lawyer.”

“Yes,” said Thorndyke, “I have seen him in court. A cut above the ordinary police-court advocate. And what did he have to say?”

“Reserved his defence, of course. They always do if the case is going for trial. That’s the worst of these police-court solicitors. But it usually means that they haven’t got any defence, and of course that is what it means now, so it doesn’t matter. But it is a time-wasting plan when they have got a defence, and the judge usually has something to say about it. Still, you can’t cure them. They think they get an advantage by springing a defence on the court that nobody expected.”

“You say you are proceeding on both the charges. Why are you bringing in the house-breaking?”

“Well, of course,” replied Miller, “it is the murder that he will actually be tried for. But we shall have to prove the facts of the house-breaking to explain how the stolen paper came to be found.”

As he gave this explanation, the Superintendent stole a slightly furtive glance at Thorndyke, which I understood when the latter remarked, dryly:

“True. And the evidence of the witnesses to the house-breaking may serve to supply the deficiencies of the station-master at Strood. I take it that they will be able to identify Dobey.”

“They have. Picked him out instantly from a crowd of thirty other men. And as to that station-master, it’s just a silly excess of caution and over-conscientiousness. He didn’t look at the man particularly, and so he won’t swear to him. But, as his description of the man agrees with that of the witnesses to the house breaking, and they are ready to swear to Dobey, it will, as you say, help matters a bit. But, of course, the finding of the paper in his possession is the really crucial piece of evidence.”

“It is more than that,” said Thorndyke. “It is the whole of the evidence in regard to the murder. Without it your bill would never get past the Grand Jury. And, as to the house-breaking, as it can’t be included in the indictment, I doubt whether the court will allow any reference to it. That, however, remains to be seen.”

“Well,” rejoined Miller, “it doesn’t matter a great deal. The paper fixes the crime on him.”

With this, he dipped his nose into his glass and resumed his cigar with the air of having disposed of the subject; and I took the opportunity to raise another point.

“Did you say that Dobey was found picking his lock with a piece of wire?” I asked.

“Yes,” he answered with a chuckle. “Quaint situation, wasn’t it?”

“It strikes me as more than quaint,” I replied. “It is most extraordinary that he should not have provided himself with a key of some sort.”

“It is,” Miller agreed. “But it was a simple latch, and I expect he was pretty handy with the wire. And I don’t suppose he often went to the flat. Still, as you say, he must have been a fool not to get a key.”

“He must,” said I. “It is a striking example of the criminal mentality.”

“Yes,” agreed Miller. “They are not a very bright lot.” He paused reflectively for a few moments, puffing at his cigar reflectively, and then resumed in a meditative tone: “And yet it doesn’t do to rate them too low. We say to ourselves that they are all fools. So they are, or they wouldn’t be crooks. Crime is never a really sound economic proposition. But there is one thing that we must bear in mind: there are two kinds of crooks—those that get caught, and those that don’t. And a crook that doesn’t get caught may never come into sight at all. If he manages well enough, his existence may never be even suspected. I have just heard of a case in which the existence of a man of this class has been disclosed by a mere chance. But we don’t know who he is, and we are not very likely to find out. I’ll tell you about the case. It’s a queer affair.

“Just recently, one of our men who specializes in note forgeries and knows a good deal about money of all kinds, had to spend a week or two on the Continent. When he was about to return, he changed his foreign money into English and got one or two sovereigns. Now, when he got home and had a look at those sovereigns, he thought there seemed to be something queer about one of them. So he got a chemist to weigh it, but the weight was apparently all right—it was only an ordinary shop scale, you know, but it weighed within a fraction of a grain. Then he measured it; but all the dimensions seemed to be correct. But, still, to his expert eye, it didn’t look right; and it didn’t sound right when he rang it. So he took it to an assayist whom he knew, and the assayist tried its specific gravity and tested it so far as was possible without damaging the coin, and he reported that it was undoubtedly gold of about the correct fineness. But still our man wasn’t satisfied. So he took it to the Mint, and showed it to one of the chief officials. And then the murder was out. It wasn’t a milled coin at all. It was a casting. An uncommonly good casting and very neatly finished off at the edge, but an undoubted casting to the skilled eye. So they passed it on to the assay department and made a regular assay of it. The result was very quaint. It was gold right enough, and just about 22 carat; but it was not exactly the composition of a sovereign. There was a slight difference in the alloy. That was all. There was no fraud. The proper amount of gold was there. Yet it was a
counterfeit coin. Now, what do you make of that?"

"Nothing," I answered, "unless it was a practical joke."

"Well, it wasn't. The Mint people asked us to look into the matter, and we did. The result was that we found one or two more specimens of this queer, unofficial money—you couldn't call it base coin—in France, Belgium, and Holland. Evidently, there is a regular manufacture."

"But what on earth can be the meaning of it?" I demanded.

Miller chuckled. "We can only guess," said he, "but we can take it that the sportsman who makes those sovereigns doesn't do it for fun. And, if he makes a profit on them, he doesn't buy his gold from the bullion dealers, and he doesn't pay the market price for it. On the other hand, he probably sells it for export at considerably above its nominal value, now that gold is so difficult to get. So, if he steals his gold, or gets it cheap from the thieves, and sells it at a premium, he doesn't do so badly. And he will be mighty hard to catch. For the coins are genuine golden sovereigns, and only a fairly expert person would be able to spot them. And experts are pretty rare, nowadays. Once, every little shopkeeper was an expert; but now there are plenty of people who have never seen a sovereign."

"It is a clever dodge," I remarked, "if the gold is really stolen."

"Clever!" repeated Miller, enthusiastically. "It's a stroke of genius. You see, it avoids all the crook's ordinary difficulties. He can get rid of the stones pretty easily, as they can't be identified separately. But the gold is less easy to dispose of at a decent price. For, if a bullion dealer is willing to buy it—which he probably isn't, if he is a respectable man—the transaction is known, and the vendor has left dangerous tracks; and the ordinary fence will only give a knock down price. He must make a big profit to set off the risk that he takes.

"But there is another case that has just come to light—probably the same man. You know that, for some time past, the Mint has been calling in all real silver money. Now, since this sovereign incident, it occurred to the people there to look over the silver coins that came in; and, at the first cast, they came on a half-crown that turned out to be a casting. But it was silver. Further search brought one or two more to light. Someone was making silver half-crowns.

"Now, here was a paradoxical situation! The coiner was making good silver coin while the Mint was issuing base money. Of course, coining is illegal. But this coiner could not be charged with uttering base coin. It would be hard to prove to a jury that it was counterfeit.

"Here you see the difference between the stupid crook and the clever crook. The fool tries to grab the whole—and doesn't do it. He makes his coin of pewter and probably steals that. They generally used to. If he got half a crown for his pewter snide, it would be all profit. But he doesn't, because it is a duffer. So he has to sell it cheap to the snide man. And he gets caught. But this sportsman puts, say, a shilling's worth of silver into his half-crown, and he doesn't have to pay the snide man. He can pass it quite safely himself. And he doesn't get caught."

"He runs the risk of getting caught if he passes it himself," I objected.

"Not at all," said Miller. "How should he? What you're overlooking is that the coins are good coins. They pass freely, and they will bear assay. Only an expert can spot them, and then only after close examination. But he must make a big profit. He could easily get rid of a hundred a day. There's seven pounds ten shillings profit, even if he buys the silver at the market price, which he probably does not. That silver is most likely burglars' loot—silver tea-pots and candlesticks melted down; stuff that he would have to sell to a fence at about the price of brass. I tell you, Dr. Jervis, that coiner is a brainy customer. He'll want a lot of salt sprinkled on his tail before he'll get caught."

"I think you are rather over-estimating his profits," said I. "He has not only to pass the coins; he has got to make them. Good workmanship like that means time and labour. And there is the gold. Most trade jewellery is made of a lower-grade gold than 22 carat. He would either have to buy fine gold from the bullion dealers to bring his low-grade gold up to standard or to do a good deal of conversion himself."

While Miller was considering this difficulty, the door opened, and Polton's head became visible, his eyes riveted on the Superintendent's back with an expression of consternation. I think he would have with drawn, but that Miller, in some occult manner, became aware of his presence and addressed him.

"Good evening, Mr. Polton. We were just discussing a little problem that is rather in your line. Perhaps you would give us your opinion on it."

On this, Polton advanced with a slightly suspicious eye on the Superintendent, and Miller proceeded to put his case.

"The problem is, how to make sovereigns—castings, you know—out of jewellery composed of low-grade gold. Supposing you had got a lot of rings, for instance, of 18-carat gold. Now, how would you go about turning them into 22-carat sovereigns?"

Polton crinkled at him reproachfully.

"I am surprised at you, Mr. Miller—an officer of the law, too—suggesting such a thing. Of course, I wouldn't do anything of the sort."

"No, no," chuckled Miller, "we know that. It's just a question of method that we want explained. Because somebody has done it, and we would like to know how he managed it."
“Well, sir,” said Polton, “there is no particular difficulty about it. He would weigh up the 18-carat gold and take part of it, say a little more than half, flatten it out on the stake or in a rolling mill, if he had one, break it up quite small, and boil it up in nitric acid. That would dissolve out the alloy—the copper and silver—and leave him pure gold. Then he would melt that down with the proper proportion of the 18-carat stuff, and that would give him 22-carat gold.”

“And as to making the coins? Would that be much of a job? How many do you think he could make in a day?”

“A man who knew his job,” said Polton, “wouldn’t make any trouble about it. He would make his mould in a casting flask that would cast, say, twenty at a time, and he would use a matrix that would dry hard and give a good many repeats. There would be a bit of finishing work to do on each coin—cutting off the sprue, where the metal ran in, and making good the edge. But that is not a big job. They make a special edge tool for the purpose.”

“Oh, do they?” said Miller, with a sly grin. “You seem to know a good deal about it, Mr. Polton.”

“Of course I do,” was the indignant response, “seeing that I have been dealing with tool-makers in the metal trade since I was a boy. Not that the respectable makers in Clerkenwell have anything to do with burglars’ and coiners’ tools. But, naturally, they get to know what is made.”

“Yes, I know,” said Miller. “Our people get some useful tips from them, now and again. And I shall know where to send them if they want some more, eh, Mr. Polton? Technical tips, I mean, of course.”

Polton crinkled indulgently at the Superintendent, and when the latter, having glanced at his watch, suddenly emptied his glass and rose, his expression became positively affectionate.

“I am afraid I have wasted a lot of your time with my gossip,” said Miller, apologetically, as he drew on his gloves, “but I thought you would like to have the news. Probably you will look in at the Old Bailey and see how the case goes. The sessions are just beginning now, and I expect the case will come on in the course of a few days.”

“We shall certainly drop in if we can,” said Thorndyke, “and see what comes of your efforts. Won’t you throw away that stump and take a fresh cigar?” he added, holding out the box as the Superintendent essayed to strike a match.

“Seems a waste,” replied Miller, turning a thrifty eye on the stump. But he succumbed, nevertheless; and when he had selected a fresh cigar and amputated its point with anxious care, he lit it (with a match that Polton had struck in readiness), shook hands, and took his leave.

As the door closed on the sound of his retiring footsteps, Polton fell to, in his noiseless, dexterous fashion, on the dismantling of the dinner-table; and, as he prepared a tray for transport to the upper regions, he announced:

“The camera is finished, sir, and all ready for inspection, if you have time to come up and have a look at it.”

“Then let us go up at once,” said Thorndyke; “and perhaps we can take some of the debris with us and save another journey.”

He loaded a second tray and followed Polton up the stairs, while I brought up the rear with an empty claret jug and a couple of dish covers.

The “automatic watcher,” which its creator exhibited with justifiable complacency, was a singularly ingenious appliance. The clock was enclosed in a small box, on the front of which was a miniature dial; and the almost inaudible tick was further muffled by a pad of felt between its back and the wall. The camera, to which it was connected by an insulated wire, was another small box, fitted with mirror plates to fasten it to the door. From its front projected a brass tube, five inches long, and half an inch thick, at the end of which was an enclosed prism with a circular opening facing at right angles to the axis of the tube.

“There are two film holders,” Polton explained, “each taking six yards of kinematograph film, and each enclosed in a light-tight case with a dark-slide, so that it can be taken out and another put in its place. So I can go down and bring away one film for development and leave the other to carry on. I have set the clock to make an exposure every six hours, beginning at twelve o’clock, noon.”

“And what about the shutter?” asked Thorndyke. “Does it make much of a click?”

“It doesn’t make any sound at all,” replied Polton, “because it moves quite slowly. It is just a disc with a hole in it. When the clock makes the circuit, the disc moves so that the hole is opposite the lens; and stays there until the circuit is broken. Then it moves round and closes the lens, and, at the same time, the roller makes a turn and winds on a fresh piece of film. I’ll make an exposure now.”

He turned the hand of the clock until it came to six, while Thorndyke and I listened with our heads close to the camera. But no sound could be heard; and it was only by repeating the proceeding with our ears actually applied to the camera that it was possible to detect faint sounds of movement as the shutter-disc revolved.

“I suppose,” said Thorndyke, “you focus on the film?”

“Yes,” replied Polton; “there’s plenty to spare, so I use a piece as a focusing screen and waste it. And the barrel of the lens can be turned so as to get the prism pointing at the right spot. I think it will do, sir.”

“I am sure it will,” Thorndyke agreed, heartily; “and I only hope that all your trouble and ingenuity and skill will not have been expended in vain.”
“That can hardly be, sir,” was the cheerful response. “The photographs are bound to show something, though it may not be exactly what you want. At any rate, it’s ready; and, with your permission, I will pop down with it to-morrow, as soon as I have finished with the breakfasts.”

“Excellent!” said Thorndyke. “Then, if Mrs. Gibbins’s belief is well founded, the ‘watcher’ will be installed in time for the Wednesday-night visit.”

XIII. — REX V. DOBEY

DURING the next day or two, I was sensible of a certain tension and unrest that seemed to affect the atmosphere of our chambers in King’s Bench Walk. Polton, having successfully installed his apparatus in the corridor at Hartsden Manor House, was in a fever of impatience to harvest the results. I believe that he would have liked to sit down beside his camera and change the film after each exposure. As it was, he had fixed it on Tuesday morning, and, as no result could be expected until Thursday, at the earliest, circumstances condemned him to two whole days of suspense.

But Polton was not the only sufferer. My long association with Thorndyke enabled me to detect changes in his emotional states that were hidden from the eye of the casual observer by his habitually calm and impassive exterior; and, in these days, a certain gravity and preoccupation in his manner conveyed to me the impression that something was weighing on his mind. At first, I was disposed to connect his preoccupation with the affairs of Hartsden Manor; but I soon dismissed this idea. For in those affairs there was nothing that could reasonably cause him any anxiety. And Thorndyke was by no means addicted to fussing unnecessarily.

The explanation came on the Wednesday evening, when we had finished dinner and taken our armchairs, and were preparing the post-prandial pipes.

“I suppose,” said he, pushing the tobacco jar to my side of the little table, “you will turn up at the Old Bailey to hear how Dobey fares?”

“When is the trial?” I asked.

“To-morrow,” he replied. “I thought you knew.”

“No,” said I. “Miller didn’t mention any date, and I have heard nothing since. I think it would be interesting to hear the evidence, though we know pretty well what it will be.”

“Yes, we know the case for the prosecution. But we don’t know what Dobey may have to say in reply. That is what interests me. I am not at all happy about the case. I don’t much like the attitude of the prosecution—if Miller has represented it fairly—particularly the dragging in of the house affair.”

“No,” I agreed, “that seems quite irrelevant.”

“It is,” said be. “And it is a flagrant instance of the old forensic dodge of proving the wrong conclusion. The identification of Dobey by these women is evidently expected to convey to the jury in a vague sort of way that the station-master’s refusal to swear to the identity of the Strood man is of no consequence.”

“It is quite possible that the judge may refuse to allow the house affair to be introduced at all.”

“Quite,” he agreed, “especially if the defence objects. But, still, I am not happy about the case. The intention of the prosecution to introduce this irrelevant matter to prejudice the jury and their suppression of the evidence regarding the poisoned cigar—which really is highly relevant—suggests a very determined effort to obtain a conviction.”

“I take it that you do not entertain the possibility that Dobey may have committed the murder?”

“No, I don’t think I do. As you say, we know the case for the prosecution and we know that it is a bad case. There is a total lack of positive evidence. But, still, there is the chance that they may get a conviction. That would be a disaster; and it would, at once, raise the question as to what we should have to do. Obviously, we couldn’t let an innocent man go to the gallows. But it would be a very difficult position.”

“What are the chances of a conviction, so far as you can see?”

“That depends on what Dobey has to say. The case for the prosecution rests on the finding of the stolen document in his flat. There is no denying that that is a highly incriminating circumstance, and, if he can produce nothing more than a mere denial of having taken it, the chances will be decidedly against him.”

“It is difficult to see what answer he can give,” said I. “The document was certainly taken from Badger, before or after his death; it was certainly found in Dobey’s flat; and, apparently, Dobey was the sole occupant of that flat. I don’t see how he is going to escape from those facts.”

“Neither do I,” said Thorndyke. “But we shall hear what he has to say to-morrow; and if he is found guilty, we shall have to consider very seriously what our next move is to be.”

With this, the subject dropped. But, at intervals during the evening, my thoughts went back to it, and I found myself wondering whether Thorndyke had not perhaps allowed himself to undervalue the evidence against Dobey. The finding of that document in his rooms would take a great deal of explaining.
My intention to hear the case from the beginning was frustrated by a troublesome solicitor, who first failed to keep an appointment, and then detained me inordinately, so that when, at last, I arrived at the Central Criminal Court and, having hurriedly donned my wig and gown, slipped into the counsels’ seats beside Thorndyke, the case for the prosecution was nearly concluded. But by the fact that the finger-print expert was then giving evidence, I knew that the prosecution had succeeded in introducing the house breaking incident. As I listened to the evidence, I looked quickly round the court to identify the various dramatic personae and, naturally, looked first at the dock, where the prisoner stood “on his deliverance,” listening with stolid calm to the apparently indestructible evidence of the expert.

As I looked him over critically, I was not surprised at the eagerness with which the police had fastened on his salient peculiarities. He was quite a striking figure. Dull and commonplace enough in face and feature, the combination of a rather untidy mop of dark-red hair with a noticeably red nose set in a large pale face made him an ideal subject for identification. From the prisoner I turned to his defending solicitor, Mr. Coleman, who sat at the solicitors’ table, listening with sphinx-like impassiveness to the expert’s authoritative pronouncements. Equally unmoved was the prisoner’s counsel, a good-looking Jew named Lyon, who specialized in criminal practice. The counsel for the prosecution, a Mr. Barnes, was on his feet at the moment, and his junior, Mr. Callow, was industriously taking notes of the evidence.

"Have the defence objected to this evidence?" I asked Thorndyke in a whisper, as the leader for the Crown put what seemed to be his final question.

"No," was the reply. "The judge questioned the relevance of it; but, as the defence did not seem interested, he gave no ruling."

It seemed to me that Mr. Dobey’s case was being rather mismanaged; and I was confirmed in this opinion when his counsel rose to cross-examine:

“You have stated that the marks on this window glass are the prints of the prisoner’s fingers. Are you quite certain that those marks were not made by the fingers of some other person?”

“The chances against their having been made by the fingers of any person other than the prisoner are several thousand millions.”

“But is it not possible that you may have made some mistake in the comparison? You don’t, I suppose, claim to be infallible?”

“I claim that the method employed at the Bureau is infallible. It does not depend on personal judgment, but on comparison, detail by detail, of the questioned finger-print with the one which is known. I have made the comparison with the greatest care, and I am certain that I have made no mistake.”

“And do you swear, positively, of your certain knowledge, that the marks on this window-glass were made by the fingers of the prisoner?”

“I do,” was the reply; whereupon, having thus unnecessarily piled up the evidence against his client, Mr. Lyon sat down with an air of calm satisfaction. I was astonished at the apparent stupidity of the proceeding. It is seldom worth while to cross-examine finger-print experts at all closely, for the more they are pressed, the more do they affirm their absolute certainty. And I noticed that my surprise seemed to be shared by the judge, who glanced with a sort of impatient perplexity from the counsel to the sphinx-like solicitor who was instructing him. It must be an exasperating experience for a judge—who knows all the ropes—to have to watch a counsel making a hopeless muddle of a case.

The next witness was a middle-aged woman who gave the name of Martha Bunsbury, and who was examined by Mr. Barnes in the plain, straightforward fashion proper to a prosecuting counsel.

“Kindly look at the prisoner and tell us whether you recognise him.”

The witness bestowed a disdainful stare on the prisoner, and replied, promptly: “Yes. I picked him out of a whole crowd at Brixton Prison.”

“Where and when had you seen him before that?”

“I saw him on the second of August, breaking into a house in Sudbury Park. I happened to be at the window at the back of my house when I heard the sound of glass being broken. So I looked out, and then I saw the prisoner getting into the back window of the house in Sudbury Park that is just opposite mine. So I opened the window and called out. Then I ran down to the garden and gave the alarm to two men who were coming along the towing-path of the canal.”

“And what happened next?”

“The lady next door to me came out into her garden and she began to call out too. Then the two men started to run along the tow-path towards the bridge, but the prisoner, who had heard us giving the alarm, backed out of the window and ran across the garden with his coat on his arm. When he came to the wall, he laid the coat on the top of it, because the wall has broken glass all along his top, and climbed over. But, as he dropped down outside, the coat dropped down inside. He turned round, and was going to climb back to get it, but, by that time, the two men were running over the bridge. So he left the coat and made off up a side lane between two houses. And that is the last I saw of him.”

“Yes. A very excellent description,” said Mr. Barnes. “But now I want you to be extremely careful. Look again at the prisoner, and see if you are quite certain that he is really the man whom you saw in the garden of that house. It is most
important that there should be no possibility of a mistake."

“There isn’t,” was the immediate and confident reply. “I am perfectly certain that he is the man.”

On this, Mr. Barnes sat down and Mr. Lyon rose to cross-examine.

“You have said that you saw the housebreaker from the back window of your house, breaking a back window of a house opposite. How far would that window be from yours?”

“I really couldn’t say. A fair distance. Not so very far.”

“You spoke of a canal. Is the opposite house on the same side of the canal as your house?”

“No, of course it isn’t. How could it be? It is on the opposite side.”

“And how long is your garden?”

“Oh, a moderate length. You know what London gardens are.”

“Should I be right in saying that, at the time that you saw this man, you were separated from him by the length of two gardens and the width of the canal?”

“Yes. That is what I said.”

“And you say that, having seen this total stranger at that very considerable distance, you are quite certain that you are able to recognize and remember him?”

“Yes, I am quite certain.”

“Can you tell us how you are able to identify him with such certainty?”

“Well,” said the witness, “there’s his nose, you see. I could see that.”

“Quite so. You looked upon the nose when it was red.”

“I should think it is always red,” said Mrs. Bunsbury. “At any rate, it was red then, and it is red now. And then there is his hair.”

“Very true. There is his hair. But he is not the only man in the world with a red nose and red hair.”

“I don’t know anything about that,” replied the witness, doggedly. “But I do know that he is the man. I’d swear to him among ten thousand.”

This apparently finished Mr. Lyon, for, having again prejudiced his client’s case to the best of his ability, he sat down with unimpaired complacency.

The next witness, Miss Doris Gray, gave evidence to the same effect, though with somewhat less emphasis; and, when she had been cross-examined and finally vacated the witness-box, Mr. Barnes rose and announced that “that was his case.”

As soon as he sat down, Mr. Lyon rose and made his announcement.

“I call witnesses, my lord.”

“Now,” Thorndyke said to me in a low tone, “we are going to see whether there is really a case for the defence.”

“They haven’t made much of it up to the present,” I remarked.

“Exactly,” he replied. “That is what makes me a little hopeful. They have certainly given the prosecution plenty of rope.”

I should have liked to have this observation elucidated somewhat—and so, probably, would Superintendent Miller, who, at this moment, came forth from some inconspicuous corner and took his place at the solicitors’ table; for there was more than a shade of anxiety on his face as he looked expectantly at the witness-box. But there was no opportunity for explanations. Even as Miller took his seat, the first witness for the defence was called, and appeared in the person of a pleasant-looking middle-aged lady wearing the uniform of a trained nurse, and bearing, it transpired, the name of Helen Royden. In reply to a question from Mr. Lyon, she deposed that she was the matron of the cottage hospital at Hook Green, near Biddenden in Kent.

“Will you kindly look at the prisoner and tell us if you recognize him?”

The witness turned her head and cast a smiling glance at the accused (whereupon Mr. Dobey’s rather saturnine countenance relaxed into a friendly grin). “Yes,” she replied, “I recognize him as Mr. Charles Dobey, lately a patient at my hospital.”

“When did you last see him?”

“On the first of October, when he was discharged from hospital.”

“What were the date and the circumstances of his admission?”

“He was brought to the hospital on the thirtieth of July by Dr. Wale, the medical officer of the hospital, suffering from a compound fracture of the left tibia. I understand that the doctor found him lying in the road.”

“Do you remember the exact time at which he was brought in?”
“It was a little before eleven in the forenoon.” As the dates were mentioned, I observed the judge and the two prosecuting counsel hurriedly turn over their notes with an expression of astonishment and incredulity, and the jury very visibly “sat up and took notice.”

“Did you communicate with any of the patient’s relatives?”

“Yes. At the patient’s request, I wrote to his wife, who lives at East Malling in Kent, informing her of his admission, and inviting her to come and see him.”

“And did she come?”

“Yes. She came the next day, and I allowed her to stay the night at the hospital. After that, she came to see him usually twice a week.”

“Have you any doubt that the prisoner is the man whom you have described as your patient, Charles Dobey?”

“No. I couldn’t very well be mistaken. He was in the hospital just over two months, and I saw him several times every day, and often had quite long talks with him. Ours is a small hospital, and the patients are rather like a family.”

“Did you learn what his occupation was?”

“Yes. He described himself as a plumber and gas-fitter.”

“Had you any reason to doubt that that was his real occupation?”

“None whatever. In fact, we had evidence that it was; for, when he was convalescent and able to get about, he repaired all the taps in the hospital, and did a number of odd jobs. He seemed to be quite a clever workman.”

“Do you keep a record of admissions and discharges?”

“Yes. I have brought the register with me.”

Here she produced from a business-like hand-bag a rather chubby quarto volume which she opened at a marked place and handed to the usher, who conveyed it to the counsel. When the latter had examined it and verified the dates, he passed it up to the judge, who scanned it curiously and compared it with his notes. Finally, it was handed to the prosecuting counsel, who appeared to gaze on it with stupefaction, and returned it to Mr. Lyon, who handed it back to the usher for transmission to the witness. This concluded the examination-in-chief, and Mr. Lyon accordingly thanked the witness and sat down. I waited curiously for the cross-examination, but neither of the Crown counsel made any sign. The judge glanced at them enquiringly, and, after a short pause, the witness was dismissed and her place taken by her successor. The new witness was a shrewd-looking, clean-shaved man, in whom I seemed to recognize a professional brother. And a doctor he turned out to be; one Egbert Wale by name, and the medical officer of the Hook Green Cottage Hospital. Having given the usual particulars, and been asked the inevitable question, he deposed as follows:

“On the thirtieth of last July, at about twenty minutes to eleven in the forenoon, I was driving down a by-road between Headcorn and Biddenden when I saw a man lying in the road. I stopped my car and got out to examine him, when I found that he had sustained a compound fracture of the left leg below the knee. I accordingly dressed the wound, put on a temporary splint, lifted him into my car, and drove him to the Hook Green Cottage Hospital, of which I am visiting medical officer. He gave the name of Charles Dobey, and explained that he had broken his leg in dropping from a motor-lorry on which he had taken a free lift without the knowledge of the driver. I detained him in the hospital for two months, and discharged him as convalescent on the first of October.”

“Did Dobey make a good recovery?”

“Yes, excellent. When he left the hospital, the wound was quite healed, and the broken bone firmly united, but there was a large knob of callus, or new bone, which, I hope, will disappear in time.”

“Would you recognize the wound if you were to examine it?”

“Certainly I should. I saw it last about three weeks ago.”

“Then, if his lordship will grant his permission, I will ask you to make the examination.”

His lordship—bearing in mind; no doubt, the evidence of the finger-print experts—gave his permission readily; whereupon the doctor came out of the witness-box and went over to the dock. There he proceeded dexterously to unwind a length of bandage from the prisoner’s leg—which had been exposed by its owner in readiness for the inspection—and examine the member by sight and touch. Then he replaced the bandage and returned to the witness-box.

“What is the result of your examination?” Mr. Lyon asked.

“I find the wound and the fracture in much the same condition as when I saw it last about three weeks ago.”

“You have no doubt that it is the same injury?”

“Not the slightest. I recognize every detail of it.”

“What is meant by a compound fracture? Is it a very serious injury?”

“A compound fracture is a break in a bone accompanied by a wound of the flesh and skin which communicates with the broken part of the bone and exposes it to the air. It is always a serious injury, even under modern surgical conditions,
because the wound and the fracture have both to be treated, and each may interfere with the treatment of the other."

"And you have no doubt that the prisoner is the person whom you treated at the hospital?"

"I identify the prisoner as the man of whom I am speaking. I am quite certain that he is the same person."

On receiving this answer, Mr. Lyon sat down, and the witness looked expectantly at the counsel for the prosecution. But, as before, they made no sign, and, accordingly, the witness was dismissed. As he retired, the foreman of the jury rose and announced that he and his colleagues did not want to hear any more evidence. "The jury are of opinion," he added, "that this is a case of mistaken identity."

"It is difficult to avoid that conclusion," the judge admitted. Then, turning to the prisoner's counsel, he enquired what further evidence he had proposed to offer. "I had proposed to call the prisoner's wife, my lord, and then to put the prisoner in the box."

The judge reflected for a few moments and then, addressing the foreman, said: "I think, in fairness to the prisoner, we should hear the rest of the evidence. You will note that the question of the document has not been cleared up. That document was found, you will remember, on premises belonging to the prisoner. We had better hear the evidence, though it may not be necessary for the learned counsel for the defence to address you." The jury having agreed to this eminently sensible suggestion, the prisoner's wife, Elizabeth Dobey, was called and took her place in the witness-box.

"Is the address at East Mailing that you have given your permanent address? Is that your home?" Mr. Lyon asked, when the preliminaries had been disposed of, and the witness had described herself as the wife of Charles Dobey, the prisoner, "Yes. We rent a cottage with a nice bit of garden. My husband is very fond of gardening."

"With regard to the flat in London, 103 Barnard's Buildings? Do you spend much of your time there?"

"Me? I have never been there at all. It isn't a flat. It's just a place where my husband can sleep and cook a meal when he is in Town, looking for a job."

"Do you remember when the prisoner first went up to Barnard's Buildings after he came home from the hospital?"

"He only went up once. That was when the police took him. It was about a week after he came home—on the eighth of October."

"Did he send anyone else up to the flat, before he went himself?"

"No. There wasn't anyone to send, and there wasn't any reason to send them." This concluded the examination-in-chief. But, this time, as Mr. Lyon resumed his seat, Mr. Barnes rose with remarkable promptitude. "You have said that your husband kept this flat in London to sleep in when he was looking for a job. What kind of jobs would he be looking for?"

"He is a plumber and gas-fitter by trade. He would be looking for jobs in his own line, of course."

"You have heard the police witnesses state that they found in that flat a number of burglars' tools, a quantity of stolen jewellery, and a stolen document. Do those tools and that stolen property suggest anything to you as to the kind of jobs that your husband went to London to look for?"

"No, they have got nothing to do with his trade."

"Can you account for the presence of burglars' tools and stolen property in the rooms of a plumber and gas-fitter?"

"Yes, I can," Mrs. Dobey replied, viciously. "after all the false swearing that there has been in this court to-day. If you ask me, I should say that the police put them there." At this rather unexpected reply a low rumble of laughter filled the court, including the jury box; and a faint, appreciative smile stole over the judge's face, and was even reflected on the countenance of Mr. Barnes himself.

"I am afraid," he said, good-humouredly, "that you are taking a prejudiced view. But with regard to this flat; have you ever taken any measures to ascertain what your husband does at those rooms?"

"No," she replied. "I don't go spying on my husband. It isn't necessary. I can trust him, if other people can't."

Here it apparently dawned upon Mr. Barnes that he was not going to do his case any good with this witness. Accordingly, he thanked her, and resumed his seat; and, as Mr. Lyon was not disposed to re-examine, Mrs. Dobey retired in triumph, and her husband was conducted from the dock to the witness-box.

When he had been sworn and had given the usual particulars, his counsel directed him to describe his movements after his escape from the prison, which he did with picturesque conciseness.

"As soon as I was clear of the prison, I scouted round a corner into a by-street, and there I saw a motor wagon piled up with empty baskets. The driver was cranking up the engine, and, as there was nobody in sight, I climbed up behind and laid down on the floor among the baskets. Then the driver got up and off she went. When we got out somewhere between Headcorn and Biddenden the wagon turned down a by-lane, and as I thought that we might be getting near the farm that we seemed to be bound for, I decided to hop off. So I did. But she was going faster than I thought, and I came down a cropper and broke my leg. I laid there in the road for about a quarter of an hour, and then the doctor came along and picked me up, and took me off to the hospital. And there I stayed until I was discharged on the first of October."

"When did you first go up to your London flat?"
“I only went once. That was when I had been at home just over a week—on the eighth of October. The detectives came and collared me just as I was picking the lock to let myself in.”

“Why did you have to pick the lock?”

“Because I hadn’t got my key. They took all the things out of my pockets at Maidstone police-station. But I had forgotten that I hadn’t got my key until I was close to the Buildings, so I had to pop into an ironmonger’s shop and get a piece of wire. And I was picking the lock with that piece of wire when the cops nabbed me.”

“You have heard about the burglars’ tools and the stolen property that the police found in your room. Can you tell us anything about them?”

“No, I don’t know anything about them. They were not mine, and I didn’t put them there. Somebody must have got into the rooms and planted them there while I was in the hospital.”

“Have you any idea who might have planted those things, and for what purpose?”

“I should think anyone could see what they were planted for. It was to put this murder on to me. But, as to who planted them, if the police didn’t—and I suppose they didn’t, though they do seem to have been working the oracle a bit—it must have been the person who did the murder, seeing that he had got the paper that was taken from the murdered man.”

“What do you say, gentlemen? Is the prisoner guilty or not guilty?”

“Not guilty,” was the reply, delivered with noticeable emphasis.

“Are you all agreed upon your verdict, gentlemen?”

“To which the foreman replied, promptly: “We are.”

“What do you say, gentlemen? Is the prisoner guilty or not guilty?”

“Not guilty,” was the reply, delivered with noticeable emphasis.

The judge briefly expressed his entire concurrence, and then proceeded:

“I understand that the prisoner, having escaped from prison while awaiting his trial, is still in custody, on the original charge. Have you any instructions on the subject?”

“Yes, my lord,” replied Mr. Barnes. “It appears that the bill was presented to the Grand Jury at Maidstone on the day on which the prisoner absconded. There would seem to have been some error in presenting the bill; but, at any rate, the Grand Jury threw it out.”

“I am glad to hear that,” said the judge. Then, addressing the prisoner, he continued: “Charles Dobey, you have been tried for the crime on which you were indicted, and have been found not guilty—very properly, as I think—and, as the bill in respect of the original offence has been thrown out by the Grand Jury at Maidstone, there is now no charge against you, and you are accordingly discharged.”

He accompanied the rather dry statement with a smile and a kindly nod, which Dobey acknowledged with a low bow, and, as the gate of the dock was now thrown open, he descended to meet, with a somewhat stolid grin, the effusive greetings of his wife and the congratulations of his friends from the hospital.

“Well,” I said, as we rose to depart, “I hope you find the result of the trial satisfactory.”

“I do,” Thorndyke replied, “but I don’t think Miller does. He looks most uncommonly glum. But I do not feel
sympathetic. The police—if they instructed the prosecution—have been hoist with their own petard. They insisted on dragging in these finger-prints and those two women, whose evidence was quite irrelevant and was intended merely to discredit the prisoner, and behold the result. From this time forward, Dobey is practically immune from finger-print evidence and evidence of personal identification. He can prove, from the records of this trial, that there is some person, who is engaged in the practice of house breaking, who is in appearance his exact double, and whose finger-prints are identically similar to his. He can actually quote the judge to that effect.”

“Yes,” I agreed. “Dobey need not trouble to wear gloves now, if he really is a cracksman, as I have no doubt he is. One cannot help admiring the masterly strategy of the defence in egging on the prosecution to play their trump cards and prove those very facts. But, even now, I don’t see how you came to be so certain of Dobey’s innocence. You knew nothing about the alibi. And, apart from that, there was a case against him. Yet, apparently, you never entertained the possibility of his being guilty.”

“I don’t think I did,” he admitted; “and, if you will reconsider the case in general terms and in detail, I think you will see why. Let me recommend you to do this now, as the completion of the case devolves on us. I must stay and have a few words with Miller; and I suggest that you go on ahead and spend half an hour in going over the case with an open mind. You know where to find our notes of the case. Get them out and look through them. Note all the facts that are known to us, consider them separately and as a whole, and see if there does not emerge a perfectly coherent theory of the crime. The evidence that you have heard to-day, inasmuch as it is in agreement with that theory, ought to be helpful to you.”

“When you speak of a theory of the crime,” said I, “do you mean a general theory, or one capable of a particular application?”

“Our function,” he replied, “is to discover the identity of the person who murdered Inspector Badger; and the theory that I refer to is one which is capable of leading us to that discovery.”

With this he stepped out into the body of the court to go in search of the Superintendent, and I made my way to the robing-room to divest myself of wig and gown before issuing forth into places of public resort.

XIV.—A STARTLING DISCOVERY

ON my way westward from the Old Bailey to the Temple, I turned over in my mind Thorndyke’s last statement. Its exact meaning was not perfectly clear to me; but what I did gather was that he had enough knowledge of the circumstances surrounding Badger’s death to make the belief in Dobey’s guilt untenable. That implied some positive knowledge pointing to the guilt of some other person; but as to whether that other person was an actual individual to whom a name could be given, or a mere abstraction whom we had yet to convert into a reality, I was unable to decide. What did, however, emerge clearly from his statement was that whatever facts were known to him were also known to me. My problem, therefore, was to examine the facts that I already knew, and try to extract their significance, which I had apparently missed up to the present.

When I arrived at our chambers, I became aware, by certain familiar signs, that Polton had returned from his expedition to Hartsden, and was engaged in some kind of photographic work in the laboratory. Presumably, he was developing the films from the “automatic watcher,” and I was tempted to go up and see what luck he had had. But I restrained my curiosity, and, having drawn a chair up to the table and procured a note-block and pencil, I went to the cabinet in which the portfolios of current cases were kept and unlocked it. The one labelled “Inspector Badger, deceased,” was uppermost, with the finger-print measuring-glass lying on its cover. I lifted them out together, and, laying the glass on the table, opened the portfolio and began to glance through its contents, laying the papers out in their order as to the dates.

The first that I picked up I put aside, as it did not appear to belong to the series. It was a rough copy of the entry that Thorndyke had made in his note-book when we were experimenting on the Thumbograph, and had apparently been put in the portfolio out of the way—though it was extremely unlike Thorndyke to put anything in its wrong place. Then I began to go through the various notes, seriatim, trying to refresh my memory as to the order of the events and the way in which the case had developed. But as I turned over the notes, I was aware of a growing sense of disappointment. There was nothing new; nothing that I did not remember quite clearly without their aid. I glanced through the brief notes of our expedition to Greenwich. It was all fresh in my memory. The description of the body, the examination of the tunnel, the finding of the cigar; then the analysis of the cigar, the report of the inquest, and the evidence of the witnesses. I knew it all, and it conveyed nothing to me but a mysterious crime of which we held not a single clue to guide us to the identity of the perpetrator. There was a brief summary of Miller’s account of the house-breaking incident, which did now, after the event, point pretty definitely to a personation and the making of false finger-prints. But there was no suggestion as to the identity of the personator. To me, the whole case remained in the air.

At the end of the portfolio was a separate folder labelled “finger-prints,” which I took out, doggedly, but with a sense of deep discouragement. Nothing could be much less illuminating than a collection of unidentified finger-prints. Nevertheless, I opened the folder and began to look through the collection. There were Badger’s prints, devoid of any meaning to me, and the photograph of Dobey’s, taken from the official paper that Miller had shown us, which told me nothing at all. Then I opened a smaller folder, labelled “Prints from cigar.” There were two sets of photographs, one the natural size and the other enlarged to about four diameters. Discarding the smaller photographs, I examined the enlargements, and read the inscriptions written below them, with as much attention as I could muster; for, little as they
conveyed to me, I realized that they constituted evidence of the highest importance, if only the opportunity should ever come to apply it.

The first was Inspector Badger’s left thumb, remarkably clear for a developed print. But, though it was, in effect, an indictment of murder, it gave me no help, since I knew already that poor Badger had been murdered. I laid it down and took up the next. “Right thumb of person unknown.” Having read the inscription, I glanced at the print. This one, too, was admirably clear and distinct. The experts should have no difficulty in identifying it if they could get a known print with which to compare it. Not only was the general pattern—a very distinctive one—perfectly plain, but all the minor “characteristics” were easily legible.

I sat with the print in my hand and my eyes fixed on it musingly, reflecting on all that it meant and all that it did not mean. This thumb-print had been made by the man who had given the poisoned cigar to poor Badger—who had almost certainly murdered him; who had personated Dobey at the sham house-breaking, and who had entered Dobey’s flat and there planted the stolen document. It was capable of giving infallible proof of that villain’s identity; and yet it offered not the faintest hint as to what manner of man that villain might be. In spite of our possession of this infallible touchstone we might pass this murderer in the street a hundred times without the faintest glimmer of suspicion as to who he was. A finger-print is a poor instrument with which to start the search for an unknown criminal.

As I sat thus, with my eyes fixed only half-consciously on the print, I became aware of a dim sense of familiarity. A finger-print is, to an accustomed eye, much more easy to remember than might be supposed; and, as my eye rested on this print, I began to have the feeling that I had seen it before. At first the feeling was not more than vaguely reminiscent; but yet it was enough to arouse my attention. I looked, now, with a critical and purposeful scrutiny and a definite effort of memory. And then, suddenly, in a flash, the revelation came and left me gazing open-mouthed.

It was amazing, incredible; so incredible that I sought instantly for corroboration or disproof. Snatching up the measuring-glass, and picking out the natural-sized print, I placed the central dot of the scale of circles on the summit of the central character of the core and wrote down on the note-block the measurements shown. The pattern was intermediate between a whorl and a twinned loop; but, remembering Thorndyke’s rule, I treated it as a whorl. Then, as it was a left-handed, or anti-clockwise, whorl, and as the “core-character” lay entirely within the centre circle (“Space A”), the whorl was of the type A3. I wrote this down, and then measured the distance to the right delta. The latter was intersected by the circle, C, and therefore, by the rule, lay in the space, D. The ridge tracing was clearly outside the delta, and I therefore wrote down O. The left delta was outside the print, and therefore could not be located. The number of ridges between the centre of the core and the right delta was twelve, while the left ridge-count—since the left delta was outside the print—was unascertainable.

When I had finished, I set out my results in the regular formula, so far as I remembered the method, thus:

Right thumb—Unknown.

Then I turned back through the portfolio until I found the slip of paper on which Thorndyke had copied the entry in his note-book. The first eager glance at it I showed me that my memory had not deceived me.

The entry ran:
Walter Hornby. Right thumb.

In addition to the formula, Thorndyke had written down a few of the “ridge characteristics” with their ridge-counts from the centre of the core, and a direction-arrow to show their position, thus:

-{3, Lake, 5, Bif., 8, End, 10, Bif.
{7, Lake, 9, Bif., 11, Lake.

With intense excitement, I proceeded to verify these characters, not a little surprised at the ease with which they could be recognized and located. Taking first the right direction-arrow, and counting the ridges from the centre of the core, I found in the third ridge one of those little loops, or eyes, known, technically, as “lakes.” The fifth ridge divided into a fork, or bifurcation; the eighth ridge terminated abruptly in a free end, and the tenth showed another bifurcation. Then, following the left direction-arrow, the seventh ridge showed a small lake, the ninth a bifurcation, and the eleventh a larger lake. The agreement was complete in every detail.

I laid down the print and reflected on this amazing discovery, still hardly able to credit the evidence of my eyes. For the thing seemed beyond belief. The murderous wretch whose tracks we had been following was none other than Walter Hornby. After all these years, during which I had almost forgotten his very existence, he had suddenly swum into the field of our vision like some strange and horrible apparition. Yet my astonishment was hardly justified; for no detail of his recent villainy was in any way out of character with his past, as it was known to me.

Presently my thoughts took another turn. By what means had Thorndyke been able to identify Badger’s murderer as Walter Hornby? It had been no chance shot. The discovery of Hornby’s thumb-print in the Thumbograph had been no mere accident. It was now evident to me that Thorndyke had come to our house with the express purpose of seeking that thumb-print, if it was in existence, as was manifest from the fact that he had come equipped with the measuring-glass, and from the anxiety that he had shown as to the fate of the Thumbograph. Clearly, that was the final verification of a theory
that was already complete in his mind. Indeed, he had, in effect, said as much this very day in court. He had spoken of “a coherent theory of the crime,” an expression that would have been quite inapplicable to the chance discovery of a fingerprint. Now, how, from the information that we possessed, had he arrived at this astonishing conclusion?

It is proverbially easy to be wise after the event. “Jobbing back,” as this mental exercise is named on the Stock Exchange, is considerably simpler than jobbing forward. So I found it on the present occasion. Now that the conclusion was known to me, I was in a favourable position to consider the processes of reasoning which had led to it. And when I did so, and when I recalled the hints that Thorndyke had dropped from time to time, I was surprised that no inkling of the truth had ever dawned on me. For what Thorndyke had said was perfectly true. When all the facts were considered, separately and as a whole, a consistent theory of the crime emerged, and inevitably brought the figure of Walter Hornby into the picture.

Taking the facts separately there were those that related to technique and method and those that related to motive. The technique in the present crime included the use of a poisoned cigar and of counterfeit finger-prints. But this was the technique employed, years ago, by Walter Hornby; and it was not only a peculiar and distinctive technique; it was absolutely unique. No other criminal, so far as I had ever heard, had employed it. Then the method of employing it was the same in both cases. In the Hornby case—the case of the Red Thumb Mark—an original finger-print (in the Thumbograph) had been obtained from the victim, Reuben Hornby, from which to make, by photo mechanical process, the stamps for the counterfeit. In the Badger case, a sheet of finger-prints had been stolen, evidently for the same purpose. Again, in both cases, the forged finger-prints had been “planted” at the scene of the crime. In short, the technique and method in the Badger case repeated, in the main, those of the Red Thumb Mark case.

Then the motive showed a like similarity in the two cases. When Walter Hornby had tried to murder Thorndyke (by means of a poisoned cigar) his motive was to get rid of the only person who suspected him. As to the motive for the murder of Badger, Miller was almost certainly right, although he had guessed wrong as to the identity of the murderer. Badger’s uncanny memory for faces had made him a dangerous enemy. And we had Miller’s statement that Badger was the only officer who was able to identify Walter Hornby.

Finally, taking the whole set of facts together, the similarity of the two cases was very striking. In each crime, the criminal act had been preceded by a careful preparation to incriminate an innocent person. There had been a systematic scheme of false evidence, thought out and arranged in advance with remarkable completeness and ingenuity, before the criminal had committed himself. Thus, as a whole and in detail, the murder of Inspector Badger virtually repeated a crime which was known to me, and which was utterly unlike any other crime of which I had ever heard. Reluctantly, I had to admit that I had been distinctly “slow in the uptake.”

I had just reached this rather unsatisfactory conclusion when I heard a latchkey inserted in the outer door. A moment later, Thorndyke entered, and, as his eye lighted on the open portfolio, he greeted me with the enquiry:

“Well, what says my learned friend? Has he reached any conclusion?”

By way of answer, I wrote on a scrap of paper: “x=Walter Hornby,” and pushed it along the table towards him.

“Yes,” he said, when he had glanced at it, “history repeats itself. We had this equation once before, you remember.”

“I remember,” said I, “and I ought to have remembered sooner. But, tell me, Thorndyke, when did you first suspect Hornby in this case?”

“The word ‘suspect,’” he replied, “is a little indefinite. But I may say that when we established the fact of a poisoned cigar, the name of Walter Hornby inevitably floated into my mind, especially as the cigar was associated with a stolen sheet of finger-prints which were pretty evidently not those of the person who stole them. In fact, I adopted, provisionally, the hypothesis that the murderer was Walter Hornby, but only as a mere possibility which had to be borne in mind while further developments were being watched for. I argued that if the hypothesis was correct, certain events might be confidently expected to follow. There would be some crime, probably committed in daylight by a man with red hair and a red nose, who would leave Frederick Smith’s finger-prints at the scene of the crime; and the stolen paper would be found in some place connected with Frederick Smith.

“As you know, these events occurred exactly according to plan. Thereupon, the mere hypothesis became a very weighty probability. But the experimentum crucis was made possible by Juliet. When the Thumbograph had spoken the hypothesis passed into the domain of established fact.”

“Yes,” I said; “you have established the murderer’s identity beyond any reasonable doubt. The next thing is to ascertain his whereabouts. At present he is no more than a name.”

“That,” he replied, “is Miller’s problem. The police have all the facilities for finding a wanted man. We have none. By the way, have you seen Polton?”

“No,” I replied, “but I expect you will see him before long. He always knows, in some occult way, when you come in. In fact, I think I hear him approaching at this moment.”

Almost as I spoke, the door opened and Polton entered, bearing a large vulcanite dish and a long strip of cinematograph film. There was no need to ask for his news, for his face was one large and incredibly crinkly smile of triumph and satisfaction.

“We’ve brought it off, sir,” he announced, gleefully, “first shot. I went down to the Manor House this morning, and I
waited by the camera until I heard the twelve-o’clock exposure go off. Then I took out the roll-holder and put in a fresh one. But I don’t think you will want it. I have developed the strip—nine exposures, altogether, but only two of them matter, and those two I have enlarged to half-plate. They are those made at twelve o’clock on Tuesday and twelve o’clock to-day.”

He laid the dish on the table, and watched Thorndyke ecstatically as the latter stooped over it to examine the enlargements.

“The top one is the Tuesday exposure,” he explained. “Shows the room just as you saw it, with the box on the table. The bottom one is to-day’s. You see there’s no box there, and the arm-chair has been moved about a couple of inches, as you can see by the sash of the case behind it.”

“Yes,” Thorndyke agreed, “it is a true bill, Polton. The box is gone from the table; and boxes don’t fly away of themselves. By the way, Polton, what do you make of that box?”

“Well, sir,” was the reply, “if it didn’t seem so unlikely, I should have said that it looked like a casting-box; one of those biggish flasks that silversmiths use for casting the blanks of things like spoons. It is certainly a metal box, and those things at the side look very much like pin-lugs.”

“So I thought,” said Thorndyke; “but we shall probably know all about it, before long. At any rate, Polton, you have solved our problem for us, and now we can go ahead with confidence. I shall send Mr. Woodburn a letter and a telegram. He will probably get the letter to-morrow morning, but the telegram will make it safer.”

“There’s the telephone, sir,” Polton suggested.

“Yes, I know,” said Thorndyke “but when I whisper secrets, I like to know whose ear they are going into.”

“What are you going to say to him?” I asked.

“I shall ask him to meet us to-morrow morning and bring the key of the gallery door. That is what we arranged.”

“Then you are going to break the seals and explore the rooms?”

“Certainly. There is now no doubt that someone visits those rooms; and as the next visit seems to be due to-morrow night, we may as well be there to give the visitor a hospitable reception.”

“Shall you want me to come with you, sir?” Polton enquired, anxiously.

My impression was that Thorndyke did not particularly want him. But the wistfulness of the little man’s face proved irresistible.

“I think you had better come, Polton,” he said, “and bring a few tools with you. But it would be as well if you went on ahead of us, so that we don’t make too large a party. We mustn’t be too noticeable.”

“No, sir,” Polton agreed, undisguisedly jubilant at being included in the expeditionary party; “I will go down by the early train. Are there any tools in particular that you wish me to bring?”

“Well, Polton.” Thorndyke replied, “you know what our problem is. Someone has got into these rooms by some means other than an ordinary door. We may have to pick one or two locks, and they may be rather unusual locks. I would not suggest burglars’ tools, because, of course, you haven’t any. If you had, they might be useful.”

Polton crinkled knowingly as he protested “There is nothing improper about burglars’ tools in themselves. It is the use that is made of them. The tools are quite innocent if they are used for a lawful purpose.”

Having delivered himself of this slightly questionable legal dictum, he departed, leaving the photographs for us to examine at our leisure.

Very curious productions they were. I took up the strip of film and examined the tiny negatives through my pocket lens. Small as they were—barely an inch and a half square—they were full of minute detail, and the enlargements, magnified about four diameters, were as clear as if they had been taken with a full-sized camera. The “Automatic Watcher” had turned out, in respect of its efficiency, far beyond my expectations.

“Yes,” said Thorndyke, in reply to my admiring comments, “with first-class lenses, you can get surprising results; in fact, the only limit to enlargement is the grain of the film. But we had better put the photographs away for the present, as I am expecting Miller to drop in at any moment. He is dreadfully disgruntled at the result of the trial, though the fiasco is very largely of his own producing. Still, we shall have to try to comfort him, and it had occurred to me that we might take him into this Hartsden adventure. What do you think? We really ought to have a police officer with us.”

“Yes, I think it is rather necessary.” I agreed. “We don’t want a search warrant, as we are acting with Woodburn’s authority, but, as we may have to make an arrest, it would be more regular to have a police officer to direct that part of the business. Besides, we don’t know how many we may have to deal with. It looks like a one-man job, but we don’t know. It may turn out to be a gang. Let us have Miller’s beef and experience, by all means.”

On this, Thorndyke took the photographs and retired to the laboratory to write and dispatch his letter and telegram. When he returned, he brought in with him the Superintendent, whom he had encountered on the landing.

“Well,” growled Miller, as I placed an arm-chair for him, with the usual creature comforts, “we’ve brought our pigs to a pretty fine market.”
Thorndyke chuckled, but refrained from pointing out that the market was of his own choosing.

"What I can't understand," the Superintendent continued, "is why that fool couldn't have trotted out his infernal alibi when we charged him. Then there needn't have been any trial."

Again we refrained from the obvious answer to this question. Instead, Thorndyke proceeded at once to the "comforting" operation.

"Well, Miller," he said, "now that we have cleared Dobey off the stage, we can give our attention to realities. I suppose you will now agree with me that the man who gave Badger that poisoned cigar is the man who murdered him."

"Yes," Miller admitted, "I'll agree to that much. But it doesn't get us a great deal forrarder. The fellow is a mere abstraction. He isn't even a name. He is just a finger-print that we haven't got on our files."

"Not at all," said Thorndyke. "We can tell you who he is. It will then be for you to find out where he is."

The Superintendent laid down a match that he had just struck, and stared at Thorndyke, open-mouthed.

"You can tell me who he is!" he exclaimed. "Do you mean that you can give him a name?"

"I do," replied Thorndyke. "His name is Walter Hornby."

The Superintendent was thunderstruck. "Walter Hornby!" he gasped in amazement. Then, suddenly, he brought his large hand down heavily on the little table, causing it to rock visibly, to the imminent peril of the whisky decanter. "Now," he exclaimed, "I understand how it happened. Badger told me, himself, that he thought he had seen Walter Hornby, and he was mighty pleased with himself for having spotted him. I gathered that Hornby was either very much changed or else disguised, though Badger didn't actually say so. But I have no doubt that poor old Badger, in his secretive way, kept an eye on him, and probably shadowed him a bit too openly. Then Hornby got alarmed and, in his turn, shadowed Badger, and finally enticed him into that first-class carriage with the cigar all ready in his pocket. But, if you knew, Doctor, why on earth didn't you tell me?"

"My dear Miller," protested Thorndyke, "of course I didn't know in time to prevent the prosecution. I have only just completed the case."

"By the way, Doctor," said Miller, "I suppose I can take it that there is no mistake this time? You are quite sure of your man?"

"I am prepared to sign a sworn information," Thorndyke replied, "and I will undertake to present a convincing case for the prosecution. Naturally, I cannot promise a conviction."

"Of course you can't," said Miller. "But a sworn information from you is good enough for me, to start with. We can go into the evidence another time. But I am hanged if I know how to go about looking for the beggar. I suppose you have no idea what he looks like nowadays?"

"I can only guess," replied Thorndyke. "We can safely assume that he has not red hair or a red nose. Probably he has shaved off his beard and moustache, and, judging from what Badger told you and from the fact that he has certainly worn a wig when personating Dobey, it is likely that he habitually wears a wig of a colour different from the lightish brown of his own hair. But I must admit that those assumptions are not very helpful. Still, you have the finger-prints that I handed to you, so, if you make an arrest on suspicion you will know, at once, whether you have or have not got the right man. And now let us dismiss this case, and have a few words about another one that we want you to help us to work at."

Here Thorndyke gave the Superintendent a brief outline of the mystery of Hartsden Manor House, dwelling principally on the testimony of the servants and, characteristically, keeping his own counsel about the "Automatic Watcher." Consequently, Miller, though deeply interested, was a little disposed to be sceptical.

"It sounds a tall story," he remarked, "though it is by no means impossible. At any rate, it is worth looking into. Of course, if a party of crooks have managed to get in there, they have got ideal premises for some kinds of jobs. Just think of a bank-note forger, for instance, getting the use of a set of sealed rooms where he could work in perfect safety, and leave all his incriminating stuff about with the certainty that no one would stumble on it by chance! Or a maker of bombs, or any other kind of illicit artisan. Yes, I certainly think it is worth looking into. And you think the sportsmen are likely to turn up to-morrow night?"

"That is merely a matter of probability," said Thorndyke. "Apparently, the visitor or visitors keep to regular days for their calls, and Friday is one of those days. So we shall take the chance and spend the night there. I think you had better come, Miller," he added, persuasively "Even if nobody turns up, it will be worth your while to look over the premises. You may be able to spot something that we might miss."

"I don't think you are likely to miss much, Doctor," said Miller, with a faint grin. "However, I'd like to come with you; in fact, the more I think of the job, the more it takes my fancy. There are all sorts of possibilities in it. But, if you don't mind, I think I will bring a couple of spare men, or let them come on later. You see, we may want to post them in some cover outside, in case our sportsmen should happen to spot us first and nip off. They would know the place better than we should, and they might easily get away while we were trying to find the way out. In that case it would be very handy to have a couple of men outside who could hear the alarm and pounce on them as they came out."

We both agreed heartily to this excellent arrangement; and, when we had discussed a few further details and settled the
time for starting in the morning, Miller lighted a fresh cigar and took his departure quite revived in spirits by the prospect of the morrow’s adventure.

XV. — THE BREAKING OF THE SEALS

DURING our journey down to Hartsden on the following morning, Superintendent Miller’s state of mind seemed to alternate between a rather extravagant optimism and a haunting fear of an anticlimax that might expose him to the derision of his subordinates. And such was his condition when we introduced him to Mr. Woodburn at Hartsden Station.

“Well, sir,” he said, “this is a very remarkable affair—if it isn’t a mare’s nest. I hope it isn’t.”

“I rather hope it is,” replied Woodburn, “though that is not my expectation. But we shall soon know.”

He held open the door of the car, and, when we had taken our places, he drove off at a smart pace and soon covered the short distance between the station and the Manor House. There, at the open door, we found Mrs. Gibbins awaiting us, supported by Polton, who seemed to have established himself as the master of ceremonies, and who conveyed to Thorndyke, in a conspiratorial whisper, that the “Automatic Watcher” had been removed and put out of sight. Evidently, he did not intend that his patent should be infringed by the official investigators.

“We may as well go straight to the gallery,” said Woodburn. “I’ve got the key. Shall I show the way?”

Without waiting for an answer, he passed through the narrow doorway that led into the corridor and the rest of the party followed, with the exception of the housekeeper, whose good manners were even greater than her curiosity, and who contented herself with a wistful observation of our departure, following us with her eyes until we were lost in the darkness of the corridor.

“Well, I’m jiggered!” he exclaimed. “Your Mr. Toke is a cautious man with a vengeance! He isn’t taking any risks. Just look at that.”

He pointed to the door-post, on which was a large seal, and, depending from it, a length of strong tape with a mass of sealing-wax adhering to its free end. We came down the steps and stood gazing at this singular phenomenon while Miller swung the door round and exhibited, near its edge, the broken seal from which the tape had torn out.

“Now, why the deuce,” demanded Wilier, “should he have wanted to seal the door on the inside? And when he had done it, how the devil did he get out?”

“Exactly,” said Thorndyke, “that is what interests us. This inside seal gives a conclusive answer to our principal question. He couldn’t have got out by this door, so there must be some other way out. And a way out is a way in.”
"'Yes," Miller agreed in a reflective tone. "That is so. But it seems to raise another question. Is it quite certain that Mr. Toke has really gone abroad? Is it certain, for instance, that he is not just keeping out of sight for some private reasons?"

"Of course," Woodburn replied, a trifle stiffly, "there is no absolute proof that he has gone abroad. But he said that he was going abroad; he locked and sealed his premises, and was seen thereafter to go away from his house. He put his car into storage, and he has not since been seen in any of his usual places of resort. I may say further that he is a gentleman of the highest character and repute, and that I can imagine no reasons that should induce him to keep out of sight."

"Then," said Miller, apologetic—but unconvinced, as I suspected—"that settles it. You must excuse me, Mr. Woodburn, but I did not know Mr. Toke. We shall have to look for some other explanation. Probably we shall find it when we have made our examination of the premises; when we have ascertained, for instance, whether there is anything missing. Shall we take a look round and check the property? I suppose you know roughly what there was in these rooms when Mr. Toke went away?"

"Yes," replied Woodburn; "I think I should know if anything of value had been taken away."

With this, Miller and the solicitor proceeded to make a systematic tour of inspection, passing along the range of wall-cases and rapidly glancing at the objects on the shelves and apparently finding the collection intact.

"It’s rather queer, you know," said Miller, when they had made the round, "that none of these things should have been taken. I imagine that they are pretty valuable pieces."

"They are," replied Woodburn, "but they wouldn’t be much use to a thief, seeing that they could be so easily identified; at least, that was Mr. Toke’s opinion. He always considered the collection quite safe, so far as burglars were concerned."

"To a certain extent he was right," said Miller. "This stuff would be no use to an ordinary burglar if there was a hue and cry and a description of the stolen property. But that doesn’t apply to the present conditions. If someone has been entering these rooms, he might have taken the whole boiling away and have offered it quite safely at a common auction, in small lots at a time. Because, you see, nobody would have known that it had been taken. And there’s plenty of demand for this sort of stuff. What is in this room?" he added, as their peregrinations brought them to a door near the entrance.

"That is where the collection of bronzes is kept," replied Woodburn. "We may as well see if they are all right, too."

Thereupon, he opened the door and entered the room with the Superintendent.

Meanwhile, Thorndyke had been devoting his attention to the seals on the gallery door, making a minute comparison of the outside seal with that on the inside door-post. As Miller and the solicitor disappeared into the adjoining room (closely attended by Polton, who was apparently determined that the Superintendent should not steal a march on his employer), Thorndyke handed me his lens, remarking:

"The seals appear to be identical. I should say that they were both made with the same matrix."

"Is there any reason why they should not be?" I asked in some surprise.

"No," he replied, "I don’t think there is." I made a somewhat perfunctory comparison—for Thorndyke’s opinion was good enough for me—and then remarked:

"I am in the same case as Miller. I can’t imagine what object Toke can have had in sealing the inside of the door. Do you understand it?"

"Not if the seals were affixed by Toke," he replied; "seeing that Toke had access to the whole of the house and could examine the sealed door from the outside to satisfy himself that the seals were intact. But it would be quite understandable if the inside seals were fixed by someone who had not access to the house, but who would wish to be assured that the outside seals had not been broken. Supposing, for instance, there had been no inside seals, and supposing that we made our inspection without disturbing anything and went away, locking the door behind us. There would be no trace of our visit, nor any evidence that the rooms had been entered. But now, if we should go away and our friends should return tonight, they would see at a glance that someone had been here, and, no doubt, they would discreetly clear off and abandon their tenancy."

"Yes," said I. "That seems to be the explanation. It had not occurred to me, nor, apparently to Miller. But there is another point. If the visitors sealed the door on the inside, they must be in possession of the seal."

"Obviously," he agreed. "That is the important point. If it is a fact, it is an extremely significant fact, especially when it is considered in connection with a certain ‘Ginger Lushington.’"

At this critical stage, our conversation was interrupted by the Superintendent’s voice, hailing us from an adjoining room. At once we hurried into the room which we had seen him enter, but, finding it empty, passed through into a second room, with which it communicated, and so, by another communicating doorway, into a third. This also was empty, save for a company of bronze statuettes on its shelves, but, through the farther doorway, we could see into a fourth, larger room, and thither we made our way.

As we entered, I looked round me with no little surprise. The three small rooms through which we had passed with their glazed wall-cases and rare and curious contents, had the trim, well-kept aspect of an art museum. This fourth room presented a startling contrast. Considerably larger than the others, it had the appearance of a goldsmith’s or metal-worker’s workshop. In one corner was a large, rectangular chemical sink, and, adjoining it a fixed wash-hand basin. At one
side was a massive crucible-furnace, arranged to burn charcoal and fitted with a foot-bellows. Close by was a massive post, fitted with a flat stake and a jeweller’s “sparrowhawk.” There were one or two cupboards and enclosed nests of drawers, and a strong bench provided with a serviceable vice. These details my eye took in rapidly, but there was no time for a complete survey, for my attention was instantly riveted on an object on the bench round which our three friends were gathered in a mighty ferment of excitement.

“Here’s a discovery, if you like, Doctor!” the Superintendent exclaimed, gleefully. “You remember my telling you about those bogus sovereigns? Well, we’ve struck the sovereign factory! Just look at this!”

He indicated the object on the bench—which I now recognized as the box that I had seen through the keyhole periscope, resting on the gallery table, and that had been shown in the “Tuesday” photograph.

Polton’s diagnosis had been correct. It was a casting box, or “flask,”—an iron frame in two halves, held together in position by pins and eyes at the sides. The upper, or pin, half had now been lifted off, and the mould which filled the interior was displayed. And a very remarkable mould it was, and very illuminating as to the kind of industry that was being carried on in this room. In the smooth, flat surface of the matrix were twenty sunk impressions of sovereigns, each beautifully clear and shiny with graphite. The impressions were connected with one another, and with the “pour” or inlet of the mould, by a deep groove, which was one-half of the channel along which the molten metal was conducted to the impressions.

“Quite a workmanlike outfit,” chuckled the delighted Superintendent. “Don’t you think so, Mr. Polton?”

Polton crinkled approvingly. “Yes, sir,” he replied; “and he knows how to use it. He’s no amateur. That is a wonderfully good matrix; hard enough to stand brushing with graphite, and to be used over and over again. I should like to know what it is. There’s bone-ash in it, but there’s something else on the surface.”

“Well,” said Miller, “that’s more interesting to you than to me. Let us have a look at that other flask.”

He indicated a second, similar flask that had been pushed to the back of the bench. Reaching out, he drew it forward and passed it to Polton, who tenderly lifted off the top half and turned it over, laying it beside the lower half and thus exhibiting the two halves of the mould. As he laid it down, he bestowed a crinkly leer on the Superintendent.

“Well, I’m jiggered!” the latter exclaimed. “Half-crowns, too! But I always suspected that the half-crowns and the sovereigns were made by the same man. It was the same idea in both cases. But now we have got to find out where the stuff came from—where he kept his bullion, I mean. We had better go through these cupboards and drawers.”

He gave a lead by throwing open a deep cupboard, and, as the door swung out, he uttered the single word, “Moses!” The relevance of the exclamation was not obvious, but the cause was extremely so. For the deep shelves were occupied by an assemblage of silver articles—candle-sticks, tea-pots, spoons, and the like, mostly a good deal battered, and many of them reduced to small fragments, apparently by means of shears. A second cupboard made a similar sinister display, though the quantity was smaller. But of gold there was no trace.

“He must have kept his gold in the drawers,” said Miller. “He couldn’t have brought it with him.”

“He brought some of it with him, sir,” said Polton, who had been pulling out the drawers of a nest and peering in with a school-boy’s delight in a treasure-hunt. “Here is a piece of fine gold plate—twenty-four carats—which certainly came from a bullion dealer’s.”

At this report, Thorndyke, who had hitherto maintained the attitude of a mildly interested observer, suddenly woke up. Taking a pair of pliers from the bench, he went to the drawer which Polton was holding open and carefully lifted out the piece of plate. Having scrutinized it closely on both sides, he held it out for Miller’s inspection.

“You had better secure this,” said he. “There are some fairly clear finger-prints on it which may be helpful later on, if our friend should fail to keep his appointment to-night.”

The Superintendent took the pliers from him, and examined the gold plate, but with less enthusiasm than I should have expected. However, he laid it carefully on a shelf of the cupboard, and then returned to the quest in which he appeared to be specially interested. By this time Polton had made some further discoveries that seemed more relevant, one of which he announced by pulling a drawer out bodily and placing it on the bench.

“Sovereigns, by gosh!” exclaimed Miller, as he looked into the drawer. “Now, I wonder whether these are some of the castings, or the originals that he worked from. What do you think, Doctor?”

Thorndyke picked out one of the coins and examined its edge through his lens, turning it round and inspecting the whole circumference.

“I should say that this is certainly genuine,” he reported. “There is no trace of the edge tool. The milling is quite perfect, and it seems to show slight traces of wear. Moreover, the number—there are about two dozen in the drawer—is not more than would be required as models to avoid repetition of a particular coin.”

“Yes, I expect you are right,” said Miller, “but they will know at the Mint, in any case. Ah!” he exclaimed, as Polton laid another drawer on the bench. “This looks more interesting. No bullion dealer’s stuff this time, I fancy.”

The drawer contained about a dozen small ingots of gold, each marked by means of a punch with a number—presumably the carats of “fineness.” One of these Miller took up and held out for Polton’s inspection.
“No, sir,” said the latter, “that did not come from a dealer. It was cast in that ingot mould on the shelf, there.”

As he spoke, he took the mould down from the shell and slipped the ingot into it, when it was seen to fit with quite convincing accuracy.

The Superintendent regarded it with profound attention for some moments. Suddenly he turned to Polton and asked impressively:

“I want you to tell me, Mr. Polton, which of these things might have been brought here by an outsider and which must have been put here by Mr. Toke. There is this gold plate. That must have been brought here. But what was it brought for?”

“To melt down with these ingots,” replied Polton, “to bring the gold up to 22 carats. The ingots are all 18 carats or less.”

“But why couldn’t he have used that acid process that you spoke of?”

“Because he would have had to cut up the ingots and hammer the pieces out thin on the stake. But, if he had done that at night, they’d have heard him all over the house. Besides, the fine gold plate would be quicker and less trouble, and it would come to the same thing. He would get his money back. As to what you were asking, I should say that the whole outfit of this place must have been put here by Mr. Toke. The furnace certainly was, and the crucibles and ingot moulds seem to belong to it; in fact, it is a regular metal-worker’s shop.”

“And what do you make of those ingots?”

Polton crinkled knowingly. “I think, sir,” he answered, “they are more in your line than mine. They are not trade ingots, but they are about the fineness of good-class jewellery.”

At this point, Thorndyke, who had been listening with rather detached interest to this discussion, sauntered out into the gallery, leaving Polton and Miller to their devices.

“I think,” said he, as I followed him out, “we had better get on with our own job. This coining business is no concern of ours.”

With this, he went along to the entrance door, on the steps of which he had left his research case, and, picking it up, carried it back to the table and deposited it thereon.

“We may as well begin with the most obvious probabilities,” said he, as he opened the case and ran his eye over the contents. “I suppose you noticed this end of the room, as it showed in the photograph?”

I had to admit that I had not taken especial note of it, nor did I now perceive anything particularly striking in its appearance. The end wall was decorated pleasantly enough, by a low elliptical arch of simply moulded oak supported by a pair of oaken pilasters, the surfaces of which were enriched with shallow strap carving in the form of a guilloche with small rosettes in the spaces. There was nothing remarkable about it; and, to tell the truth, I was not quite clear as to what I was expected to see. And Thorndyke’s proceedings enlightened me not at all.

“The police methods are good enough for our present purpose,” he remarked, as he took out a wide-mouthed bottle and a large camel-hair brush. “The good old Hyd. cum-creta.”

Removing the stopper from the bottle, he picked up the latter and the brush, and walked across to the pilaster nearest the window. Dipping the brush into the bottle of powder, he began to paint it lightly over the carved surface. I watched him with slightly bewildered curiosity; and, looking through the door way into the workshop, where I noticed Woodburn listening with an anxious and rather disapproving expression to the comments of our assistant and the Superintendent, I perceived that the two latter had developed a sudden interest in my colleague’s activities. Presently Miller came out for a closer inspection.

“I thought you always used a powder-spray,” he remarked. “And you needn’t worry about finger-prints. Those on the gold plate will tell us all we want to know. And,” he added in a lower tone, “let me give you a hint. Your nocturnal stranger is a myth. The name of the chappie who runs the sovereign factory is Toke. Mustn’t say so before Woodburn, but it’s a fact. It staves you in the face. Mr. Toke is a fence. Dam’ clever fence, too. Buys the scrap from the jewel-robbers, sells the stones, and melts down the settings into sovereigns. I take my hat off to him, and I only hope he’ll turn up to-night and let me have the pleasure of making his acquaintance.”

Thorndyke nodded, but continued to brush the grey powder on to the woodwork in a broad band from near the floor to a little above the eye level. The Superintendent watched him with a slightly anxious expression, and presently resumed: “I don’t see why you are so keen on finger-prints, all of a sudden, or why you should expect to find them in this particular and rather unlikely place. At any rate, there don’t seem to be any.”

“No,” said Thorndyke, “we seem to have drawn a blank. Let us try the other side.”

He crossed the room and began operations on the second pilaster, watched, not only by Miller, but also by Polton and Woodburn. But this time he did not draw a blank, for, at the first sweep of the brush, the pale-grey of the powder was interrupted by a number of oval shapes, forming an irregular, crowded group close to one side of the pilaster about four feet above the floor. Thorndyke blew away the superfluous powder and examined the group of finger-prints closely. It seemed to be divided into two subgroups, one on the extreme edge of the pilaster and extending round to the side, and the other in the space of one member of the guilloche, around and over the enclosed rosette. After another close inspection, Thorndyke grasped the marked rosette between his fingers and thumb, and tried if it were possible to rotate it. Apparently
it turned quite easily; but, beyond the rotation, no result followed. After a moment’s reflection, Thorndyke took a fresh hold, and gave it another turn in the same direction. Suddenly, from within, came a soft click; and then the whole shaft of the pilaster, from the capital to the plinth, swung out a couple of inches like an absurdly tall and narrow door. Thorndyke grasped it by the edge and drew it fully open, when there came into view a small triangular space of floor and a low, narrow opening at the side, with the beginning of a flight of ladder-like steps, the ren of which was lost to view in the impenetrable darkness of a passage which seemed to burrow into the substance of the wall.

“Well, I’m jiggered!” exclaimed Miller. “Now, I wonder how you guessed that door was there, Doctor?”

“I only guessed that it might be there,” said Thorndyke. “Hence the search for finger-prints. Without them, we might have spent hours trying to find the secret door, and especially the fastening, which was so cleverly concealed. However, we have solved the most difficult part of our problem. The outside opening of this passage is probably as cleverly hidden as the inside one. But it will be hidden from without, whereas we shall approach it from within, where there is probably no concealment.”

“I suppose it is worth while to explore that passage,” said Miller, looking a little distastefully at the narrow, black chink, “though, really, we want to know who the man is, not how he got in.”

“Perhaps,” replied Thorndyke, “an exploration of the passage may answer both questions. At any rate, Mr. Woodburn will want to know how the house was entered from the outside.”

“Certainly,” Woodburn agreed. “That was, in fact, what we came to find out.”

As Thorndyke produced from his case a couple of powerful electric inspection lamps, one of which he handed to me, I reflected on his slightly cryptic answer to the Superintendent’s question; as also did Miller himself. At least, so I judged from the inquisitive look that he cast at Thorndyke. But he made no remark; and, when he had provided himself with an electric lantern from his bag, he announced that he was ready for the exploration.

Thereupon, Thorndyke turned on his lamp, and, squeezing through the narrow opening, began to descend the steps, followed, at due intervals, by the rest of the expeditionary party.

XVI. — THE VAULT

IN the course of my descent of that interminable stairway, I found myself speculating curiously on the physical characteristics of the dead and gone Greenlees. They must, I decided, have been a thin family; for, surely, no corpulent person, no matter how hard pressed or how deeply embroiled in political machinations, could ever have got down those steps. Vainly did I seek to avoid contact with those slimy, fungus-encrusted walls. They pressed in on me from either side as if I had been sliding down a tube. Not, indeed, that this close contact was without its compensations, for, since there was no hand-rail, and the steps were incredibly steep and narrow, and, like the walls, slippery with slime and fungus, it gave some slight feeling of security.

But it was a hideous experience. Soon the faint glimmer of daylight from the doorway above faded out and gave place to the ghostly light of the electric lamps, which glanced off the shiny, unsavoury walls and ceiling in fitful gleams that dazzled rather than illuminated. Moreover, the air, which at first had seemed only musty and close, grew more and more foul, and pervaded by a strange, cadaverous odour unlike the usual earthiness of underground cellars and passages.

At length, the sudden eclipse of Thorndyke’s lamp, followed by that of Miller’s, and a faint reflection on the wall, told me that they had turned into some other passage. Then I, bringing up the rear, reached the bottom of that apparently endless flight, and found myself on a small paved space from which opened a low tunnel along which my predecessors were creeping in postures more suited to chimpanzees than to representatives of the law. I lowered my head and shoulders and followed, concentrating my attention on avoiding contact with the unclean ceiling. Presently Miller’s voice came rumbling unnaturally along the tube-like passage.

“What does your compass say, Doctor? Which way are we travelling?”

“Due west,” was the reply. “Towards the church.” I had hardly time to consider the significance of this piece of information when the Superintendent’s voice again rang out, this time in a slightly startled tone:

“Why, this is a vault!”

A few moments more, and I was able to confirm the statement. The tunnel ended in a narrow, oblong chamber, barely three feet wide, but more than a dozen feet long, and of a height that, at least, allowed one to stand upright. I availed myself of this advantage, and looked around me with some curiosity and a strong desire to find the way out. For, if the air had been foul on the stairs and in the tunnel, it was here suffocatingly fetid.

The light of the three powerful lamps made it easily possible to see all the details of structure and arrangement. And a strange and gruesome place it looked in that lurid illumination; a long, passage-like chamber, as I have said, paved with stone and enclosed with walls of damp and slimy brick. At the ends, the walls were solid, excepting the arched opening of the tunnel, but the long side walls were each interrupted by a wide arch which opened into a side chamber. Both chambers were fitted with massive stone shelves, something like the bins of a wine-cellar, and on these could be seen the ends of the coffins containing, presumably, mature specimens of the Greenlees vintage. Above, at a height of about ten feet,
the long walls supported what looked like a bottomless brickwork box about eight feet long, the rest of the chamber being roofed in with stone slabs. Under the box, towards one end, a thick iron bar—or what would nowadays be called a girder—crossed the chamber and supported at its middle an upright iron post that seemed to be fixed into the top of the box.

But the feature that interested me most was a flight of steep and narrow, but perfectly practicable, brick steps, which started from the mouth of the tunnel and passed up the left-hand wall above the arch to the base of the box near the end opposite to that which was crossed by the iron bar.

“I don’t quite understand that contraption up there,” said Miller, throwing the light of his lantern on the under-side of the box, “but there’s a flight of steps, so I suppose there’s a way out; and I propose that we try it without delay. The atmosphere of this place is enough to stifle a pole-cat.”

“We mustn’t be precipitate, Miller,” said Thorndyke. “We want to find the way out, but we don’t want to publish it to the world at large. Before we go out, we must send someone up to see that the coast is clear.”

“I suppose we shall be able to get out,” said Woodburn, “though I don’t see very clearly how we are going to do it. But I expect you do, as you nosed out that doorway so readily.”

“I think it is pretty obvious,” replied Thorndyke. “That coffer-like structure up there I take to be the Greenlees tomb in the churchyard. The top slab seems to rotate on that iron pivot and those curved runners that cross on the under-side. But I will run up and make sure of it before we send out our scouts.”

He climbed cautiously up the brick steps, and having reached the top, threw the light of his lamp on the under-side of the slab and examined the simple mechanism.

“Yes,” he reported, “I think it is all plain sailing. The runners are clean and smooth, and both they and the pivot have been kept well oiled. It won’t do to try it, in case there should be anyone in the churchyard. Now, who is going up as scout? I suggest that you go, Woodburn, as you know the tomb; and the Superintendent had better go with you to learn the lie of the land. Take a stick with you, and, if it is all clear, give five distinct taps on the side of the tomb; and be careful not to leave any more tracks than you can help.”

Neither of the scouts showed any reluctance. On the contrary, they both assented with a readiness that I attributed to the influence of the deceased Greenlees. At any rate, they waited for no further instructions, but dived forthwith into the tunnel, whence presently came the echoes of their footsteps as they scrambled up the steps towards the fresh air and the light of day.

As they disappeared, Thorndyke began a systematic exploration of the vault, throwing the light of the lamp into all the darker corners and finally extending his researches into the side chambers.

“Isn’t it rather odd,” said I, “that the air of this place should be so extraordinarily foul? I take it that there have been no recent burials here.”

“If the inscriptions are to be accepted,” he replied, “the last burial took place more than sixty years ago. I agree with you that the physical conditions do not seem to be quite consistent with the inscriptions. Perhaps we may find some explanation.”

He walked slowly round the first chamber that he had entered, throwing the light on the shelves and examining, the latter with minute and suspicious scrutiny, reading each of the coffin-plates, and inspecting each coffin critically as to its condition. Having made his round of the first chamber, he crossed to the second, followed by me and Polton—who had developed a profound and ghoulish interest in the investigation. He had passed along nearly the whole length of the first shelf when I saw him stop and look closely, first at the shelf, then at the ground beneath it, and, finally, at the two adjacent coffins.

“This wants looking into, Jervis,” said he. “These two coffins have been moved quite recently. The thick dust on the shelf has been brushed away—you can see some of it on the floor—but there are clear traces showing that both coffins have been pulled forward. And, if you look closely at the coffins themselves, you will see pretty evident signs of their having been opened at some fairly recent time. This right-hand one has been opened quite roughly, with in adequate tools. The other has been treated more skilfully; but if you look at the screws you can see that they have been withdrawn and replaced quite recently. Parts of the slots have been scraped bright by the screwdriver and the edges of the slots are burred up, particularly on the left side, showing that they were difficult to turn, as you would expect in the case of an old screw that has been in position for years.”

“For what purpose do you suppose the coffins were opened?” I asked.

“Why suppose at all?” he replied, “when the coffins are here, and Polton has a whole burglar’s outfit on his person? Let us get the lids off and see what is inside. I take it that the damaged coffin is the one that was opened first, so we will begin with the other one. Have you a practicable screwdriver about you, Polton?”

The question was hardly necessary, for Polton had already extracted from some secret and illegal pocket a good-sized ratchet screwdriver with a hollow handle containing several spare blades of different sizes. Having taken a glance at the screws, he fitted in a blade of the appropriate size, and then, as we drew out the coffin to the front of the shelf, he fell to work on it.

“The last operator wasn’t much of a hand with the screwdriver,” he grumbled, “He’s scraped away half the slots.”
However, by bearing heavily on the tool, he got the screws started, and, as they came out one by one and were put tidily on a clear space on the shelf, we brought the coffin a stage farther forward to bring the next one within reach. When the last of them had been extracted, the "case-opener" was produced, and its beak inserted under the lid. A slight tweak raised the latter, and it was easily lifted off.

As Polton drew it aside and exposed the interior of the coffin, I uttered a cry of astonishment.

"Why, there are two bodies!" I exclaimed.

"Skeletons, I should call 'em, sir," Polton corrected, disparagingly.

"Yes," Thorndyke agreed; "there would hardly have been room for two recent corpses. But they are not so badly preserved, considering that they have been here for close on a century. Now, let us get the other one open, and don't damage the coffin more than you are obliged to, Polton."

"Am I right," I asked, "in supposing that you expected to find two bodies in that coffin?"

"Yes," he replied. "That was what the circumstances seemed to suggest."

"And what do you expect to find in the other one?"

"That question, Jervis," said he, "seems to be answered by the one that we have just opened. Why should a man take a body out of one coffin and cram it into another which is already occupied?"

The answer was certainly pretty obvious. But the discussion came to a premature end: for, in spite of Polton’s care, the damaged lid came loose before all the screws had been extracted. As he lifted it off, I threw the light of my lamp into the cavity; and though it disclosed nothing that I had not expected, I stood for a while, silently gazing into the coffin with horrified fascination.

The bright glare of the lamp fell on the figure of a grey-haired man, fully clothed, even to a crumpled soft felt hat. His age, so far as it was possible to judge, appeared to be from fifty to sixty, and his neat worsted clothes and the quality of his linen suggested a man of some means, reasonably careful of his appearance. As to how he had died there was nothing to show, save for the sinister suggestion of a smear of blood on one sleeve. I was just turning to Thorndyke to ask a question when the deathly silence was broken by five sharp taps from above, which reverberated through the vault with quite startling distinctness.

"There is Woodburn," said Thorndyke. "Lay the covers on the coffins."

With this he picked up his lamp and went out into the main vault. Following him, I saw him pick his way carefully up the steep and narrow steps until he reached the little platform at the top. There he paused, and threw his light on the underside of the covering slab. Then, grasping what appeared to be some sort of handle, he gave a pull, first downward and then sideways. Immediately the heavy slab turned on its pivot and runners with a dull grinding sound and a stream of brilliant daylight poured down into the gruesome interior. A moment or two later it was partially obscured as Miller and Woodburn leaned over the edge and peered down curiously into the vault.

"Is it necessary for us to come down again?" Miller enquired. "The air is a good deal fresher up here."

"I shall want Mr. Woodburn to come down," said Thorndyke. "We have been making some investigations, and I should like to have his opinion on something that we have discovered. Probably you will be interested too."

He was—very decidedly. At the mention of a discovery, his long legs swung, one after the other, over the edge of the sarcophagus, and he followed Thorndyke down the steps as rapidly as was consistent with the necessary caution. Close behind him came Woodburn, all agog with curiosity.

"It isn’t so bad here," he remarked, "now that we have got that cover open. We had better keep it open, and let a little air in."

"Then," said Thorndyke, "Polton had better go up and keep a look-out. We don’t want any other observers. You saw how the slab was moved, Polton. If anyone comes in sight, shut it at once."

I could see that this duty was not at all acceptable to our ingenious coadjutor, who evidently foresaw dramatic developments in the immediate future. Nevertheless, he climbed the steps and thrust his head out of the opening. But I noticed that one eye and both ears were kept focused on the happenings down below.

"Now, Doctor," said Miller, "what is this discovery that you have made?"

"I will show you," said Thorndyke, leading the way into the side chamber. "But I may explain that we found that two of the coffins had been moved, and moved quite recently. But they had not only been moved: they had been opened and reclosed. On observing that, we thought it desirable to open them and ascertain why they had been opened. We did so, with this result: we found in one coffin two bodies—two quite ancient bodies; mere skeletons, in fact."

"Then," said Woodburn, "you may take it that they are strangers to me, and they are not any concern of mine. So we will take them as read."

"Very well," said Thorndyke. "I will not trouble you with that coffin. But I must ask you to look at the other. This is the one."
He drew the coffin a little farther to the front of the shelf and lifted off the lid, throwing the light of his lamp into the cavity. Mr. Woodburn approached with very evident reluctance, holding his handkerchief to his face, and cast a glance of mingled disgust and apprehension towards the coffin. Suddenly he stopped and then started forward with a half-articulate cry. For a moment he stood staring with incredulous horror. Then, in a voice tremulous with emotion, he exclaimed:

“Great God! It's Mr. Toke!”

For some moments there was a dead silence. Then Thorndyke replaced the coffin lid, and we went back to the main vault. And still, for a while, no one spoke. On Woodburn this revelation had fallen like a thunderbolt, while Miller, whose theory of the criminal doings at the Manor House was suddenly shattered, was wrapped in the most profound cogitation. At length the latter broke the silence.

“How long do you think Mr. Toke has been in that coffin, Doctor?” he asked.

“I should say,” replied Thorndyke, “that he has been there ever since the day on which he was supposed to have gone abroad.”

“Yes,” said Woodburn, “I think you are right. I have had all along a lurking suspicion that he never really went abroad; that something happened to him on that last day. I didn’t at all like the garage man’s story of that ginger-haired fellow with the red nose.”

“Eh!” exclaimed Miller, all agog in a moment. “What story was that?”

Woodburn gave him a brief summary of the incident of the returned car and the “Ginger Lushington,” to which he listened with profound attention, and on which he cogitated for a while when Woodburn had finished. Suddenly he turned to Thorndyke, and regarded him eagerly and almost fiercely.

“Now, look here, Doctor,” said he, “you have got to tell us what all this means. It is no use for you to try to put us off. You hold all the clues and you know all about it. You have followed this case as if you were running along rails. You knew that someone had been here. I believe you knew about those sovereigns, and you went for that secret door as if you knew exactly where to look for it. And then you came down into this vault and you went straight for that coffin. I have no doubt that you knew Mr. Toke was there. Now, Doctor, I ask you to tell me who killed Mr. Toke, and who was that red-nosed man.”

“You are asking me,” replied Thorndyke, “to make a statement, whereas I can only offer an opinion. But you can have that opinion for what it is worth; and I may say that I think it is worth a good deal, as it is based on a mass of evidence. I should say that the red-nosed man at the garage and the murderer of Mr. Toke are one and the same person; and that person is named Walter Hornby.”

“What!” exclaimed Miller. “The villain who murdered Badger!”

“That is what I believe,” said Thorndyke. “But I hope that we shall have the opportunity to settle the question. At any rate, we may fairly take it that the person who has been frequenting these premises is the person who murdered Mr. Toke.”

“And you expect that person to come here to-night?”

“It is only a probability,” replied Thorndyke. “You know our reasons for expecting him. It may be to-night, or he may choose some other night. But there is very little doubt that he will come sooner or later to finish up the gold that is left, and take away those sovereigns. But it is quite possible that the next visit will be meant to be the last.”

“It will be the last,” Miller remarked, grimly. “If I stay here till Doomsday, I am going to have him.”

There was a brief pause. Then Woodburn asked:

“Where and how do you suppose the murder was committed?”

“I should say,” answered Thorndyke, “that the deed was done at the top of those steps. There is what looks very much like a blood-stain on the brick there. As to the circumstances, I should say that they were roughly these: I take it that Mr. Toke, when he took the car out of the garage, had for some reason to come down here, unexpectedly, to fetch something from, or deposit something in, the gallery; and he had reasons for not wishing to enter the house and break the seals. I think that the murderer must have come to know of this intended visit, and have come on in advance and waited for him in hiding somewhere; that he saw Toke arrive, followed him into the churchyard, and saw him enter the tomb by the secret opening. I suspect that he waited for him to come out, and then murdered him as he was emerging from the tomb. Then he explored the vault, hurriedly broke open a coffin, and, having disposed of the body, made an inspection of the premises, the valuable contents of which may have been known to him. At any rate, he would have found the gold, and known then that it would be worth while to come back to take it away. I should think that the sovereigns were probably an afterthought, suggested by the quantity of gold bullion, which would have been rather unsafe to dispose of in the regular way. Moreover, if I am right as to the identity of the man, we must remember that he was an assayist by profession, and would have an expert knowledge of the methods of dealing with gold. But, as to that, we shall know more when we have seen him. And now we may as well relieve Polton and get back to the house. I don’t think we have left any traces of our visit down here, and we must be careful to leave none in the churchyard as we go out.”

“No,” Miller agreed fervently, “for the Lord’s sake don’t let us spoil our chances by giving him any sort of warning. At present, we seem to have him in the hollow of our hand. It would take ten years off my life if we should let him slip.”
"I don’t think you need have any misgivings, Miller," said Thorndyke. “He is bound to come back; and we are agreed that we are willing to wait for him to come in his own time. We can only hope that he will not keep us waiting too long.”

XVII. — THE VIGIL

WE made our way out of the vault, one by one, creeping cautiously up the narrow brick steps, and climbing over the side of the tomb into the green and sunny churchyard. Woodburn was the first to emerge, and, as he stepped down on to the grass, he drew a deep breath.

"Lord," he exclaimed, “it is good to be back in the world of living men and to breathe the fresh air. That was a horrible experience!”

I sympathized with him, though, naturally, my professional training had made me less sensitive to merely physical unpleasantness. For I realized that, whatever misgivings he might have had respecting his client, it must have been a shocking experience to be brought suddenly, without warning, face to face with his murdered corpse. Even Miller was not unaffected by the tragedy that had been so abruptly sprung upon him.

Thorndyke was the last to come up, having lingered to take a final look round and make sure that no tell tale evidence of our visit had been left to arouse the suspicions of the hoped-for visitor. As soon as he had stepped out, he seized the displaced slab, and, with a vigorous pull, swung it round into its normal position.

“We may as well make sure, before we go,” said he, “that we all understand how this arrangement works from the outside. It seems to be quite a simple device. The slab rocks slightly on its pivot. To release the inside catch, the higher end of the slab has to be pressed down. This raises the other end and so frees the catch. You see that, at present, the slab is quite immovable; but when I throw my weight on this end, I am able to swing it round without difficulty.”

As he spoke, he demonstrated the mechanism; and when Miller had satisfied himself by actual trial that he had fully grasped the method, we took our way out of the churchyard and walked across to the house. There we were admitted by Mrs. Gibbins in person, who informed us that two officers had arrived, and, further, that lunch would be served in five minutes, and, furthermore, that separate arrangements had been made for Mr. Polton and the two officers.

At the latter announcement Miller smiled grimly. “Artful old puss,” was his comment, when she had gone. “Made her arrangements to have Mr. Polton all to herself, and get the latest news. But it doesn’t matter. She’s an interested party, and it will save me the trouble of giving my men the particulars.”

Nevertheless, he introduced us to the two officers, and gave them a few instructions, and then we retired to remove, as far as was possible, the traces of our subterranean activities, before sitting down to lunch.

It was a very leisurely meal; almost intentionally so; for there was little more to do in the way of preparation, and a long interval before the next phase of our adventure could be expected to begin. But there was plenty of material for discussion, especially as Woodburn had to be put in possession of the numerous and complicated antecedents of the case. Then the details of the procedure to be adopted in the actual capture had to be considered, and the course that would have to be taken in the event of the quarry failing to appear. As to the former, Miller showed a disposition to simplify the proceedings by making the arrest in the churchyard.

“You see,” he explained, “there’s a good deal to be said for catching your hare while you have the chance. If we collar him as soon as he has gone up to the tomb, we shall make sure of him; whereas, if we let him go down, he may disappear into some underground passage that we know nothing about.”

But Thorndyke shook his head very decidedly. “No, Miller,” said he. “That won’t do. It is a bad plan in two ways. In the first place, the churchyard is not secure enough. He would have quite a fair chance of escape in that open space, with its various obstructions to dodge among, and possibly a car waiting close by. In the second place, he ought to be arrested, for evidential reasons, in the gallery. Remember that we have got to identify him with the coiner who has used Mr. Toke’s gold, and we are going to charge him with the murder of Mr. Toke. Now, if you arrest him in the churchyard, you have got those charges to prove. You will infer, reasonably enough, that he has come into the churchyard for the purpose of entering the house by way of the secret passage. But in a criminal trial, on a capital charge, evidence is sifted very finely. The defence would deny the intention, and you would have to prove it. But if he is taken actually in the gallery, that fact is evidence in itself of his connection with the coining, and, by fair inference, with the murder of Mr. Toke.”

Miller admitted the force of this contention. “But, still,” he urged, “we are not dealing with an unknown man. You say you can prove his identity, which connects him with a previous crime, and you have got substantial evidence in regard to the murder of poor Badger.”

Thorndyke, however, was firm. “It won’t do, Miller,” said he. “We shall want every particle of evidence that we can get. At present, all that we have is circumstantial. But, with all respect to the dictum of a certain learned judge, circumstantial evidence is much less satisfactory to a jury than that which is more or less direct.”

“Very well,” said Miller; “you know more about court work than I do. But what do you suggest—I mean, about planting my men?”

“The best plan, I think,” replied Thorndyke, “would be to instruct them to hide behind the yew tree—it must be pitch-
dark there at night—and to wait for the man to arrive. They should let him go down into the tomb, and, as soon as he has disappeared, they should take up their stations at the side of the tomb nearest the steps. There they would have absolute control of him if he should come up again, as he would be standing on the steps."

“You speak of ’him,”’ Miller remarked. “Supposing there should be a gang?”

“That is very unlikely,” replied Thorndyke, “but, even so, there are four of us, without counting Polton. I think we can take our chance. Are you and your men armed?”

“No,” replied Miller; “we don’t much favour firearms in the force. We’ve brought two or three sets of handcuffs, and, for the rest, we’ve got a pretty serviceable outfit of fists.”

Eventually, the Superintendent accepted Thorndyke’s suggestions, and, when we had finished lunch, the final preparations were made. Thorndyke showed the two officers the secret door, and demonstrated the working of the catch from outside and from within, and then conducted them down the stair-way and through the vault to the opening, at which Polton had been sent to keep a look-out. When they had mastered the working of the movable slab, they were shown the spot behind the yew tree where they were to keep watch later on. Then the whole party returned to the house by way of the vault—to avoid exhibiting themselves to any chance observers in the village.

When the officers had been dismissed to repose and smoke their pipes in Mr. Toke’s study, Thorndyke produced a six-inch ordnance map of the district, and invited the attention of Woodburn and the Superintendent to a narrow lane that appeared to run close beside the churchyard, and, presently to open into a by-road at no great distance.

“It seems probable,” said he, “that our friend, or friends, make the journey here by car, unless they should be local persons; which is most unlikely. And if they do, this lane would be an ideal approach, as it would avoid the village street, and be a most convenient place in which to leave the car—quite close to the churchyard and well out of sight. It might be worth while to go and inspect that lane.”

“I don’t think that is necessary,” said Woodburn, “because the same idea had occurred to me, and I took the opportunity to walk along it this morning. And I have no doubt that you are right. At any rate, someone has been bringing a car up that lane, for there were clear traces of one—a smallish car it seemed to be—especially at a place near the middle, where it is wide enough to turn round. I could see quite plainly the marks on the grass verge where he had backed in to turn. It appeared that he entered the lane from the by-road and stopped short a couple of hundred yards from the village street. So he must have gone back on the reverse until he came to the wide part, and then have turned round and gone out by the by-road.”

"Were these the marks of a single journey," asked Miller, "or were there more than one set?"

"At the wide part," answered Woodburn, "on the soft grass verge, there were a number of tracks on top of one another. I couldn’t say how many."

"Then," said Miller, "we needn’t trouble to inspect it; which is as well. The less we show ourselves in this neighbourhood the better. I’ll tell my men to keep their ears pricked up for the sound of a motor, though if it is occupied by the parties that we are expecting, it isn’t likely to be a very noisy one."

"No," Thorndyke agreed; "but in the silence of the country at night it will certainly be audible, especially if the driver should take the precaution—as he probably would—to turn round as soon as he arrived, so as to be ready to drive straight off in the event of an alarm. So we will hope that he comes in style in his car. It would give a very useful warning to your watchers."

“Yes,” said Miller, “and it would be rather useful if they could pass the warning on to us in some way. What do you think, Doctor?”

"Of course," replied Thorndyke, “it would be a great help to us. But I think we shall have to do without it. Any kind of signalling would be extremely unsafe. It might easily give a warning in the wrong quarter."

Miller acknowledged the truth of this, and the subject dropped. And then began a somewhat tedious period of waiting; for there were yet several hours of daylight to dispose of before our actual vigil would begin. The Superintendent, being an old hand at this sort of business, retired to the study to smoke and “take forty winks”; while Thorndyke, Woodburn, and I whiled away the afternoon by making a complete tour of Mr. Toke’s collection.

A very remarkable collection it was. The gallery was filled mainly with Bow, Chelsea, and other porcelain figures, while the three smaller rooms were occupied by bronze busts and statuettes and a small collection of choice pottery and enamels. The entire contents of the rooms must have been of very great value, for all the pieces seemed to have been selected with the most fastidious taste and obviously expert judgment, without regard to cost. As we walked round and admired them one after another, they suggested two rather curious questions.

First, was it credible that the man who had acquired and treasured all these things of beauty, with such obvious enthusiasm and love for them, could be a mere fence—a receiver of stolen property? Those ingots in the workshop had certainly looked suspicious. Yet how could one believe it? The man who had cherished all these beautiful things so lovingly was no common money-grabber. Every one of them seemed to cry out in vindication of Mr. Toke.
The second question was, How came it that Hornby—if he was indeed the mysterious visitor—should have left this treasure-house intact? Many of the pieces were quite portable, especially to a man with a car. And, as Miller had pointed out, they could have been disposed of quite safely, so long as they had not been missed. The first question could not be discussed in Woodburn's presence, but the second I ventured to put to Thorndyke.

"I think the explanation is fairly simple," he replied. "There appears to have been here an accumulation of gold bullion. How much we cannot guess, nor how it came to be accumulated. But here it was, and its presence was probably known, or suspected by, the murderer, though it may have been discovered after the murder. My impression—though it is nothing more—is that the murder was not committed ad hoc—as a means to the carrying out of the robbery, but for some reason that is not known to us, and that the gold robbery was, as it were, a by-product.

"Now, the existence of this gold bullion was, almost certainly, known to no one but Mr. Toke. It follows that if the murderer could have simply taken away the gold and then disappeared, he would have left no trace whatever of his having ever been here. The corpse, you remember, is in a coffin in the vault, to which the only access is by secret openings whose existence was unknown to anybody but Mr. Toke. You see the masterly simplicity of the plan. When Mr. Toke failed to return or give any sign of being alive, and leave had been granted by the court to presume death, these rooms would have been opened and everything found apparently intact. There would have been nothing whatever to suggest any crime. It might have been suspected that Mr. Toke had met with foul play. But not here. The scene of his disappearance would have been placed in some unknown locality abroad.

"But now suppose that this man, in addition to taking away the gold, had rifled the collection. Then, as soon as the rooms were entered, it would have been seen that there had been a robbery. But a robbery in conjunction with a disappearance at once suggests a murder. There would have been a search, with the possible, and even probable, discovery of the body. Obviously, it was worth the murderer's while to abstain from tampering with the collection."

The afternoon wore on and merged into evening. The daylight faded, and, as the twilight deepened and the night closed in on the old house, we felt that the time had come to set the watch. For this was a quiet country neighbourhood where people went to rest early and measured time by the sun rather than by the clock. Accordingly, we went forth in search of the Superintendent and found him in the act of mustering his forces, preparatory to placing them at their posts in the churchyard.

"It seems a bit early," said he. "But it won't do to be caught napping. Our friends may turn up earlier than we expect. I'll just go out and see my men posted, and then we will make our arrangements."

With this he departed and we proceeded with the preliminaries that concerned us. First Woodburn instructed Mrs. Gibbins to have all lights out at the usual time—which appeared to be ten o'clock—and advised that the inmates should go to bed when they put out the lights (which I suspected to be a counsel of perfection that was not likely to be followed). Then we made out our programme for the night watch in the gallery. Woodburn not only volunteered, but insisted on joining the party; and Polton, when he was offered the use of a spare bedroom, became, for the first time on record, positively mutinous, absolutely refusing to be driven away from the scene of action. So he had to be put on the roster of the "garrison," and proceeded with us to the gallery to take up our final positions, where we were presently joined by the Superintendent.

"Well," the latter remarked, surveying our party with a grin, "if there is only one man, we ought to be able to manage him. Seven of us, all told. Seems as if we weren't taking many risks. Of course, if there should be more than one, we shan't be too many. And now we've got to settle on our stations, because, when once we have taken them, we must keep them. There must be no moving about. Now, we can't lock that door, as there is no keyhole on the inside, so one or two of us had better take post in the first room—the one that is next to the door. The question is, which of us?"

"I think you had better take that post, Miller," said Thorndyke, "as that is where he, or they, will probably have to be stopped. They will know that the door is unlocked as soon as they discover that someone is in the room, and, as the secret door will be blocked, they will naturally make a burst for the main door."

"Yes," agreed Miller, "I think you are right, Doctor. Then I propose that Mr. Woodburn and I take the end room, and the rest of you take post in the workshop, where you will be close to the secret door."

These arrangements having been agreed to, Thorndyke made a final round to make sure that nothing was visible that might create premature suspicion. First, he inspected the secret door, and set the catch exactly as he had found it, wiping away the last traces of the dusting powder by the light of his lamp (for we had put on no lights in the gallery). Then he went to the main door, and, taking the dangling remains of the seal, heated the wax with a lighted match (which he carefully shrouded with his hand), and stuck it in its original place so that, to a casual glance, it appeared to be unbroken.

"Now, I think we are all ready," said he, "and it is about time that we took our places."

The existing arrangements did not make for luxury, or even common comfort. The Superintendent and Woodburn found in their room one chair, and collected another from the adjoining room. But in the workshop there was but one hideously incommmodious stool, which we all rejected, preferring to seat ourselves on the bench, when we had removed the flasks and other obstructions. It was far from being a comfortable seat, and the shelves behind it offered but an uneasy support to the back. However, Thorndyke reminded us that many a journeyman tailor spent the greater part of his life seated on just such a bench, and added with undoubted truth that it had the virtue of offering a steady resistance to any tendency to drowsiness.
I look back on that long vigil as one of the strangest experiences of my life. It was like that of a big-game hunter, offering a curious combination of tedium and excitement, of wearisome monotony with the need for incessant alertness and the uncertainty as to what the next moment might bring forth, or whether it might bring forth anything. We took our places, very prematurely, at half-past nine; and thereafter we sat in the dark, conversing little, and then in the softest of whispers, and hardly daring to change our positions. It would have been a relief to smoke, but this was, of course, forbidden, though at intervals, a faint sniff, accompanied by the suspicion of a distinctive scent, informed me that Polton was indulging in the mild dissipation of a pinch of snuff. Once, indeed, the cold touch of a metal snuff-box on my hand was accompanied by a whispered invitation to test the virtues of Brown Rappée; an invitation which I half-reluctantly declined.

The tardy minutes crawled on with incredible slowness. Sitting there in the darkness, encompassed, as it seemed, by the silence of the tomb, I was able to mark their passage by the chimes of a clock, somewhere in the village, which were borne faintly to my ear across the quiet countryside. The clock struck the quarters, but each quarter seemed to have the duration of an hour. I fingered the automatic pistol in my pocket and wondered what degree of urgency would induce me to use it. Like Thorndyke, I had a profound dislike of firearms; and none of our party had seemed to show much enthusiasm when he handed them out. Miller had the typical police officer’s contempt for a mere assassin’s weapon, and had offered his to Polton. But Polton assured him that he had never fired a pistol in his life and should probably hit the wrong man; upon which Miller hastily took it back.

The distant clock had struck half past ten when the dreariness of our vigil was to some extent mitigated by the appearance of the moon. It first came into view through the curtained window of the gallery which was just visible through the half-open door of the workshop, as a misshapen, coppery disc (for it was a few days past the full), just peeping above the window-sill. Then, by slow degrees, it crept up higher and higher; and, as its dull copper brightened into a warm, ruddy glow and then to a clear, cold, silvery sheen, the shape of the lofty window became traced on the floor in an elongated, luminous patch, on which the pattern of the lace curtains stood out clearly in forms of delicate shadow.

That shape of patterned moonlight came as a welcome distraction which helped to fill the long intervals between the chimes of the distant clock. Like some solitary prisoner in his cell, I followed its infinitely slow progress across the floor; idly calculating the time that it would take to reach the foot of the pilaster in which was the secret door. At present, the pilaster was enveloped in dense, black shadow, and a wide space of floor separated it from the patch of moonlight. I tried to think of that space in terms of angular distance and time, but failed to reach any intelligible result. Then I fell to thinking about the man for whom we were waiting. Was he now on the road, drawing gradually nearer to his doom—or, perchance, ours? If so, how far away was he now? Was he travelling alone or had he companions with whom we should have to reckon? Or was he, even now, comfortably tucked up in bed in some far-away hiding-place with no intention of sallying forth this night? Or was he lurking in the village, fully warned by the sight of us to keep out of the way? To leave us to our profitless vigil until the coming of daylight should send us away, drowsy and defeated?

The silence of the old house was like the silence of some cavern in the heart of a mountain. Save for the infrequent chime of the far-away clock, there was not a sound. Not a window rattled—for it was a still night—not a joist creaked, no mouse “shrieked in the wainscot” or scuttled through its burrow. None of the ordinary night sounds of an old house were audible. It was as still as the inside of a pyramid.

A few minutes had passed since the hardly audible chime of the distant clock had told out the half-hour after eleven when that deathly silence was, for the first time, disturbed by a sound that seemed to come from within the house. And, even then, it was so faint and indefinite that I doubted whether I had, in fact, heard anything. I listened intently. Then, after the lapse of nearly a minute, it was repeated. It conveyed nothing to me. It was just a sound—infinitely faint and remote, and so devoid of any recognizable character that I was still doubtful. But at this moment Thorndyke silently slid off the bench and was followed—less silently—by Polton. I, too, slipped my legs over the edge and, as I stood upright beside Thorndyke, I asked in a whisper:

“Did you think you heard anything?”

“Yes,” he replied. “It was the slab turning on its pivot. Listen!”

I strained my ears, but for a few moments I could hear no further sound. Then I became aware of a faint but distinctly audible murmur or rustle as if a number of separate sounds were being confused by echoes. Suddenly it became much more distinct and changed in character; for now I could clearly distinguish footsteps—soft, stealthy footsteps, mingled with their reverberations, but unmistakable.

Nearer and nearer they came, still secret and stealthy, but now recognizable as the tread of feet on the long stairway. Once, the feet slipped or stumbled, and the sound of some hard object striking the steps, followed by a muttered curse, told me that the man was nearer than I had thought. Suddenly on the side of the pilaster, there appeared a bright thread—the light of a lamp from the stairway shining through the crack of the secret door.

With a throbbing heart I watched that thread of light, drawn on the black shadow of the pilaster, as it waxed in brightness from moment to moment. At last plain sounds from within the woodwork told us that our visitor had come. There was a soft scraping like the sound of a groping hand; two successive creaks followed by a sharp click. Then the secret door swung open, and a man stepped out into the room.

At first, he was no more than a dim, dark shape, as he stood in the shadow; but when he moved, I could see that he was hatless, and that he carried a good-sized hand-bag in one hand and in the other what looked like a large electric lamp, the
light of which was switched off. From the door he went across to the table and laid his bag on it. Then he walked softly up the room until he came to the door, where he switched on his lamp and threw its light on the seals. Apparently their appearance satisfied him, for he turned away after a brief glance; but then, as if by an after-thought, he turned back and threw the light on again. Evidently he had detected something amiss, for, after a few moments’ inspection, he mounted the steps to examine the seals more closely. As he did so, Thorndyke glided like a shadow from the workshop door to the pilaster, where he halted just in front of the secret opening. Almost at the same moment looking out from the workshop, I saw another shadow glide out of the door of the farther room without a sound and slip round behind the stranger as he ascended the steps.

At this point, I crept silently out into the gallery, for the reflection from the moonlit floor enabled me to recognize this second shadow as the Superintendent, and I knew that the critical moment had come. It had seemed to me that Miller had moved quite noiselessly, but apparently I was wrong; for, at the very moment when his arm stretched out to seize his prey, the stranger turned sharply, and, as the light of his lamp fell on the Superintendent, he uttered a sort of snarl, struck out viciously, and wrenched himself away, springing from the steps and racing down the room, closely pursued by Miller and Woodburn.

As to what followed my recollections are somewhat confused. It all happened so quickly and the light was so imperfect that nothing but a general impression remains. I saw the fugitive adroitly catch up a chair and whirl it back at his pursuers, with the result that Miller staggered heavily sideways, and Woodburn, whose legs it struck, fell sprawling on the floor. The next moment, as the man swerved to pass the workshop door, the light of his lamp fell on Thorndyke. I think that in that instant he must have recognized him, for he uttered a savage cry, checked for a moment, and then threw out his arm. Instantly I realized, though I could not see it, that the hand of that extended arm held a pistol, and I started forward. But at that instant something hurtled past me and struck the stranger in the face with such force that he staggered backward. The report of the pistol rang out sharply, and the missile, whatever it was, clattered heavily on the floor.

It had been a near thing; and, indeed it was not yet over, though Miller had now rushed forward and grasped the pistol arm while I sprang at the other. But our prisoner fought and struggled like a maniac, yet with a settled purpose, for the flash and report of the pistol were repeated again and again, not at random, but always when the weapon could be brought to bear in Thorndyke’s direction. Now, however, my colleague, having closed and fastened the secret door, came forward to take a hand with the light of his lamp turned full on the struggling, swaying group, which had now been joined by Woodburn.

Suddenly I heard Thorndyke call out sharply:

“Keep out of the way, Polton!” At the same moment I caught sight of our artificer, skirmishing round at Miller’s side, with his eyes riveted on the pistol. Almost as Thorndyke spoke, a pair of large crucible-tongs came into view, reaching out towards the hand which held the weapon. There was a quick but unhurried movement, and the tongs took firm hold of the pistol by its flat stock. Then the long handles were quietly raised and twisted the weapon irresistibly out of the prisoner’s grasp.

The removal of the pistol brought the struggle virtually to an end. I did, indeed, feel the hand which I controlled thrusting towards the waist-belt. But I had already detected the presence there of a sheath-knife of formidable size, and I easily circumvented the movement. And, when Thorndyke seized both the prisoner’s wrists and held them together, Miller was able to snap on the handcuffs. Even then, our prisoner continued to struggle violently; and it was not until Thorndyke had encircled his legs and pinioned his arms with a couple of document straps (which he had, apparently, put in his pocket for that purpose) that his resistance ceased. Then we sat him in a chair, and, while we recovered our breath, considered the next move.

“I think,” said Miller, “I will just run across to the churchyard and relieve my men. They may be able to produce some sort of transport. If not, I shall have to borrow Mr. Woodburn’s car. I leave the prisoner in your custody, Doctor.”

As soon as he had gone, Woodburn proceeded to light the two hanging lamps which swung by long chains from beams in the gallery ceiling—for there was neither gas nor electric light in the house—when we were able to survey one another and examine our prisoner. Woodburn was the only one of us who had suffered visibly from the encounter, having an undeniable black eye. But the prisoner was a sorry spectacle, and, villain as he was, I could not but feel some twinges of compunction as I looked at him. His face was badly bruised and bleeding; at which I was not surprised, when I picked up the missile that had struck him and recognized it as Polton’s “case-opener.” But what most contributed to his forlorn and wretched aspect was his bald head, from which the wig had been dislodged during the fray. It was not a common, natural, and decent bald head, which would have been normal enough, but the baldness was in large patches with separating areas of stubble; the condition, in fact, known to our profession as Alopecia areata.

I picked up the wig and carefully replaced it on his head, disregarding its profane and furious protests. Then I went with Thorndyke to the workshop, where the research case had been deposited, to fetch the little first-aid case that was part of its permanent equipment, and, as I was thus engaged, Thorndyke proceeded to moralize.

“That Alopecia is interesting,” he remarked. “I mean, as an illustration of the incalculability of human affairs. If he had not been compelled to wear a wig, he would probably never have thought of personating Dobey. Probably, too, he would not have murdered Badger—at any rate not in that way; and he might not have murdered Toke. Evidently, the course of his criminal career has been largely influenced by his Alopecia. He had to wear a wig, but he could wear any kind of wig that he pleased and change it at any time for any other kind that circumstances seemed to require.”
“Yes,” I agreed; “a disguise which has to be habitually worn naturally suggests additions and variations.”
I took the little emergency case and a basin of water, and we went back to the prisoner. As I was mixing some lotion while Thorndyke prepared a dressing, the patient watched him with a glare of the most concentrated malice.

“Don’t you touch me, you devil!” he exclaimed, huskily, “or I’ll bite you. I ought to have settled with you years ago.”

In different circumstances it might have been permissible to remind him that he had made three pretty determined attempts. Nevertheless, as a matter of policy, he was certainly right. But for Thorndyke, be would have been, at this moment, at large and unsuspected.

I had hardly finished attending to his damaged face when Miller returned.

“We shall be able to manage quite well,” he announced. “My men discovered a car in that lane—heard it arrive, in fact. So I shan’t want Mr. Woodburn’s. We can take him to London in his own car.”

Here the two officers entered, and, advancing up the gallery, took a long and curious look at the prisoner. Then Miller proceeded to make the formal charge.

“I arrest you, Walter Hornby, for the murder of Mr. Didbury Toke; and I caution you that anything you say will be taken down in writing and may be used against you—”

“Oh, go to blazes!” interrupted Hornby. “Do you think I am a cackling old woman? I am not going to say anything.”

Nevertheless, in spite of his bravado, I had the impression that the nature of the charge came as an appalling shock. I think he had expected to be charged only with breaking and entering, for after this outburst he settled down into sullen silence and submitted passively to being carried away by the two officers. Only once, as he was borne out, he turned his head to bestow on Thorndyke a look of the most concentrated malignancy.

When the grim procession, accompanied by the Superintendent, had passed out and the footsteps had died away, Thorndyke turned to his faithful henchman and laid his hand on his shoulder.

“It was fortunate for me, Polton,” said he, “that you would not go to bed. But for that remarkable shot of yours, I think Hornby would have settled his account with me, after all.”

Polton crinkled apologetically and gave a little embarrassed cough as he replied:

“Yes, sir, I thought I might be useful. You see, sir, when I was younger, I used to take a good deal of practice at the coconuts on Hampstead Heath. I got to be quite a dab at ’em; and the Aunt Sallies, too.”

At this moment, the gallery door opened, and Mrs. Gibbins entered spectrally, bearing a lighted candle in a bedroom candlestick.

“I’ve come to tell you, sir,” she said, addressing Woodburn, “that I have laid supper in the dining-room. Mr. Miller is coming back to join you when he has seen the other officers off in the car.”

It was an undeniably welcome announcement; and, when Woodburn had extinguished the lamps, we switched on our electric lanterns and followed the housekeeper along the winding corridor.

XVIII. — POSTSCRIPT

WITH the arrest of Walter Hornby, this history—which is that of an investigation—naturally comes to an end. In the course of the events that followed, nothing transpired that could be regarded as a new discovery. Certain details were filled in, and certain conclusions which had been arrived at by inference were confirmed by actual demonstration. Thus, at the inquest, it was proved that Mr. Toke had died from a deep knife wound, and the evidence left no doubt that it had been inflicted, as Thorndyke had suggested, just as he was in the act of emerging from the tomb. The wound corresponded exactly with the knife which was on Hornby’s person when he was arrested. And, though that knife had been carefully washed, when Polton, under Thorndyke’s supervision, unriveted and removed the wooden handle, considerable traces of blood were discovered; sufficient, in fact, to admit of a biochemical test which showed it to be human blood.

At the trial, there was practically no defence, nor was there any appeal from the conviction and sentence. The prisoner was indicted for the murder of Mr. Toke, the other crime being held back for a further indictment in the unlikely event of an acquittal. But of an acquittal there was never the remotest chance. For, in addition to the profoundly incriminating fact that Hornby had been captured in actual occupation of the murdered man’s premises and in command of the secret passages in which the body was concealed, there was the utterly damning fact that Mr. Toke’s signet ring was found in his pocket when he was searched after his arrest.

It was unavoidable that the trial and its dreadful sequel should be a cause of pain to many estimable people, including his cousin Reuben—against whom he had hatched such a dastardly plot in the years gone by. To my wife, who had been almost in the position of a relative, the whole sordidly tragic affair was so harrowing that we tacitly agreed not to speak of it. Even I, who had known the man in the days of his prosperity and respectability, could hardly bring myself to contemplate his present terrible plight; and I was almost disposed to resent Thorndyke’s calm, impersonal interest in the trial and his satisfaction at the conviction and the sentence. For a man so kind by nature, this callousness—as it appeared to me—seemed surprising and hardly natural. I think I must have given expression to some such sentiments on the day, I
remember, when the execution had just taken place, and he was calmly collecting the notes and memoranda of the case to put away in the files where the records were kept. His reply was characteristic and, looking back, I am not much disposed to cavil at it.

“I understand, Jervis,” said he, “your personal discomfort in contemplating this tragedy; the shipwreck of a life that started with so much promise and had such potentialities of usefulness and success. But it is a mistake to grow sentimental over the Nemesis that awaits the criminal. The most far-reaching mercy that can be exercised in social life is to safeguard the liberties of those who respect the liberties of others. Believe me, Jervis, the great purveyor of human happiness is not philanthropy, which seeks to soften the lot of the unworthy, but justice, which secures to the worthy the power to achieve their own happiness, by protecting them from the wrong-doer and the social parasite.”
THE ATTENDANT AT THE CLOAK ROOM AT FENCHURCH STREET STATION GLANCED AT THE TICKET WHICH HAD JUST BEEN HANDED TO HIM BY A TALL, HAWK-FACED AND RATHER ANXIOUS-LOOKING MAN, AND RAN AN INQUIRING EYE OVER THE ASEMBLAGE OF TRUNKS, BAGS AND OTHER OBJECTS THAT CROWDED THE FLOOR OF THE ROOM.

“WOODEN, IRON-BOUND CASE, YOU SAID?” HE REMARKED.

“YES. NAME OF DOBSON ON THE LABEL. THAT LOOKS LIKE THE ONE,” HE ADDED, CRANING OVER THE BARRIER AND WATCHING EAGERLY AS THE ATTENDANT THREADED HIS WAY AMONG THE LITTER OF PACKAGES.

“DOBSON IT IS,” THE MAN CONFIRMED, STOOPING OVER THE CASE, AND, WITH AN OBVIOUSLY PUZZLED EXPRESSION, COMPARING THE TICKET THAT HAD BEEN PASTED ON IT WITH THE COUNTERFOIL WHICH HE HELD IN HIS HAND. “RUM AFFAIR, THOUGH,” HE ADDED. “IT SEEMS TO BE YOUR CASE BUT IT HAS GOT THE WRONG NUMBER ON IT. WILL YOU COME IN AND HAVE A LOOK AT IT AND SEE THAT IT IS ALL RIGHT?”

The presumptive owner offered no objection. On the contrary, he raised the bar of the barrier with the greatest alacrity and took the shortest route among the trunks and portmanteaux until he arrived at the place where the case was standing. And then his expression became even more puzzled than that of the attendant.
“This is very extraordinary,” he exclaimed.

“What is?” demanded the attendant.

“Why!” the other explained, “it is the right name and the same sort of case; but this is not the label that I wrote and I don’t believe that it is the same case.”

The attendant regarded him with a surprised grin and again remarked that “it was a rum affair,” adding, after a reflective pause: “It rather looks as if there had been some mistake, as there easily might be with two cases exactly alike and the same name on both. Were the contents of your case of any particular value?”

“They were, indeed!” the owner exclaimed in an agitated tone. “That case contained property worth several thousand pounds.”

The attendant whistled and apparently began to see things in a new light, for he asked a little anxiously: “When do you say you deposited the case?”

“Late on Saturday evening.”

“Yes, I thought I remembered,” said the attendant. “Then the muddle, if there has been one, must have happened yesterday. I wasn’t here then. It was my Sunday off. But are you quite sure that this is really not your case?”

“It certainly is not the label that I wrote,” was the reply. “But I won’t swear that it is a different case; though I don’t think that it is the right one. But you see, as the name on the label is my name and the address is my address, it can’t be a matter of a simple mistake. It looks like a case of deliberate substitution. And that seems to be borne out by the fact that the change must have been made on a Sunday when the regular attendant was not here.”

“Yes,” the other agreed, “there’s no denying that it does look a bit fishy. But look here, sir; if your name and address is on the label, you are entitled to assume that this is your case. As you say, it is either yours or it is a deliberate substitute, and, in either case, you have the right to open it and see if your property is inside. That will settle the question right away. I can lend you a screw-driver.”

The presumptive owner caught eagerly at the suggestion and began forthwith to untie the thick cord which surrounded the case. The screw-driver was produced, and, while the official turned away to attend to two other clients, it was pried vigorously on the eight long screws by which the lid of the case was secured.

The two newcomers, of whom one appeared to be an American and the other an Englishman, had come to claim a number of trunks and travelling-bags; and as some of these, especially those belonging to the American gentleman, were of imposing dimensions, the attendant prudently admitted them that they might identify their packages and so save unnecessary hauling about. While they were carrying out their search he returned to Mr. Dobson and watched him as he extracted the last of the screws.

“Now we shall see whether there has been any jiggery pokery,” he remarked, when the screw had been laid down with the others, and Mr. Dobson prepared to raise the lid. And in fact they did see; and a very singular effect the sight had on them both. Mr. Dobson sprang back with a gasp of horror and the attendant uttered the single word “Golly!”

After staring into the case incredulously for a couple of amazed seconds, Dobson slammed down the lid and demanded, breathlessly, “Where can I find a policeman?”

“You’ll find one somewhere near the barrier or else just outside the station. Or you could get on the phone and—”

Mr. Dobson did not wait to hear the conclusion of the sentence but darted out towards the barrier and disappeared in the direction of the main entrance. Meanwhile, the two strangers, who had apparently overheard Mr. Dobson’s question, abandoned for the time being the inspection of their luggage and approached the case, on which the attendant’s eyes were still riveted.

“Anything amiss?” the Englishman asked.

The attendant made no reply but silently lifted the lid of the case, held it up for a moment or two and then let it drop.

“Good Lord!” exclaimed the Englishman, “it looks like a man’s head!”

“It is a man’s head,” the attendant confirmed. And, in fact, there was no doubt about it, though only a hairy crown was visible, through a packing of clothes or rags.

“Who is the chappie who has just bolted out?” the Englishman inquired. “He seemed mightily taken aback.”

“So would you have been,” the attendant retorted, “if you had come to claim a package and found this in its place.” He followed up this remark with a brief summary of the circumstances.

“Well!” observed the American, “I have heard it said that exchange is no robbery, but I guess that the party who made this exchange got the best of the deal.”

The Englishman grinned. “You are right there, Mr. Pippet,” said he. “I’ve heard of a good many artful dodges for disposing of a superfluous corpse, but I have never heard of a murderer swapping it for a case of jewellery or bullion.”

The three men stood silently looking at the case and occasionally glancing round in the direction of the entrance. Presently the American inquired:
“Is there any particular scarcity of policemen in this city?”

The attendant looked round again anxiously towards the entrance.

“He is a long time finding that policeman,” said he in reply to the implied comment.

“Yes,” rejoined Mr. Pippet; “and I guess that policeman will be a long time finding him.”

The attendant turned on him with a distinctly startled expression.

“You don’t think he has done a bunk, do you?” he asked uneasily.

“Well,” replied Pippet, “he didn’t waste any time in getting outside, and he doesn’t seem to have had much luck in what he went for. I reckon one of us had better have a try. You know the place better than I do, Buffham.”

“Yes, sir, if you would,” urged the attendant. “I can’t leave the place myself. But I think we ought to have a constable as soon as possible, and it does rather look as if that gent had mizzled.”

On this, Mr. Buffham turned and rapidly made his way through the litter of trunks and packages and strode away towards the entrance, while the attendant reluctantly tore himself away from the mysterious case to hand out one or two rugs and suit-cases, and Mr. Pippet resumed his salvage operations on his trunks and portmanteaux. In less than three minutes Mr. Buffham was seen returning with a constable, and the attendant raised the barrier to admit them. Apparently, Mr. Buffham had given the officer a general sketch of the circumstances as they had come along, for the latter remarked, as he eyed the case:

“So this is the box of mystery, is it? And you say that there is a person’s head inside it?”

“You can see for yourself,” said the attendant; and with this he raised the lid, and, having peered in, he looked at the constable, who, after an impassive and judicial survey, admitted that it did look like a man’s head, and produced from his pocket a portentous, black note book.

“The first question,” said he, “is about this man who has absconded. Can you give me a description of him?”

The three men consulted and between them evolved a description which might have been illuminating to anyone who was intimately acquainted with the absent stranger, but furnished indifferent material for the identification of an unknown individual. They agreed, however, that he was somewhat tall and dark, with a thin face, a Torpedo beard and moustache, and a rather prominent nose; that he was dressed in dark-coloured clothing and wore a soft felt hat. Mr. Pippet further expressed the opinion that the man’s hair and beard were dyed.

“Yes,” said the constable, closing his note book, “he seems to have been a good deal like other people. They usually are. That’s the worst of it. If people who commit crimes would only be a bit more striking in their appearance and show a little originality in the way they dress, it would make things so much more simple for us. But it’s a queer affair. The puzzle is what he came here for, and why, having come, he proceeded to do a bolt. He couldn’t have known what was in the case, or he wouldn’t have come. And, if the case wasn’t his, I don’t see why he should have hopped it and put himself under suspicion. I had better take your names and addresses, gentlemen, as you saw him, though you don’t seem to have much to tell. Then I think I will get on the phone to headquarters.”

He re-opened the note book and, having taken down the names and addresses of the two gentlemen, went out in search of the telephone.

As he departed, Mr. Pippet, apparently dismissing the mysterious case from his mind as an affair finished and done with, reverted to the practical business of sorting out his luggage, in which occupation he was presently joined by Mr. Buffham.

“I am going to get a taxi,” said the former, “to take me to my hotel—the Pendennis in Great Russell Street. Can I put you down anywhere? I see you’re travelling pretty light.”

Mr. Buffham cast a deprecating eye on the modest portmanteau which contained his entire outfit and a questioning eye on the imposing array of trunks and bags which appertained to his companion, and reflected for a moment.

“The taxi-man will jib at your lot,” said he, “without adding mine to it.”

“Yes,” agreed Pippet, “I shall have to get two taxis in any case, so one of them can’t complain of an extra package. Where are you putting up?”

“I am staying for a few days at a boarding house in Woburn Place; not so very far from you. But I was thinking that, when we have disposed of our traps, you might come and have some dinner with me at a restaurant that I know of. What do you say?”

“Why, the fact is,” said Pippet, “that I was just about to make the very same proposal, only I was going to suggest that we dine together at my hotel. And, if you don’t mind, I think it will be the better plan, as I have got a suite of rooms that we can retire to after dinner for a quiet yarn. Do you mind?”

Mr. Buffham did not mind. On the contrary, he accepted with something approaching eagerness. For his own reasons, he had resolved to cultivate the not very intimate acquaintance which had been established during the voyage from New York to Tilbury, and he was better pleased to do so at Mr. Pippet’s expense than at his own; and the mention of the suite of rooms had strongly confirmed him in his resolution. A man who chartered a suite of rooms at a London hotel must be something more than substantial. But Mr. Pippet’s next observation gave him less satisfaction.
“You are wondering, I suppose, what a solitary male like me can want with a suite of rooms all to himself. The explanation is that I am not all by myself. I am expecting my daughter and sister over from Paris tomorrow, and I can’t have them hanging about in the public rooms with no corner to call their own. But, until they arrive, I am what they call en garçon over there.”

Having thus made clear his position, Mr. Pippet went forth and shortly returned accompanied by two taxi-men of dour aspect and taciturn habit, who silently collected the baggage and bore it out to their respective vehicles, which, in due course, set forth upon their journey.

Before following them, we may linger awhile to note the results of the constable’s mission. They were not very sensational. In the course of a few minutes, an inspector arrived, and, having made a brief confirmatory inspection, called for the screws and the screwdriver and proceeded in an impassive but workmanlike manner to replace the former in their holes and drive them home. Then he, in his turn, sent out for a taxi-man, by whom the case with its gruesome contents was borne out unsuspiciously to the waiting vehicle and spirited away to an unknown destination.

When Mr. Buffham’s solitary portmanteau had been dumped down in the hall of a somewhat seedy house in Woburn Place, the two taxis moved on to the portals of the quiet but select hotel in Great Russell Street, where the mountainous pile of baggage was handed over to the hotel porter with brief directions as to its disposal. Then the two men, after the necessary ablutions, made their way to the dining-room and selected a table in a comparatively retired corner, where Mr. Buffham waited in some anxiety as to the quality of the entertainment. His experience of middle-aged American men had given him the impression that they were not, as a class, enthusiastic feeders, and it was with sensible relief that he discovered in his host the capacity to take a reasonable interest in his food. In fact, the gastronomic arrangements were so much to his satisfaction that, for a time, they engaged his entire attention; for, if the whole truth must be told, this dinner was not an entirely unforeseen contingency, and, as he had providently modified his diet with that possibility in view, he was now in a condition to do complete justice to the excellent fare provided. Presently, however, when the razor-edge had been taken off his appetite, his attention reverted to larger interests and he began cautiously to throw out feelers. Not that an extreme amount of caution was really necessary; for Mr. Pippet was a simple, straightforward, open-minded man; shrewd enough in the ordinary business of life and gifted with a massive common-sense. But he was quite devoid of cunning, and trustful of his fellow-creatures to an extent that is somewhat unusual in citizens of the United States. He was, in fact, the exact opposite in mental and moral type of the man who faced him across the table.

“Well!” said Buffham, raising his newly-refilled glass, “here’s to a successful beano. I suppose you contemplate laying a delicate wash of carmine over the British landscape. Or is it to be a full tint of vermillion?”

“Now you are talking in tropes and metaphors,” said Pippet, with an indulgent smile, “but, as I interpret the idiom, you think we are going to make things hum.”

“I assume that you are over here to have a good time.”

“We always like to have a good time if we can manage it, wherever we may be,” said Pippet, “and I hope to pass the time pleasantly while I am in the Old Country. But I have come over with a more definite purpose than that; and, if I should tell you what that purpose is, I should make you smile.”

“And a very pleasant result, too,” said Buffham. “I like to be made to smile. But, of course, I don’t want to pry into your private affairs, even for the sake of a smile.”

“My private affairs will probably soon be public affairs,” said Pippet, “so I need not maintain any particular reticence about them; and, in any case, there’s nothing to be ashamed or secret about. If it interests you to know, my visit to England is connected with a claim to an English title and the estates that go with it.”

Buffham was thunderstruck. But he did not smile. The affair was much too serious for that. Instead, he demanded in a hushed voice: “Do you mean that you are making a claim on your own behalf?”

Mr. Pippet chuckled. “Sounds incredible, doesn’t it? But that is the cold-drawn fact. I am setting up a claim to the Earldom of Winsborough and to the lands and other property that appertain to it, all of which I understand to be at present vacant and calling aloud for an owner.”

Mr. Buffham pulled himself together. This looked like a good deal bigger affair than he had anticipated. Indeed, he had not anticipated anything in particular. His professional habits—if we may so designate them—led him to cultivate the society of rich men of all kinds, and by preference that of wealthy Americans making an European tour. Not that the globe-trotting American is a peculiarly simple and trustful soul. But he is in a holiday mood; he is in unaccustomed surroundings and usually has money to spend and a strong inclination to spend it. Mr. Buffham’s role was to foster that inclination, and, as far as possible, to collaborate in the associated activities. He had proposed to fasten upon Mr. Pippet, if he could, in a Micawber-like hope that something profitable might turn up. But the prospect opened up by Mr. Pippet’s announcement was beyond his wildest dreams.

“I suppose,” Mr. Pippet continued after a brief pause, “you are wondering what in creation a middle-aged American in comfortable circumstances wants with an English title and estates?”

“I am not wondering anything of the kind,” replied Buffham. “The position of a great English nobleman is one that might well tempt the ambition of an American if he were twenty times a millionaire. Think of the august dignity of that position! Of the universal deference that it commands! Think of the grand old mansions and the parks planted with immemorial
trees, the great town house and the seat in the House of Lords, and—and—"

“Yes, I know,” chuckled Pippet, “I’ve had all that rubbed into me, and, to tell the bald truth, I wouldn’t give a damn for the whole boiling if I had only myself to consider. I don’t want to have people calling me ‘My Lord’ and making me feel like a fool; and I’ve no use for baronial mansions or ancestral halls. A good comfortable hotel where they know how to cook answers all my requirements. But I’ve got to go in for this business whether I like it or not. My womenfolk have got me fairly in tow, especially my sister. She’s just mad to be Lady Arminella—in fact, if I hadn’t put my foot down she’d have settled the matter in advance and taken the title on account, so to speak.”

“I suppose,” said Buffham, “you have got your claim pretty well cut and dried? Got all your evidence, I mean, and arranged with your lawyer as to the plan of campaign?”

“Well, no!” replied Pippet, “at present things are rather in the air. But, if we have finished, perhaps we might take our coffee up in my sitting room. We can talk more freely there. But don’t let me bore you. After all, it isn’t your funeral.”

“My dear sir!” exclaimed Buffham, with genuine sincerity, “you are not boring me. I assure you that I am profoundly interested. If you won’t consider me inquisitive, I should like to hear the whole story in as much detail as you care to give.”

Mr. Pippet nodded and smiled. “Good!” said he, as they ascended the stairs to the private suite, “you shall have all the detail you want. I shall enjoy giving it to you, as it will help to get the affair into my own head a trifle more clearly. It’s a queer story and I must admit that it does not sound any too convincing. The whole claim rests upon a tradition that I heard from my father.”

Mr. Buffham was a little disappointed; but only a little. As his host had said, it—the claim—was not his funeral. A wild cat claim might answer his purpose as well as any other; perhaps even better. Nevertheless, he remarked with an assumption of anxiety: “I hope there is something to go on besides the tradition. You’ll have to deal with a court of law, you know.”

“Yes, I realize that,” replied Pippet, “and I may say that there is some corroborative matter. I’ll tell you about that presently. But there’s this much about the tradition; that it admits of being put to the test, as you’ll see when I give you the story. And I will do that right away.

“The tradition, then, as I had it from my father from time to time, in rather disjointed fragments, was that his father was a very remarkable character; in fact, he was two characters rolled into one, for he led a double life. As my father and mother knew him, he was Mr. Josiah Pippet, the landlord of a house of call in the City of London known as ‘The Fox and Grapes.’ But a persistent tradition had it that the name of Josiah Pippet was an assumed name and that he was really the Earl of Winsborough. It is known that he was in the habit of absenting himself from his London premises from time to time and that when he did so he disappeared completely, leaving no hint of his whereabouts. Now, it seems that the Earl, who was a bachelor, was a somewhat eccentric gentleman of similar habits. He also was accustomed periodically to absent himself from the Castle, and he also used to disappear, leaving no clue to his whereabouts. And rumour had it that these disappearances were, as the scientists would say, correlated; like the little figures in those old-fashioned toy houses that foretold the weather. When the old man came out, the old woman went in, and vice versa. So it was said that when Josiah disappeared from ‘The Fox and Grapes,’ his lordship made his appearance at Winsborough Castle; and when his lordship disappeared from the Castle, Josiah popped up at ‘The Fox and Grapes.’”

“Is there any record of the movements of the two men?” Buffham asked.

“Well, there is a diary, along with a lot of letters and other stuff. I have just glanced at some of it but I can’t I say of my own observation that there is a definite record. However, my sister has gone through the whole lot and she says that it is all as plain as a pike-staff.”

Buffham nodded with an air of satisfaction that was by no means assumed. He began to see splendid possibilities in his host’s case.

“Yes,” he said, “this is much more hopeful. If you can show that these disappearances coincided in time, that will be a very striking piece of evidence. You have got these documents with you?”

“Yes, I have got them in a deed box in my bedroom. I have been intending to make a serious attack on them and to go right through them.”

“What would be much more to the point,” said Buffham, “would be to hand the box to your lawyer and let him go through them. He will be accustomed to examining documents, and he will see the significance—the legal significance, I mean—of little, inconspicuous facts that might easily escape a non-professional eye. I think you said you had a lawyer?”

“No. That’s a matter that I shall have to attend to at once; and I don’t quite know how to go about it. I understand that they don’t advertise in this country.”

“No,” said Buffham, “certainly not. But I see your difficulty. You naturally want to get a suitable man, and it is most important. You want to secure the services of a solicitor whose position and character would command the respect and confidence of the court, and who has had experience of cases of a similar kind. That is absolutely vital. I recall a case which illustrates the danger of employing a lawyer of an unsuitable kind. It was, like yours, a case of disputed succession. There were two claimants whom we may call ‘A’ and ‘B.’ Now Mr. ‘A’ had undoubtedly the better case. But unfortunately for him, he employed a solicitor whose sole experience was concerned with commercial law. He was an excellent man, but he knew
practically nothing of the intricacies of succession to landed property. Mr. ‘B,’ on the other hand, had the good fortune to secure a lawyer whose practice had been very largely concerned with these very cases. He knew all the ropes, you see; and the result was that the case was decided in Mr. ‘B’ s favour. But it ought not to have been. I had it, in confidence, from his lawyer (whom I happened to know rather well) that if he had been acting for Mr. ‘A,’ instead of for Mr. ‘B,’ the decision would certainly have gone the other way. ‘A’ had the better claim, but his lawyer had not realized it and had failed to put it before the court in a sufficiently convincing manner.

Having given this striking instance, Buffham looked anxiously at his host, and was a trifle disappointed at its effect. Still more so was he with that gentleman’s comment.

“Seems to me,” the latter remarked, “that that court wasn’t particularly on the spot if they let your lawyer friend bluff them into giving Mr. ‘B’ the property that properly belonged to Mr. ‘A.’ And I shouldn’t have thought that your friend would have found it a satisfactory deal. At any rate, I am not wanting any lawyer to grab property for me that belongs to somebody else. As long as I believe in this claim myself, I’m going for it for all I am worth. But I am not going to drop my egg into somebody else’s rightful nest, like your Mr. B.”

“Of course you are not!”Buffham hastened to reply, considerably disconcerted by his host’s unexpected attitude; so difficult is it for a radically dishonest man to realize that his is not the usual and normal state of mind. “But neither do you want to find yourself in the position of Mr. ‘A.’”

“No,” Pippet admitted, “I don’t. I just want a square deal, and I always understood that you could get it in an English court.”

“So you can,” said Buffham. “But you must realize that a court can only decide on the facts and arguments put before it. It is the business of the lawyers to supply those facts and arguments. And I think you are hardly just to my lawyer friend—his name, by the way, is Gimbler—a most honourable and conscientious man. I must point out that a lawyer’s duty is to present his client’s case in the most forcible and convincing way that he can. He is not concerned with the other man’s case. He assumes—and so does the court—that the opposing lawyer will do the same for his client; and then the court will have both cases completely presented. It is the client’s business to employ a lawyer who is competent to put his case properly to the court.”

Mr. Pippet nodded. “Yes,” he said, reflectively, “I see the idea. But the difficulty in the case of a stranger like myself is to find the particular kind of lawyer who has the special knowledge and experience that is required. Now, as to this friend of yours, Gimbler; you say that he specializes in disputed claims to property.”

“I didn’t say that he specialized in them, but I know that he has had considerable experience of them.”

“Well, now, do you suppose that he would be willing to take up this claim of mine?”

Mr. Buffham did not suppose at all. He knew. Nevertheless he replied warily:

“It depends. He wouldn’t want to embark on a case that was going to result in a fiasco. He would want to hear an about the claim and what evidence there is to support it. And especially he would want to go very carefully through those documents of yours.”

“Yes,” said Pippet, “that seems to be the correct line, and that is what I should want him to do. I’d like to have an expert opinion on the whole affair before I begin to get busy. I am not out to exploit a mare’s nest and make a public fool of myself. But we didn’t finish the story. We only got to the Box and Cox business of Josiah and the Earl. It seems that this went on for a number of years, and nothing seems to have been thought of it at the time. But when Josiah’s wife died and his son—my father—was settled, he appears to have wearied of the complications of his double life and made up his mind to put an end to them. And the simplest and most conclusive way to write Finis on the affair seemed to him to be to die and get buried. And that is what he did. According to the story, he faked a last illness and engineered a sham death. I don’t know how he managed it. Seems to me pretty difficult. But therumour had it that he managed to get people to believe that he had died, and he had a funeral with a dummy coffin, properly weighted with lumps of lead, and that this was successfully planted in the family vault. I am bound to admit that this part of the story does sound a trifle thin. But it seems to have been firmly believed in the family.”

It would have been a relief to Mr. Buffham to snigger aloud. But sniggering was not his role. Still, he felt called on to make some kind of criticism. Accordingly, he remarked judicially:

“There do certainly seem to be difficulties; the death certificate, for instance. You would hardly expect a doctor to mistake a live, healthy man for a corpse—unless Josiah made it worth his while. It would be simple enough then.”

“I understand,” said Mr. Pippet, “that doctors often used to give a certificate without viewing the body. But the lawyer will know that. At any rate, it is obvious that someone must have been in the know; and that is probably how the rumour got started.”

“And when did the Earl die?”

“That I can’t tell you, off hand. But it was some years after Josiah’s funeral.”

“And who holds the title and estate now?”

“Nobody; at least, so I understand. The last—or present—Earl went away to Africa or some other uncivilized place, big
game shooting, and never came back. As there was never any announcement of the Earl's death, things seem to have drifted on as if he was alive. I have never heard of any claimant.

“There couldn’t be until the Earl’s death was either proved or presumed by the permission of the court. So the first thing that you will have to do will be to take proceedings to have the death of the Earl presumed.”

“Not the first thing,” said Pippet. “There is one question that will have to be settled before we definitely make the claim. The tradition says that Josiah’s death was a fake and that his coffin was a dummy weighted with lead. Now, that is a statement of fact that admits of proof or disproof. The first thing that we have got to do is to get that coffin open. If we find Josiah inside, that will settle the whole business, and I shan’t care a hoot whether the Earl is alive or dead.”

Once again Mr. Buffham was sensible of a slight feeling of disappointment. In a man who was prepared to consider seriously such a manifestly preposterous cock and bull story as this, he had not looked for so reasonable a state of mind. Of course, Pippet was quite right from his own idiotic point of view. The opening of the coffin was the experimentum crucis. And when it was opened, there, of course, would be the body, and the bubble would be most effectively burst. But Mr. Buffham did not want the bubble burst. The plan which was shaping itself vaguely in his mind was concerned with keeping that bubble in a healthy state of inflation. And again, his crooked mind found it hard to understand Pippet’s simple, honest, straightforward outlook. If he had been the claimant, his strongest efforts would have been devoted to seeing that nobody meddled with that coffin. And he had a feeling that his friend Gimbler would take the same view.

“Of course,” he conceded, “you are perfectly correct; but there may be difficulties that you don’t quite realize. I don’t know how it is in America, but in this country you can’t just dig up a coffin and open it if you want to know who is inside. There are all sorts of formalities before you can get permission; and I doubt whether faculty would be granted until you had made out some sort of a case in the courts. So the moral is that you must get as impressive a body of evidence together as you can. Have you got any other facts besides what you have told me? For instance, do you know what these two men—Josiah and the Earl—were like? Do they appear to have resembled each other?”

Mr. Pippet grinned. “If Josiah and the Earl,” said he, “were one and the same person, they would naturally be a good deal alike. I understand that they were. That is one of the strong points of the story. Both of them were a bit out-size; well over six feet in height. Both were fair, blue-eyed men with a shaved upper lip and long sandy side-whiskers.”

“You can prove that, can you?”

“I can swear that I had information to that effect from my father, who knew one and had seen the other. And there is one other point; only a small one, but every little bit of corroboration helps. My father told me on several occasions that his father—Josiah—had often told him that he was born in Winsborough Castle.”

“Ha!” exclaimed Buffham, “that’s better. That establishes a definite connexion. It’s a pity, though, that he was not more explicit. And now, with regard to these documents that you spoke of; what is the nature of them?”

“To tell you the truth,” replied Pippet, “I don’t know much about them. I’ve been used to an active life and I’m not a great reader, so I’ve not done much more than glance over them. But, as I mentioned, my sister has gone through them carefully and she reckons that they as good as prove that Josiah and the Earl were one and the same person. Would you like to have a look at them?”

A mere affirmative would have been inadequate to express Mr. Buffham’s ravenous desire to see whether there was or was not the making of a possible legal case. Nevertheless, he replied in a tone of studied indifference:

“My opinion is not much to the point, but I should certainly like to see what sort of material you will be able to give your lawyer.”

Thereupon Mr. Pippet retired to the bedroom, from which he presently emerged carrying a good-sized deed box. This he placed on the table, and, having gone deliberately through a large bunch of keys, eventually selected one and carefully fitted it into the lock while Buffham watched him hungrily. The box being opened, the two men drew their chairs up to the table and peered into its interior; which was occupied by a collection of bundles of papers, neatly tied up with red tape, each bundle being distinguished by means of a label inscribed in an old-fashioned feminine handwriting. In addition, there were seven small, leather-bound volumes.

Buffham picked out the bundles, one after another, and read the labels. “Letters from J.S. to his wife,” “Letters from various persons to J.S.,” “Copies of letters from J.S. to various persons,” “Various tradesmen’s bills and accounts,” and so on. Having asked his host’s permission, he untied one or two of the bundles and read samples of the letters and tradesmen’s bills with a feeling of stupefaction, mingled with astonished speculations as to the mental peculiarities of his host’s sister.

“Yes,” he said, gloomily replacing the last of them, “I dare say a careful analysis of these letters may yield some relevant information, but it will need the expert eye of the trained lawyer to detect the relevancy of some of them. There is, for instance, a bill for two pounds of pork sausages and a black pudding, which seems rather beside the mark. But you never know. Important legal points may be involved in the most unexpected matter. What are those little books? Are they the diaries that you spoke of?”

Mr. Pippet nodded and handed one of them to him, which proved to be the diary for the year 1833. He turned over the leaves and scanned the entries with more interest but still with a feeling of bewilderment. After examining a few sample pages, he handed the volume back to Pippet, remarking a little warily:
“The late Josiah didn’t go into much detail. The entries are very dry and brief and seem to be concerned chiefly with the trivial happenings of his life from day to day and with money paid or received.”

“Well, isn’t that what diaries are usually filled with?”

Pippet protested, not unreasonably. “And don’t you think that those simple, commonplace entries are just the ones to give us the information that we want? My sister said that she learned quite a lot about Josiah’s ways of life from those diaries.”

“Did she?” said Buffham. “I am glad to hear it; because it suggests that a trained lawyer, going through those diaries with the legal issues in his mind, noting, collating and analyzing the entries, will probably discover significances in the most unexpected places. Which brings us back to the point that you ought to get competent legal assistance without delay.”

“Yes, I think you are right,” agreed Pippet. “I’ve got to secure a lawyer sooner or later, so I might as well start right away. Now, to come down to brass tacks, what about this lawyer friend of yours? You say that this case of mine would be in his customary line of business; and you think he would be willing to take it on?”

Mr. Buffham had no doubts whatever, but he did not think it expedient to say so. A retreating tendency on the part of the bait is apt to produce a pursuing tendency on the part of the fish.

“Naturally,” said he, “I can’t answer for another man’s views. He is a busy man, and he might not be prepared to give time to what he might regard as a somewhat speculative case. But we can easily find out. If you like, I will call on him and put the case to him in as favourable a light as possible, and, if he doesn’t seem eager to take it up, I might use a little gentle pressure. You see, I know him pretty well. Then, if I am successful, I might arrange for you to have an interview, at which, perhaps, it might be advisable for your sister to be present, as she knows more about the affair than you do. Then he could tell you what he thought of your chances and you could let him know what you are prepared to do. What do you think of that plan?”

Mr. Pippet thought that it seemed to meet the case, provided that it could be carried out without delay.

“You understand,” said he, “that my sister and daughter will be arriving here tomorrow, and they will be red-hot to get the business started, especially my sister.”

“And quite naturally, too,” said Buffham. “I sympathize with her impatience and I promise that there shall be no delay on my part. I will call at Gimbler’s office tomorrow morning the first thing, before he has had time to begin his morning’s work.”

“It’s very good of you,” said Pippet, as his guest rose to take his leave, “to interest yourself in this way in the affairs of a mere stranger.”

“Not at all,” Buffham rejoined cheerily. “You are forgetting the romance and dramatic interest of your case. Anyone would be delighted to lend you a hand in your adventure. You may depend on hearing from me in the course of tomorrow. Good night and good luck!”

Mr. Pippet, having provided his guest with a fresh cigar, accompanied him down to the entrance and watched him with a meditative eye as he walked away down the street. Apparently, the dwindling figure suggested a train of thought, for he continued to stand looking out even after it had disappeared. At length he turned with a faint sigh and thoughtfully retraced his steps to his own domain.

II.—MR. BUFFHAM’S LEGAL FRIEND

NO amount of native shrewdness can entirely compensate for deficiency of knowledge. If Mr. Christopher Pippet had been intimately acquainted with English social customs, he would have known that the neighbourhood of Kennington in general and Kennington Grove in particular, is hardly the place in which to look for the professional premises of a solicitor engaged in important Chancery practice. He did, indeed, survey the rather suburban surroundings with a certain amount of surprise, noting with intelligent interest the contrast between the ways of New York and those of London. He even ventured to comment on the circumstance as he halted at the iron gate of a small garden and read out the inscription on a well-worn brass plate affixed to the gate aforesaid; which set forth the name and professional vocation of Mr. Horatio Gimbler, Solicitor and Advocate.

“Buffham didn’t tell me that he was an advocate as well as a solicitor,” Mr. Pippet remarked, as he pushed the gate open.

“Hewo!,” replied his companion, “but left you to find out for yourself. Of course he knew you would, and then you would give him credit for having understated his friend’s merits. It’s just vanity.”

At the street door, which was closed and bore a duplicate plate, Mr. Pippet pressed an electric bell-push, with the result that there arose from within a sound like the “going off” of an alarm clock and simultaneously the upper half of a face with a pair of beady black eyes appeared for an instant above the wire blind of the adjacent window. Then, after a brief interval, the door opened and revealed an extremely alert youth of undeniably Hebraic aspect.

“Is Mr. Gimbler disengaged?” Mr. Pippet inquired.

“Have you got an appointment?” the youth demanded.
“Yes; eleven o’clock; and it’s two minutes to the hour now. Shall I go in here?”
He turned towards a door opening out of the hall and marked “Waiting Room.”

“No,” the youth replied, hastily, emphatically and almost in a tone of alarm. “That’th for clienth that haven’t got an appointment. What name thall I thay?”

“Mr. and Miss Pippet.”

“Oh, yeth, I know. Jutht thtep thith way.”

He opened an inner door leading into a small inner hall, which offered to the visitors a prospect of a flight of shabbily carpeted stairs and a strong odour of fried onions. Here he approached a door marked “Private Office” and knocked softly, eliciting a responsive but inarticulate roar; whereupon he opened the door and announced: “Mr. and Miss Pippet.”

The opened door revealed a large man with a pair of folding pince-nez insecurely balanced on the end of a short, fat nose, apparently writing furiously. As the visitors entered, he looked round with an interrogative frown as if impatient of being interrupted. Then, appearing suddenly to realize who they were, he made a convulsive grimace, which dislodged the eyeglasses and left them dangling free on their broad black ribbon, and was succeeded by a wrinkly but affable smile. Then he rose, and, holding out a large, rather fat hand, exclaimed:

“Delighted to see you. I had no idea that it was so late. One gets so engrossed in these—er—fascinating—”

“Naturally,” said Mr. Pippet, “though I thought it was the documents that got engrossed. However, here we are. Let me introduce you to my sister, Miss Arminella Pippet.”

Mr. Gimbler bowed, and, for a brief space there was a searching mutual inspection. Miss Pippet saw a physically imposing man, large in all dimensions—tall, broad, deep-chested and still more deep in the region immediately below the chest; with a large, massive head, rather bald and very closely cropped, a large, rather fat face, marked with wrinkles suggestive of those on the edge of a pair of bellows, and singularly small pale blue eyes, which tended to become still smaller, even to total disappearance, when he smiled. Through those little blue eyes, Mr. Gimbler saw a woman, shortish in stature but majestic in carriage and conveying an impression of exuberant energy and vivacity. And this impression was reinforced by the strong, mobile face with its firm mouth set above the square, pugnacious chin and below a rather formidable Roman nose, which latter gave to her a certain suggestive resemblance to a bird, a resemblance accentuated by her quick movements. But the bird suggested was not the dove. In short, Miss Arminella Pippet was a somewhat remarkable-looking lady with a most unmistakeable “presence.” She might have been a dame of the old French noblesse; and Mr. Gimbler, looking at her through his little blue eyes and bearing in mind the peerage claim, decided that she looked the part. He also decided—comparing her with her mild-faced brother—that the grey mare was the better horse and must claim his chief attention. He was not the first who had undervalued Mr. Christopher Pippet.

“I suppose,” said the latter, sitting down with some care on a rather infirm cane-bottomed chair (Miss Arminella occupied the only easy chair), “Mr. Buffham has given you some idea of the matter on which we have come to consult you?”

“He has done more than that,” said Mr. Gimbler, “and would have done more still if I had not stopped him. He is thrilled by your romantic story and wildly optimistic. If we could only get a jury of Buffhams you would walk into your inheritance without a breath of opposition.”

“And what do you think of our chances with the kind of jury that we are likely to get?”

Mr. Gimbler pursed up his lips and shook his massive head.

“We mustn’t begin giving opinions at this stage,” said he. “Remember that I have only heard the story at second hand from Mr. Buffham; just a sketch of the nature of the case. Let us begin at the beginning and forget Mr. Buffham. You are claiming, I believe, to be the grandson of the late Earl of Winsborough. Now, I should like to hear an outline of the grounds of your claim before we go into any details.”

As he spoke, he fixed an inquiring eye on Miss Pippet, who promptly responded by opening her hand-bag and drawing therefrom a folded sheet of foolscap paper.

“This,” said she, “is a concise statement of the nature of the claim and the known facts on which it is based. I thought it would save time if I wrote it out, as I could then leave the paper with you for reference. Will you read it or shall I?”

Mr. Gimbler looked at the document, and, observing that it was covered with closely-spaced writing in a somewhat crabbed and angular hand, elected to listen to the reading in order that he might make a few notes. Accordingly Miss Pippet proceeded to read aloud from the paper with something of the air of a herald reading a royal proclamation, glancing from time to time at the lawyer to see what kind of impression it was making on him. The result of these inspections must have been a little disappointing, as Mr. Gimbler listened attentively with his eyes shut, rousing only at intervals to scribble a few words on a slip of paper.

When she had come to the end of the statement—which repeated substantially, but in a more connected form, the story that her brother had told to Buffham—she laid the paper on the table and regarded the lawyer with an interrogative stare. Mr. Gimbler, having opened his eyes to their normal extent, directed them to his notes.

“This,” said he, “is a very singular and romantic story. Romantic and strange, and yet not really incredible. But the important question is, to what extent is this interesting tradition supported by provable facts? For instance, it is stated that
when Josiah Pippet used to disappear from his usual places of resort, the Earl of Winsborough made his appearance at Winsborough Castle. Now, is there any evidence that the disappearance of Josiah coincided in time with the appearance of the Earl at the Castle, and _vice versa_?

“There is the diary,” said Miss Pippet.

“Ha!” exclaimed Mr. Gimbler, genuinely surprised. “The diary makes that quite plain, does it?”

“Perfectly,” the lady replied. “Any way, it is quite clear to me. Whenever Josiah was about to make one of his disappearances, he noted in his diary quite unmistakably: ‘Going away tomorrow for a little spell at the old place.’ Sometimes, instead of ‘the old place,’ he says plainly ‘the Castle.’ Then there is a blank space of more than half a page before he records his arrival home at ‘The Fox and Grapes.’”

“I’m yes,” said Mr. Gimbler, swinging his folded eyeglass on its ribbon like a pendulum. “And you think that by the expression ‘the old place’ or ‘the Castle’ he means Winsborough Castle?”

“I don’t see how there can be any doubt of it. Obviously, ‘the old place’ must have been Winsborough Castle, where he was born.”

“It would seem probable,” Mr. Gimbler admitted. “By the way, is there any evidence that he was born at the castle?”

“Well,” Miss Pippet replied a little sharply, “he said he was; and I suppose he knew.”

“Naturally, naturally,” the lawyer agreed. “And you can prove that he did say so?”

“My brother and I have heard our father repeat the statement over and over again. We can swear to that.”

“And with regard to the Earl? Is there any evidence that, when Josiah returned home to ‘The Fox and Grapes,’ his Lordship disappeared from the Castle?”

“Evidence!” Miss Pippet exclaimed, slapping her hand-bag impatiently. “What evidence do you want? The man couldn’t be in two places at once!”

“Very true,” said Mr. Gimbler, fixing a slightly perplexed eye on his dangling glasses; “very true. He couldn’t. And with regard to the sham funeral. Naturally there wouldn’t be any reference to it in the diary, but is it possible to support the current rumour by any definite facts?”

“Don’t you think the fact that my father—Josiah’s own son—was convinced of it is definite enough?” Miss Pippet demanded, a trifle acidly.

“It is definite enough,” Gimbler admitted, “but in courts of law there is a slight prejudice against hearsay evidence. Direct, first-hand evidence, if it is possible to produce it, has a good deal more weight.”

“So it may,” retorted Miss Pippet, “but you can’t expect us to give first-hand evidence of a funeral that took place before we were born. I suppose even a court of law has a little common sense.”

“Still,” her brother interposed, “Mr. Gimbler has put his finger on the really vital spot. The sham funeral is the kernel of the whole business. If we can prove that, we shall have something solid to go on. And we can prove it—or else disprove it, as the case may be. But it need not be left in the condition of what the late President Wilson would have called a peradventure. If that funeral was a sham, there was nothing in the coffin but some lumps of lead. Now, that coffin is still in existence. It is lying in the family vault; and if we can yank it out and open it, the Winsborough Peerage Claim will be as good as settled. If we find Josiah at home to visitors, we can let the claim drop and go for a holiday. But if we find the lumps of lead, according to our program, we shall hang on to the claim until the courts are tired of us and hand over the keys of the Castle. Mr. Gimbler is quite right. That coffin is the point that we have got to concentrate on.”

As Mr. Pippet developed his views, the lawyer’s eyeglasses, dangling from their ribbon, swung more and more violently, and their owner’s eyes opened to an unprecedented width. He had never had the slightest intention of concentrating on the coffin. On the contrary, that obvious means of exploding the delusion and toppling over the house of cards had seemed to be the rock that had got to be safely circumnavigated at all costs. In his view, the coffin was the fly in the ointment; and the discovery that it was the apple of Mr. Pippet’s eye gave him a severe shock. And not this alone. He had assumed that the lady’s invincible optimism represented the state of mind of both his clients. Now he realized that the man whom he had written down an amiable ass, and perhaps a dishonest ass at that, combined in his person two qualities most undesirable in the circumstances—hard common sense and transparent honesty.

It was a serious complication; and as he sat with his eyes fixed on the swinging eyeglasses, he endeavoured rapidly to shape a new course. At length he replied:

“Of course you are quite right, Mr. Pippet. The obvious course would be to examine the coffin as a preliminary measure. But English law does not always take the obvious course. When once a person is consigned to the tomb, the remains pass out of the control of the relatives and into that of the State; and the State views with very jealous disapproval any attempts to disturb those remains. In order to open a tomb or grave, and especially to open a coffin, it is necessary to obtain a faculty from the Home Secretary authorizing an exhumation. Now, before any such faculty is granted, the Home Secretary requires the applicant to show cause for the making of such an order.”

“Well,” said Mr. Pippet, “we can show cause. We want to know whether Josiah is in that coffin or not.”
“Quite so,” said Mr. Gimbler. “A perfectly reasonable motive. But it would not be accepted by the Home Office. They would demand a ruling from a properly constituted court to the effect that the claim had been investigated and a prima facie case made out.”

“What do you mean by a prima facie case?” Miss Pippet inquired.

“The expression means that the claim has been stated in a court of law and that sufficient evidence has been produced to establish a probability that it is a just and reasonable claim.”

“You mean to say,” said Mr. Pippet, “that a judge and jury have got to sit and examine at great length whether the claim may possibly be a true claim before they will consent to examine a piece of evidence which will settle the question with practical certainty in the course of an hour?”

“Yes,” Mr. Gimbler admitted, “that, I am afraid is the rather unreasonable position. We shall have to lay the facts, so far as they are known to us, before the court and make out as good a case as we can. Then, if the court is satisfied that we have a substantial case, it will make an order for the exhumation, which the Home Office will confirm.”

“For my part,” said Miss Pippet, “I don’t see why we need meddle with the coffin at all. It seems a ghoulish proceeding.”

“I entirely agree with you, Miss Pippet,” said Mr. Gimbler (and there is no possible doubt that he did). “It would be much better to deal with the whole affair in court if that were possible. Perhaps it may be possible to avoid the exhumation, after all. The court may not insist.”

“It won’t have to insist,” said Mr. Pippet. “I make it a condition that we ascertain beyond all doubt whether Josiah is or is not in that coffin. I want to make sure that I am claiming what is my just due, and I shan’t be sure of that until that coffin has been opened. Isn’t it possible for you to make an application to the Home Secretary without troubling the courts?”

“It would be possible to make the application,” Mr. Gimbler replied somewhat dryly. “But a refusal would be a foregone conclusion. Quite properly so, if you consider the conditions. The purpose of the exhumation is to establish the fact of the sham burial. But if that were established, you would be no more forward, or, at least very little. Your claim would still have to be stated and argued in a court of law. Of course, the proof of the sham burial would be material evidence, but still, your claim would stand or fall by the decision of the court. Naturally, the Home Office, since it cannot consider evidence or give a decision, is not going to give a permit until it is informed by the proper authority that an exhumation is necessary for the purposes of justice. Believe me, Mr. Pippet, we should only prejudice our case by trying to go behind the courts; and, moreover, we should certainly fail to get a permit.”

“Very well,” said Mr. Pippet. “You know best. Then I take it that there is not much more to say at present. We have given you the facts, such as they are, and we shall leave my sister’s statement with you, and it will be up to you to consider what is to be done next.”

“Yes,” agreed Gimbler. “But something was said about documents—some letters and a diary. Are they available?”

“They are,” replied Mr. Pippet. “I’ve got the whole boiling of them in this box. My sister has been through them, as she mentioned to you just now.”

“And you?” Mr. Gimbler asked with a trace of anxiety, as he watched his client’s efforts to untie the parcel. “Have you examined them thoroughly?”

“I can’t truly say that I have,” was the reply, as Mr. Pippet deliberately opened a pocket knife and applied it to the string.

“I had intended to look through them before I handed them to you, but Mr. Buffham assured me that it would be a waste of labour, as you would have to study them in any case; so, as I am not what you would call a studious man, and they look a pretty stodgy collection, I have saved myself the trouble.”

“I don’t believe,” said Miss Pippet, “that my brother cares two cents whether we succeed or not.”

The lady’s suspicion was not entirely unshared by her legal adviser. But he made no comment, as, at this moment, Mr. Pippet, having detached the coverings of the parcel, and thereby disclosed the deed box which he had shown to Buffham, inserted a key and unlocked it.

“There,” said he, as he threw the lid open, “you can see that the things are there. Those bundles of paper are the letters and the little volumes are the diary. There is no need for you to look at them now. I guess you will like to study them at your leisure.”

“Quite so,” agreed Mr. Gimbler. “It will be necessary for me to examine them exhaustively and systematically and make a very careful précis of their contents, with an analysis of those contents from an evidential point of view. I shall have to do that before I can give any opinion on the merits of the case, and certainly before I suggest taking any active measures. You realize that those investigations will take some time?”

“Certainly,” said Mr. Pippet; “and you will not find us impatient. We don’t want to urge you to act precipitately.”

“Not precipitately,” agreed Miss Pippet. “Still, you understand that we don’t want too much of the law’s delay.”

Mr. Gimbler understood that perfectly; and, to tell the whole truth, looked with much more favour on the lady’s hardly-veiled impatience than on her brother’s philosophic calm.

“There will be no delay at all,” he replied, “but merely a most necessary period of preparation. I need not point out to
you, Madam,” he continued after a moment’s pause, “that we must not enter the lists unready. We must mature our plans in advance, so that when we take the field—if we decide to do so—it will be with our weapons sharpened and our armour bright.”

“Certainly,” said Miss Pippet. “We must be ready before we start. I realize that; only I hope it won’t take too long to get ready.”

“That,” replied Mr. Gimbler, “we shall be better able to judge when we have made a preliminary inspection of the documentary material; but I can assure you that no time will be wasted.”

Here he paused to clear his throat and adjust his eyeglasses. Then he proceeded: “There is just one other little matter that I should like to be clear on. You realize that an action at law is apt to be a somewhat expensive affair. Of course, in the present case, there is a considerable set-off. If you are successful, the mere material gain in valuable property, to say nothing of the title and the great social advantages, will be enough to make the law costs appear a negligible trifle. Still, I must warn you that the outlay will be very considerable. There will be court fees, fees to counsel, costs of the necessary investigations, and, of course, my own charges, which I shall keep as low as possible. Now, the question is, are you prepared to embark on this undoubtedly costly enterprise?”

He asked the question in a tone as impassive and judicial as he could manage, but he awaited the answer with an anxiety that was difficult to conceal. It was Miss Pippet who instantly dispelled that anxiety.

“We understand all about that,” said she. “We never supposed that titles and estates were to be picked up for the asking. You can take it that we shall not complain of any expense in reason. But perhaps you were thinking of our capacity to bear a heavy expense? If you were, I may tell you that my own means would be amply sufficient to meet any likely costs, even without my brother’s support.”

“That is so,” Mr. Pippet confirmed. “But, as I am the actual claimant, the costs will naturally fall on me. Could you give us any idea of our probable liabilities?”

Mr. Gimbler reflected rapidly. He didn’t wish to frighten his quarry, but he did very much want to take soundings of the depth of their purse. Eventually, he took his courage in both hands and made the trial cast.

“It is mere guess work,” said he, “until we know how much there may be to do. Supposing—to take an outside figure—the costs should mount to ten thousand pounds. Of course, they won’t. But I mention that sum as a sort of basis to reckon from. How would that affect you?”

“Well,” said Mr. Pippet, “it sounds a lot of money, but it wouldn’t break either of us. Only we look to you to see that the gamble is worth while before we drop too much on it.”

“You may be quite confident,” Gimbler replied in a voice husky with suppressed joy, “that I shall not allow you to embark on any proceedings until I have ascertained beyond a doubt that you have at least a reasonable chance of success. And that,” he continued, rising as his visitors rose to depart, “is all that is humanly possible.”

He stuck his glasses on his nose to shake hands and to watch Mr. Pippet as he detached the key of the deed box from his bunch. Then he opened the door and escorted his visitors through an atmosphere of fried onions to the street door, where he stood watching them reflectively as they descended the steps and made their way along the flagged path to the gate.

As Mr. Gimbler closed the street door, that of the waiting-room opened softly, disclosing the figure of no less a person than Mr. Buffham. And, naturally, the figure included the countenance; which was wreathed in smiles. Looking cautiously towards the kitchen stairs, Mr. Buffham murmured:

“Did I exaggerate, my little Gimblet? I think not. Methought I heard a whisper of ten thousand pounds. An outside estimate, my dear sir; in fact, a wild overestimate. Hey? What O!”

Mr. Gimbler did not reply. He only smiled. And when Mr. Gimbler smiled—as we have mentioned—his eyes tended to disappear. They did on this occasion. Especially the left one.

III. — MR. PIPPET GIVES EVIDENCE

AMERICAN visitors to London often attain to a quite remarkable familiarity with many of its features. But their accomplishments in this respect do not usually extend to an acquaintance with its intimate geography. The reason is simple enough. He who would know London, or any other great city, in the complete and intimate fashion characteristic of the genuine Town Sparrow, must habituate himself to the use of that old-fashioned conveyance known as “shanks’s mare.”

For the humblest of creatures has some distinctive excellence; even the mere pedestrian, despised of the proud motorist (who classes him with the errant rabbit or the crawling pismire) and ignored by the law, has at least one virtue: he knows his London.

Now, the American visitor is not usually a pedestrian. As his time appears to him more valuable than his money, he tends to cut the Gordian knot of geographical difficulties by hailing a taxi; whereby he makes a swift passage at the sacrifice of everything between his starting-point and his destination.

This is what Mr. Pippet did on the afternoon of the day of his conference with Mr. Gimbler. The hailing was done by the
hotel porter, and when the taxi was announced, Mr. Pippet came forth from the hall and delivered to the driver an address in the neighbourhood of Great Saint Helen's, wherever that might be, and held open the cab door to admit the young lady who had followed him out; who thereupon slithered in with the agility born of youthful flexibility, extensive practice and no clothing to speak of.

“I am not sure, Jenny,” said Mr. Pippet, as he took his seat and pulled the door to, “that your aunt was not right. This is likely to be a rather gruesome business, and the place doesn’t seem a very suitable one for young ladies.”

Miss Jenny smiled a superior smile as she fished a gold cigarette case out of her hand-bag and proceeded to select a cigarette. “That’s all bunk, you know, Dad,” said she. “Auntie was just bursting to come herself, but she thought she had to set me an example of self-restraint. As if I wanted her examples. I am out to see all that there is to see. Isn’t that what we came to Europe for?”

“I thought we came to settle this peerage business,” replied Mr. Pippet.

“That’s part of the entertainment,” she admitted, “but we may as well take anything else that happens to be going. And here we have struck a first-class mystery. I wouldn’t have missed it for anything. Do you think it will be on view?” she added, holding out the cigarette case.

Mr. Pippet humbly picked out a cigarette and looked at her inquiringly. “Do you mean the head?” he asked.

“Yes. That’s what I want to see. You’ve seen it, you know.”

“I don’t know much about the ways of inquests in England,” he replied, “but I don’t fancy that the remains are shown to anyone but the jury.”

“That’s real mean of them,” she said. “I was hoping that it would be on view, or that they would bring it in—on a charger, like John the Baptist’s.”

Mr. Pippet smiled as he lit his cigarette. “The circumstances are not quite the same, my dear,” said he; “but, as I am only a witness, you’ll see as much as I shall, though, as you say, I have actually seen the thing, or, at least, a part of it; and I have no wish to see any more.”

“Still,” persisted Jenny, “you can say that you have really and truly seen it.”

Mr. Pippet admitted that he enjoyed this inestimable privilege for what it might be worth, and the conversation dropped for the moment. Miss Jenny leaned back reproachfully in her corner, taking occasional “pulls” at the cigarette in its dainty amber holder, while her father regarded her with a mixture of parental pride, affection and quiet amusement. And it has to be admitted that Mr. Pippet’s sentiments with regard to his daughter were by no means unjustified. Miss Jenifer Pippet—to give her her full and unabridged style and title—was a girl of whom any father might have been proud. If—as Mr. Gimblenber had very properly decided—the majestic Arminella “looked the part” of an earl’s sister (which is not invariably the case with the genuine possessors of that title), Mistress Jenifer would have sustained the character of the earl’s daughter with credit even on the stage, where the demands are a good deal more exacting than in real life. In the typically “patrician” style of features, with the fine Roman nose and the level brows and firm chin, she resembled her redoubtable aunt; but she had the advantage of that lady in the matter of stature, being, like her father, well above the average height. And here it may be noted that, if the daughter reflected credit on the father, the latter was well able to hold his position on his own merits. Christopher J. Pippet was fully worthy of his distinguished womenkind; a fine, upstanding gentleman with an undeniable “presence.”

It was probably the possession of these personal advantages that made the way smooth for the two strangers on their arrival at the premises in which the inquest was to be held. At any rate, as soon as Mr. Pippet had made known his connexion with the case, the officiating police officer conducted them to a place in the front row and provided them each with a chair directly facing the table and nearly opposite the coroner’s seat. At the moment, this and the jurymen’s seats were empty and the large room was filled with the hum of conversation. For the sensational nature of the case had attracted a number of spectators greatly in excess of that usually found at an inquest; so much so that the accommodation was somewhat strained, and our two visitors had reason to congratulate themselves on their privileged position.

A few minutes after their arrival, a general stir among the audience and an increase in the murmur of voices seemed to indicate that something was happening. Then the nature of that something became apparent as the jurymen filed into their places and the coroner took his place at the head of the table. There was a brief interval as the jurymen settled into their places and the coroner arranged some papers before him and inspected his fountian pen. Then he looked up; and as the hum of conversation died away and silence settled down on the room, he began his opening address.

“The circumstances, gentlemen,” said he, “which form the subject of this inquiry are very unusual. Ordinarily the occasion of a coroner’s inquest is the discovery of the dead body of some person, known or unknown, or the death of some person from causes which have not been ascertained or certified, but whose body is available for examination. In the present case, while there is indisputable evidence of the death of some person, and certain evidence which may enable us to form some opinion as to the probable cause of death, the complete body is not available for expert examination. All that has been discovered, up to the present, is the head; whereas it is probable that the physical evidence as to the exact cause of death is to be found in the missing portion of the remains. I need not to occupy your time with any account of the circumstances, all of which will transpire in the evidence. All that I need say now is that the efforts of the police to discover the identity of deceased have so far proved fruitless. We are accordingly dealing with an entirely unknown individual. The
first witness whom I shall call is Thomas Crump.”

At the sound of his name, Mr. Crump made his way to the table, piloted thither by the coroner’s officer, and took his stand, under the latter’s direction, near to the coroner’s chair. Having been sworn, he stated that he was an attendant in the cloak room at Fenchurch Street Station.

“Were you on duty in the evening of Saturday the 19th of August?”

“Yes, sir, I was.”

“Do you remember receiving a certain wooden case on that evening? A case which there has been some question about since?”

“Yes. It was brought in about nine twenty; just after the nine fifteen from Shoeburyness had come in.”

“Was there anything on the case to show where it had come from?”

“No, there were no labels on it excepting one with what I took to be the owner’s name and address. I supposed that it had come by the Shoeburyness train, but that was only a guess. If it did, it couldn’t have travelled in the luggage van. The guard wouldn’t have had it without a label.”

“Who brought the case to the cloak room?”

“It was brought in by the gentleman who I took to be the owner. And a rare job he must have had with it, for it weighed close on a hundredweight, as near as I could tell. He staggered in with it, carrying it by a cord that was tied round it.”

“Can you give us any description of this man?”

“I didn’t notice him very particularly, but I remember that he was rather tall and had a long, thin face and a big, sharp nose. He looked a bit on the thin side, but he must have been pretty strong to judge by the way he handled that case.”

“Did you notice how he was dressed?”

“So far as I remember, he had on a dark suit—I fancy it was blue serge but I wouldn’t be sure; but I remember that he was wearing a soft felt hat.”

“Had he any moustache or was he clean shaved?”

“He had a moustache and a smallish beard, cut to a point; what they call a Torpedo beard. His beard and his hair were both dark.”

“About what age would you say he was?”

“He might have been about forty or perhaps a trifle more.”

“And with regard to the case, can you give us any description of that?”

“It was a wooden case, about fifteen inches square and perhaps eighteen inches high. It was made of plain deal strongly put together and strengthened at the corners with iron straps. The top was fitted with hinges and held down by eight screws. The wood was a good deal stained and rubbed, as if it had seen a fair amount of use. It had a label fastened on with tacks; just a plain card with the owner’s name on it—at least, somebody’s name—and an address. The name was Dobson, but I wouldn’t swear to the address.”

“Well,” the coroner pursued, “you took in the case. What happened next?”

“Nothing on that night. I gave the man his ticket and he took it and said he would probably call for the case on Monday. Then he said ‘Good night’ and went off.”

“When did you see him again?”

“That was on Monday evening, about seven o’clock. It happened to be a slack time and I had more time to attend to him. He came and handed me his ticket and asked for the case. He pointed out one which he thought was his, so I went over to it and looked at the label that had been stuck on it, but it was the wrong number. However, he said that his name was on the case—name of Dobson—and I saw that there was a private label with that name on it, so I said he had better have a look at it and see if it really was his case. So he came into the cloak room and examined the case. And then he got into a rare state of excitement. He said it was certainly his name that was on the case and his address, but the label was not the same one that he wrote. But still he thought that the case was his case.”

“Then I asked him if the contents of his case were of any particular value, and he said ‘yes.’ They were worth several thousand pounds. Now, when he said that, I began to suspect that there was something wrong, so I suggested that we had better open the case and see if his property was inside.”

“He jumped at the offer, so I got a screw-driver, and we took out the screws and lifted the lid. And when we lifted it, the first thing that we saw was the top of a man’s head, packed in with a lot of rags. When he saw it, he seemed to be struck all of a heap. Then he slammed down the lid and asked me where he could find a policeman. I told him that he would find one outside the station, and off he went as hard as he could go.”

Here the coroner held up a restraining hand as he scribbled furiously to keep up with the witness. When he had finished the paragraph, he looked up and nodded.
“Yes; he went out to look for a policeman. What happened next?”

“While we had been looking at the case, there were two gentlemen who had come to collect their luggage and who heard what was going on. When Mr. Dobson—if that was his name—went out, they came over to have a look at the case; and we all waited for Mr. Dobson to come back. But he didn’t come back. So, after a time, one of the gentlemen went out and presently came back with a constable. I showed the constable what was in the case, and he then took possession of it.”

“Yes,” said the coroner, “that is all quite clear, so far. Do you think you would recognize this man, Dobson, if you were to see him again?”

“Yes,” replied Crump. “I feel pretty sure I should. He was the sort of man that you would remember. And I did look at him pretty hard.”

“Well,” said the coroner, “I hope that you will have an opportunity of identifying him. Does any gentleman wish to ask the witness any questions? I think he has told us all that he has to tell. The other witnesses will be able to fill in the details. No questions? Then we will pass on to the next witness. William Harris.”

Mr. Harris came forward with rather more diffidence than had been shown by his colleague, which might have been due to his age—he was little more than a youth—or to the story that he had to tell. But, ill at ease as he obviously was, he gave his evidence in a quite clear and straightforward fashion. When he had been sworn and given the usual particulars, he stood, regarding the coroner with a look of consternation, as he waited for the dread interrogation.

“You say,” the coroner began impassively, “that you are an attendant in the cloak room at Fenchurch Street Station. How long have you been employed there?”

“Not quite three months,” the witness faltered.

“So you have not had much experience, I suppose?”

“No, sir, not very much.”

“Were you on duty on Sunday, the twentieth of August?”

“Yes, sir.”

“Who was on duty with you?”

“No one, sir. It was Mr. Crump’s Sunday off, and, being a slack day, I took the duty by myself.”

“On that day, you received a certain wooden case. Do you remember the circumstances connected with it?”

“Yes, sir. The case was brought in about half-past ten in the morning. The man who brought it said that he would be calling for it about tea-time.”

“Did this man bring the case himself?”

“Yes, sir. He carried it by a thick cord that was tied round it, and he brought it right in and put it down not far from another case of the same kind.”

“Did you examine these cases or read the labels that were on them?”

“No, sir, I can’t say that I did. I just stuck the ticket on the case that the man had brought in, but I didn’t examine it. But I remember that there was another case near it that looked like the same sort of case.”

“Did this man come back for the case?”

“Yes, sir. He came about four o’clock with another man who looked like a taxi-driver. He handed me the ticket and I went with the two men and found the case. Then the man who had brought it told the other man to take it out and stow it in the taxi. Then he pulled a time-table out of his pocket and asked me to look over it with him and see how the trains ran to Loughton and Epping. So we spread out the time-table on the luggage-counter and went through the list of Sunday trains; and while we were looking at it, the taxi-man took up the case and went out of the station. When we had finished with the time-table and the man had taken one or two notes of the trains, he put the time-table back in his pocket, thanked me for helping him and went away.”

“Did it never occur to you to see whether he had taken the right case?”

“No, sir. My back was towards the taxi-man when he picked the case up. I saw him carrying it out towards the entrance, but it looked just like the right case, and it never occurred to me that he might have taken the wrong one. And the one that was left looked like the right one and it was in the right place.”

“Yes,” said the coroner, “it was very natural. Evidently, the exchange had been carefully planned in advance, and very skilfully planned, too. Now, with regard to these two cases: were you able to form any opinion as to the weight of either or both of them?”

“I never felt either of them,” the witness replied; “but the one that the man brought in seemed rather heavy, by the way that he carried it. He had hold of it by the cord that was tied round it. The other one seemed a bit heavy, too. But when I saw the taxi-man going out with it, he had got it on his shoulder and he didn’t seem to have any difficulty with it.”

“And, with regard to these two men. Can you give us any description of them?”
"I hardly saw the taxi-man, and I don't remember what he was like at all, excepting that he was a big, strong-looking man. The other man was rather small, but he looked pretty strong-built, too. When we were looking at the time-tables, I noticed two things about him. One was that he seemed to have a couple of gold teeth."

"Ah!" said the coroner, "presumably gold-filled teeth. Do you remember which teeth they were?"

"They were the two middle front teeth at the top. He showed them a good deal when he talked."

"Yes; and what was the other thing that you noticed?"

"I noticed, when he put his hand on the time-table, that his fingers were stained all browny yellow, as if he was always smoking cigarettes; and his hand was shaking, even when it was laying on the paper. I didn't notice anything else."

"Can you tell us how he was dressed?"

"He had on an ordinary tweed suit; rather a shabby suit it was. And he was wearing a cloth cap."

"Had he any moustache or beard?"

"No, sir; he was clean shaved—or, at least, not very clean, because he had about a couple of days' growth, and as he was a dark man, it showed pretty plainly."

"How did he strike you as to his station in life? Should you describe him as a gentleman?"

"No, sir, I should not," the witness replied with considerable emphasis. "He struck me as quite a common sort of man, and I got the idea that he might have been a seaman or some kind of waterside character. We see a good many of that sort on our line, so we get to recognize them."

"What sort of men are you referring to?" the coroner asked with evident interest, "and where do they come from?"

"I mean sailors of all kinds from the London and the India Docks, and fishermen and longshoremen from Leigh and Benfleet and Southend and the sea-side places up that way."

"Yes," said the coroner, "this is quite interesting and may be important. Fenchurch Street has always been a sailors' station. However, that is for the police rather than for us. I think that is all that we want to ask this witness, unless any of the gentlemen of the jury wish to put any questions."

He glanced interrogatively at the jury, but none of them expressed any curiosity. Accordingly, the witness was allowed to retire; which he did with undisguised relief.

The next witness was the constable who had been called in to take charge of the case, and, as his evidence amounted to little more than a statement of that fact, he was soon disposed of and dismissed. Then the coroner pronounced the name of Geoffrey Buffham, and that gentleman rose from the extreme corner of the court and worked his way to the table, casting a leer of recognition on Mr. Pippet as he passed. His evidence, also, was chiefly formal; but, when he had finished his account of his search for the constable, the coroner turned to the subject of identification.

"You saw the man who had come to claim the case. Can you add any particulars to those given by the attendant?"

"I am afraid I can't tell you very much about him. The light was not very good, and, of course, until he had gone, there was nothing to make me take any special notice of him. And then it was too late. All I can say is that he was a tallish man with a rather dark beard and a prominent nose."

The coroner wrote this down without comment, and then, apparently judging Mr. Buffham to be worth no more powder and shot, glanced at the jury for a moment and dismissed him. Then he pronounced the name of Christopher J. Pippet, and the owner of that name rose and stepped over to the place that had been occupied by the other witnesses. The coroner looked up at the tall, dignified figure, apparently contrasting it with its rather scruffy, raffish predecessor; and when the preliminaries had been disposed of, he asked apologetically:

"It is of no particular importance, but would you tell us what the 'J' in your name stands for? It is usual to give the full name."

Mr. Pippet smiled. "As I have just been sworn," said he, "I have got to be careful in my statements. My impression is that the 'J' stands for Josiah, but that is only an opinion. I have always been accustomed to use the initial only."

"Then," said the coroner, "we will accept that as your recognized personal designation. There is no need to be pedantic. Now, Mr. Pippet, I don't think we need trouble you to go into details concerning the discovery of this case, but it would be useful if you could give us some further description of the man who came to claim the property. The descriptions which have been given are very sketchy and indefinite; can you amplify them in any way?"

Mr. Pippet reflected. "I took a pretty careful look at him," said he, "and I have a fairly clear mental picture of the man."

"You say you took a pretty careful look at him," said the coroner. "What made you look at him carefully?"

"Well, sir," Mr. Pippet replied, "the circumstances were rather remarkable. From his conversation with the attendant it was clear that something quite irregular had been happening; and when he mentioned the value of the case, it began to look like a serious crime. Then when he rushed out pell mell in search of a policeman, that struck me as a very strange thing to do. What was the hurry about? His own case was gone, and the one that was there wasn't going to run away. But I gathered that there was something in it that oughtn't to have been there. So when he came running out full pelt, I
suspected that the cause of the hurry was behind him, not in front, and, naturally, my attention was aroused.”

“You suspected that he might be making off?”

“It seemed a possibility. Anyway, I have never seen a man look more thoroughly scared.”

“Then,” said the coroner, “as you seem to have taken more notice of him than anyone else, perhaps you can give us a rather more complete description of him. Do you think you would recognize him if you should see him again?”

“I feel pretty sure that I should,” was the reply; “but that is not the same as enabling other people to recognize him. I should describe him as a tall man, about five feet eleven, lean but muscular and broad across the shoulders. He had a long, thin face and a long, thin nose, curved on the bridge and pointed at the end. His hair and beard were nearly black, but his skin and eyes didn’t seem to match them very well, for his skin was distinctly fair and his eyes were a pale blue. I got the distinct impression that his hair and beard were dyed.”

“Was that merely an impression or had you any definite grounds for the suspicion?”

“At first, it was just an impression. But as he was running out he got between me and the electric light for a moment, and the light shone through his beard. Then I caught a glint of that peculiar red that you see in hair that is dyed black when the light shines through it, and that you never see in natural hair; a red with a perceptible tinge of purple in it.”

“Yes,” said the coroner, “it is very characteristic. But do you feel quite sure that you actually saw this colour? It is a very important point.”

“I feel convinced in my own mind,” replied Mr. Pippet, “but, of course, I might have been mistaken. I can only say that, to the best of my belief, the hair showed that peculiar colour.”

“Well,” said the coroner, “that is about as much as anyone could say, under the circumstances. Did you notice anything of interest in regard to the clothing? You heard Mr. Crump’s evidence.”

“Yes; and I don’t think I can add much to it. The man was wearing a well-used dark blue serge suit, a blue cotton shirt with a collar to match, a soft felt hat and dark brown shoes. He had a wrist watch, but he seemed to have a pocket watch as well. Anyway, he had what looked like a watch guard, made, apparently, of plaited twine.”

“Is that all you can tell us about him, or is there anything else that you are able to recall?”

“I think I have told you all that I noticed. There wasn’t much opportunity to examine him closely.”

“No, there was not,” the coroner agreed. “I can only compliment you on the excellent use that you made of your eyes in the short time that was available. And, if that is all that you have to tell us, I think that we need not trouble you any further.”

He glanced at the foreman of the jury, and as that gentleman bowed to indicate that he was satisfied, Mr. Pippet was allowed to return to his seat, where he received the whispered congratulations of his daughter.

“That,” said the coroner, addressing the jury, “concludes the evidence relating to the discovery of the remains. We shall now proceed to the evidence afforded by the remains themselves; and we will begin with that of the medical officer to whom the head was handed for expert examination. Dr. Humphrey Smith.”

IV. — THE FINDING OF THE JURY

THE new witness was a man of about thirty with a clean shaved, studious face, garnished with a pair of horn-rimmed spectacles, and a somewhat diffident, uneasy manner. Having advanced to the table and taken his seat on the chair which had been placed for him close to that occupied by the coroner, he produced from his pocket a note book which he held unopened on his knee throughout the proceedings. In reply to the preliminary questions, he stated that his name was Humphrey Smith, that he was a bachelor of medicine, a member of the Royal College of Surgeons and a Licentiate of the Royal College of Physicians.

“You are the Police Medical Officer of this district, I believe,” the coroner suggested.

“Temporarily, I hold that post,” was the reply, “during the absence on sick leave of the regular medical officer.”

“Quite so,” said the coroner; “for the purposes of this inquiry, you are the Police Medical Officer.”

The witness admitted that this was so, and the coroner proceeded: “You have had submitted to you for examination a case containing a human head. Will you give us an account of your examination and the conclusions at which you arrived?”

The witness reflected a few moments and then began his statement.

“At ten fifteen on the morning of the twenty-second of August, Inspector Budge called on me and asked me to come round to the police station to examine the contents of a case, in which he said were certain human remains. I went with him and was shown a wooden case, strengthened by iron straps. It had a hinged lid which was further secured by eight screws, which, however, had been extracted. On raising the lid, I saw what looked like the top of a man’s head, surrounded by rags and articles of clothing which had been packed tightly round it. With the Inspector’s assistance I removed the packing material until it was possible to lift out the head, which I then took to a table by the window where I was able to
The head appeared to be that of a man, although there was hardly any visible beard or moustache and no signs of his having been shaved.

“You say that the head appeared to be that of a man. Do you feel confident that deceased was a man, or do you think that the head may possibly be that of a woman?”

“I think there is no doubt that deceased was a man. The general appearance was masculine, and the hair was quite short and arranged like a man’s hair.”

“That,” remarked the coroner, “is not a very safe criterion in these days. I have seen a good many women who would have passed well enough for men excepting for their clothes.”

“Yes, that is true,” the witness admitted, “but I had the present fashion in mind when I formed my opinion; and, although there was extremely little hair on the face, there was more than one usually finds on the face of a woman—a young woman, at any rate.”

Then, are we to understand that this head was that of a young person?”

“The exact age was rather difficult to determine, but I should say that deceased was not much, if any, over thirty.”

“What made it difficult to estimate the age of deceased?”

“There were two circumstances that made it difficult to judge the age. One was the physical condition of the head, and the other was the extraordinary facial character of this person.”

“By the physical condition, do you mean that it had undergone considerable putrefactive changes?”

“No, not at all. It was not in the least decomposed. It had been thoroughly embalmed, or, at least, treated with preservative substances—principally formalin, I think. There was quite a distinct odour of formalin vapour.”

“Then it would appear that it was in quite a good state of preservation, which ought to have helped rather than hindered your examination.”

“Yes, but the effect of the formalin was to produce a certain amount of shrinkage of the tissues, which naturally resulted in some distortion of the features. But it was not easy to be sure how much of the distortion was due to the formalin and how much to the natural deformity.”

“Was the shrinkage in any way due to drying of the tissues?”

“No. The tissues were not in the least dry. It appeared to me that the formalin had been mixed with glycerine; and, as glycerine does not evaporate, the head has remained perfectly moist, but without any tendency to decompose.”

“How long do you consider that deceased has been dead?”

“That,” replied the doctor, “is a question upon which I could form no opinion whatever. The head is so perfectly preserved that it will last in its present condition for an almost indefinite time; and, of course, what applies to the future applies equally to the past. One can estimate the time that has elapsed since death only by the changes that have occurred in the interval. But, if there are no changes, there is nothing on which to form an opinion.”

“Do you mean to say that deceased might have been dead for a year?”

“Yes, or even longer than that. A year ago the head would have looked exactly as it looks now, and as it will look a year hence. The preservatives have rendered it practically unchangeable.”

“That is very remarkable,” said the coroner, “and it introduces a formidable difficulty into this inquiry. For we have to discover, if we can, how, when and where this person met with his death. But it would seem that the ‘when’ is undiscoverable. You could give no limit to the time that has elapsed since death took place?”

“No. I could make no suggestion as to the time.”

The coroner wrote this down and looked at what he had written with an air of profound dissatisfaction. Then he turned to the witness and opened a new subject.

“You spoke just now of the remarkable facial peculiarities of deceased. Can you describe those peculiarities?”

“I will try. Deceased had a most extraordinary and perfectly hideous face. The peculiar appearance was due principally to the overgrown condition of the lower part, especially the lower jaw. In shape, the face was like an egg with the small end upwards; and the jaw was not only enormously broad, but the chin stuck out beyond the upper lip and the lower teeth were spread out and projected considerably in front of the upper ones. Then the nose was thick and coarse and the ears stood out from the head; but they were not like ordinary outstanding ears, which tend to be thin and membranous. They were thick and lumpy and decidedly misshapen. Altogether, the appearance of the face was quite abnormal.”

“Should you regard this abnormality as a deformity, or do you think it was connected with deceased’s state of health?”

“I should hardly like to give an opinion without seeing the rest of the body. There is no doubt about the deformity; but whether it was congenital or due to disease, I should not like to say: There are several rather rare diseases which tend to produce malformations of different parts of the body.”
“Well,” said the coroner, “medical details of that kind are a little outside the scope of this inquiry. The fact which interests us is that deceased was a very unusual-looking person, so that there ought not to be much difficulty in identifying him. To come to another question; from your examination of this head, should you say that there is any evidence of special skill or knowledge in the way in which the head has been separated from the trunk?”

“I think that there is a suggestion of some skill and knowledge. Not necessarily very much. But the separation was effected in accordance with the anatomical relations, not in the way in which it would have been done by an entirely ignorant and unskilful person. The head had been separated from the spinal column—that is, from the top of the backbone—by cutting through the ligaments that fasten the backbone to the skull; whereas a quite ignorant person would almost certainly have cut through the neck and through the joint between two of the neck vertebrae.”

“You think that it would not require much skill to take the head off in the manner in which it was done?”

“No; it would be quite easy if one knew where to make the cut. But most people do not.”

“You think, then, that the person who cut off this head must have had some anatomical knowledge?”

“Yes; but a very little knowledge of anatomy would suffice.”

“Do you think that such knowledge as a butcher possesses would be sufficient?”

“Certainly. A butcher doesn’t know much anatomy, but he knows where to find the joints.”

“And now, to take another question; can you give us any information as to the cause of death?”

“No,” was the very definite reply. “I examined the head most carefully with this question in view, but I could find no trace of any wound, bruise, or mark of violence, or even of rough treatment. There was no clue whatever to the cause or mode of death.”

There was a brief pause while the coroner glanced through his notes. Then, looking up at the jury, he said:

“Well, gentlemen, you have heard what the doctor has to tell us. It doesn’t get us on very far, but, of course, that is not the doctor’s fault. He can’t make evidence. Would any of you like to ask him any further questions? If not, I think we need not occupy any more of his time.”

Once more he paused with his eyes on the jury; then, as no one made any sign, he thanked the witness and gave him his dismissal.

The next witness was a smart-looking uniformed inspector of the City Police who stepped up to his post with the brisk, confident air of one familiar with the procedure. He stated that his name was William Budge, and, having rattled through the preliminaries, gave a precise and business-like account of the circumstances in which he made the acquaintance of the “remains” in the cloak room. From this he proceeded to the examination of the case in collaboration with the medical officer. His description of the case tallied with that given by Mr. Crump, but he was able to supply a few further details.

“Mr. Crump referred in his evidence,” said the coroner, “to a private label on this case. You examined that, of course?”

“Yes. It was a piece of card—half of a stationer’s postcard—fastened to the lid of the case with four tacks. It had a name and address written on it in plain block letters with a rather fine pen. The name was J. Dobson and the address was 401 Argyle Square, King’s Cross, London.”

“Four hundred and one!” exclaimed the coroner.

The witness smiled. “Yes, sir. Of course, there’s no such number, but I went there to make sure.”

“You did not extract any other information from the label?”

“I did not make a particular examination of it. I took it off carefully with the proper precautions and handed it to the superintendent.”

“You did not test it for finger-prints?”

“No, sir. That would not be in my province.”

“Exactly!” said the coroner, “and it is not really in ours.” He paused for a few moments and then asked:

“Have you any idea, Inspector, where this case might have come from, or what its original contents might have been?”

“I should say,” was the reply, “that it originally contained some kind of provisions and that it formed part of a ship’s stores. It is very usual for firms who supply provisions to ships to send them out in cases of this kind. The lids are screwed down for security in transit, but furnished with hinges for convenience when they are in use on board. There was no mark on the wood to indicate where the case came from. The issuer’s name and address was probably on a label which has been taken off.”

“Did you find anything that seemed to confirm your surmise that this case had formed part of a ship’s stores?”

“Yes. When the doctor had taken the head out, I took out the clothes and rags that had been used for packing and went over them carefully. Most of them seemed to be connected with a vessel of some sort. I made out a list, which I have with me.”

He produced an official-looking note book, and, at the coroner’s request, read out the list of items.
“At the top, immediately surrounding the head, was a very old, ragged blue jersey, such as fishermen wear. There was no mark of any kind on it, but there were some ends of thread that looked as if a linen tab had been cut off. Next, there was a pair of brown canvas trousers, a good deal worn and without any marks or any name on the buttons, and an old brown canvas jumper. Then there were several worn-out cotton swabs such as they use on board ship, three longish ends of inch-and-a-half manilla rope, and, at the bottom of the case, a ragged oil-skin coat. So the whole contents looked like the throw-outs collected from some ship’s fo’c’sle, or from the cabin of a barge or some other small craft.”

“Do you associate these cast-off things with any particular kind of vessel?”

“As far as the things themselves are concerned, I do not. But the case rather suggests a deep-water craft. A barge or a coaster can pick up her provisions at the various ports of call, and hardly needs the quantity of stores that this case suggests.”

“And what about the other case—the case that was stolen? Do you connect it with the one that contained the head?”

The Inspector reflected. “There is not much information available at present,” said he, “and what there is you have had in Crump’s evidence. It appears that the two cases were exactly alike; and, if that is so, they might have come from the same source. Evidently, the man who brought in the case with the head in it knew all about the other case, and what was in it.”

“Which, I take it, is more than you do?”

The Inspector smiled and admitted that the unknown man had the advantage of the police at present; and, with that admission his evidence came to an end and he retired to his seat. There followed a pause, during which the coroner once more looked over his notes and the jury exchanged remarks in an undertone. At length, when he had run his eye over the depositions, the coroner leaned back in his chair, and, taking a general survey of the jury, began his summung-up.

“This inquiry, gentlemen,” he began, “is a very remarkable one, and as unsatisfactory as it is unusual in character. It is unsatisfactory in several respects. We are inquiring into the circumstances surrounding the death of a deceased person. But we are not in possession of the body of that person but of only a part of it; and that part gives us no information on either of the three headings of our inquiry—the time, the place and the manner. We are seeking to discover:—first, When this person died; second, In what place he died; and, third, In what manner and by what means he came by his death. But, owing to the incomplete nature of the remains, the strange circumstances in which they were discovered, and the physical condition of the remains themselves, we can answer none of these questions. We do not even know who the deceased is. All that we can do is to consider the whole body of facts which are known to us and draw what reasonable conclusions we can from them.

“Let us begin by taking a glance at the succession of events in the order of their occurrence. First, on the Saturday night, comes a man with a heavy case which, according to his subsequent admission, contains property of great value. He leaves this case in the cloak room for the week-end. Then, on the Sunday, comes another man with another case which appears to be identically similar to the first. He very adroitly manages to exchange this case for the one containing the valuable property. Then, on the Monday, comes the first man to claim his property. He sees that some substitution appears to have occurred, and, in order to make sure, opens the case. Then he discovers the head of the deceased and is, naturally enough, horrified. Instantly, he rushes out of the station, ostensibly in search of a policeman, but actually, to make his escape, as becomes evident when he does not return. That is the series of events which are known to us, and which form, in effect, the whole sum of our knowledge. Let us see what conclusions we can draw from them.

“The first question that we ask ourselves is:—Why did that man not come back? The case which had been stolen contained, according to what was probably a hasty, unguarded statement, property worth several thousand pounds. Without committing ourselves to a legal opinion, we may say that he could have made a claim on the railway company for the value of that property. Yet, at the sight of that dead man’s head, he rushed out and disappeared. What are we to infer from that? There are several inferences that suggest themselves. First, although it is evident that the head in the case came to him as a complete surprise, it is possible that, as soon as he saw it, he recognized it as something with which he had a guilty association. That is one possibility. Then there is the question as to what was in his own case. It was property of great value. But whose property was it? There is in the behaviour of this man a strong suggestion that the valuable contents of that case may have been stolen property, of which he was not in a position to give any account. That appears to be highly probable; but it does not greatly concern us, excepting that it suggests a criminal element in the transaction as a whole—a suggestion that is strengthened by the apparent connexion between the two men.

“When we come to the second man, the criminal element is unmistakeable. To say nothing of the theft which he undoubtedly committed, the fact that he was going about with the head of a dead man in a box, definitely puts upon him the responsibility for the mutilation of a human body, to say the least. The question of any further guilt depends on the view that is taken of that mutilation. And that brings us to the question as to the manner in which the deceased came by his death.

“Now, we have to recognize that we have no direct evidence on this point. The doctor’s careful and expert examination failed to elicit any information as to the cause of death; which was what might have been expected from the very insufficient means at his disposal. But, if we have no direct evidence as to the actual cause of death, we have very important indirect evidence as to some of the circumstances surrounding his death. We know, for instance, that the body had been mutilated, or at least decapitated; and we know that some person was in possession of the separated head—and, probably, of the mutilated remainder of the corpse.
“But these are very material facts. What does our common sense, aided by experience, suggest in the case of a corpse which has been mutilated and a part packed in a box and planted in a railway cloak room? What is the usual object of dismembering a corpse and of disposing of the dismembered remains in this way? In all the numerous cases which have occurred from time to time, the object has been the same; to get rid of the body of a person who has been murdered, in order to cover up the fact and the circumstances of the crime. No other reason is imaginable. There could be no object in thus making away with the body of a person who had died a natural death.

“That, however, is for you to consider in deciding on your verdict. The other known facts do not seem to be helpful. The singular and rather repulsive appearance of deceased does not concern us, although it may be important to the police. As to the curious use of a preservative, the object of that seems to be fairly obvious. Mutilated remains have been commonly discovered by the putrefactive odour which they have exhaled. If this head had not been preserved, it would have been impossible for it to have been left in the cloak room for twenty-four hours without arousing suspicion. But, as I have said, the fact, though curious, is not material to our inquiry. The material facts are those which suggest an answer to the question, How did deceased come by his death? Those facts are in your possession; and I shall now leave you to consider your verdict.”

Thereupon, while the hum of conversation once more pervaded the court room, the jury drew together and compared notes. But their conference lasted only a very few minutes, at the end of which the foreman signified to the coroner that they had agreed on their verdict.

“Well, gentlemen,” said the latter, “what is your decision?”

“We find,” was the reply, “that deceased was murdered by some person or persons unknown.”

“Yes,” said the coroner, as he entered the verdict at the foot of the depositions, “that is what common sense suggests. I don’t see that you could have arrived at any other decision. It remains only for me to thank you for your attendance and the careful attention which you have given to the evidence, and close the proceedings.”

As the court rose, Mr. Buffham emerged hurriedly from the corner in which he had been seated and elbowed his way towards Mr. Pippet and his daughter.

“My dear sir,” he exclaimed, effusively, “let me offer my most hearty congratulations on the brilliant way in which you gave your evidence. Your powers of observation positively staggered me.”

The latter statement was no exaggeration. Mr. Buffham had been not only staggered but slightly disconcerted by the discovery of his friend’s remarkable capacity for “keeping his weather eyelid lifted.” In the peculiar circumstances, it was a gift that he was disposed to view with some disfavour; and he found himself wondering, a little uncomfortably, whether Mr. Pippet happened to have observed any other facts which he was not expected or desired to observe. But he did not allow these misgivings to interfere with his suave and ingratiating manner. As Mr. Pippet received his congratulations without obvious emotion, he bestowed on Miss Jenny a leer which was intended to express admiring recognition and then turned with an insinuating smile to her father.

“This charming young lady,” said he, “is, I presume, the daughter of whom I have heard you speak.”

“You have guessed right the first time,” Mr. Pippet replied. “This is Mr. Buffham, my dear; but you know that, as you heard him give his evidence.”

Miss Jenny bowed, with a faint suggestion of stiffness. The ingratiating smile did not seem to have produced the expected effect. The “charming young lady” was not, in fact, at all favourably impressed by Mr. Buffham’s personality. Nevertheless she exchanged a few observations on the incidents of the inquest, as the audience was clearing off, and the three moved out together when the way was clear. Here, however, Mr. Buffham suffered a slight disappointment. For when the taxi which Mr. Pippet hailed drew up at the curb, the hoped-for invitation was not forthcoming, and the cordial handshake and smiling farewell appeared an unsatisfactory substitute.
V.—THE GREAT PLATINUM ROBBERY

THORNDYKE’S rather free and easy custom of receiving professional visitors at unconventional hours tended on certain occasions to result in slightly embarrassing situations. It did, for instance, on an evening in early October when the arrival of our old friend Mr. Brodribb, was followed almost immediately by that of Mr. Superintendent Miller. Both were ostensibly making a friendly call; but both, I felt sure, had their particular fish to fry. Brodribb had almost certainly come for a professional consultation, and Miller’s informal chats invariably developed a professional background.

I watched with amused curiosity to see what would happen. Each man would probably give the other a chance to retire, and the question was, which would be the first to abdicate? The event would probably be determined by the relative urgency of their respective fish frying. But the delicate balance of probabilities was upset by Polton, our invaluable laboratory assistant, who happened to be in the room when they arrived; who instantly proceeded to make the arrangements which immemorial custom had associated with each of our visitors. The two cosiest armchairs were drawn up to the fire and a small table placed by each. On one table appeared, as if by magic, the whisky decanter, siphon and cigar box which clearly appertained to Miller, and on the other, three port glasses.

“This is your chair, sir,” said Polton, shepherding the Superintendent in the way he should go. “The other is for Mr. Brodribb”; and with this he vanished, and we all knew whither he had gone.

“Well,” said Brodribb with slight indecision, as he subsided into his allotted chair and put his toes on the curb, while Thorndyke and I drew up our chairs, “If I shan’t be in the way, I’ll just sit down and warm myself for a few minutes.”

His “defeatist” tone I judged to be due to the fact that Miller, in ready response to my invitation, had mixed himself a stiff jorum, got a cigar alight and apparently settled himself comfortably for the evening. I think the old lawyer was disposed to give up the contest and retire in favour of the Superintendent. But at that moment Polton returned, bearing a decanter of port which he deposited on Mr. Brodribb’s table; whereupon the balance of probabilities was restored.

“Ha!” said Brodribb, as Thorndyke filled the three glasses, “it’s all very well to sentimentalize about the Last Rose of Summer, but the First Fire of Winter makes more appeal to me.”

“You can hardly call it winter at the beginning of October,” Miller objected.

“Can’t you, by Jove!” exclaimed Brodribb. “Perhaps not by the calendar; but when I came through the Carey Street gateway just now, the wind was enough to nip the nose off a brass monkey. But I haven’t got a fire yet. It’s only you medico-legal sybarites who can afford such luxuries.”

He sipped his wine ecstatically, spread out his toes and blinked at the fire with an air of enjoyment that suggested a particularly magnificent old Tom cat. The superintendent made no rejoinder, and Thorndyke and I filled our pipes and waited curiously for the situation to develop.

“I suppose,” said Brodribb, after an interval of silence, “you haven’t got any forrarder with that Fenchurch Street mystery; I mean the box with the gentleman’s head in it?”

“Gentleman, indeed!” exclaimed Miller. “He was about the ugliest beggar that I ever clapped eyes on. I don’t wonder they cut his head off. He must have been a lot better-looking without it.”

“Still,” said Brodribb, “you’ve got to admit that the man was murdered.”

“No doubt,” rejoined Miller; “and if you had seen him, you wouldn’t have been surprised. His face was an outrage on humanity.”

“So it may have been,” retorted Brodribb, “but ugliness is not provocation in a legal sense. You don’t mean to say that you have abandoned the case?”

“We never abandon a case at The Yard,” replied Miller, “but it’s no use fussing about when you’ve nothing to go on. As a matter of fact, we expect to approach the problem from another direction. For the moment, we are letting that particular box rest while we give a little attention to the other box—the one that was stolen.”

“Ha!” said Brodribb. “Yes; very necessary, I should say. But what is your idea about it? You don’t think it possible that it contained the body which belonged to the head?”

Miller shook his head. “No,” said he. “I think you can rule that out. If the original case had contained a headless corpse, Mr. Dobson would not have been so ready to open the doubtful one in the presence of the attendant. You see, until they got it open, it wasn’t certain that it was a different case.”

“Then,” said Brodribb, “I don’t quite see the connexion. You said that you were approaching the problem of the head from another direction—through the stolen box, as I understood.”

“That is so,” replied Miller; “and you must see that there is evidently some connexion between the two cases. To begin with, the second case, which we may call the head case, was exactly similar to the first one—the stolen case—and we may take it that the similarity was purposely arranged. The head case was prepared as a counterfeit so that it could be exchanged for the other. But from that it follows that the person who prepared the head case must have known exactly what the other case was like, even to what was written on the label; and as he was at a good deal of trouble to steal the first
case, we may take it that he knew what that case contained. So there you have a clear connexion on the one side. As to whether the man, Dobson, recognized the head or knew anything about it, we can't be sure."

"The way in which he made himself scarce when he had seen it," said Brodribb, "rather suggests that he did."

"Not necessarily," Miller objected. "The question is, What was in the stolen case? He stated that the contents were worth several thousand pounds, but in spite of that, he made no attempt at recovery or claim for compensation. It looks as if he was not in a position to say what was in the case. But that suggests that the contents were not his lawful property; in fact, that the case contained stolen property—perhaps the loot from some robbery. Now, if that were so, he would have to clear off in any event to avoid inquiries. Naturally, then, when he came on that head, he would have realized that he was fairly in the soup. The fact that he had been in possession of stolen property wouldn't have been a bit helpful if he had been charged with complicity in a murder. I'm not surprised that he bolted."

"Is there any clue to what has become of the stolen case?" Brodribb asked.

"No," replied Miller; "but that is not the question which is interesting us. What we want to know is, not where it went, but where it came from, and what was in it."

"And that, I presume, you don't know at present," said Brodribb.

The Superintendent took a long draw at his cigar, blew out a cloud of smoke and performed the operation that he would have described as 'wetting his whistle.' Then he set down his glass and replied, cautiously:

"As the Doctor is listening, I mustn't use the word 'know.' But we think we've got a pretty good idea."

"Have you?" Brodribb exclaimed. "Now, I wonder what you have discovered. But I suppose it isn't in order for an outsider like me to pry into the secrets of Scotland Yard."

The Superintendent did not reply immediately, but from something in his manner, I suspected that he had come expressly to discuss the matter with us, but was "inhibited" by Brodribb's presence. At length, Thorndyke broke the silence.

"We are all very much interested, Miller, and we are all very discreet."

"I'm yes," said Miller. "Three lawyers and a detective officer ought to be able to produce a fair amount of discretion between them. And I don't know that it's such a deadly secret, after all. Still, we are keeping our own counsel, so you will understand that what I may mention mustn't go any farther."

"You are perfectly safe, Miller," Thorndyke assured him. "You know Jervis and me of old, and I can tell you that Mr. Brodribb is as close as an oyster."

Thus reassured, Miller (who was really bursting to give us his news) moistened his whistle afresh and began:

"You must understand that we are at present dealing with what the Doctor calls hypothesis, though we have got a solid foundation of fact. As to what was in that stolen case, we have no direct evidence; but we have formed a pretty confident opinion. In fact, we think we know what that case contained. What do you suppose it was?"

I ventured to suggest jewellery, or perhaps bullion. "You are not so far out," said Miller. "We say that it was platinum."

"Platinum!" I exclaimed. "But there was a hundredweight of it! Why, at the present price, it must have been worth a king's ransom!"

"I don't know how much that is," said Miller, "but we reckon the value of the contents at between seventeen and eighteen thousand pounds. That is only a rough estimate, of course. We think that the witness, Crump, was mistaken about the weight, and it was only a guess, in any case. He hadn't tested the weight of the package. At any rate, we can't account for more than about half a hundredweight of platinum."

"You have some perfectly definite information, then?" said Thorndyke.

"Definite enough so far as it goes," replied Miller, "but it doesn't go far enough. We are quite clear that a parcel of platinum weighing about twenty-five kilograms—roughly, half a hundredweight—was stolen and has disappeared. That is actual fact. The rest is inference, or, as the Doctor would say, hypothesis. But I will give you a sketch of the affair, leaving out the details that don't matter."

"Our information is that, about the end of last June, a quantity of platinum was shipped by a Latvian firm at Riga. It was packed in small wooden cases, each containing twenty-five kilos, and consigned to various dealers in Germany, France and Italy. Well, the cases were all duly delivered at their respective destinations, and everything seemed to be in order excepting the contents of one of the Italian cases. That happened to be the last one that was delivered, and, as the ship had made a good many calls on her voyage, it wasn't delivered until the beginning of August. When it was opened, it was found to contain, instead of the platinum, an equal weight of lead."

"Obviously, there had been a robbery somewhere, but, owing to the time which had elapsed, it was difficult to trace. One thing, however, was clear; the job had been done by somebody who was in the know. That was evident from the fact that the case was in all respects exactly like the original case and all the other cases."

"Why shouldn't it have been the original case with the contents changed?" I asked.

"That hardly seems possible. It would have been difficult enough to steal the case; but to steal it, empty it, refill it and put
it back, looks like an impossibility. No, we can be pretty certain that the thieves had the dummy case ready and just made a quick exchange. That must have been the method, whoever did the job; but the puzzle was to discover the time and place of the robbery. The stuff had made a long journey to the port of delivery and the robbery might have taken place anywhere along the route.

“Eventually, suspicion arose with regard to an English yacht, the Cormorant, which had berthed close to the Kronstadt—that was the name of the ship which carried the stuff while she was taking in her cargo at Riga. It was recalled that she had occupied the next berth to the Cronstadt at the time when the platinum was being shipped, and someone remembered that, at that very time, the Cormorant was taking stores on board, including one or two big hampers. Accordingly, the Latvian police made some inquiries on the spot, and, though they didn’t discover anything very sensational, the little that they did learn seemed to favour the idea that the platinum might have been taken away on the yacht. This is what it amounted to, together with what we have picked up since.

“The Cormorant is a sturdy little yawl-rigged vessel—she appears to be a converted fishing lugger from Shoreham—of about thirty tons. She turned up at Riga on the 21st. of June and took up her berth alongside the quay where the Kronstadt had just berthed. She went out from time to time for a sail in the Gulf but always came back to the same berth. Her crew consisted of four men, of whom three seemed to be regular seamen of the fisherman type, while the fourth, the skipper, whose name was Bassett, was a man of a superior class. The description of Bassett agrees completely with that of the man whom we have called Dobson—the man who deposited the case that was stolen from the cloak room; and the description of one of the crew seems to tally with that of the man who stole the case—the man whom we have called ‘the head man.’ Perhaps we had better call him Mr. ‘X’ for convenience.

“Well, as I have said, at the time the platinum was shipped, the Cormorant was taking in stores; and her hampers and cases were on the quay at the same time as the cases of platinum and quite close to them. The platinum was unloaded from a closed van and dumped on the quay, and the Cormorant’s stores were unloaded from a wagon and also dumped on the quay. Then, as soon as the Cormorant had got her stores on board, she put out for a sail in the bay. But she was back in her berth again in about a couple of hours; and there she remained, on and off, for the next five days. It was not until the 26th. of June that she left Riga for good.”

“Doesn’t the fact that she stayed there so long rather conflict with the idea that she had the stolen platinum on board?” I suggested.

“Well,” Miller replied, “on the face of it, it does seem to. But if you bear all the circumstances in mind, I don’t think it does. As soon as all the platinum was on board the Kronstadt, the danger of discovery was over. Remember, there was the right number of cases. There was nothing missing. It was practically certain that the robbery would not be discovered until the dummy case was opened by the consignees. Bearing that in mind, you see that it would be an excellent tactical plan to stay on at Riga as if nothing had happened; whereas it might have looked suspicious if the yacht had put to sea immediately after the shipment of the platinum.

“The next thing we hear of the yacht is that she arrived at Southend on the 17th. of August.”

“Have you ascertained where she had been in the interval?” I asked.

“No” he replied, “because, you see, it doesn’t particularly concern us, as our theory is that she still had the platinum on board. But I must admit that, apart from the cloak room incident, we can’t get any evidence that she had. At Southend she was boarded by the Customs Officer, and, as she had just come from Rotterdam and had been cruising up the Baltic and along the German and Dutch coasts, he made a pretty rigorous search, especially for tobacco. He turned out every possible place in which a few cigars or cakes of ‘hard’ could have been stowed, and he even took up the trap in the cabin floor and squeezed down into the little hold. But he didn’t find anything beyond the few trifles that had been declared. So his evidence is negative.”

“It is rather more than negative,” said I. “It amounts to positive evidence that the platinum wasn’t there.”

“Well, in a way, it does,” Miller admitted. “It certainly doesn’t help us. But there was one curious fact that we got from him. It seems that there were still four men on board the yacht; but they were not the same four men. One of them, at least, was different. The Customs man didn’t see anybody corresponding to the description of Mr. ‘X.’ On the other hand, there was a tall, clean shaven, elderly man who didn’t look like a seaman—looked more like a lawyer or a doctor and spoke like a gentleman, or, at least, an educated man, though with a slight foreign accent, and didn’t seem very anxious to speak at all; seemed more disposed to keep himself to himself. But the interesting point to us is the disappearance of Mr. ‘X.’ That seems to give us something like a complete scheme of the whole affair, including the transaction at the cloak room.”

“Were you proposing to let us hear your scheme of the robbery?” I asked.

“Well,” said Miller, “I don’t see why not, as I have told you so much. Of course, you will understand that it is very largely guess-work, but still, it comes together into a consistent whole. I will just give you an outline of what we believe to have been the course of events.

“We take it that this was a very carefully planned robbery, carried out by a party of experienced criminals who must all have had a fair knowledge of sea-faring. One of them, at least—probably the skipper, Bassett—must have had some pretty exact information as to the time and place at which the platinum was shipped and the size and character of the cases that it was stowed in. They must have arrived at the selected berth with a carefully prepared dummy case ready for use at the
psychological moment. Then, when the cases of platinum arrived—and they must have known when to expect them—the dummy was smuggled up to the quay, covered up in some way, and slipped in amongst the genuine cases. Then they must have managed to cover up one of these, and they probably waited until the whole consignment, including the dummy, had been put on board and checked. There would have been the right number, you must remember.

“Well, when all the platinum appeared to have been put on board, there would have been no difficulty in taking the one that they had pinched—still covered up—on to the yacht along with their own stores. As soon as they had got it on board, they cast off and went for a sail in the bay; and during that little trip, they would be able safely to unload the case, break it up and burn it and stow the platinum in the hiding-place that they had got prepared in advance. When they came back to their berth, they had got the loot safely hidden and were ready to submit to a search, if need be. And it must have been an uncommonly cleverly devised hiding-place, for they made no difficulty about letting the Customs officer at Southend rummage the vessel to his heart’s content.”

“It must, as you say, have been a mighty perfect hiding-place,” I remarked, “to have eluded the Customs man. When one of those gentrs becomes really inquisitive, there isn’t much that escapes him. He knows all the ropes and is up to all the smugglers’ dodges.”

“You must bear in mind, Jervis,” Thorndyke reminded me, “that he was not looking for platinum. He was looking for tobacco. Do you know, Miller, in what form the metal was shipped? Was it in ingots or bars or plates?”

“It was in plates; thin sheets, in fact, about a millimetre in thickness and thirty centimetres—roughly twelve inches—square; a most convenient form for stowing in a hiding-place, for you could roll up the plates or cut them up with shears into little pieces.”

“Yes,” said Thorndyke, “and the plates themselves would take up very little room. You say the Customs man squeezed down into the hold. Do you know what the ballast was like? In a fishing vessel, it usually consists of rough pigs of iron and square ends of old chain and miscellaneous scrap, in which a few rolled-up plates of metal would not be noticed.”

“Ahh!” Miller replied, “the Cormorant’s ballast wasn’t like that. It was proper yacht’s ballast; lead weights, properly cast to fit the timbers and set in a neat row on each side of the kelson. So the hold was perfectly clear and the Customs man was able to see all over it from end to end.

“But to return to our scheme. When they had got the platinum safely hidden, our friends decided to stay on in their berth for a few days for the sake of appearances. Then they put to sea and proceeded in a leisurely, yacht-like fashion to make their way home. But during the voyage something seems to have happened. It looks rather as if the rogues had fallen out. At any rate, Mr. ’X’ seems to have left the ship, and this stranger to have come on board in his place. I don’t understand the stranger at all. I can’t fit him into the picture. But Mr. ’X’ apparently had a plan for grabbing the loot for himself, and, when he went ashore, he must have left a confederate on board to keep him informed as to when the cargo was going to be landed.

“As to the landing, there wouldn’t have been any difficulty about that. When the Customs man had made his search and found everything in order, the papers would be made out and the ship would be passed as ‘cleared.’ After that, the crew would be at liberty to take any of their goods ashore unchallenged. And the arrangements for getting the platinum landed were excellent. The yacht was brought up in Benfleet Creek, quite close to the railway. Evidently, the case was carried up to the station, and Bassett must have taken it into the carriage with him to avoid having a label stuck on it and giving a clue to the cloak room attendant.

“Why Bassett decided to plant it in the cloak room is not very clear. We can only suppose that he hadn’t any other place to put it at the moment, and that he left it there while he was making arrangements for its disposal. But it gave Mr. ’X’ his chance. No doubt his pal on board made it his business to find out what became of the case, and gave Mr. ’X’ the tip; which Mr. ’X’ acted on very promptly and efficiently. And he and his pal are at this moment some seventeen thousand pounds to the good.

“That is the scheme of the affair that we suggest. Of course, it is only a rough sketch, and you will say that it is all hypothesis from beginning to end, and so it is. But it hangs together.”

“Yes,” I agreed, “it is a consistent story, but it is all absolutely in the air. It is just a string of assumptions without a particle of evidence at any point. You begin by assuming that the case which was stolen from the cloak room contained the missing platinum. Then, from that, you deduce that the case came from the yacht, and therefore the man who deposited it must be Bassett, and the other man must be a member of the crew. And you don’t even refer to the trivial circumstance that a box containing a man’s head was left in exchange.”

“I have already said,” Miller rejoined a little impatiently, “that we are letting the problem of the head rest for the moment, as we have nothing to go on. But it is evidently connected in some way with the stolen case, so we are following that up. If we can connect that with the platinum robbery and lay our hands on Bassett and Mr. ’X’, we shall soon know something more about that head. I don’t think your criticism is quite fair, Dr. Jervis. What do you say, Doctor?”

“I agree with you,” said Thorndyke, “that Jervis’s criticism overstates the case. Your scheme is admittedly hypothetical, and there is no direct evidence. So it may or may not be a true account of what happened. But I think the balance of probabilities is in favour of its being substantially true. You don’t know anything about any of these men?”

“No; you see they are only names, and probably wrong names.”
“You found no finger-prints on the address label of the ‘head case’?”

“None that we could identify. Probably only those of chance strangers.”

“And what has become of the yacht and the crew?”

“The yacht is still lying in Benfleet Creek. Bassett left her in charge of a local boat builder as there is no one on board and the crew have gone away. We got a search warrant and rummaged her thoroughly, but we didn’t find anything. So we sealed up the hatches and put on special padlocks and left the keys with the local police.”

“Do you know whom she belongs to?”

“She belongs to Bassett. He bought her from a man at Shoreham. And she is now supposed to be for sale; but, as the owner’s whereabouts are not known, of course, she can’t be sold. For practical purposes she is abandoned, but we are paying the boat builder for keeping an eye on her, pending the re-appearance of Mr. Bassett. Meanwhile we are keeping a look-out for that gentleman and Mr. ‘X,’ and for the appearance on the market of any platinum of uncertain origin. And that is about all that we can do until we get some fresh information.”

“I suppose it is,” said Thorndyke; “and, by the way, to return to the mysterious head; what has been done with it?”

“It has been buried in an air-tight case in Tower Hamlets Cemetery, with a stone to mark the spot in case it should be wanted. But we’ve got a stock of photographs of it which we have been circulating in the provinces to the various police stations. Perhaps you would like me to send you a set.”

“Thank you, Miller,” Thorndyke replied. “I should like a set to attach to the report of the inquest, which I have filed for reference.”

“One on the chance that, sooner or later, the inquiry may come into your hands?”

“Yes. There is always that possibility,” Thorndyke replied. And this brought the discussion to an end, at least so far as Miller was concerned.

VI. — MR. BRODRIBB’S DILEMMA

THE silence which fell after Thorndyke’s last rejoinder lasted for more than a minute. At length it was broken by Brodribb who, after profound meditation, launched a sort of broadcast question, addressed to no one in particular.

“Does anyone know anything about a certain Mr. Horatio Gimbler?”

“Police court solicitor?” inquired Miller.

“That is what I assumed,” replied Brodribb, “from his address, which seemed to be an unlikely one for a solicitor in general practice. Then you do, apparently, know him, at least by name.”

“Yes,” Miller admitted, “I have known him, more or less, for a good many years.”

“Then,” said Brodribb, “you can probably tell me whether you would consider him a particularly likely practitioner to have the conduct of a claim to a peerage.”

“A peerage!” gasped Miller, gazing at Brodribb in astonishment. “Holy smoke! No. I—certainly—should—NOT!” He paused for a few moments to recover from his amazement and then asked: “What sort of a claim is it, and who is the claimant?”

“The claimant is an American and, at present, I don’t know much about him. I’ll give you some of the particulars presently, but, first, I should like to hear what you know about Mr. Gimbler.”

Miller appeared to reflect rapidly, accompanying the process by the emission of voluminous clouds of smoke. At length he replied, cautiously:

“It is understood that what is said here is spoken in strict confidence.”

To this reasonable stipulation we all assented with one accord and Miller continued: “This fellow, Gimbler, is a rather remarkable person. He is a good lawyer, in a sense; at any rate, he has criminal law and procedure at his finger ends. He knows all the ropes—some that he oughtn’t to know quite so well. He is up to all the tricks and dodges of the professional crooks, and I should think that his acquaintance includes practically all the crooks that are on the lay. If we could only pump him, he would be a perfect mine of information. But we can’t. He’s as secret as the grave. The criminal class provide his living, and he makes it his business to study their interests.”

“I don’t see that you can complain of that,” said Brodribb. “It is a lawyer’s duty to consider the interests of his clients, no matter who they may be.”

“That’s perfectly true,” replied Miller, “in respect of the individual client; but it is not the duty even of a criminal lawyer to grease the wheels of crime, so to speak. However, we are speaking of the man. Well, I have told you what we know of him, and I may add that he is about the downiest bird that I am acquainted with and as slippery as an eel. That is what we know.”
Here Miller paused significantly with the air of a man who expects to be asked a question. Accordingly, Brodribb ventured to offer a suggestion.

"That is what you know. But I take it that you have certain opinions in addition to your actual knowledge?"

Miller nodded. "Yes," said he. "We are very much interested in Mr. Gimbler. Some of us have a feeling that there may possibly be something behind his legal practice. You know, in the practice of crime there is a fine opening for a clever and crooked brain. The professional crook, himself, is usually an unmitigated donkey, who makes all sorts of blunders in planning his jobs and carrying them out; and when you find the perfect ass doing a job that seems right outside his ordinary capabilities, you can't help wondering whether there may not be someone of a different calibre behind the scenes, pulling the strings."

"Ah!" said Brodribb. "Do I understand that you suspect this legal luminary of being the invisible operator of a sort of unlawful puppet show?"

"I would hardly use the word 'suspect,'" replied Miller. "But some of us—including myself—have entertained the idea. And not, mind you, without any show of reason. There was a certain occasion on which we really thought we had got our hands on him; but we hadn't. If he was guilty—I don't say that he was, mind you—but if he was, he slipped out of the net uncommonly neatly. It was a case of forgery; at least we thought it was. But, if it was, it was so good that the experts wouldn't swear to it, and the case wasn't clear enough to take into Court."

Mr. Brodribb pricked up his ears. "Forgery, you say; and a good forgery at that? You don't remember the particulars, I suppose? Because the question has a rather special interest for me."

"I only remember that it was a will case. The signature of the testator and the two witnesses were disputed, but, as all three were dead, the question had to be decided on the opinions of experts; and none of the experts were certain enough to swear that the signatures might not be genuine. So the will had to be accepted as a genuine document. I suppose I mustn't ask how the question interests you?"

"Well," said Brodribb, "we are speaking in confidence, and I don't know that the matter is one of any great secrecy. It concerns this peerage claim that I was speaking about. I have had a copy of the pleadings, and I see that the claimant relies on certain documents to prove the identity of a very doubtful person. If you would care to hear an outline of the case, I don't think there would be any harm in my giving you a few of the particulars. I really came here to talk the case over with Thorndyke."

"If the pleadings were drawn up by Mr. Gimbler," said Miller, "I should like very much to hear an outline of the case. And you can take it that I shall not breathe a word to any living soul."

"The pleadings," said Brodribb, "were drawn up by counsel, but, of course, on Gimbler's instructions. The facts, or alleged facts, must have been supplied by him. However, before I come to this part in the business, there are certain other matters to consider; so it will be better if I take the case as a whole and in the natural order of events."

"Let me begin by explaining that I am the Earl of Winsborough's man of business. My father and grandfather both acted in the same capacity for former holders of the title, so, naturally, all the relevant documents on the one side are in my keeping. I am also the executor of the present Earl's will, though there is not much in that, as practically everything is left to the heir."

"You speak of the present Earl," said Thorndyke. "But, if there is a present Earl, how comes it that a claim is being made to the earldom? Is an attempt being made to oust the present holder of the title?"

"I spoke of the present Earl," replied Brodribb, "because that is the legal position, and I, as his agent, am bound to accept it. But, as a matter of fact, I do not believe that there is a present Earl of Winsborough. I have no doubt that the Earl is dead. He went away on an exploring and big game hunting expedition to South America nearly five years ago, and has not been heard of for over four years. But, of course, in a legal sense, he is still alive and will remain alive until he is either proved or presumed to be dead. Hence these present proceedings; which began with a proposal on the part of the heir presumptive to apply to the Court for permission to presume death. The heir presumptive is a young man, a son of the Earl's first cousin, who has only recently come of age. As I had no doubt that he was the real heir presumptive—there being, in fact, no other possible claimant known to me—and very little doubt that the Earl was dead, I did not propose to contest the application; but, as the Earl's agent, I could not very well act for the applicant. Accordingly, I turned the business over to my friend, Marchmont, and intended only to watch the case in the interests of the estate. Then, suddenly, this new claimant appeared out of the blue; and his appearance has complicated the affair most infernally."

"You see the dilemma. Both claimants wish to apply for permission to presume death. But neither of them is the admitted heir presumptive, and consequently neither of them has the necessary locus standi to make the application."

"Couldn't they make a joint application?" Miller asked, "and fight out the claim afterwards?"

"I doubt whether that could be done," replied Brodribb, "or whether they would be prepared to act in concert. Each would probably be afraid of seeming to concede the claim to the other. The alternative plan would be for them to settle the question of heirship before applying for leave to presume death. But there is the difficulty that, until death is presumed, the present Earl is alive in a legal sense, and, that being so, the Court might reasonably hold that the question of heirship does not arise. And, as the Earl is a bachelor and there are no near relatives, there is no one else to make the application."
“In any event,” said I, “the new claimant’s case would have to be dealt with by a Committee of Privileges of the House of Lords. Isn’t that so?”

“I don’t think it is,” replied Brodribb. “This is not a case of reviving a dormant peerage. If the American’s case, as stated in the pleadings, is sound, he is unquestionably the heir presumptive.”

“What does his case amount to?” Thorndyke asked.

“Put in a nutshell,” replied Brodribb, “it amounts to this: The American gentleman, whose name is Christopher Pippet, is the grandson of a certain Josiah Pippet who was the keeper of a tavern somewhere in London. But there is a persistent tradition in the family that the said Josiah was living a double life under an assumed name, and that he was really the Earl of Winsborough. It is stated that he was in the habit of going away from his home and his usual places of resort and leaving no address. It is further stated that during these periodical absences—which often lasted for a month or two—he was actually in residence at Winsborough Castle; that, when Josiah was absent from home, the Earl was in residence at the Castle, and when Josiah was at the tavern, the Earl was absent from the Castle.”

“And did Josiah and the Earl die simultaneously and in the same place?” I inquired.

“No,” said Brodribb. “The double life was brought to an end by Josiah, who is said, after the death of his wife and the marriage of his sons and daughter, to have grown weary of it. He wound up the affair by a simulated death, a mock funeral and the burial of a dummy coffin weighted with lumps of lead, after which he went to the Castle and took up his residence there for good. That is the substance of the story.”

The Superintendent snorted contemptuously. “And you tell us, sir,” said he, “that this man, Gimbler, is actually going to spin that yarn in a court of law. Why, the thing’s grotesque—childish. He’d be howled out of Court.”

“I agree,” said Brodribb, “that it sounds wild enough. But it is not impossible. Few things are. It is just a question of what they can prove. According to the pleadings, there are certain passages in a diary of the late Josiah which prove incontestably that he and the Earl were one and the same person.”

“That diary,” said Miller, “will be worth a pretty careful examination, having regard to the circumstances that I mentioned.”

“Undoubtedly,” Brodribb agreed; “though it seems to me that it would be extremely difficult to interpolate passages in a diary. There is usually no space in which to put them.”

“Does the claimant propose to produce the dummy coffin with the lumps of lead in it?” I asked.

“Nothing has been said on that subject up to the present,” Brodribb answered. “It would certainly be highly relevant; but, of course, they couldn’t produce it without an exhumation order.”

“I think you can take it,” said Miller, “that they will leave that coffin severely alone—if you let them.”

“Probably you are right,” said Brodribb. “But the difficulty that confronts us at present is that it may be impossible to proceed with the case. When it comes on for hearing, the Court may refuse to consider the application until one of the applicants has established his locus standi as a person competent to make it; and it may refuse to hear evidence as to the claim of either party to be the heir on the grounds that, inasmuch as the Earl has been neither proved nor presumed to be dead, he must be presumed to be alive, and that, therefore, in accordance with the legal maxim, Nemo est heres viventis, neither of the applicants can be the heir.”

“That,” said Thorndyke, “is undoubtedly a possible contingency. But judges are eminently reasonable men and it is not the modern practice to favour legal hair-splittings. We may assume that the Court will not raise any difficulties that are not unavoidable; and this is a case which calls for some elasticity of procedure. For the difficulty which exists today might conceivably still exist fifty years hence; and, meanwhile, the title and the estates would be left derelict. What are the proceedings that are actually in contemplation, and who is making the first move?”

“The American claimant, Pippet, is making the first move. Gimbler has briefed Rufus McGonnell, K.C. as his leader with Montague Klein as junior. He is proposing to apply for permission to presume the death of the Earl. I am contesting this application and challenging his claim to be the heir presumptive. That, he thinks, will enable him to produce his evidence and argue his claim as an issue preliminary to and forming part of the main issue. But I doubt very much whether the Court will consent to hear any evidence or any arguments that are not directly relevant to the question of the probability of the Earl’s death. It is a very awkward situation. Pippet’s claim looks like a rather grotesque affair; and if he is depending on the entries in a diary, I shouldn’t think he has the ghost of a chance. Still, it ought to be settled one way or the other for the sake of young Giles Engleheart, the real heir presumptive, as I assume.”

“Why shouldn’t Engleheart proceed with his application?” said I.

“Because,” replied Brodribb, “the same difficulty would arise. The other claimant would challenge his competency to make the application. It is a ridiculous dilemma. There are two issues, and each of them requires the other to be settled before it can be decided. It is very difficult to know what to do.”

“The only thing that you can do,” said Thorndyke, “is what you seem to be doing; let things take their own course and wait upon events. Pippet is making the first move. Well, let him make it; and, if the Court won’t hear him, it will be time for you to consider what you will do next. Meanwhile, it would be wise for you to assume that the Court will allow him to
produce evidence of his competency to make the application. It is quite possible; and if you are supporting Mr. Engleheart's claim, you ought to be ready to contest the other claim."

"Yes," said Brodribb, "that is really what I came to talk to you about; and the first question is, do you know anything about these two counsel, McGonnell and Klein? I don't seem to remember either of them."

"You wouldn't," replied Thorne. "They are both almost exclusively criminal practitioners. But, in their own line, they are men of first class capabilities. You can take it that they will give you a run for your money if they get the chance, in spite of their being rather off their usual beat. Have you decided on your own counsel?"

"I have decided to secure your services, in any event. Would you be prepared to take the brief?"

"I will take it if you wish me to," replied Thorne, "but I think you would be better advised to employ Anstey. For this reason. If the case comes into court, it is possible that certain questions may arise on which you might wish me to give expert evidence. I think you would do well to let me keep an eye on the technical aspects of the case and let Anstey do the actual court work."

Brodribb looked sharply at Thorne but made no immediate reply; and, in the ensuing silence, a low chuckle was heard to proceed from the Superintendent.

"I like the delicate way the Doctor puts it," said he, by way of explaining the chuckle. "The technical aspects of this case will call for a good deal of watching; and I need not tell you, Mr. Brodribb, that, if the Doctor's eye is on them, there won't be much that will pass unobserved. In fact, I shouldn't be surprised to learn that the Doctor has got one or two of them in his eye already."

"Neither should I," said Brodribb. "Nothing surprises me where Thorne is concerned. At any rate I shall act on your advice, Thorne. One couldn't ask for a better counsel that Anstey; and it is not necessary for me to stipulate that you go over the pleadings with him and put him up to any possible dodges on the part of our friend Mr. Gimbler. Remember that I am retaining you, and that you do as you please about pleading in court."

"I understand," said Thorne. "You will keep Anstey and me fully instructed, and I shall give the case the most careful consideration in regard to any contingencies that may arise. As Miller has hinted, there are a good many possibilities, especially if Mr. Gimbler should think it necessary to throw a little extra weight into the balance of probabilities."

"Very well," said Brodribb, "then we will leave it at that. If you have the case in hand, I shall feel that I can go ahead in confidence; and I only hope that McGonnell will be able to persuade the Court to hear the evidence on his client's claim. It would be a blessed thing if we could get that question settled so that we could go straight ahead with the other question—the presumption of death. I am getting a little worried by the more or less derelict condition of the Winsborough estates and it would be a relief to see a young man fairly settled in possession."

"You are rather taking it for granted that the American's claim will fall through," I remarked.

"So I am," he admitted. "But you must allow that it does sound like a cock and bull story, and none too straightforward at that. However, we shall see. If I get nothing more out of it, I have had an extremely pleasant evening and a devilish good bottle of wine, and now it's about time that I took myself off and let you get to bed."

With this he rose and shook hands; and the Superintendent, taking the rather broad hint conveyed in the concluding sentence, rose too, and the pair took their departure together.

VII. — THE FINAL PREPARATIONS

MOST of us have wit enough to be wise after the event, and a few of us have enough to be wise before. Thorne was one of these few, and I, alas! was not. I am speaking in generalities, but I am thinking of a particular case—the Winsborough Peerage Claim. That case I could not bring myself to take seriously. The story appeared to me, as it had appeared to Miller, merely grotesque. Its improbabilities were so outrageous that I could not entertain it as a problem for serious consideration. And then, such as it was, it was a purely legal case, completely outside our ordinary line of practice. At least, that is how it appeared to me.

Now, Thorne made no such mistake. Naturally, he could not foresee developments in detail. But subsequent events showed that he had foreseen, and very carefully considered, all the possible contingencies, so that when they arose they found him prepared. And he also saw clearly that the case might turn out to be very much in our line.

As I was unaware of his views—Thorne being the most uncommunicative man whom I have ever known—I looked with some surprise on the obvious interest that he took in the case. So great was that interest that he actually adopted the extraordinary habit of spending week-ends at Winsborough Castle. What he did there I was unable to make out. I heard rumours of his having gone over the butler's accounts and some of the old household books and papers with Brodribb, which seemed a not unreasonable proceeding, though more in Brodribb's line than ours. But most of his time he apparently spent rambling about the country with a note book, a small camera and a set of six inch ordnance maps. And he evidently covered a surprising amount of ground, as I could see by the numbers of photographs that he brought home, and which he either developed himself or handed to our invaluable laboratory assistant, Polton, for development. Over those photographs, when they were printed, I pored with a feeling of stupefaction. They included churches, both inside and out,
windmills, inns, churchyards, and quaint village streets; all very interesting and many of them charming. But what had they to do with the peerage case? I was completely mystified.

On one occasion I accompanied him, and a very pleasant jaunt it was. The Castle was rather a delusion, though there were some mediaeval ruins of a castellated building; but the mansion was a pleasant, homely brick house of the late seventeenth century in the style of Wren’s country houses. But our ramblings about the house and the adjoining gardens and park yielded no information—excepting as to the mental condition of a former proprietor, as suggested by the costly and idiotic additions that he had made to the mansion.

These were, I must admit, perfectly astounding. On a low hill in the park near to the house was a stupendous brick tower—a regular Tower of Babel—from the summit of which we could look across the sea to the white cliffs of the coast of France. It stood quite alone and appeared to have no purpose beyond the view from the top, but the cost of its construction must have been enormous. But “George’s Folly,” to give the tower its appropriate local name, was not the most astonishing of these works. When we came down from the roof, Thorndyke produced a bunch of large keys, which he had borrowed from the butler, and with one of them opened a door in the basement. Then he switched on a portable electric lamp, by the light of which I perceived a flight of stone steps apparently descending into the bowels of the earth. Picking our way down these, we reached an archway opening into a roony brick-walled passage, and making our way along this for fully a hundred yards, at length reached another door which, being unlocked, gave entrance to a large room, lighted by a brick shaft that opened on the surface. A moth-eaten carpet still covered the floor and the mouldering furniture remained as it had been left, presumably, by the eccentric builder.

It was a strange and desolate-looking apartment, and the final touch of desolation was given by a multitude of bats which hung, head downwards, from the ceiling ornaments or fluttered silently in circles in the dark corners or in the dim light under the opening of the shaft.

“This is a weird place,” Thorndyke,” I exclaimed. “What do you think could have been the object of building it?”

“So far as I know,” he replied, “there was no particular object. It was the noble lord’s hobby to build towers and underground apartments. This is not the only one. The door at the other end of the room opens into another passage which leads to several other large rooms. We may as well inspect them.”

We did so. In all, there were five large rooms connected by several hundred yards of passages, and three or four small rooms, all lighted by shafts and all still containing their original furniture and fittings.

“But,” I exclaimed, as we threaded our way along the interminable passages back to the tower, “this man must have been a stark lunatic.”

“He was certainly highly eccentric,” said Thorndyke, “though we must make some allowance for an idle rich man. But you see the significance of this. Supposing that the peerage claim were to be tried by a jury, and supposing that jury were brought here and shown these rooms and passages. Do you think Mr. Pippet’s story would appear to them so particularly incredible? Don’t you think that they would say that a man who could busy himself in works of this kind would be capable of any folly or eccentricity?”

“I think it very likely,” I admitted; “but for my own part, I must say that I cannot imagine his lordship as landlord of a London pub. Playing the fool in your own park is a slightly different occupation from drawing pints of beer for thirsty labourers. I wonder if the Kenningtonian Gimbler knows about these works of imagination.”

“He does,” said Thorndyke. “A description of them was included in the ‘material facts’ set forth in the pleadings. And he has examined them personally. He applied to Brodribb for permission to view the mansion, and, naturally, Brodribb gave it.”

“I don’t see why ‘naturally.’ He was not called on to assist the claim which he was opposing.”

“He took the view—correctly, I think—that he ought not to hinder, in any way, the ascertainment of the material facts; facts, you must remember, that he does not dispute. And, really, he can afford to deal with the American claimant in a generous and sporting spirit. Mere evidence of eccentricity on the part of the late Earl will not do more than establish a bare possibility. A positive case has to be made out. The burden of proof is on Cousin Jonathan.”

“That is, if the case ever comes into court. I doubt if, it will.”

“Then you need doubt no longer,” said he. “The case is down for hearing next week.”

“The deuce it is!” I exclaimed. “Do you know what form the proceedings will take?”

“It is to be heard in the Probate Court. Ostensibly, it is an application by Christopher Pippet for permission to presume the death of Percy Engleheart, sixth Earl of Winsborough. Brodribb, acting in virtue of a power of attorney, opposes the application and challenges the locus standi of the applicant. Of course, we cannot say how far the case will be allowed to proceed; but I take it that it is proposed to allow Pippet to produce evidence establishing his locus standi as a person having such an interest in the estate as would entitle him to make the application. That is to say, he will be allowed to present the case on which he bases his claim to be the heir presumptive to the Earl. I certainly hope he will. There are all sorts of interesting possibilities in the case.”

“Interesting, no doubt, in a legal sense; but I don’t see where we come in.”
“Perhaps we shan’t come in at all,” he replied with a faint smile. “But I rather suspect that we shall. The special interest of the case to me lies in the fact that Mr. Pippet’s counsel will be instructed by Mr. Horatio Gimbler.”

Something in Thordyke’s manner, as he made this last statement, seemed to suggest some special significance. But what that significance might be I was unable to guess, beyond the fact that the said Gimbler, being neither an infant nor a man of irreproachable reputation, might adopt some slightly irregular tactics. But I suspected that there was something more definite than this in my colleague’s mind. However, the conversation went no farther on this occasion, and I was left to turn the problem over at my leisure.

Thordyke’s announcement had come to me as a complete surprise, for I had never believed that this fantastic case would actually find its way into the courts. But the case furnished a whole series of surprises, of which the first was administered on the day when the proceedings opened, and was connected with the personality and behaviour of the claimant. I had assumed that Mr. Christopher Pippet was an American adventurer who had come over to tell this cock and bull story in the hope of getting possession of a valuable English estate. Probably the idea arose—not quite unreasonably—from the fact that the claimant made his appearance under the guidance of a slightly shady police-court solicitor. In my mind I had written him down an impostor, and formed a picture of a hustling, brazen vulgarian, suitable to the part and appropriate to his company. The reality was surprisingly different.

On the morning of the hearing, Brodribb appeared at our chambers accompanied by his clients, Mr. Giles Engleheart and his mother, to whom he presented us in his old-fashioned, courtly manner.

“I thought it best,” he explained, “that you should not meet in court as strangers. I have introduced Anstey already, and I think he is going to join us here. So we shall be able to make our descent on the Halls of Justice in a united body and thereby impress the opposition.”

“I suspect,” said Mrs. Engleheart, “that the opposition is not so easily impressed. But my boy and I will feel some encouragement if we arrive escorted by our champions. Have we plenty of time?” she added, glancing a little anxiously at her watch.

“We have,” replied Brodribb, “if Anstey doesn’t keep us waiting. Ah! here he is”; and, as a quick footstep was heard on the stair, he strode over to the door and threw it open, when our leading counsel entered with an exaggerated pretence of haste, holding his watch in his hand.

“Come,” he exclaimed, “this won’t do. We ought to be starting.”

“But,” said Mrs. Engleheart, “we have been waiting for you, Mr. Anstey.”

“Exactly,” he retorted, “that is what I meant.” Then, as the lady, unaccustomed to his whimsicalities, looked at him in some perplexity, he continued briskly: “It is always desirable to be in court early on the opening day. Are we all ready? Then let us go forth and make our way to the scene of conflict. But not too much like a procession. And I want to have a few words with you, Thordyke, en route.”

With this, he took Thordyke’s arm and led the way out. Brodribb followed with Mrs. Engleheart and I brought up the rear with her son.

As we walked at a leisurely pace—set by Anstey—across the precincts by way of the Cloisters and Pump Court, I took the opportunity to consider my companion as to his appearance and personality in general; and in all respects I was very favourably impressed, as I had been by the gentle dignity of his mother. Giles Engleheart was not only a fine, strapping, handsome young man and very unmistakably a gentleman, but—like his mother—he conveyed the impression of a kindly, generous and amiable disposition. But, unlike his mother, he seemed disposed to regard the legal proceedings as a gigantic joke.

“Well, Mr. Engleheart,” I said, by way of making conversation, “I think we shall make pretty short work of your American rival.”

“Do you?” said he. “I don’t think Mr. Brodribb is so confident; and for my part, I rather hope you won’t make it too short. He ought to have a run for his money—and he may give us a run for ours. After all, you know, sir, his statements are pretty definite, and we’ve no right to assume that he is a liar. And, if he isn’t, his statements are probably true. And, if they are true, we’ve got to imagine George Augustus, fourth Earl of Winsborough, with his sleeves rolled up and a black linen apron on his tummy, pulling at the handles of the beer engine in a London pub. It’s a quaint idea. I’m all agog to hear his counsel tell the story and trot out his evidence.”

“For my part,” said I, “I can’t bring myself to view the claim as anything more than a gross and crude imposture, and I shouldn’t be surprised if the case ended in a charge of perjury.”

“Do you mean against Mr. Pippet?” he asked.

“I don’t know anything about Pippet,” I replied, “but I look with considerable suspicion on his solicitor.”

Engleheart laughed cheerfully. “You are like Mr. Brodribb,” said he. “The very mention of the name of Gimbler makes him spit—metaphorically—whereas I never hear it without thinking of Jabberwocky and the Slithy Toves.”

“What is the connexion?” I asked, rather foolishly. “Don’t you remember, sir?” said he. “The Slithy Toves ‘did gyre and gimble in the wabe.’ Therefore they were gimblers. Q.E.D.”
“Perhaps,” said I, laughing at his schoolboy joke, “Mr. Brodribb has noticed the connexion and suspects our friend of an intention to ‘gyre and gimble’ in a legal sense. And perhaps he is right. Time will show. But here we are at what Anstey calls ‘the scene of conflict.’”

Entering the great doorway, we followed our friends along the rather gloomy passages until Anstey pushed open a heavy swing door and stood, holding it open while Mrs. Engleheart and the rest of us passed through. Then he and Thorndyke and I retired to the robing room and hastily donned our wigs and gowns.

When we returned to the court, the clock showed that there was still a quarter of an hour to spare, and, with the exception of one or two reporters, a few spectators in the gallery, and a stray barrister, we had the place to ourselves. But not for long. Even as the quarter was chiming, the heavy and noisy swing doors were pushed open and a party of strangers entered.

There was no doubt as to who they were, for, though I had not recognized the name of Gimbler, I recognized the man, having seen him on several occasions at the Central Criminal Court; a big, burly man with a large, rather fat face, and small, furtive eyes; a sly-looking fellow, I decided, and forthwith wrote him down a knave. But the other members of the party gave me quite a little surprise. There were three of them—two women and a man; and the outstanding fact which instantly impressed me was their imposing appearance. It was not only that they were all well above the average of good looks, though that was a fact worth noting; but they all had the unmistakeable appearance and bearing of gentlefolk.

Of course, my surprise was quite unreasonable, being due to an entirely gratuitous pre-conceived idea. But still more unreasonable was the instant change in my state of mind in regard to the claim. Looking at the claimant—as I assumed him to be, seeing that there was no other man—I found myself talking a revised view of the case. Clearly, this fine, upstanding gentleman with his clear-cut, strong, reposeful face, was an entirely different creature from the raffish cosmopolitan adventurer of my imagination, who had come over to “tell the tale” and try to snatch a stray fortune.

The two parties—our own and “the opposition”—took an undissembled interest in one another, and Mr. Giles conveyed his sentiments to me in an undertone.

“Good-looking crowd, sir, aren’t they? If that young lady is a fair sample of an American girl, I am going to emigrate if we lose the case.”

“And if you don’t lose the case?” I asked.

“Well, sir,” he replied, smilingly evading the question, “I shall be able to pay my lawyer, which will be pleasant for us both.”

Here my attention was diverted by what looked like a difference between Mr. Gimbler and his client. The solicitor appeared distinctly annoyed and I heard him say, almost angrily:

“I do certainly object. It would be entirely out of order.”

“No doubt you are right, as a lawyer,” was the calm reply; “but I am not a lawyer”; and, with this, he turned away from his legal adviser, and, to that gentleman’s evident dismay, began to move across in our direction. As he was obviously bearing down on us with intent, we all, excepting Mrs. Engleheart, stood up, and I could hear Brodribb muttering under his breath.

Having saluted us with a comprehensive bow, the stranger addressed himself to our old friend.

“I believe you are Mr. Brodribb.”

“At your service, sir,” was the reply, accompanied by a bow of such extreme stiffness that I seemed to hear him creak.

“I understand,” said Mr. Pippet, “that I am committing a gross breach of legal etiquette. But etiquette is made for man, especially for European man, and I am venturing to take an aboriginal view of the matter. Would it appear particularly shocking if I were to ask you to do me the honour of presenting me to your clients?”

“I think,” replied Brodribb, recovering himself somewhat, “that I should survive the shock, and my clients, I am sure, will be delighted to make your acquaintance.”

With this he proceeded, with the air of a Gold-Stick-in-Waiting approaching a royal personage, to present the American to Mrs. Engleheart.

“This is most kind of you, Mr. Pippet,” the lady exclaimed with a gracious smile. “Mr. Brodribb is quite right. I am delighted to make your acquaintance, and so, I am sure, will my son be. May I introduce him?”

Here Giles stepped forward and the two men shook hands heartily.

“It is very good of you, sir, to make this friendly move,” said he, “seeing that our presence here is not exactly helpful to you.”

“But,” said Mr. Pippet, “that is just my point. All this talk of fights and battles and contests that I have been hearing from my solicitor makes me tired. I am not here to fight anybody, and neither, I take it, are you. There are certain matters of alleged fact that I am submitting for the consideration and judgment of the court. I don’t know whether they are true or not. That is for the court to find out. My lawyers will argue that they are, and yours will argue that they are not. Let us leave it to them. There’s no need for us to have any unfriendly feeling about it. Isn’t that so, Mr. Brodribb?”
“There is no reason,” Brodribb replied cautiously, “why opposing litigants should not be personally friendly—without prejudice, of course. But you are not forgetting that these proceedings involve certain consequences. If the decision is in your favour, you obtain possession of a title of nobility and property of great value, which Mr. Engleheart thereby loses; and vice versa.”

“Not quite vice versa, Mr. Brodribb,” Mr. Pippet corrected. “The cases are not identical. If the court decides that my respected grandfather was not the Earl of Winsborough, Mr. Engleheart steps into the late Earl’s shoes as soon as the death has been presumed, and I retire out of the picture. But, if it is decided that my grandfather was the Earl, then, as I have no male descendants, Mr. Engleheart has only to wait for those shoes until I step out of them.”

I could see that this statement made a considerable impression on both Mr. Brodribb and Mrs. Engleheart; and it did certainly ease the situation materially from their point of view. Brodribb, however, made no comment, and it fell to Mrs. Engleheart to make the acknowledgments.

“Thank you, Mr. Pippet,” said she, “for letting us know the position. I won’t pretend that I am not very much relieved to know that it is only a question of postponement for my son. But, whichever way the decision goes, I hope it will be a long time before a vacancy is declared in those shoes. But you haven’t completed the introductions. Is that very charming girl your daughter?”

“She is, Madam,” was the reply. “My only child; and, with the exception of my sister, who is with her, my only kin in the world—unless it should transpire that I have the honour to be related to you and your son.”

“Well,” said Mrs. Engleheart, “if your kinsfolk are not very numerous, you have reason to be proud of them, as I dare say you are. Do you think they would care to know us?”

“I have their assurance that they would like very much to make your acquaintance,” Mr. Pippet replied; on which Mrs. Engleheart rose and was requesting to be taken to them when they were seen to be moving in our direction, apparently in response to some subtle telegraphic signals on the part of Mr. Pippet. As they approached, I looked them over critically and had to admit that their appearance was at least equal to their pretensions. The elder lady—like the late Queen Victoria—combined a markedly short stature with a most unmistakeable “presence,” aided not a little by the strong, resolute face and a somewhat out-size Roman nose; while the younger was a tall, handsome girl, noticeably like her father and her aunt both in features and in the impresssion of dignity and character which she conveyed. And both ladies had that un-selfconscious ease of manner that is usually associated with the word “breeding.”

The introductions were necessarily hurried, for the time for the opening of the proceedings was drawing nigh. The clerk had taken his seat at his desk, the reporters were in their places, the ushers had taken up their posts, a few more spectators were drifting into the seats in the public gallery and the counsel had established themselves in their respective places and were now turning over the pages of their briefs—excepting Thorndyke and myself, who had no briefs but were present merely in a watching capacity. Mr. Pippet returned to the place where his solicitor sat glumly by the solicitor’s table, but the two ladies remained with our party, Miss Pippet sitting by Mrs. Engleheart and the young lady (who, I gathered, bore the picturesque old English name of Jenifer) by Mr. Giles.

They had hardly settled themselves when the judge entered and took his seat on the bench. Having laid some papers on his desk, he leaned back in his seat and ran his eye with undissembled interest over the parties to the proceedings.

“Now,” Miss Jenifer remarked in a low tone to her companion, “we are going to hear whether we are cousins or only friends.”

“Or both,” added Giles.

“Of course,” said she. “That was what I meant. But we mustn’t talk. The play is going to begin; and that nice-looking old gentleman in that quaint wig has got his eye on us.”

Thereupon she subsided into silence, and Mr. McGonnell proceeded to open the case.

VIII. — THE OPENING OF THE CASE

“THIS, my lord,” said Mr. McGonnell, rising and turning an ingratiating eye on the bench, “is an application by Mr. Christopher Josiah Pippet, a citizen of the United States, for permission to presume the death of Percy Engleheart, sixth Earl of Winsborough, but there are certain peculiar and unusual features in the case. The application is opposed by the representatives of the Earl, who challenge the locus standi of the applicant on the ground that he is, as they allege, a stranger having no legitimate interest or concern in the estate of the said Earl. The applicant, on the other hand, affirms, and is prepared to prove, that he is the direct descendant of the fourth Earl of Winsborough, and that he is, in effect, the heir presumptive to the earldom and the settled estate.

“Accordingly, the applicant petitions to be allowed to produce evidence of his title to the estate and to obtain a decision on that issue as an issue antecedent to the application for permission to presume death.”

The judge looked keenly at the counsel during the making of this statement and then he turned a slightly curious glance on Mr. Pippet and from him to his solicitor.

“I must be perfectly clear,” said he, “as to the scope of this further application. There appears to be a claim to a title and
to the settled property associated with it. Now, I need not remind you that claims in respect of titles of honour lie within the jurisdiction of the House of Lords through a Committee of Privileges.”

“We realize that, my lord,” said Mr. McGonnell.

“But we are not seeking a final and conclusive decision in this court on the question whether the applicant, Christopher Pippet, is or is not entitled to succeed the present tenant, Earl Percy, but merely whether he has such an interest in the estate as will give him the locus standi necessary to entitle him to make an application to presume the death of the said Earl Percy.”

“That application,” said the judge, “implies certain further proceedings, including, perhaps, a petition to the House of Lords.”

“That is so, my lord,” counsel agreed. “But we are in a difficulty, and we ask your lordship to exercise a discretion in the matter of procedure. Our difficulty is this: There is reason to believe that Earl Percy is dead; but no direct evidence of his death exists. Consequently, he is, in a legal sense, a living person; and, since no one can be the heir of a living person, it is not possible for Mr. Pippet to initiate proceedings in the House of Lords. Before any such proceedings could become possible it would be necessary for the death of Earl Percy to be either proved or presumed.

“Therefore, the applicant applies for the permission of the court to presume the death. But his right to make this application is contested on the grounds that I have mentioned. Thus he is in this dilemma: He cannot prove his claim until death is presumed, and he cannot apply for permission to presume death until he has proved his claim. But this dilemma, it is submitted, is contrary to the interests of justice; and we accordingly ask your lordship to hear such evidence as shall establish the applicant’s position as a person having such an interest in the estate as renders him competent to make the application.”

“It is not perfectly clear,” said the judge, “that the fact of his having this belief in his title to succeed does not constitute him an interested party to that extent. But we need not go into that, as the issue is not raised. What is the position of the Earl’s representatives in regard to the heir presumptive?”

“Our position, my lord,” said Anstey, rising as the other counsel sat down, “is that the heir presumptive is Mr. Giles Engleheart, the only son of the late Charles Engleheart, Esquire, who was the Earl’s first cousin. Apart from Mr. Pippet’s claim, there is no doubt whatever about Mr. Engleheart’s position. It is not contested. And I may say, if it is permissible, that we are in full agreement with what my learned friend has just said with regard to the applicant’s claim. Since the question has been raised, we submit that it is desirable that the applicant be permitted to produce such evidence as may establish the existence or non-existence of a prima facie case. We agree with my learned friend that the present impasse is against the interests of justice.”

“Yes,” said the judge, “there ought certainly to be some escape from the dilemma which the learned counsel for the applicant has mentioned. The actual claim will, no doubt, have to be decided in another place; but there is no objection to such provisional proof as may be necessary for the purposes of the present application. I am therefore prepared to hear the evidence in support of the applicant’s claim.”

He looked at Mr. McGonnell, who thereupon rose and proceeded to open the preliminary case, by a recital of the alleged facts in much the same terms as the sketch which I had heard from Mr. Brodribb, but in somewhat greater detail; and, as I listened, with my eyes on the judge’s face, to the unfolding of that incredible and ridiculous story, I was once more astonished that anyone should have the confidence to tell it seriously in a court of law. How it impressed the judge it was impossible to tell. Judges, as a class, are not easily surprised, nor are they addicted to giving facial expression to their emotions; and the present specimen was a particularly wooden-faced old gentleman. All that I could gather from my observations of his countenance was that he appeared to be listening with close attention and placid interest.

“That, my lord,” said Mr. McGonnell, when he came to the end of the “story” with a description of the sham funeral, “is an outline of what are alleged to be the facts of the applicant’s case; and it would be useless to deny that, taken at its face value, the whole story appears wildly incredible. If it rested only on the family tradition, no one would entertain it for a moment. But it does not rest only on that tradition. It is supported by a considerable body of evidence, including certain very significant entries in a diary kept by Josiah Pippet and certain facts relating to the Earl, George Augustus, who, it is claimed, was the alter ego of the said Josiah. Perhaps it will be well to glance at the latter first.

“The thesis on which Mr. Christopher Pippet’s claim is based is that the said Earl, George Augustus, was in the habit of leaving his mansion from time to time and going to ‘The Fox and Grapes’ Inn, where he assumed the name and style of Josiah Pippet and lived the life and carried out the activities of an inn-keeper. Now, it will naturally be asked, ‘Is it credible that any man in the possession of his senses would conduct himself in this manner?’ And the answer obviously is that it is not. But here the question arises, ‘Was the said Earl in the possession of his senses?’ And the answer to that is that, apparently, he was not. At any rate, his conduct in general was so strange, so unusual and erratic, that it would be difficult to name any eccentricity of which he might not have been capable. Let us see what manner of man this was.

“In the first place, he appears to have been a man who had no fixed habits of life. He would live for months at his mansion, busying himself in certain works which we shall consider presently, and then, apparently without notice, he would disappear, leaving no clue to his whereabouts. He would stay away from home for months—in some cases for more than a year—and then would suddenly make his appearance at the mansion, unannounced and unexpected, giving no account of himself or his doings during his absence. And it is worth notice that his alleged double, Josiah Pippet, had
similar peculiarities of behaviour. He also was in the habit of making mysterious disappearances and leaving no clue to his whereabouts.

"Is it ascertained," the judge asked, "that the disappearances of the two men coincided in time?"

"That is what is alleged, my lord," was the reply. "Naturally, after the many years that have elapsed, it is difficult to recover the dates as exactly as might be desired."

"No doubt," his lordship agreed; "but the point is highly material."

"Certainly, my lord," counsel admitted. "Its importance has been fully realized and the point has been carefully examined. Such evidence as has been available goes to prove that the disappearances synchronized.

"But these strange disappearances are not the only, or even the most striking evidences of the Earl’s eccentricity. Still more suggestive of an unbalanced mind is the way in which he occupied himself in the intervals of those disappearances, when he was in residence at the mansion. Nothing in the traditional story which I have recited is more incredible than the history of his doings when he was at home. For then, it appears, he was in the habit of assembling an army of workmen, and, at enormous expense, employing them in carrying out works on the most gigantic scale and of the most preposterous character. In one part of his grounds, he set up an immense and lofty tower, with no ascertainable purpose except the view from the summit. From the base of this tower, a flight of steps was constructed leading down into the bowels of the earth, and communicating with a great range of subterranean passages of an aggregate length of close upon a mile. Connected with these passages were several large subterranean rooms, lighted from the surface by shafts and elaborately furnished. No reason is known for the construction of these rooms, though it appears that the Earl was accustomed, from time to time, to retire to them with a stock of provisions and pass a few days underground, hidden from the sight of men. These strange burrows and the great tower are still in existence and will be described in detail by a witness who, by the courtesy of the Earl’s representatives, was enabled to make a thorough examination of them. But the slight description of them which I have given is sufficient to demonstrate that the Earl George Augustus was a man who, if not actually insane, was so strange and erratic in his behaviour that there is hardly any eccentricity of which he might not have been capable. The objection, therefore, to the traditional story, that it postulates an unbelievable degree of eccentricity in the Earl George Augustus, has no weight; since the said Earl did, in fact, give evidence of an unbelievable degree of eccentricity.

"I will say no more on the subject of this strange man’s personality, though further details of his peculiarities will be given in evidence. But, before finishing with him, it will be material to note the salient facts of his life. George Augustus, fourth Earl of Winsborough, was born on the 9th of August in the year 1794 and he died unmarried in 1871, aged 77. He had no brothers. He was succeeded by his cousin, Francis Engleheart, who died in 1893 and was succeeded by his only son—and only child—then twenty-six years of age, the present Earl Percy.

"We now pass to the alleged double of the Earl George Augustus, Josiah Pippet. Of his personal character we have less direct information, but, on the other hand, we have an invaluable and unimpeachable source of evidence in a diary which he kept for many years, and up to the date of his death. From this, we, at least, gather one highly suggestive fact; that he, like the Earl, was in the habit of disappearing at intervals from his home and from his usual places of resort, of staying away for months at a time, and on two occasions for over a year, and, so far as we are able to discover, leaving no clue as to the place to which he had gone or where he was living.

"When I say that he left no clue to his whereabouts, I mean that he gave no information to his wife or family. Actually, the diary furnishes quite a considerable number of clues; and it is a very striking fact that these clues all refer to the same locality, and that the locality referred to happens to be the very one in which Winsborough Castle is situated. But not only is the locality referred to; there are actual references to the Castle itself, and in such terms as to leave no doubt that the writer was, at the time, in residence there. As the diary will be put in evidence, I need not occupy the time of the court with quotations at this stage, but will proceed to the few but important facts that are known respecting Josiah Pippet.

"The first fact that I shall mention—and a very striking and suggestive fact it is—is that, although the date of Josiah’s birth is known, no entry recording it appears in any known register. Exhaustive search has been made at Somerset House and elsewhere, but, so far as can be discovered, no record whatever exists of this man’s birth. He seems to have dropped from the skies.

"But, as I have said, the date of his birth is known, for it is stated with great exactness on the vault in which his coffin was deposited. Above the entrance to that vault is a marble tablet on which is carved this brief but significant inscription: JOSIAH PIPPET, died the 12th day of October 1843, aged 49 years, 2 months and 3 days."

"Now here is a very exact, though rather roundabout statement, from which we can compute the very day of his birth. And what was that day? A simple calculation shows that it was the 9th of August 1794—the very same day on which George Augustus, Fourth Earl of Winsborough, was born!"

"If this is a coincidence, it is a most amazing one. The Earl and his alleged double were born on the same day. And not only that. The birth of the double is unrecorded. There is no evidence that it ever took place. Which is precisely what we might expect in the case of a double. The birth of the Earl duly appears in the register at Somerset House; and I submit that it is a reasonable inference that that entry records the birth, not only of George Augustus Engleheart, but also of Josiah Pippet. That those two men were, in fact, one and the same person; or, in other words, that Josiah Pippet was a purely imaginary and fictitious person."
“But the mysterious circumstances connected with the birth of these two persons—or these two aspects of the same person—are repeated in connexion with their deaths. Just as only one of them is known, and can be proved, to have been born, so only one of them can be proved to have died. It is true that, in the case of Josiah, there was a funeral and a coffin which was solemnly interred. But there was a current belief that the funeral was a sham and that the coffin contained no human remains. And that belief is supported by the fact that there was no medical certificate. The death certificate was signed only by ‘Walter Pippet, the son of the alleged deceased, as was possible in those days, before the passing of the Medical Act of 1858. There is nothing to show that the alleged deceased was attended by any medical practitioner or that there was anything to prevent the sham funeral from taking place with the collusion of the said Walter Pippet. The circumstances of the death, I repeat, like those of the birth, are fully compatible with the belief that there were not two persons at all, but only one person enacting two alternating parts. In other words, that Josiah Pippet was a mythical personage, like John Doe, created for a specific purpose.

“Nevertheless, when we come to the matter of the applicant’s ancestry and descent, we must treat the said Josiah as a real person, since he is the applicant’s visible ancestor. And he has undeniably the qualities of a real person inasmuch as, in the character of Josiah Pippet, he married and had children. In the year 1822, in the church of St. Helen’s, Bishopsgate, he was married to Martha Bagshaw, spinster, he being then 28 years of age, and, according to the register, following the occupation of a ship’s steward. The exact date at which he became landlord of the ‘Fox and Grapes’ is not certain, but he is so described in the register where the birth of his eldest child is recorded.

“There were three children of this marriage; Walter, the eldest, born in 1824, Frederick William, born in 1826 and Susan, born in 1832. Susan married and died in 1897. Walter carried on the ‘Fox and Grapes’ after his father’s real or fictitious death, and died unmarried in 1865. Frederick William took to a sea-faring life and eventually settled, in the year 1853, at the age of 27, in the United States, in the city of Philadelphia, Pennsylvania. There he began business by opening a small shop, which grew by degrees into a large and important department store. In 1868 he married Miss Elizabeth Watson, the daughter of a well-to-do merchant of Philadelphia, by whom he had two children, a son, Christopher Josiah, the present applicant, and a daughter Arminella. He lost his wife in 1891, and he died in 1905, leaving the bulk of his large fortune to his daughter and the residue together with the business to his son; who carried on the concern until 1921, when, having made a further considerable fortune, he sold out and retired. It was then that, for the first time, he began seriously to consider raising the claim to what he believes—justly, as I submit—to be his legitimate heritage.

“Before proceeding to call witnesses, I venture, my lord, to recapitulate briefly the points of the case which favour the belief that Josiah Pippet and the Earl George Augustus, Fourth Earl of Winsborough, were one and the same person.

“First, that the said Earl was a man of such wildly eccentric habits and conduct that he might credibly have behaved in the manner alleged.

“That his habit of absenting himself from home for long periods and disappearing from his known places of resort, would have rendered the alleged impersonation easily possible.

“That the man called Josiah Pippet was in the same way addicted to absences and disappearances.

“That the said Josiah is reported to have claimed to be the Earl.

“That, whereas both these persons were born on the same day, there is evidence of the birth of one only.

“That, in like manner, there is evidence of the death of only one of them, the circumstances being such as to support the rumour which was current that the coffin which was interred contained no corpse.

“Those, my lord, are the facts on which the applicant’s claim is based; and I submit that if they can be proved—as they will be by the testimony of the witnesses whom I shall call—they constitute a case sufficiently convincing for the purpose of this application.”

Here Mr. McGonnell paused and inspected his brief while the judge shifted his position in his chair and the usher pronounced the name of Christopher Josiah Pippet. Thereupon Mr. Pippet moved across to the witness-box, and, having been sworn, gave his name and the usual particulars. Then his counsel proceeded to open the examination in chief.

IX. — THE EVIDENCE OF CHRISTOPER J. PIPPET

“CAN you remember, Mr. Pippet,” the counsel asked, “when you first became aware that you were possibly the direct descendant of the Earl of Winsborough?”

“No, sir, I cannot,” was the reply. “It must have been when I was quite a small boy.”

“From whom did you receive the information?”

“From my father, Frederick William Pippet.”

“Did he refer to the matter on more than one occasion?”

“Yes; on a great many occasions. It was rather a favourite subject with him.”

“Did you gather that he believed in the truth of the tradition?”

“I didn’t have to gather,” replied the witness, with a dry smile. “He said in perfectly unmistakable terms that he regarded
it as pure bunkum."

"Do you know what reasons he had for taking that view?"

"There were several reasons. In the first place, he didn’t care a dime whether it was true or not. He was a prosperous American citizen, and that was good enough for him. But I think his beliefs were influenced by the character and personality of his father, Josiah Pippet. Josiah was a very peculiar man; very erratic in his behaviour, and, my father thought, not particularly reliable in his statements. Then he was an inveterate joker and much addicted to what is now called leg-pulling. I gathered that my father regarded the whole story as a leg-pull. But he did express surprise that Josiah should have kept the joke up so long and that so many people seemed to have been taken in by it."

"What people was he referring to?"

"The people who were connected with the 'Fox and Grapes' and those who frequented the place. He made a trip to England soon after the death of his brother Walter to see to the disposal of the family property. He had to go to the 'Fox and Grapes' to arrange about the sale of the good-will and effects; and there he found a general belief among the staff and the regular frequenters of the house that there was some mystery about Josiah. It was then, too, that he heard the rumour of the bogus funeral."

"Did he tell you what, exactly, it was that the staff and the other people believed?"

"A good deal of it seemed to be rather vague, though they all agreed that Josiah was not what he appeared to be—just an inn-keeper—but that he was a member of some noble house, masquerading as a publican for some unknown reasons. And they all appeared to believe that he was not really dead, but that he had arranged a sham funeral in order to bring the masquerade to an end without disclosing his real personality."

"But apart from these vague rumours, was there anything more definite?"

"Yes; there were some very definite statements, particularly those made by Walter's manager, who succeeded him. He professed to have been on terms of close intimacy with Josiah and to have received confidences from him which were made to no one else. Among these was the categorical statement that he, Josiah Pippet, was actually the Earl of Winsborough; that he had been born in the Castle at Winsborough and that he intended, if possible, to die there. And he, the manager, expressed himself as quite certain that Josiah was not dead, giving as his reason a number of reports which had reached him from time to time. One man, he stated, who was a frequenter of the 'Fox and Grapes,' had seen Josiah coming out of the town mansion in Cavendish Square and stepping into a carriage. Another customer, a Channel pilot, had met Josiah riding along the road across the sand-hills from Sandwich to Deal. He was perfectly certain that the man was Josiah Pippet, having often been served by him with liquor at the bar of the 'Fox and Grapes.' Another customer, who occasionally had business at Sandwich in Kent, happened to walk out from that town to Winsborough, and there he saw Josiah Pippet riding out of the main gate of the Castle grounds, followed by a mounted groom. He also was quite certain that the man he saw was really Josiah. And there were several other instances of persons who had seen Josiah since his alleged death which were mentioned by the manager, but my father could not remember the particulars."

"And did not all these circumstantial statements make any impression on your father?"

"No, none whatever. His opinion was that Josiah had amused himself by throwing out mysterious hints and that these had been repeated over and over again, growing with each repetition, until this story had taken definite shape."

"And as to the reports that Josiah had actually been seen in the flesh?"

"His explanation of that was that Josiah and the Earl were probably a good deal alike; and he suspected that Josiah's hints arose from that circumstance. He remarked that Josiah certainly came from that part of the country, and that he probably knew the Earl by sight."

"You do not, I presume," said the counsel, slightly disconcerted, I thought, by the witness's tone, "take quite the same view as your father."

"I am trying to keep an open mind," the witness replied, calmly, "but I am telling you what my father thought, if his opinions have any bearings on the case."

"It is not clear that they have," said the judge. "We are, I believe, endeavouring to elicit facts."

"I would submit, my lord," the counsel replied, "that they have this bearing; that the statements being those of an entirely unconvinced man, they may be assumed to be quite free from any suspicion of exaggeration. The speaker’s bias was clearly against the truth of the reports and his testimony has, accordingly, an added value."

The judge acknowledged this "submission" with a grave nod but made no further comment, and the counsel resumed his examination.

"When your father used to speak to you about Josiah’s story, did he give you any particulars as to what Josiah had told him?"

"He did occasionally. But most of Josiah’s talk on the subject took the form of vague boastings to the effect that his real station was very different from what it appeared. But now and again he let himself go with a straight statement. For instance, on one occasion he said quite definitely that Pippet was not his real name; that he had assumed it because it seemed to be a good name for an inn-keeper. I don’t know what he meant by that."
“He gave no hint as to what his real name was?”

“No. The nearest approach to a disclosure of an identity other than that of Josiah Pippet was in his parting words to my father when the latter was starting on a long voyage a few months before Josiah’s death. He then said—I am quoting my father as well as I can remember his words—‘When you come back, you may not find me here. If you don’t, you can look for me down at Winsborough, near Sandwich in Kent, and you will probably find me living at the Castle.’ That was the last time that my father saw him.”

“You have referred to the alleged bogus funeral of your grandfather, Josiah Pippet, and to a dummy coffin weighted with lead. In the accounts which you received, was any mention made of the kind of lead used—whether, for instance, it was lead pipe, or bars, or lead pig?”

“Most of the accounts referred simply to lead; but one—I forgot who gave it—mentioned a roll of roofing-lead and some plumber’s oddments, left after some repairs. But I am not very clear about it. I can’t quote any particular account.”

“Are there any other facts or statements known to you tending to prove that the man known as Josiah Pippet was in fact the Earl of Winsborough?”

“No. I think you have got them all except those contained in the diary.”

“Then,” said the counsel, “in that case, we will proceed to consider the entries in the diary which seem relevant.” With this, he produced seven small, antique-looking, leather-bound volumes and passed them across to the witness.

“What do you say these volumes are?” he asked. “To the best of my belief,” was the reply, “they are the diary kept by my grandfather, Josiah Pippet.”

“How did they come into your possession?”

“They were among the effects of my late father, Frederick William Pippet. They were obtained by him, as he informed me, when he was disposing of the effects of his deceased brother, Walter. He found them in a deed box with a large number of letters, the whole being tied together and docketed ‘Diary and letters of Josiah Pippet, deceased.’ As the surviving son, he took possession of them and the letters.”

“You have no doubt that these volumes are the authentic diary of Josiah Pippet?”

“No, I have not. His name is written in each volume and my father always referred to them as his father’s diary, and I have no reason to doubt that is what they are.”

“Are they, in all respects, in the same condition as when they came into your possession?”

“They were up to the time that I handed them to my solicitor, and I have no doubt that they are still. They were always kept in the deed box in which my father found them, together with the letters. I handed the whole collection in the deed box to my solicitor for him to examine.”

“Would it be correct to say that it was the study of this diary that led you seriously to entertain the possibility that Josiah Pippet was really the Earl of Winsborough?”

“It would—with the proviso that the studying was not done by me. It was my sister who used to study the diary, and she communicated her discoveries to me.”

“Since you have been in England, have you made any attempts to check the accuracy of the entries in the diary?”

“I have, in the few cases in which it has been possible after all these years.”

“There is an entry dated the 3rd of September, 1839: ‘Home on the brig Harmony. Got aground on the Dyke, but off next tide. Have you been able to check that? As to the locality, I mean.”

“Yes, I find that the Dyke is the name of a shoal by the side of a navigation channel called The Old Cudd Channel, leading to Ramsgate Harbour. I find that it is used almost exclusively by vessels entering or leaving Ramsgate Harbour or Sandwich Haven. At Sandwich I was allowed to examine the old books kept by the Port authorities, and, in the register of shipping using the port I found, under the date 1st September, 1839, a note that the brig Harmony sailed out of the Haven in ballast, bound for London.”

“What significance do you attach to that entry?”

“As Sandwich is only a mile and a half from Winsborough, and is the nearest port, the fact of his embarking there is consistent with the supposition that Winsborough was the place in which he had been staying.”

“There is a previous entry dated the 12th of June, 1837: ‘Broached an anker of prime Dutch gin that I bought from the skipper of the Vriendschap.’

“I checked that at the same time in the same register. There was an entry relating to a Dutch galliot named the Vriendschap which discharged a general cargo, including a quantity of gin. She arrived at Sandwich on the 10th of April and cleared outward on the 25th of the same month. At that time, the diary shows that Josiah was absent from home.”

“Is there anything to show where he was at that time?”

“There is an entry made just after he arrived home. I am not sure of the date.”
“Are you referring to the entry of the 6th of May, 1837: ‘Home again. Feel a little strange after the life at the Castle?’”

“Yes. Taking the two entries together, it seems clear that the castle referred to was Winsborough Castle and that he was in residence there.”

“I will take only one more passage from the diary—that of the 8th of October, 1842: ‘Back to the Fox. Exit G. A. and enter J. P., but not for long.’ What does that convey to you?”

“The meaning of it seems to me to be obvious. The initials are those of the Earl, George Augustus, and himself, Josiah Pippet. It appears plainly to indicate that George Augustus now retires from the stage and gives place to Josiah Pippet. And, as the entry was made within ten months of his alleged death, or final disappearance, the expression, ‘not for long,’ seems to refer to that final disappearance.”

On receiving this answer, counsel paused and glanced over his brief. Apparently finding no further matter for examination, he said: “I need not ask you anything about the passages from the diary which I quoted in my opening address. The diary is put in evidence and the passages speak for themselves.”

With this he sat down and Anstey rose to cross-examine.

“You have told us, Mr. Pippet,” he began, “that you were led to entertain the belief in the dual personality of your grandfather, Josiah Pippet, by your study of certain passages in his diary.”

“Not my study,” was the reply. “I said that my sister studied the diary and communicated her discoveries to me.”

“Yes. Now, which of these passages was it that first led you to abandon the scepticism which, I understand, you formerly felt in regard to the story of the double life and the sham funeral?”

“I cannot remember distinctly, but my impression is that my sister was strongly influenced by those passages which imply, or definitely state that Josiah, when absent from his London home, was living at the Castle.”

“But what caused you to identify ‘the Castle’ as Winsborough Castle? There is nothing in the diary to indicate any castle in particular. The words used are simply ‘The Castle.’ How did you come to decide that, of all the castles in England, the reference was to this particular castle?”

“I take it that we were influenced by what we had both heard from our father. The stories that he had been told referred explicitly to Winsborough Castle. And the inquiries which I have made since I have been in England—”

“Pardon me,” interrupted Anstey, “but those inquiries are not relevant to my question. We are speaking of your study of the diary when you were at your home in America. I suggest that you then had very little knowledge of the geography of the county of Kent.”

“We had practically none.”

“Then I suggest that, apart from what you had heard from your father, there was nothing to indicate that the words, ‘The Castle,’ referred to Winsborough Castle.”

“That is so. We applied what my father had told us to the entries in the diary.”

“Then, since the connexion was simply guess-work, is it not rather singular that the mere reference to The Castle should have made so deep an impression on you?”

“Perhaps,” the witness replied, with a faint smile, “my sister may have been prepared to be impressed, and may have communicated her enthusiasm to me.”

To this answer Anstey made no rejoinder, but, after a short pause and a glance at his brief, resumed:

“There is this entry of the 8th of October, 1842: ‘Back to the Fox. Exit G. A. and enter J. P., but not for long.’ Did that passage influence you strongly in your opinion of the truth of the story of Josiah’s double life?”

The witness did not answer immediately, and it seemed to me that he looked a little worried. At length he replied:

“It is a remarkable fact, but I have no recollection of our ever having discussed that entry. It would almost seem as if my sister had overlooked it.”

“Do you remember when your attention was first drawn to that entry?”

“Yes. It was at a consultation with my solicitor, Mr. Gimbler, when he showed me a number of passages which he had extracted from the diary; which he considered relevant to the case, and which he wished me to try to verify if possible.”

“Have you, since then, discussed this passage with your sister?”

“Yes; and she is as much surprised as I am that it did not attract her attention when she was reading the diary.”

“So far as you know, did she read the entire diary?”

“I understood that she read the whole seven volumes from cover to cover.”

“Has she ever made a definite statement to you to that effect?”

“Yes. A short time ago, I put the question to her explicitly and she assured me that, to the best of her belief, she had read every word of the diary.”
"And you say that she had no recollection of having noticed this particular entry?"

"That is what she told me."

Here the judge interposed with a question.

"I don’t understand why we are taking this hearsay testimony from the witness as to what his sister read or noticed. Is not the lady in court?"

"Yes, my lord," replied Anstey; "but I understand that it is not proposed to call Miss Pippet."

The judge turned and looked inquiringly at Mr. McGonnell, who rose and explained:

"It was not considered necessary to call Miss Pippet as she is not in possession of any facts other than those known to her brother."

With this he sat down. But, for some seconds, the judge continued to look at him fixedly as if about to ask some further question, a circumstance that seemed to occasion the learned counsel some discomfort. But, if his lordship had intended to make any further observations, he thought better of it, for he suddenly turned away, and, leaning back in his chair, glanced at Anstey; who thereupon resumed his cross-examination.

"Now, Mr. Pippet," said he, taking up the last volume of the diary (the seven volumes had been passed to him at the conclusion of the examination in chief) and opening it at a place near the end, "I will ask you to look at this entry, dated the 8th of October, 1842. (Here the open book was passed across to the witness.) "You will see that there is a blank space between the last entry made before the writer went away from home and this, the first entry made after his return. Is that so?"

"It is," replied Mr. Pippet.

"And does it not appear to you that this entry is in a very conspicuous position—in a position likely to catch the eye of any person glancing over the page?"

"It does," the witness agreed.

"Then I put it to you, Mr. Pippet: Here is a diary which is being searched by an intelligent and attentive reader for corroboration of the story of Josiah’s alleged double life. Here is an entry which seems to afford such corroboration. It is in a conspicuous position, and not only that; for, being the first entry after Josiah’s return from his mysterious absence, it is in the very position in which an intelligent searcher would expect to find it. Now, I ask you, is it not an astounding and almost incredible circumstance that this entry should have been overlooked?"

"I have already said so," Mr. Pippet replied, a little wearily, delivering the open diary to the usher, who handed it up to the judge. There was a short pause while Anstey turned over the leaves of his brief and the judge examined the diary; which he did with undissembled interest and at considerable length. When he had finished with it, he returned it to the usher, who brought it over to Anstey, by whom it was forthwith delivered into the hands of Thorndyke.

I watched my colleague’s proceedings with grim amusement. If, in Anstey’s cross-examination, certain hints were to be read between the lines, there was no such reticence on Thorndyke’s part. Openly and undisguisedly, he scrutinized the entry in the diary, with the naked eye, with his pocket-lens, and finally with a queer little squat, double-barrelled microscope which he produced from a case at his side. Nor was I the only observer. The proceeding was watched by his lordship, with a sphinx-like face but a twinkling eye, by the two opposing counsel, and especially Mr. Gimbler, who seemed to view it with considerable disfavour. But my attention was diverted from Thorndyke’s activities by Anstey, who now resumed his cross-examination.

"You have referred to the alleged bogus funeral of your grandfather, Josiah Pippet, and to a dummy coffin weighted with lead. Now, so far as you know, is that coffin still in existence?"

"I have no doubt that it is. I visited the cemetery, which is at a place near Stratford in the east end of London, and examined the vault from the outside. It appeared to be quite intact."

"Is the cemetery still in use?"

"No. It was closed many years ago by Act of Parliament and is now disused and deserted."

"Had you any difficulty in obtaining admission?"

The witness smiled. "I can hardly say that I was admitted," said he. "The place was locked up and there was nobody in charge; but the wall was only about six feet high. I had no difficulty in getting over."

"Then," said Anstey, "we may assume that the coffin is still there. And if it is, it contains either the body of Josiah Pippet or a roll of sheet lead and some plumber’s oddments. Has it never occurred to you that it would be desirable to examine that coffin and see what it does contain?"

"It has," the witness replied, emphatically. "When I came to England, my intention was to get that coffin open right away and see whether Josiah was in it or not. If I had found him there, I should have known that my father was right and that the story was all bunk; and if I had found the lead, I should have known that there was something solid to go on."

"What made you abandon that intention?"
“I was advised that, in England, it is impossible to open a coffin without a special faculty from the Home Secretary, and that no such faculty would be granted until the case had been heard in a court of law.”

“Then we may take it that it was your desire to have this coffin examined as to its contents?”

“It was, and is,” the witness replied, energetically. “I want to get at the truth of this business; and it seems to me, being ignorant of law, that it is against common sense to spend all this time arguing and inferring when a few turns of a screw-driver would settle the whole question in a matter of minutes.”

The judge smiled approvingly. “A very sensible view,” said he; “and not such particularly bad law.”

“So far as you know, Mr. Pippet,” said Anstey, “have any measures been taken to obtain authority to open the vault and examine the coffin?”

“I am not aware of any. I understood that, until the court had given some decision on the case, any such measures would be premature.”

“Are you aware that it is within the competency of this court to make an order for the exhumation of this coffin and its examination as to its contents?”

“I certainly was not,” the witness answered.

Here the judge interposed with some signs of impatience.

“It seems necessary that this point should be cleared up. We are trying a case involving a number of issues, all of which are subject to one main issue. That issue is: Did Josiah Pippet die in the year 1843 and was he buried in a normal manner? Or was his alleged death a fictitious death and the funeral a sham funeral conducted with a dummy coffin weighted with lead? Now, as Mr. Pippet has most reasonably remarked, it seems a strange thing that we should be listening to a mass of evidence of the most indirect kind—principally hearsay evidence at third or fourth hand—when we actually have within our grasp the means of settling this issue conclusively by evidence of the most direct and convincing character. Has the learned counsel for the applicant any instructions on this point?”

While the judge had been speaking, a hurried and anxious consultation had been taking place between Mr. Gimbler and his leading counsel. The latter now rose and replied:

“It was considered, my lord, that, as these proceedings were, in a sense, preliminary to certain other proceedings possibly to be taken in another place, it might be desirable to postpone the question of the exhumation, especially as it seemed doubtful whether your lordship would be willing to make the necessary order.”

“That,” said the judge, “could have been ascertained by making the application; and I may say that I should certainly have complied with the request.”

“Then in that case,” said Mr. McGonnell, “we gratefully adopt your lordship’s suggestion and make the application now.”

“Very well,” the judge rejoined, “then the order will be made, subject to the consent of the Home Secretary, which we may assume will be given.”

As he concluded, he glanced at Anstey, but, as the latter remained seated, and no re-examination followed, Mr. Pippet was released from the witness-box.

Of the rest of the evidence I have but a dim recollection. The sudden entry, like a whiff of fresh air, into this fog of surmise and rumour, of a promise of real, undeniable evidence, made the testimony of the remaining witnesses appear like mere trifling. There was an architect and surveyor who described and produced plans of the old Earl’s underground chambers; and there was an aged woman whose grandfather had been a potman at the “Fox and Grapes” and who gave a vague account of the strange rumours of which she had heard him speak. But it was all very shadowy and unreal. It merely left us speculating as to whether the story of the bogus funeral might or might not possibly be true. And the speculation was not worth while when we should presently be looking into the open coffin and able to settle the question definitely, yes or no.

I think everyone was relieved when the sitting came to an end and the further hearing was adjourned until the result of the exhumation should be made known.

X. — JOSIAH?

THE last resting-place—real or fictitious—of the late Josiah Pippet was a somewhat dismal spot. Not that it mattered. The landscape qualities of a burial ground cannot be of much concern to the inmates. And in Josiah’s day, when he came here prospecting for an eligible freehold, the aspect of the place was doubtless very different. Then it must have been a rural burial ground adjoining some vanished hamlet (it was designated on the Ordnance map “Garwell Burial Ground”) hard by the Romford Turnpike Road. Now, it was a little grimy wilderness, fronting on a narrow street, flanked by decaying stable-yards and cart sheds, and apparently utterly neglected and forgotten of men. The only means of access was a rusty iron gate, set in the six-foot enclosing wall, and at that gate Thorndyke and I arrived a full half-hour before the appointed time, having walked thither from the nearest station—Maryland Point on the Great Eastern. But early as we were, we were not early enough from Thorndyke’s point of view; for, not only did we find the rusty gate unlocked (with a brand-new key
sticking out of the corroded lock), but, when we lifted the decayed latch and entered, we discovered two men in the very act of wrenching open the door of a vault.

“This,” said Thorndyke, regarding the two men with a disapproving eye, “ought not to have been done until everyone was present and the unopened door had been inspected.”

“Well,” I said, consolingly, “it will save time.”

“No doubt,” he admitted, “But that is not what we are here for.” We approached the operators, one of whom appeared to be a locksmith and the other an official of some kind, to whom, at his request, we gave our names and explained our business.

“I expect,” said Thorndyke, “you had your work cut out, getting that door unlocked.”

“It was a bit of a job, sir,” the locksmith replied. “Locks is like men. Gets a bit stiff in the joints after eighty years. But it wasn’t as bad as I’d expected. I’d got a good strong skeleton key filed up and a tommy to turn it with; and when I’d run in a drop of paraffin and oil, she twisted round all right.”

As he was speaking, I looked around me. The burial ground was roughly square in shape, enclosed on three sides by a six-foot brick wall, while the fourth side was occupied by a range of the so-called vaults; which were not, strictly speaking, vaults at all, but sepulchral chambers above ground. There were six of them, each provided with its own door, and over each door was a stone tablet on which was inscribed brief particulars of the inmates. Josiah alone had a chamber all to himself, and, running my eye along the row of tablets and reading the dates, I noted that he appeared to be the last of the tenants. At this moment, the sound of a motor car in the street outside caused us to step back to bring the gate within view; when, to my surprise—but not, apparently, to Thorndyke’s—our old friend, Mr. Superintendent Miller, was seen entering. As he approached and greeted us, I exclaimed:

“This is an unexpected pleasure, Miller. What brings you here? I didn’t know that the police were interested in this case.”

“They are not,” he replied. “I am here on instructions from the Home Office just to see that the formalities are complied with. That is all. But it is a quaint business. What are we going to find in that coffin, Doctor?”

“That,” replied Thorndyke, “is an open question, at present.”

“I know,” said Miller. “But I expect you have considered the probabilities. What do you say? Bones or lead?”

“Well, as a mere estimate of probabilities,” replied Thorndyke, “I should say lead.”

“Should you really!” I exclaimed in astonishment. “I would have wagered fifty to one on a body. The whole story of the bogus funeral sounded to me like ‘sheer bunk,’ as Pippet would express it.”

“That would certainly have been my view,” said Miller, “but I expect we are both wrong. We usually are when we disagree with the Doctor. And there does seem to be a hint of something queer about that inscription. Josiah Pippet, died on the 12th day of October, 1843, aged 49 years, 2 months and 3 days. If he was so blooming particular to a day, why couldn’t he have just given the date of his birth and have done with it?”

While we had been talking, the official and his assistant had produced two pairs of coffin trestles, which they set up side by side opposite the open door of the vault; and they had hardly been placed in position when the sound of two cars drawing up almost at the same moment announced the arrival of the rest of the party.

“My eye!” exclaimed Miller, as the visitors filed in and the official—beadle, or whatever he was—advanced to meet them and lock the gate after them; “it’s a regular congregation.”

It did look a large party. First there was Mr. Pippet with his sister and daughter and his solicitor and Mr. McGonnell; and then followed Mrs. Engleheart and her son with Mr. Brodribb. But, once inside the burial ground, the two groups tended to coalesce while mutual greetings were exchanged, and then to sort themselves out. The two elder ladies decided to wait at a distance while “the horrid business” was in progress, and the rest of us gathered round the half-open door; the two young people drawing together and seeming, as I thought, to be on uncommonly amicable terms.

“I leave the conduct of this affair in your hands, Thorndyke,” said Mr. Brodribb, casting a wistful glance at the two ladies, who had retired to the farther side of the enclosure. “Is there anything that you want to do before the coffin is removed?”

“I should like, as a mere formality, to inspect the interior of the vault,” was the reply; “and perhaps the Superintendent, as a disinterested witness, might also take a glance at it.”

As he spoke, he looked inquiringly at Mr. Gimbler, and the latter, accepting the suggestion, advanced with him and Miller and threw the door wide open. There was nothing very sensational to see. The little chamber was crossed by a thick stone shelf on which rested the coffin. The latter had a very unattractive appearance, the dark, damp oak—from which every vestige of varnish had disappeared—being covered with patches of thick, green mildew and greasy-looking stains, over which was a mantle of impalpably fine grey dust. A layer of similar dust covered the shelf, the floor and every horizontal surface, but nowhere was there the faintest sign of its having been disturbed. On coffin and shelf and floor it presented a perfectly smooth, unbroken surface.

“Well, Doctor,” said Miller, when he had cast a quick, searching glance round the chamber, “are you satisfied? Looks all right.”
“Yes,” replied Thorndyke. “But we will just take a sample or two of the dust for reference, if necessary.”

As he spoke, he produced from his pockets a penknife and two of the inevitable seed-envelopes which he always carried about him. With the former he scraped up a little heap of dust on the coffin lid and shovelled it into one envelope, and then took another sample from the shelf; a proceeding which was observed with a sour smile by Mr. Gimber and with delighted amusement by the Superintendent.

“Nothing left to chance, you notice,” chuckled the latter. “Thomas a Didymus was a credulous man compared with the Doctor. Shall we have the coffin out now?”

As Thorndyke assented, the beadle and his assistant approached and drew the coffin forward on the shelf. Then they lifted the projecting end, but forthwith set it down again and stood gazing at it blankly.

“Moses!” exclaimed the locksmith. “He don’t seem to have lost much weight in eighty years! This is a four-man job.”

Thereupon, Miller and I stepped forward, and, as the two men lifted the foot end of the coffin, we took the weight of the other end; and as we staggered to the trestles with our ponderous burden, Miller whispered to me:

“What’s the betting now, Dr. Jervis?”

“There may be a lead shell,” I suggested, but without much conviction. However, there was no use in speculating, seeing that the locksmith had already produced a screw-driver from his tool-bag and was preparing to set to work. As he began, I watched him with some interest, expecting that the screw would be rusted in immovably. But he was a skilful workman and managed the extraction with very little difficulty, though the screw, when at last he got it out and laid it on the coffin lid, was thickly encrusted with rust. Thorndyke picked it up, and, having looked it over, handed it to Miller with the whispered injunction:

“Take charge of the screws, Miller. They may have to be put in evidence.”

The Superintendent made no comment, though I could see that he was a little puzzled; as also was I, for there appeared to be nothing unusual or significant in the appearance of the screw. And I think the transaction was observed—with some disfavour—by Mr. Gimber, though he took no notice, but kept a watchful and suspicious eye on Thorndyke; who, during the extraction of the other screws, occupied himself with an exhaustive examination of the exterior of the coffin, including the blackened brass name-plate (the fastening-screws of which he inspected through a lens) and the brass handles and their fastenings.

At length the last of the eight screws was extracted—and pocketed by Miller—and the locksmith, inserting his screw-driver between the lid and the side, looked round as if waiting for the word. We all gathered round, making space, however, for Mr. Pippet, his daughter and Mr. Giles.

“Now,” said Mr. Pippet, “we are going to get the answer to the riddle. Up with her.”

The locksmith gave a single wrench and the lid rose. He lifted it clear and laid it on the other trestles, and we all craned forward and peered into the coffin. And then, at the first glance, we had the answer. For what we saw was an untidy bundle of mouldy sacking. We could not see what the bundle contained; but it certainly did not contain the late Josiah Pippet.

The excitement now reached its climax and found expression in low-toned, inarticulate murmurs, in the midst of which Mr. Pippet’s calm, matter-of-fact voice was heard directing the locksmith to “get that bundle open and let’s see what’s inside.” Accordingly, with much tugging at the unsavoury sacking, the bundle was laid open and its contents exposed to the light of day—a small roll of whitened sheet lead and four hemispherical lumps of the same metal, apparently the remains from a plumber’s melting-pot.

For some moments there was a complete silence as nine pairs of fascinated eyes remained riveted on the objects that reposed on the bottom of the coffin. It was not quite harmoniously, by the voice of Mr. Gimber.

“A roll of sheet lead and some plumber’s oddments.”

As he spoke, he turned, with a fat, wrinkly and rather offensive smile to Mr. Giles Engleheart.

“Yes,” the latter agreed, “it fits the description to a T.” He held out his hand to Mr. Pippet and continued: “It’s heads up for you, sir. I congratulate you on a fair win, and I wish you a long life to enjoy what you have won.”

“Thank you, Giles,” said Mr. Pippet, shaking his hand warmly. “I am glad to have your congratulations first—even if they should turn out premature. We mustn’t be too previous, you know.”

He spoke in a singularly calm, unemotional tone, without a trace of triumph or even satisfaction. Indeed, I could not but be impressed (and considerably surprised) by the total absence of any sign of elation on the part either of the claimant or his daughter. It might have been simply good manners and regard for the defeated rival. But it looked uncommonly like indifference. Moreover, I could not but notice that, in the midst of the congratulations, Mr. Pippet was keeping an attentive eye on Thorndyke; and, indeed, my colleague’s proceedings soon began to attract more general notice.

When the leaden objects were first disclosed, he had viewed them impassively with what had almost looked like a glance of recognition. They were, in fact, as I knew, exactly what he had expected to see. But after a general, searching glance, he proceeded to a closer inspection. First, he lifted out the roll of sheet lead, and, having looked it over, critically, laid it on the coffin-lid. Then he turned his attention to the “oddments,” of which there was one appreciably larger than the other three,
having apparently come from a bigger melting-pot. This mass, which looked like the half of a metallic Dutch cheese, he lifted out first, and, in spite of its great weight, he seemed to handle it without any difficulty as he turned it about to examine its various parts. When he had inspected it all over, he laid it on the coffin-lid beside the roll of sheet lead, and then, dipping into the coffin once more, took up one of the smaller “remainder.”

And it was at this moment that I became aware that “something had happened.” How I knew it, I can hardly say, for Thorndyke was a perfectly impossible subject for a thought-reader. But my long association with him enabled me to detect subtle shades of expression that were perceptible to no one else. And something of the kind I had seen now. As he lifted the lump of lead, he had checked for a moment and seemed to stiffen, and a sudden intensity of attention had flashed into his eyes, to vanish in an instant, leaving his face as immobile and impassive as a mask of stone.

What could it be? I could only watch and wait for developments. As he turned the mass of lead over in his hands and pored over every inch of its surface, I caught the twinkling eye of Superintendent Miller and a low chuckle of appreciative amusement.

“Nothing taken for granted, you observe,” he murmured.

But the others were less indulgent. As Thorndyke laid the last of the leaden pot-leavings on the coffin-lid, Mr. McGonnell interposed, a little stiffly.

“Is there anything more, Dr. Thorndyke? Because, if not, as we seem to have done what we came here to do, I suggest that we may consider the business as finished.”

“That is,” said Mr. Pippet, “if Dr. Thorndyke is satisfied. Are you satisfied, Doctor?”

“No,” replied Thorndyke. “I am not satisfied with this lead. It purports to have been placed here in 1843, and part of it—the sheet lead—was then old. It was said to have been old roofing-sheet. Now, I am not satisfied that this lead is of that age. This sheet lead looks to me like modern milled lead.”

“And how do you propose to settle that question?” McGonnell asked.

“I propose that an assay of the lead should be made to determine, if possible, its age.”

McGonnell snorted. “This is Thomas Didymus, with a vengeance,” he exclaimed. “But I submit that it is mere hair-splitting; and I don’t believe that any assayist could give an opinion as to the age of the lead, or that the court would pay any attention to him if he did. What do you say, Gimbler?”

Mr. Gimbler smiled his queer, fat, wrinkly smile, to the entire extinction of his little blue eyes, and swung his eye-glasses on their ribbon like a pendulum.

“I say,” he replied, oracularly, “that the proposal is inadmissible for several reasons. First, the objection is frivolous. We came here to find out whether this coffin contained a body or some lumps of lead. We find that it contained lead. Now Dr. Thorndyke doubts whether it is the original lead. He thinks it may be some other lead of a later vintage. But if it is, how came it here? What does he suggest?”

“I suggest nothing,” said Thorndyke. “My function in this case is the purely scientific one of ascertaining facts.”

“But,” persisted Gimbler, “there is a suggestion implied in the objection. But I let that pass. Next, I assert that an assay would not produce any evidence that the court would take seriously. The proposed proceeding is merely vexatious and obstructive. It would occasion delay and increase the costs to no useful purpose. And, finally, the order of the court does not authorize us to make an assay of the lead. It merely authorizes us to open the coffin and ascertain whether it contains a body. We have done that and we find that it does not contain a body.”

Here Mr. Brodribb, who had been showing signs of increasing discomfort, intervened in the discussion.

“I am inclined, Thorndyke,” said he, “to agree with Mr. Gimbler. Your proposal to make an assay of the lead does seem to go beyond the powers conferred by the judge’s order. Of course, if it is necessary, we could make a special application. But is it necessary? Do you say definitely that this lead is not of the age that it is assumed to be?”

“No,” replied Thorndyke, “I do not. I merely say that I am not satisfied that it is.”

“Then,” said Brodribb, “I suggest that we waive the question of the assay, at least for the present. I should much prefer to do so, especially as there is no denying that your proposal does imply certain suggestions which should not be lightly made.”

Thorndyke reflected for a few moments, and I waited curiously for his decision. Finally, he rejoined:

“Very well, Brodribb; I will not press the matter against your sense of the legal proprieties. We will waive the assay—at any rate, for the present.”

“I think you are wise,” said McGonnell. “It would have seemed an extravagant piece of scepticism and couldn’t have led to any result. And now,” he added, looking anxiously at his watch, “I suppose we have finished our business. I hope so. Have we got to see to the re-placing of the coffin?”

“No, sir,” replied Miller. “That is my business, as official master of the ceremonies. There is nothing to detain you.”

“Thank goodness for that,” said McGonnell, and began, forthwith, to move towards the gate, while Mr. Pippet, the two
solicitors and the two young people advanced up the path to meet the two elder ladies and give them the latest news of the discoveries. Then the beadle unlocked the gate, and, as the procession moved towards it, we joined the party to exchange polite greetings and see them into their cars (in which the opposing litigants got mixed up in the most singular and amicable manner).

“Can I give you two a lift?” inquired Brodribb, as he held the door of his car open.

“No, thank you,” replied Thorndyke. “We have a little business to transact with Miller.”

Thereupon Brodribb wriggled, with some difficulty into his car; and we re-entered the gate, which the beadle locked after us, and rejoined the Superintendent.
XI. — PLUMBER’S ODDMENTS AND OTHER MATTERS

AS Thorndyke and I returned from the gate, the Superintendent met us with a peculiarly knowing expression on his countenance.

“Well, Doctor,” said he, “what about it?” And, as this slightly ambiguous question elicited no reply beyond an indulgent smile, he continued: “When I hear a gentleman of your intellect propose to assay a lump of old lead to ascertain the exact vintage year, experience tells me that that gentleman has got something up his sleeve. Now, Doctor, let’s hear what it is.”

“To tell you the truth, Miller,” Thorndyke replied, “I don’t quite know, myself. But you are wrong about the lead. The age of a piece of lead can be judged fairly accurately by the silver content. If you find a piece of sheet lead with a silver content of, say, ten ounces to the ton, you can be pretty sure that it was made before Pattinson’s process for the desilverization of lead was invented. Still, you are right to the extent that the question of age was not the only issue that I had in my mind. There were other reasons why the assay should be made.”

“But you have abandoned the assay,” objected Miller, “and very surprised I was to hear you give way so easily.”

“I gave way in your favour,” said Thorndyke, with a cryptic smile. “You are going to have the assay carried out.”

“Oh, am I?” exclaimed the Superintendent. “It’s as well to know these things in advance.” We turned into a side path to get a little farther from the beadle and his mate, and Miller continued: “Now, look here, Doctor; I want to be clear about this business. This is a civil case, and it is no concern of mine, as a police officer. What’s the game? You seem to be dumping this blooming lead on me, and then there are these screws. Why did you want me to take charge of them?” He drew out of his pocket the rusty handful and looked at them disparagingly. “I don’t see anything special about them. They look to me like ordinary screws such as you could buy at any ironmonger’s.”

Thorndyke chuckled. “They are common-looking screws, I must admit,” said he. “But don’t despise them. Like many other common-looking things, they have their value. I want you to put them into an envelope and seal it with your official seal; and write on the envelope, ‘Screws extracted in my presence from the coffin of Josiah Pippet,’ and sign it. Will you do that?”

“Yes,” replied Miller, “I don’t see any objection to that, though I am hanged if I can guess what you want them for. But with regard to this lead. You want me to have it assayed on my own initiative, as a police officer. But I must have something to go on. The judge’s order doesn’t cover me. Now, I know quite well that you have got something perfectly definite in your mind; and, knowing you as I do, I am pretty sure that it is not a delusion Can’t you tell me what it is?”

Thorndyke reflected for a few moments. “The fact is,” he said at length, “I am in a difficulty. My position in this case is that of a counsel instructed by Brodribb.” Here Miller indulged in a broad grin, but made no comment, beyond something like a wink directed towards me, and Thorndyke continued: “You saw that Brodribb disliked the idea of the assay. He is a very acute lawyer, but he is a most scrupulously courteous old gentleman, and he was obviously unwilling to seem to throw the slightest doubt on the good faith of the other side; even Gimbler. Now, I could not act against Brodribb’s wishes, and there was no need. I had given the other side their chance, and they didn’t choose to take it.”

“So now,” said Miller, “you want, in effect, to run with the hare and hunt with the hounds. And I am the hounds. Isn’t that the position?”

Thorndyke regarded the Superintendent with an appreciative smile. “Very neatly put, Miller,” said he, “and I won’t deny that it does seem to state the position. Nevertheless, I am going to ask you to help me, and to take on trust my assurance that, if you act on what I will call my suggestions, you will, in your official capacity, ‘learn something to your advantage,’ as the solicitors express it.”

“But don’t despise them. Like many other common-looking things, they have their value. I want you to put them into an envelope and seal it with your official seal; and write on the envelope, ‘Screws extracted in my presence from the coffin of Josiah Pippet,’ and sign it. Will you do that?”

“I am quite clear on that point,” Miller agreed, warmly. “I only want reasonable cover.”

“Very well,” rejoined Thorndyke; “I can give you that, if you will take my information on trust without the production of evidence.”

“Let’s hear the information,” said Miller, cautiously.

“It is this,” said Thorndyke; “and I am prepared to give you the information in writing, if you want it.”

“I don’t,” said Miller. “I only want a definite statement.”

“Then,” said Thorndyke, “I will give you one. I declare, positively, that, if this is the original coffin, it has, at some time after the date of the burial, as set forth on the tomb and on the coffin, been opened and reclosed; and that the objects which we have found in it are not its original contents. But I am of opinion that this is not the original coffin, but a new coffin substituted with the intent to commit a fraud. Will that do for you?”
"Yes," replied Miller. "That is good enough for a start; and not a bad start, either. If there has been a fraudulent substitution for the purpose of obtaining possession of valuable property, that brings the matter fairly within my province. And, what is more, it seems to bring Mr. Horatio Gimble within reach of my claws. But I have a sort of feeling that this faked coffin is not the whole of the business. How's that for a guess?"

"I will say, as the children say in the game of Hot Boiled Beans, that you are 'getting warm.' And I would rather not say any more. I want to start you on an independent investigation and keep out of it, myself, as counsel in this case. But I shall expect that, if you bring any facts to light that have a bearing on that case, you will bring them to my notice."

At this, Miller turned to me with a chuckle of delight.

"Just listen to him, Dr. Jervis!" he exclaimed, waggishly. "Isn't it as good as a play? He stipulates that I shall bring the facts to his notice; when you and I know perfectly well that he has got the whole pack of cards up his sleeve at this very moment. I wouldn't use the word 'humbug' in connexion with a gentleman for whom I have such a profound respect. But—well, what do you want me to do, Doctor?"

"The first thing," said Thorndyke, "is to get rid of those two men. We don't want any witnesses. As this ground is closed for burials and is not open to the public, there is no reason why you should not take possession of the keys. You will want to seal the vault and to have access to it in case any further inspection is necessary. The beadle won't make any difficulty."

He did not. On the contrary, he accepted his release gratefully and gave up the keys without a word. But, before dismissing the men, we replaced the coffin on the shelf, and, for the sake of appearances, we returned the lead to its interior and laid the lid on top.

"There is no need to screw it down," the Superintendent explained. "It may have to be re-examined, and I am going to seal up the vault."

With this he sent the two men off with a small donation for the provision of refreshments, accompanying them to the gate and watching their disappearance down the street. Then they were out of sight, he signalled to the driver of his car—a big, roomy, official vehicle—and, when it had drawn up at the gate, he returned, and we began operations.

"I understand," said he, as we lifted off the coffin lid, "that we have got to shift this stuff to some assayist's."

"I don't think we need take the sheet lead," said Thorndyke, "though that would furnish the best evidence on the question of age."

"Then let's take the whole boiling," said Miller. "May as well do the thing thoroughly."

Accordingly, he seized the roll of lead and carried it to the gate, where he deposited it on the rear seat of the car. I followed with the biggest of the pot-leavings. The driver of the car came back with Miller, and he, Miller and Thorndyke took the other three leadings. The whole collection took up a good deal of the accommodation; but Thorndyke occupied the seat next to the driver, in order to give directions, and Miller and I packed ourselves in amongst the lead as well as we could.

"I wish the Doctor wasn't so deuced secretive," Miller remarked, as the car trundled away westward with a misleading leisurely air. "Of course, it doesn't really matter as we shall know all about it presently; but I am on tenterhooks of curiosity."

"So am I, for that matter," said I; "but I am used to it. To work with Thorndyke is a fine training in restraint."

After what seemed an incredibly short journey, we drew up at a large building in Bishopsgate. Here Thorndyke alighted and disappeared into the entry; and the Superintendent's patience was subjected to a further trial. At length, our friend reappeared, accompanied by an alert-looking elderly gentleman, while three workmen in white aprons emerged from the doorway and lurked in the background. The elderly gentleman, whom I recognized as a Mr. Daniels, a very eminent assayist and metallurgist, approached, and, when he had been introduced to Miller, stuck his head in at the window of the car and surveyed our collection.

"So that's the stuff you want an opinion on," said he. "Queer-looking lot. However, the first thing to do is to get it moved up to the laboratory."

He made a sign to his three myrmidons, who forthwith came forward, and, grabbing up the ponderous samples, tucked them under their arms as if they had been lumps of cork and strolled off into the building. We followed them through the weighing rooms on the ground floor to a staircase and up to one of the great laboratories, flanked on one side by a row of tall windows, and on the other by a long range of cupel furnaces. Here, on a bench under the windows, our treasures had been dumped down, and, once more, Mr. Daniels ran his eye over them.

"What's the problem with regard to this?" he asked, indicating the roll of lead.

"It is merely a question of age," replied Thorndyke. "We can leave that for the present."

"And what is this?" asked Daniels, lifting the large pot-remainder and turning it over in his hands.

"It is supposed to be lead, eighty years old," said Thorndyke.

"Well, it may be," said Daniels, laying it down and giving it a tap with a hammer and eliciting the dull sound characteristic of lead. "And what are these other lumps supposed to be?"
“They are supposed to be lead, too,” replied Thorndyke.

“Well, they are not,” said Daniels. “Anyone can see that.” He gave one of them a tap with the hammer, and the peculiar sharp chink spoke at once of a hard, brittle metal. On this, he laid down the hammer and took the lump of metal in his hands. And then there came over him the very change that I had noticed in the case of Thorndyke, though there was now no disguise. As he lifted the mass of metal, he suddenly paused and stood quite still with his eyes fixed on Thorndyke and his mouth slightly open. Then he said: “You knew that this was not lead, Doctor.”

“Yes,” Thorndyke admitted.

“What do you suppose it is?”

“I don’t suppose,” said Thorndyke. “I have brought the Superintendent to you in order that you may ascertain what it is and give him a confidential report on the subject.”

“What do you suppose it is?” asked Miller.

“I don’t suppose either,” replied Daniels with a faint grin. “I am an assayist, and it is my business to find out.”

The Superintendent smiled sourly and looked at me. “These men of science don’t mean to give themselves away,” he remarked.

“Well,” said Daniels, “what is the use of guessing, and perhaps guessing wrong, when you are going to make a test? We have our reputations to consider. Now, what do you want me to do about this stuff?”

“The Superintendent,” said Thorndyke, “wants you to make a trial assay, just to let him know what the material is. You will report to him what you find; and remember, this is a confidential matter, and the Superintendent, acting for the Criminal Investigation Department, is your employer.”

“And what about you?” Daniels asked.

“If the matter concerns me in any way,” Thorndyke replied, “I have no doubt that the Superintendent will communicate the substance of your report to me.”

“Ah!” exclaimed Daniels, with a broad smile, “and what a surprise it will be to you. Ha! Ha!”

“Yes,” growled Miller; “the Doctor is a regular impostor. Of course, he knows all about it, without either of us telling him. How long will this job take?”

“It will take some little time,” replied Daniels, “as you will want some sort of rough estimate of quantities besides the mere qualitative test. Will five o’clock do? And shall I report to you on the phone?”

Miller considered the question. “I am not fond of telephone messages on confidential business,” said he. “You never know who is at the other end, or in the middle. I think I had better run across in the car. Then we can go into the affair in more detail, and safe from eavesdroppers. If I am here at five o’clock, I can depend on getting your report?”

“Yes; I shall have everything cut and dried by then,” Daniels assured him; and, the arrangements being thus concluded, we shook hands and took our departure.

As we emerged into Bishopsgate, I noticed that Miller seemed to look a little disparagingly at the big car that was drawn up at the curb, and, instead of entering at once, he turned to Thorndyke and asked:

“What do you say, Doctor, to walking home? There are one or two matters connected with this case that I should like to talk over with you, and the car isn’t very convenient; and then there is the driver. We could talk more freely if we walked.”

Naturally, Thorndyke, who was an inveterate pedestrian, agreed readily; and, when Miller had informed the driver of our decision, we set forth, shortening the distance and securing more quiet by striking “across country” through the by-streets. As soon as we were clear of the main thoroughfare with its bustle and din, Miller proceeded to open the discussion.

“I suppose, Doctor, you are quite clear that there has been some faking of that coffin? You’ve got something solid to go on?”

“Yes,” was the reply, “I have no doubt on the subject, and I am prepared to say so in the witness-box.”

“That seems to settle it,” said Miller. “But there are some queer features in the case. You saw the dust in the vault? But I know you did, for I spotted you taking samples of it. But it really did look as if it had not been disturbed for the best part of a century. Was there anything in that dust that looked to you suspicious, or did you take those samples just as a routine precaution?”

“I should have taken a sample in any case,” replied Thorndyke. “But in this case, it was not merely a routine precaution. That dust did not appear to me to agree with the conditions in which it was found. The dust that would accumulate in the course of eighty years in a vault above ground would be very miscellaneous in its origin. It would consist of particles of all sorts of materials which were light enough to float in the air, and in still air at that. They would he mostly minute fragments of fibres derived from textiles, and these would naturally be of all sorts of different colours. The result of such a miscellaneous mixture of different-coloured particles, aided by the fading effect of time, would be a dust of a completely neutral grey. But this dust was not of a completely neutral grey. It had a recognizable colour; very faint and very nearly neutral, but yet there was just a shadowy trace of red. And this subtle, almost indistinguishable, tint of red pervaded the
whole mass. It was all alike. To what the colour may have been due, I cannot judge until I have examined the sample under the microscope; but the suggestion—the very strong suggestion—is that this dust was all derived from the same source; which, as I have said, is irreconcilable with the ostensible conditions."

Thorndyke's explanation seemed to furnish the Superintendent with considerable food for thought, for he made no immediate answer, but appeared to be wrapped in profound cogitation. At length, he remarked:

"You are a wonderful man, Doctor. Nothing seems to escape you, and you let nothing pass without consideration and a confirmatory test. I wish, now, that we had put you on that damned head—you know the one I mean—the human head that was found in a case at Fenchurch Street Station."

"I remember," said Thorndyke. "It was an odd affair, but I fancy that the head was only a by-product. The purpose of the man who left it was to get possession of the case containing property worth several thousand pounds. He happened to have a human head on his hands, and he, very wisely, took the opportunity to get rid of it and so kill two birds with one stone."

"That may be," said Miller; "but I am not taking that head so calmly as you are. It has been the bane of our lives at the Yard, with all the newspaper men shouting 'unsolved mystery' and 'another undetected murder' and asking perpetually what the police are doing. And it really was a mysterious affair. I have been surprised to notice how little interest you have taken in that head. I should have thought it would have been a problem exactly in your line. But you medical jurists are a cold-blooded lot. You were speaking just now of this man 'having a human head on his hands' as if it were a worn-out umbrella or an old pair of boots."

Thorndyke smiled indulgently. "I am not disparaging the head, Miller," said he. "It presented quite an interesting problem. But it was not my problem. I was a mere disinterested onlooker."

"You don't usually take that sordid view," grumbled Miller. "I have generally found you ready to take an interest in a curious problem for its own sake."

To this Thorndyke made no rejoinder, and for some time we walked on in silence. Suddenly, the Superintendent stopped short and stood gazing across the road.

"By the immortal Jingo!" he exclaimed. "Talk of the Devil—"

He broke off and started to run across the road; and, following his movements with my eyes, I saw, on the opposite pavement, a newspaper boy bearing a poster on which was printed in enormous type:

**HORRIBLE DISCOVERY. HEADLESS CORPSE BY ROADSIDE.**

It was certainly curiously apropos of the subject of our conversation, and I so far shared the Superintendent's excitement that I was about to follow him when I saw that he had secured three copies of the paper and was coming back to us with them in his hand. He distributed his gifts rapidly, and then, backing into the wide entry of a draper's shop, proceeded eagerly to devour the paragraph indicated by the "scare" headlines. Following him into his retreat, I opened the paper and read:

"Some months ago the public was horrified by the discovery in the cloak room at Fenchurch Street Station of a human head packed in a wooden case. No solution of the mystery surrounding this terrible relic was forthcoming at the inquest, nor were the police ever able to discover any clue to its origin or the identity of the murderer. The matter was allowed to lapse into oblivion, to be added to the long list of undiscovered murders. But questions relating to this tragedy have been revived by a strange and shocking discovery which was made this morning by the side of the arterial road known as the Watling Street, which passes from London through Dartford to Rochester. Between three and four miles on the Rochester side of Dartford, the road passes through a deep cutting, which was made to reduce the gradient of the hill, the sides of which are in two stages, there being, about half-way up, a shelf several feet wide. As this shelf is some thirty feet above the road, its surface is entirely invisible to anyone passing along the latter, though it is, of course, visible from above. But the hill through which the road is cut is covered with dense woodland, seldom trodden by the foot of man. Thus, for months at a time, this shelf remains unseen by any human eye.

"But this morning Fate guided the footsteps of an observer to this spot, so remote and yet so near. A local archaeologist, a Mr. Elmhurst of Gravesend, happened to be making a sketch-map of the features of the wood when his wanderings took him to the edge of the cutting. Looking down the cliff-like descent, he was horrified to observe, lying on the shelf immediately below him, the headless and perfectly nude body of a man. Its huddled attitude suggested that it had rolled down the steep slope and been arrested by the shelf; and, even from the distance at which he stood, it was evident that it had been lying exposed for a considerable time.

"Mr. Elmhurst did not stay to make any further observations, but, taking the shortest way to the road, hailed an approaching motorist, who very obligingly conveyed him to Gravesend, where he notified the police of his discovery. An ambulance was at once procured, and, guided by the discoverer, proceeded to the spot, whence—after a careful examination by the police—the body was conveyed to Dartford, where it now lies in the mortuary awaiting an inquest.

"The body appears to be that of a youngish man, rather short and exceptionally muscular; and the condition of the strong and well-shaped hands suggests that the deceased was a skilled workman of some kind. The inquest will be opened tomorrow."

As I reached the end of the account, I glanced at the Superintendent and remarked:
"A very creditable piece of journalism. The reporter hasn't wasted much time. What do you think of it, Miller?"

"Well, I'm very relieved," he replied. "I've been waiting for this for months. I'm fairly sick of all the talk about the unsolved mystery, and the undiscovered murder. Now, we may be able to get a move on, though I must admit that it doesn't look like a very promising case. It's a long time since the man was murdered, and there doesn't seem much to go on. Still, it's better than a head in a box with no clue to the owner. What do you think of it, Doctor? I suppose you've been expecting it, too?"

"I wouldn't say 'expecting,'" Thorndyke replied. "The possibility of something of this kind had occurred to me. But you must bear in mind that the head, being preserved and packed in a case, offered no suggestions as to the time or place of death. As this body was apparently not preserved, it will be possible to arrive at an approximate date of death; and, as it was found in a particular place, some idea of locality may be formed. But any conclusions as to the locality in which the murder took place will have to be very cautiously considered, having regard to the ease with which, in these days, bodies can be carried away long distances from the scene of the crime. And, again, the body is nude, so that there will be no help from the clothing towards identification; and, as it appears to have been exposed in the open for months, its own condition will make identification difficult. I agree with you, Miller. It does not look a very promising case."

The Superintendent nodded and growled an inarticulate assent. But, in spite of Thorndyke's rather cold comfort, he still seemed disposed to be optimistic; and when we parted at the Inner Temple gate, he walked away with a springy step and an almost jaunty air.

XII. — THORNDYKE BECOMES INTERESTED

Miller's intense interest in the "horrible discovery" did not surprise me at all. But Thorndyke's did. For what the Superintendent had said was perfectly true. The mysterious "head in a box" had aroused in him only the most languid curiosity. Which, again to quote Miller, was entirely unlike him. It is true that he liked, if possible, to be officially appointed to investigate an interesting case. But, appointment or no appointment, from sheer professional enthusiasm, he always kept himself informed on, and followed with the closest interest, any criminal case that presented unusual or obscure features.

Now, the "head in the box" case had appeared to me eminently unusual and obscure. It had seemed to imply an atrocious crime which combined with its atrocity a remarkable degree of callous ingenuity. And the mystery surrounding it was undeniable. Excepting some vague connexion with the great platinum robbery (itself an unsolved mystery) it offered not a single clue. Yet Thorndyke had seemed to dismiss it as a mere oddity. He could not have been less moved if it had been a wax-work head—which it certainly was not.

His own explanation did not seem to me to be entirely satisfactory. It was true, as he had said, that there was a total lack of data; and "a mere mystery, without a single leading fact is not, to a medical jurist, worth powder and shot." The fact that the head was preserved and practically imperishable excluded any inferences as to time or place. It might, for any evidence to the contrary, have been the head of a person who had died in Australia twenty years ago.

So he had dismissed it into the region of the unknowable; at least, so I had understood; though I had never felt quite sure that he had not, in his queer, secret fashion, just docketed it and packed it away in some pigeon-hole of his inexhaustible memory, there to repose until such time as the "leading fact" should come into view, unrecognized by anyone but himself.

This faint suspicion now tended to revive. For though the headless body looked as hopeless a mystery as the bodyless head, there was clearly no question of dismissing it as "not worth powder and shot." That powder and shot were already being expended, I ascertained that very evening, when, returning to our chambers after a lengthy consultation, I found on the table a six-inch Ordnance map, a boxwood scale, a pair of dividers and a motor road-map.

The purpose of the latter was obvious on inspection. The Ordnance map was dated 1910 and did not show the arterial road. The motor map showed the new road—and mighty little else; but as much, no doubt, as interested the average motorist. From the road-map, the new road had been transferred in pencil to the Ordnance map, which was thus brought up to date while retaining all the original topographical features; and the locality shown left no doubt as to the nature of the investigation.

I was still looking at the maps and reflecting as above when the door opened and my colleague entered.

"I thought you were out, Thorndyke," said I.

"No," he replied; "I have been up in the laboratory, having a chat with Polton about a job that I want him to do. I see you have been inspecting what the reporters will call 'the scene of the tragedy.'"

"I see that you have," I retorted, "and have been speculating on your change of front. The 'head in the box' apparently left you cold, but you seem to be developing quite a keen interest in this problem. Why this inconsistency?"

"My dear fellow," he replied, "there is no inconsistency. The case is entirely altered. We have now a number of facts from which to start an inquiry. From the state of the body, we can form an approximate judgment as to the date about which death occurred. Perhaps the cause of death many transpire at the inquest. We knew where the body was found; and even if it may have been conveyed thither from a distance, the selection of the place where it was deposited suggests some local knowledge. The spot was extremely well-chosen, as events have proved."
“Yes; but it was a queer idea to dump it there. A sort of ghastly practical joke. Just think of it, Thorndyke. Think of that great procession of traffic of all kinds—cars, motor coaches, lorries, cyclists—streaming along that road by the thousand, day after day, month after month; and all the time, within a biscuit-toss of them, that gruesome thing lying there open to the sky.”

“Yes,” he agreed, “there is certainly an element of the macabre in the setting of this crime, though I don’t suppose it was intentional.”

“Neither do I. Nor do I suppose that the horrible picturesqueness of the setting is what is attracting you. I wonder what is.”

Thorndyke did not reply immediately but sat regarding me with a sort of appraising expression (which I recognized, and had come by experience, to associate with some special exhibition of thick-headedness on my part). At length he replied:

“I don’t see why you should. The problem of this headless body abounds in elements of interest. All sorts of questions arise out of it. There is that embalmed head for instance. That seems to have an obvious connexion with this body.”

“Very obvious indeed,” said I, with a grin; “and the connexion was still closer when the head was on the body.”

He smiled indulgently and continued: “Disregarding the suggested anatomical connexion, there is the connexion of action and motive. What, for instance, is the connexion of the man who deposited the head in the cloak-room with this body? We don’t know how he came by that head. The fact that he had it in his possession is an incriminating fact, but it is not evidence of murder. It is not even certain that he knew what was in the case. But whether he did or not, he is obviously involved in a complex of circumstances which includes this body. However, it is premature to discuss the case until we have the additional facts that will probably transpire at the inquest. Meanwhile,” he concluded, with an exasperating smile, “I recommend my learned friend to go carefully over all the facts in his possession, relating both to the embalmed head and the headless body. Let him consider those facts critically as to their separate value and in relation to one another. If he does this, I think he will find that some extremely interesting conclusions will emerge.”

It is unnecessary to say his opinion was not justified by results. I did, indeed, chew the cud of the few, unilluminating facts that were known to me. But the only conclusion that emerged was that, in some obscure way of which I could make nothing, this headless corpse was connected with the mystery of the stolen platinum. But this, I felt sure, was not the conclusion that was in Thorndyke’s mind. And at that, I had to leave it.

On the following morning, Thorndyke went forth to attend at the inquest. I was not able to go with him, nor did I particularly wish to, as I knew that I should get full information from him as to the facts elicited. He started, as I thought, unnecessarily early and he came back unexpectedly late. But this latter circumstance was presently explained by the appearance on the Ordnance map of a pencilled cross at the roadside, indicating the spot on which the body had been lying when it was first seen. Later in the evening, when giving me particulars of the inquest, he mentioned that he had visited the site of the discovery and “gone over the ground, roughly,” having taken his bicycle down by train for that purpose.

“Did you pick up anything of interest at the inquest?” I asked.

“Yes,” he replied, “it was quite a good inquest. The coroner was a careful man who knew his business and kept to it, and the medical witness had made a thorough examination and gave his evidence clearly and concisely. As to the facts, they were simple enough, though important. The body was, of course, a good deal the worse for exposure to the weather. As to the date of death, the doctor wisely declined to make a definite statement, but he estimated it at not less than three months ago. The body appeared to be that of a man between thirty and forty years of age, five feet, six inches in height, broad-shouldered and muscular, with rather small, well-shaped hands, which showed a definite, but not considerable, thickening of the skin on the palms; from which, and from the dirty and ill-kept finger-nails, the doctor inferred that deceased was a workman of some kind, but not a labourer.

“The head had been separated from the spinal column with a knife, leaving the atlas intact, and, to this extent, the separation had been effected skillfully.”

“Yes,” said I. “That point was made, I remember, at the inquest on the head. It would require some skill and the knowledge as to where the joint was to be found. By the way, was the question of the head raised?”

“Yes. Naturally a juryman wanted to question the doctor on the subject, but the witness very properly replied that his evidence dealt only with facts observed by himself, and the coroner supported him. Then the question was raised whether the head should not be produced for comparison with the body; but the doctor refused to go into the matter, and the coroner pointed out that the head had already been examined medically and that all the facts were available in the depositions of the witnesses. He did, however, read out some of the depositions from the previous inquest and asked the doctor whether the facts set forth in them were consistent with the belief that the head and the headless body were parts of one and the same person; to which the doctor replied that the mode of separation was the same in both and that the parts which were missing in the one were present in the other, but beyond that he would give no opinion.”

“Did he give any opinion as to the cause of death?” I asked.

“Oh, yes,” replied Thorndyke. “There was no mystery about that. There was a knife-wound in the back, near the angle of the left scapula, penetrating deeply and transfixing the heart. It appeared to have been inflicted with a large, single-edged knife of the ‘Green River’ type, and obviously with great force. The witness stated, confidently, that it could not have been self-inflicted.”
“That seems to be pretty obvious, too,” said I. “At any rate, the man could not have cut his own head off.”

“A very capable detective sergeant gave evidence,” Thorndyke resumed, dismissing—to my secret amusement—the trivial and uninteresting detail of the manner in which this unfortunate creature had been done to death. “He stated that the wood had been searched for the dead man’s clothing. But I suspect that it was a very perfunctory search, as he was evidently convinced that it was not there; remarking, plausibly enough, that, since the clothing must have been stripped off to prevent identification, it would not be reasonable to expect to find it in the vicinity. He was of opinion that the body had been brought from a distance in a car or van, and that, probably, two or more persons were concerned in the affair.”

“It seems likely,” I said, “having regard to the remoteness of the place. But it is only a guess.”

“Exactly,” Thorndyke agreed. “There was a good deal of guessing and not many facts; and the few facts that were really significant do not seem to have been understood.”

“What are the facts that you regard as really significant?” I asked. Not that I had the slightest expectation that he would tell me. And he did not. His inevitable reply was:

“You know what the known facts are, Jervis, and you will see for yourself, if you consider them critically, which are the significant ones. But, to return to the inquest. The coroner’s summing-up was excellent, having regard to the evidence that had been given. I took shorthand notes of some of it, and I will read them to you. With reference to the embalmed head he remarked:

“It has been suggested that the head which was found at Fenchurch Street Station ought to have been brought here for comparison. But to what purpose? What kind of comparison is possible? If the head is broken off a china figure and the two parts are lost and subsequently found in different places, the question as to whether they are parts of the same figure can be settled by putting them together and seeing whether the fractured surfaces fit each other. But with a detached human head—especially after the lapse of months—this is not possible. If the preserved head had been exhumed and brought here, we could have learned nothing more from it than we can learn from the depositions of the medical witness, which I have read to you. Accordingly, we must fall back on our common sense; and I think we shall find that enough for our purpose.

“Let us look at the facts. A headless body has been found in one place, and a body-less head in another. The doctor has told us that they might be—though he doesn’t say that they are—the head and body of one and the same person. They agree in the peculiar and unusual mode of separation. The parts which are absent in the one are present in the other. There is no part missing, and no part redundant. If that head had been cut off this body, the appearances would be exactly what they are.

“Now, gentlemen, if headless human bodies and body-less human heads were quite common objects, we might have to search further. But, fortunately, they are so rare and unusual that we may almost regard these remains as unique. And if they are not parts of the same person, then there must be, somewhere, an undiscovered body belonging to the head, and, somewhere else, an undiscovered head belonging to this body. But, I submit, gentlemen, that common sense rejects such enormous improbabilities and compels us to adopt the obvious and simple explanation that the head and the body are those of one and the same person.

“As to the cause of death, you have heard the doctor’s evidence. Deceased was killed by a knife-wound, which he could not have inflicted himself, and which was therefore inflicted by some other person. And with that I leave you to consider your verdict.”

“An excellent summing-up,” said I, “and very well argued. The verdict was Wilful Murder, of course?”

“Yes. ‘By some person or persons unknown.’ And the jury could hardly have come to any other conclusion. But, as you see, the case is, from the police point of view, left in the air.”

“Yes,” I agreed. “If Miller is taking up the case, as I assume that he is, he has got his work cut out. I don’t see that this body was such a wind-fall as he seemed to think. Scotland Yard may catch some more trouble from the Press if something fresh does not turn up.”

“Well,” Thorndyke rejoined, by way of winding up the conversation, “we must hope, like medico-legal Micawbers, that something will turn up.”

For the next few days, however, the case remained “in the air.” But it was not alone in this respect. Presently I began to be conscious that there were other matters in the air. For instance, our invaluable assistant, Polton, suddenly developed a curious, stealthy, conspiratorial manner of going about, or locking himself in the laboratory, which experience had taught me to associate with secret activities foreshadowing some important and dramatic “move” on Thorndyke’s part. Then, on the fourth day after the inquest, I detected my colleague in the suspicious act of pacing the pavement at the lower, and more secluded, end of King’s Bench Walk, in earnest conversation with Mr. Superintendent Miller. And the *prima facie* suspiciousness of the proceeding was confirmed by the eagerness and excitement that were evident in the face and manner of our friend, and even more by the way in which he suddenly shut up, like a snapped snuff-box, as I approached.

And, that very evening, Thorndyke exploded the mine.

“We have got an expedition on, tomorrow,” he announced.

“Who are we?” I asked.
“You and I, Miller and Polton. I know you have got the day free.”

“Where are we going to?” I demanded.

“To Swanscombe Wood,” was the reply.

“What for?”

“To collect some further facts relating to the headless body,” he replied.

As a mere statement, it did not sound very sensational. But to one who knew Thorndyke as I knew him, it had certain implications that gave it a special significance. In the first place, Thorndyke tended habitually to under-state; and, in the second, he took no one into his confidence while his investigations were at the tentative stage. As Miller expressed it, “The Doctor would never show a card until he was ready to take the trick.” Whence there naturally arose in my mind a strong suspicion that the “further facts” which we were to collect were already in Thorndyke’s possession.

And events proved that I was not so very far wrong.

### XIII. — THE DENÉ HOLE

THE products of Polton’s labours impressed me as disappointing and hardly worthy of his mechanical ingenuity, consisting of nothing more subtle than an immense coil of rope, rove through two double blocks and forming a long and powerful tackle, a tripod formed of three very stout iron-shod seven-foot poles, and a strong basket such as builders use, furnished with strong rope slings. There was one further item, which was more worthy of its producer; a large electric lamp, fitted with adjustable lenses, and, to judge by the suspension arrangements, designed to throw a powerful beam of parallel rays vertically downwards.

But if Polton’s productions were of an unexpected kind, the vehicle in which the Superintendent drove up to our entry was even more so. For, though it bore no outward distinguishing marks, it was an undeniable motor ambulance. However, if less dignified and imposing than the official car, it was a good deal more convenient. The unwieldy tripod, tackle and basket were easily disposed of in its roomy interior, still leaving ample accommodation for me and Polton and the detective sergeant whom Miller had brought as an additional assistant. The Superintendent, himself, was at the steering wheel, and Thorndyke took the seat beside him to give directions as we approached our destination.

I asked no questions. The character of our outfit told me pretty plainly what kind of job we had in hand; and I felt a malicious satisfaction in tantalising Polton, who was, so to speak, bursting with silence and secrecy and the desire to be questioned. So, little was said—and nothing to the point—while the ambulance trundled out at the Tudor Street gate, crossed Blackfriars Bridge, threaded its way through the traffic of the South London streets, and presently came out upon the Dover Road. A few minutes later, as we mounted a steep rise, the sergeant, who, hitherto, had uttered not a word, removed his pipe from his mouth, remarked, “Shooter’s Hill” and replaced it as if it were a stopper.

The ambulance bowed smoothly along the straight line of the old Roman road. Welling, Crayford and Dartford were entered and left behind. A few minutes after leaving Dartford, the road began a long ascent and then, after a short run on the level, fell away somewhat steeply. At this point, the sergeant once more removed his pipe, nodded at the side window, and, having affirmed, stolidly, “That’s the place,” reinserted the stopper.

The ambulance now began to slow down, and, a minute or two later, drew in by the side of the road and halted. Then, as Thorndyke and the Superintendent alighted, we also got out, and the sergeant proceeded to occupy the driver’s seat.

“You and Polton had better stay here for the present,” said Thorndyke. “The Superintendent and I are going to locate the spot. When we have found it, he will remain there while I come back and help you to carry the gear.”

He produced from his pocket a marching-compass and a card, on one side of which a sketch-plan had been drawn while a number of bearings were written on the other. After a glance at the latter, he set the direction line of the compass and started off along a rough foot-path, followed by the Superintendent. We watched their receding figures as they ascended the hill and approached the wood by which it was covered. At the margin of the latter, Thorndyke paused and “turned to take a last, fond look” at his starting-point and check his compass bearings. Then he faced about, and, in a few seconds, he and the Superintendent disappeared into the wood.

Waiting is usually a tedious business, and is still more so when the waiter is on the tip-toe of expectation and curiosity. Vainly, I endeavoured to repress a tendency to useless and futile speculation as to what Thorndyke was seeking (or, more probably, had already found and was now about to disclose). As for Polton, if he could have been furnished with an emotional pressure-gauge, it would certainly have burst. Even the stolid sergeant was fain to come off his perch and pace up and down by the roadside; and once he actually went so far as to take out the stopper and remark that “it seemed as if the Doctor had made some sort of discovery.”

Anon our sufferings were somewhat alleviated by the arrival of a police patrol, who came free-wheeling down the hill from the direction of Dartford. As he approached us, he slowed down more and more and eventually dismounted to make a circuit of our vehicle, with the manner of a dog sniffing at a suspicious stranger. Apparently, it appearance did not satisfy him, and he proceeded to interrogate.

“What’s going on?” he asked, not uncivilly. “This looks like an ambulance but I see you have got some lifting gear inside.”
Here the sergeant interposed with a brief and un lucid explanation of our business, at the same time producing his credentials; at the sight whereof the patrol officer was visibly impressed, and showed an unmistakable tendency to linger, which the sergeant by no means sought to discourage.

“Can I give any assistance?” the patrol man asked, a little wistfully.

“Well,” the sergeant replied, promptly, “if you could spare the time to give an eye to this car, that would release me to lend the Superintendent a hand.”

It was obvious that the patrol man would have preferred to transpose these functions, but, nevertheless, he agreed readily; and at this moment Thorndyke reappeared from the wood and came striding swiftly towards us along the footpath. As he came up, the sergeant explained the new arrangements with some anxiety as to whether they would be approved. To his evident relief, Thorndyke accepted them readily.

“We shall be none the worse for an extra hand,” said he. “Now we shall be able to carry the whole kit up in one journey.”

Accordingly, we proceeded to get the gear out of the ambulance and distribute the items among the party. Thorndyke and I took the tripod on our shoulders—and a deuce of a weight it was. The sergeant got the great coil of rope on to his back with the aid of a spare sling; and Polton brought up the rear with the basket, in which was stowed the lamp, while the patrol man kept a look-out with a view to heading off any inquisitive strangers who might be attracted by the queer aspect of our procession.

Appreciation of the beauties of the countryside is not favoured by the presence on one’s shoulder of three massive ash poles with heavy iron fittings. The character of the ground was what chiefly occupied my attention, particularly after we had entered the wood; where I got the impression that some ingenious sylvan devil had collected all the brambles from miles around and arranged them in an interminable series of entanglements, compared with which the barbed-wire defences of a German trench were but feeble and amateurish imitations. But we tramped on, crashing through the yellow and russet leafage. Thorndyke leading with his compass in his unoccupied hand and trudging forward in silence, save for an occasional soft chuckle at my lurid comments on the landscape.

Suddenly, I heard Miller’s voice informing us that “here we were,” and we nearly collided with him at the edge of a small opening. Here we set down the tripod, enough to enable it to stand upright.

“You didn’t have to blow your whistle,” said Thorndyke. “I suppose you heard us coming?”

“Heard you coming!” exclaimed Miller. “It was like a troop of blooming elephants—to say nothing of Dr. Jervis’s language. Hallo, Sergeant! I thought I told you to stay with the car.”

The sergeant hastily explained the arrangements, adding that “The Doctor” had concurred; on which the Superintendent, having also approved, set him to work at getting the gear ready.

A glance around the little opening in which we were gathered showed me that my diagnosis of the purpose of the expedition had been correct. Near the middle of the opening, half concealed by the rank undergrowth, yawned the mouth of one of those mysterious pits known as dene holes which are scattered in such numbers over this part of Kent. Cautiously, I approached the brink and peered down into the black depths.

“Horrible, dangerous things, these dene holes are,” said Miller. “Ought to be fenced in. How deep do you say this pit is, Doctor?”

“This one is just about sixty feet, but many of them are deeper. Seventy feet is about the average.”

“Sixty feet!” exclaimed Polton, with a fascinated eye on the yawning hole. “And anyone coming along here in the dark might step into it without a moment’s warning. Horrible! Did I understand you, sir, to say that it was dug a very long time ago?”

“It has been there as you see it,” replied Thorndyke, “for thousands of years. How many thousands we can’t say. But there seems to be no doubt that these dene holes were excavated by the men of the Old Stone Age.”

“Dear me!” exclaimed Polton. “Thousands of years! I should have thought that, by this time, they would have been full to the brim of the people who had tumbled into them.”

While these exclamations and comments were passing, the preparations were in progress for the exploration. The tripod was set up over the hole (which was some three feet in diameter and roughly circular, like the mouth of a well), the tackle securely hooked on and the lamp suspended in position. The Superintendent switched on the light by means of a push at the end of a cord, and, grasping the tripod, leaned over the hole and peered down the well-like shaft.

“I can’t make out very much,” he remarked. “I seem to see what looks like a boot, and that’s about all.”

“It is a long way down,” said Thorndyke, “and it doesn’t matter much what we can see from above. We shall soon know exactly what there is down there.”

As he spoke, he switched off the lamp and hooked the basket on to the tackle by means of a pair of clip-hooks, provided with a safety catch. Then he produced a candle from his pocket and proceeded to light it.

“I don’t like the idea of your going down, Doctor,” said the Superintendent. “It’s really our job.”

“Not at all,” replied Thorndyke, drawing the basket to the edge of the hole and stepping into it. “I proposed the
exploration and undertook to carry it out. Besides, I want to see what the bottom of this dene hole is like.”

“Don’t you think, sir,” Polton interposed, earnestly, “that it would be better for me to go down? I am so much lighter and should put less strain on the tackle.”

“My dear Polton,” said Thorndyke, regarding his devoted henchman with an appreciative smile, “this tackle would bear a couple of tons, easily. There isn’t any strain. But I will ask you to pay out the rope as steadily as you can, and keep an eye on this candle. If it goes out, you had better haul up at once without waiting for a signal, as you will know that I have dropped into foul air. Now, I am ready if you are.”

He steadied himself by lightly grasping two of the tackle-ropes and I took a turn round the trunk of a birch tree with the “fall” by passing the big coil round. Then Miller and the sergeant hauled on the rope while I gathered in the slack; the tackle grew taut, the basket began to rise from the ground and swung directly over the black hole.

“Now, pay out steadily and not too fast,” said Thorndyke; and as we began to ease out the rope, he slowly sank, like a stage demon, and disappeared into the bowels of the earth, while Polton, grasping the tripod and leaning over the hole, watched his descent with starting eyes and an expression of horror.

Owing to the great power of the tackle, the weight on the fall was quite trifling. I could, alone, have paid it out easily with the aid of the turn round the tree. So we were able, in turn, to leave it to satisfy our curiosity and relieve our anxiety by a glance down the shaft; which now looked even more alarming than when we had looked into the mere, impenetrable blackness of the hole. For now, as we peered down the well-like shaft, at our friend—already grown small in the distance-faintly illuminated by the glimmer of the candle, we were able to realize the horrible depth to which this strange memorial of a forgotten race sank into the earth.

But the unfailing glimmer of the candle-light—though it had now dwindled to a mere distant spark—reassured us; for, apart from the possibility of “choke damp,” there was really no appreciable danger. Notwithstanding which, Polton was fain, from time to time, to relieve his overwrought feelings by hailing the now invisible explorer with the inquiry, “All right, sir?” to which a strange, sepulchral, but surprisingly loud voice replied: “All right, Polton.”

After an almost interminable paying-out, the diminishing remainder of rope warned us that Thorndyke must have nearly reached the bottom, and then a sudden relaxation of the tension informed us that he had already done so. Immediately afterwards, that uncanny, megaphonic voice announced the fact and directed us to switch on the light and throw down the spare sling. I at once complied with the first order and was about to carry out the other when it occurred to me that a stout rope sling might fall with unpleasant force after a drop of sixty feet. Accordingly, I coiled it loosely round the tackle-ropes, and, securing the ends with a hitch, let go; when I saw it slide smoothly down the ropes to the bottom.

“I wonder what he wants with that sling,” Miller speculated, grasping the tripod and leaning over to peer down. But, as the only result was to obscure the light of the lamp and throw the shaft into shadow, he withdrew and waited for events to enlighten him. Then the voice came reverberating up the shaft, commanding us to hoist.

If the paying-out had been a long business, the hauling up was longer. There seemed to be no end to that rope; and as I hauled and hauled, I found myself wishing that Thorndyke had been a little less cautious and contented himself with a less powerful but quicker tackle. From time to time, Miller was impelled by the intensity of his curiosity to thrust his head over the hole to see what was coming up; but, as his head cut off the light of the lamp and rendered the ascending object invisible, he retired each time, defeated and muttering. At length, as the accumulating coils of rope told us that our freight must be nearing the surface, he succeeded in catching a glimpse of the object. But so far was that glimpse from allaying his curiosity that it reduced him to a frenzy of excitement.

“It looks like a body!” he exclaimed. “A man’s body. But it can’t be!”

It was, however. As we hauled in the last few feet of the rope and made fast to the tree, there arose out of the hole the body of a tall, well-dressed man which had been suspended from the hook of the tackle by the sling, passed round the chest under the arms. Miller helped me to haul it away from the hole, when we unfastened the sling and let the body fall on the ground.

“Well,” said the Superintendent, surveying it gloomily, “this is a disappointment. We have come all this way and taken all this trouble just to save the body of a poor devil who has stumbled into this infernal pit by accident and who is no concern of ours at all. Of course, it is not the Doctor’s fault. He discovered that there was something down there and he drew the very natural conclusion, though it happened to be the wrong one. Let the damn tackle down again as fast as you can and get the Doctor up. I expect he is as sick as I am.”

The lowering of the tackle was a slow and tedious business, for, as there was now no weight to pull it down, it had to be “overhauled.” Fortunately, Polton had oiled the sheaves so that they turned smoothly and easily; but it was a long time before the voice from below notified us that the lower block had reached the bottom. Its reverberations had hardly died away when the order came up to hoist, and we straightway began to haul, while Polton coiled down the rope as it was gathered in. Presently I noticed a puzzled expression on the Superintendent’s face, and, as I looked at him inquiringly, he exclaimed:

“This can’t be the Doctor. He’s a bigger man than that poor beggar, but there doesn’t seem to be any weight on the rope at all.”

I had noticed this, myself, and now suggested that we might take advantage of the light weight by hauling up more
quickly; which we did with such a will that Miller’s opinion was presently confirmed by the appearance of the basket at the mouth of the pit. As it came into view, the Superintendent gazed at it in astonishment.

"Why, it’s the clothes, after all!" he exclaimed, seizing the basket and turning its contents out on to the ground, "and the right ones, too, by the look of them. A complete outfit; suit, shirt, underclothing, socks, boots—everything but the hat. He must have had a hat, and so must the other fellow. Perhaps the Doctor will bring them up with him."

Having emptied the basket, we sent it down again; and now being able to judge the distance, we let it run down by its own weight, only checking it as it neared the bottom. After a very brief interval, the hollow voice from below directed us to haul up, and once again we began to gather in the rope and coil it down.

"This is queer," said Miller, as he took his turn at the rope. "It is no heavier than it was last time. I wonder what he is sending up now."

In his impatience to solve this new mystery, he hauled with such energy that beads of sweat began to appear on his forehead. But it is difficult to hurry a four-fold tackle and it was a long time before the basket came into view. When, at last, it became visible a few feet down, its appearance evidently disappointed him, for he exclaimed, in a tone of disgust:

"Hats. Two hats. I should have thought he might have brought them up with him and saved a journey."

"There is something in it besides the hats," said I, as the basket rose out of the mouth of the pit and I drew it aside on to the ground, while the others gathered round. I seized the two hats and lifted them out; and then I stood as if petrified, with the hats in my hands, too astounded to utter a sound.

"My God!" Miller exclaimed, huskily. "A man’s head! Now what the blazes can be the meaning of this?"

He stood, staring in amazement—as, indeed, we all did—at the horrible relic that lay at the bottom of the basket. Suddenly he seized the latter and turned it upside down, when the head rolled out on the ground. Then he flung the basket into the hole and gruffly ordered us to "let go."

There was no interval this time, for, almost as the rope slackened, informing us that the basket had settled on the bottom, the hollow voice from below commanded us to haul up. And as soon as we had taken in the slack, we knew by the weight that Thorndyke was at the other end of the tackle. Accordingly, I once more took a turn round the tree to prevent the chance of a slip or jerk and the others hauled steadily and evenly. Even now, the weight seemed comparatively trifling, but what we gained from the tackle in lifting power we lost in speed. In mechanics as in other things you can’t have it both ways. However, at long last, Polton, grasping the tripod and craning over the hole, was able to announce that "the Doctor" was nearly up; and after another couple of minutes he appeared rising slowly above ground, when Polton carefully drew the basket on to the solid earth and helped him to step out.

"Well, Doctor," said Miller, "you’ve given us a bit of a surprise, as you generally do. But," he added, pointing to the head, which lay with its shrunken, discoloured face turned up to the sky, "what are we to make of that? We’ve got a head too many.

"Too many for what?” asked Thorndyke.

"For what we were inquiring into," Miller replied testily. "See what you have done for us. We find a head in a box at Fenchurch Street Station. Then we keep a look-out for the body belonging to it, and at last it turns up. Then you bring us here and produce another head; which puts us back where we started. We’ve still got a spare head that we can’t account for."

Thorndyke smiled grimly. "I am not under a contract," said he, "to supply facts that will fit your theory of a crime. We must take the facts as they come; and I think there can be no doubt that this head belongs to the body that was found on the shelf a few yards from here."

"Then what about the other head?” demanded Miller. "Where is the body belonging to that?"

Thorndyke shook his head. "That is another story," said he. "But the immediate problem is how these remains are to be disposed of. We can’t carry them and the gear down to the ambulance without assistance."

Here the sergeant interposed with a suggestion.

"There is a big electric station a little farther down the road. If I were to run the patrol man down there, he could get on the phone to his head-quarters, and perhaps, meanwhile, they could lend us one or two men from the works. We’ve got a folding stretcher in the car."

"Good," said Miller. "That will do to a T, Sergeant. You cut along as fast as you can, and perhaps Mr. Polton might go with you to take charge of the patrol man’s bicycle."

As Polton and the sergeant retired along the now plainly visible track, Miller turned to Thorndyke with a puzzled and questioning air.

"I can’t quite make this out, Doctor," said he. "You brought us here, as I understood, in the expectation of probably finding that poor devil’s clothes. Had you any expectation of finding anything else?"

"I thought it probable," replied Thorndyke, "that if we found the clothes, we should probably find the head with them. But I certainly did not expect to find that body. That came as quite a surprise."
“Naturally,” said Miller. “A queer coincidence that he should have happened to tumble in, just about the same time. Still, he isn’t in the picture.”

“There,” said Thorndyke, “I think you are mistaken I should say that he is very much in the picture. My very strong impression is that he is none other than the murderer.”

“The murderer!” exclaimed Miller. “What makes you think that? Or are you just guessing?”

“I am considering the obvious probabilities,” Thorndyke replied. As he spoke, he stooped over the dead man and drew up first the jacket and then the waistcoat. As the latter garment rose, there came into view, projecting up from within the waist-band of the trousers, the haft of an undeniable Green River knife. Thorndyke drew the weapon out of its leather sheath, glanced at it and silently held it out for our inspection. No expert eye was needed to read its message. The streaks of blackened rust on the blade were distinctive enough, but much more so was the shiny black deposit at the junction of the steel and the wooden handle.

“Yes,” said Miller, as Thorndyke replaced the knife in its sheath, “that tells the tale pretty well. And exactly the kind of knife that the doctor described at the inquest.” He cogitated profoundly for a few moments and then asked: “How do you suppose this fellow came to fall into the pit?”

“I should say,” Thorndyke replied, “that the affair happened somewhat in this way: The murderer either enticed his victim into this wood, or he murdered him elsewhere and brought his body here. We shall probably never know which, and it really doesn’t matter. Obviously, the murderer knew this place pretty well, as we can judge by his acquaintance with the dene hole. Having committed the murder, or deposited the body, near the edge of the wood close to the road, he stripped the corpse and carried the clothes through the wood to the hole and dropped them down. And when we bear in mind that this must, almost certainly, have been done at night, we must conclude that, not only must the murderer have been familiar with the locality, but he had probably planned the crime in advance and reconnoitred the ground.

“Having dropped the clothes down the pit, he returned to the corpse. And now he had the most difficult part of his task to do. He had to detach the head; and he had to detach it in a particular way—and in the dark, too.”

“Why did he do to?” Miller asked.

“Let us leave that question for the moment. It was part of the plan, as the case presents itself to me. Well, having detached the head, he dragged the nude and headless corpse the short distance to the edge of the cutting and pushed it over, knowing that it would roll down only as far as the shelf. Then he carried the head to the dene hole.

“Now, we may assume that he was a man of pretty strong nerves, but, by the time he had murdered this man, stripped the corpse and cut off the head—in a public place, mind you, in which discovery was possible at any moment—he must have been considerably shaken. He was walking in the dark with the dead man’s head in his hands, over ground which, as Jervis can testify, is a mass of traps and entanglements. In his terror and agitation he probably hurried to get rid of his dreadful burden, and, just as he approached the hole, he must have caught his foot in a Bramble and fallen, sprawling, right into the pit. That is how I picture the course of events.”

“Yes,” said I, “it sounds pretty convincing as to what probably did happen, though I am in the same difficulty as Miller. I don’t quite see why he did it. Why, for instance, he didn’t throw the body, itself, down the pit.”

“We must go into that question on another occasion,” said Thorndyke; “but you will notice that—but for this investigation of ours—he did actually secure a false identification of the body.”

“Yes,” agreed Miller, “he had us there. We had fairly fixed the body on to that Fenchurch Street head.”

Once more the Superintendent fell into a train of cogitation, with a speculative eye on the body that lay on the ground at his feet. Suddenly, he roused, and, turning to Thorndyke, asked:

“Have you any idea, Doctor, who these two people are?”

“I have formed an opinion,” was the reply, “and I think it is probably a correct opinion. I should say that this,” indicating the dead man, “is the person known as Bassett, or Dobson, the man who deposited the case of stolen platinum at the cloak room; and this man,” pointing to the head, “is the one who stole the case and left the embalmed head in exchange.”

Thorndyke’s answer, delivered in calm, matter-of-fact tones, fairly took my breath away. I was too astonished to make any comment. And the Superintendent was equally taken by surprise, for he, too, stood for a while gazing at my colleague without speaking. At length he said—voicing my sentiments as well as his own:

“This is a knock-out, Doctor! I wasn’t aware that you knew anything about this case, or were taking any interest in it. Yet you seem to have it all cut and dried. Knowing you, I assume that this isn’t just a guess. You’ve got something to go on?”

“In respect of the identification? Certainly. Without going into any other matters, there is the appearance of these remains. In both cases it corresponds exactly with the description given at the inquest. The man who stole the case—”

“And left the box with the human head in it,” interpolated Miller. “You are ignoring that trivial detail.”

“Yes,” Thorndyke admitted. “We are dealing with the robbery, in which they were both concerned. Well, that man was described by the attendant as dark, clean-shaved, and having conspicuous gold fillings in both central incisors. If you look at that head, you can see the gold fillings plainly enough, as well as the other, less distinctive characteristics.
“In the case of this other man the correspondence is much more striking. Here is the long, thin face with the long, thin, pointed nose, curved on the bridge, and the dark, nearly black hair. The fair complexion and pale blue eye colour are not now clearly distinguishable. But there is one very impressive correspondence. You remember that the witness, Mr. Pippet, was strongly of opinion that the hair and beard were dyed. Now, if you take my lens and examine the roots of the hair and beard, you will see plainly that it is light brown hair dyed black.”

Miller and I took the lens in turn and made the examination; with the result that the condition was established beyond any possible doubt.

“Yes,” Miller agreed handing back the lens, “that is dyed hair, right enough, and it seems to settle the identification.”

“But we needn’t leave it at that,” pursued Thorndyke. “The very clothing agrees perfectly. There is the blue serge suit, the brown shoes, the wrist watch, and the additional pocket watch with its guard of plaited twine.”

He took hold of the latter and drew out of the pocket a large silver watch of the kind used by navigators as a “hack watch.”

“Yes,” said Miller. “It’s a true bill. You are right, Doctor, as you always are. These are the two men to a moral certainty.”

“Isn’t it rather strange,” said I, “that this man should have gone about with his dyed hair and beard and the very clothes that had been described at the inquest? He must have known that there would be a hue and cry raised after him.”

“I think,” said Thorndyke, “that the explanation is that this affair must have taken place within a day or two of the discovery at the station.”

Miller nodded, emphatically. “I’m pretty certain you are right, Doctor,” said he. “And that would account for the fact that no trace of these men was ever found. We had their descriptions circulated and the police looking for them everywhere, but nobody ever got a single glimpse of either of them. Naturally enough, as we can see now. They were lying at the bottom of this pit.”

At this moment, sounds of trampling through the wood became audible and rapidly grew more distinct. At length, the sergeant and Polton emerged into the opening, followed by the patrol man and four athletic figures in blue dungaree suits, of whom two carried a folded stretcher.

“I’ve made all the arrangements, sir,” said the sergeant, saluting as he addressed the Superintendent. “We can take the remains and the clothing in the ambulance and hand them over to the police at Dartford; and the manager of the works has kindly lent us a car to take you and the doctors to Dartford Station.”

“As to me,” said Miller, “I shall go on to Dartford with the ambulance. There are two suits of clothes to be examined. I want to go through them thoroughly before I return to town. What do you say, Doctor? Are you interested in the clothes?”

“I am interested,” Thorndyke replied, “but I don’t think I want to take part in the examination. I dare say you will let me know if anything of importance comes to light.”

“You can trust me for that,” said Miller. “Then I take it that you will go on to Dartford Station.”

With this, we parted; Miller remaining to superintend the removal of the remains and the gear, while Thorndyke, Polton and I retraced our way along the well-trodden track down to the road where the manager’s car was waiting.

———

XIV. — DR. THORNDYKE’S EVIDENCE

THE adjourned hearing in the Probate Court opened in an atmosphere which the reporters would have described as “tense.” The judge had not yet learned the result of the exhumation (or he pretended that he hadn’t) and when Mr. Gimbler took his place in the witness-box, his lordship regarded him with very evident interest and curiosity. The examination in chief was conducted by Mr. McDonnell’s junior, this being the first chance that he had got of displaying his forensic skill—and a mighty small chance at that. For Gimbler’s evidence amounted to no more than a recital of facts which were known to us all (excepting, perhaps, the judge) with certain inevitable inferences.

“You were present at the opening of the vault containing the coffin of Josiah Pippet, deceased?”

“I was.”

“What other persons were present?”

Mr. Gimbler enumerated the persons present and glanced at a list to make sure that he had omitted none.

“When the vault was opened, what was the appearance of the interior?”

“The whole interior and everything in it was covered with a thick coating of dust.”

“Was there any sign indicating that that dust had ever been disturbed?”

“No. The surface of the dust was perfectly smooth and even, without any mark or trace of disturbance.”

“What happened when the vault had been opened?”

“The coffin was brought out and placed upon trestles. Then the screws were extracted and the lid was removed in the
presence of the persons whom I have named."

"Was the body of deceased in the coffin?"

"No. There was no body in the coffin."

"What did the coffin contain?"

"It contained a roll of sheet lead and certain plumber's oddments; to wit, four lumps of lead of a hemispherical shape, such as are formed when molten lead sets in a plumber's melting-pot."

"Do those contents correspond with the traditional description of this coffin?"

"Yes. It was stated in evidence by Mr. Christopher Pippet that the traditional story told to him by his father was to the effect that the coffin was weighted with a roll of sheet lead and some plumber's oddments."

Having elicited this convincing statement, Mr. Klein sat down; and, as Anstey made no sign of a wish to cross-examine the witness, Mr. Gimbler stepped down from the witness-box with a hardly-disguised smirk, and McGonnell rose.

"That is our case, my lord," said he, and forthwith resumed his seat. There was a brief pause. Then Anstey rose and announced:

"I call witnesses, my lord," a statement that was almost immediately followed by the usher's voice, pronouncing the name,

"Dr. John Thorndyke."

As my colleague stepped into the witness-box with a small portfolio under his arm, I noticed that his appearance was viewed with obvious interest by more than one person. The judge seemed to settle himself into a position of increased attention, and Mr. McGonnell regarded the new witness critically, and, I thought, with slight uneasiness; while Mr. Gimbler, swinging his eyeglass pendulum-wise, made a show of being unaware of the witness's existence. But I had observed that he had taken in, with one swift glance, the fact that the usher had deposited the seven volumes of Josiah's diary, at Anstey's request, on the latter's desk. Remembering the double-barrelled microscope, I viewed those volumes with sudden interest; which was heightened when Anstey picked up one of them, and, opening it, sought a particular page and handed the open volume to Thorndyke.

"This," said he, "is a volume of the diary which has been identified in evidence as the diary of Josiah Pippet. Will you kindly examine the entry dated the 8th of October, 1842."

"Yes. It reads: 'Back to the Fox. Exit G. A. and enter J. P., but not for long.'"

"Have you previously examined that entry?"

"Yes. I examined it at the last hearing very carefully with the naked eye and also with the Comparison Microscope invented by Albert S. Osborn of New York."

"Had you any reason for making so critical an examination of this passage in the diary?"

"Yes. As this is the only passage in the diary in which the identity of the Earl, George Augustus, with Josiah Pippet is explicitly stated, it seemed necessary to make sure that it was really a genuine entry."

"Had you any further reason?"

"Yes. The position of this entry, after a blank space, made it physically possible that it might have been interpolated."

"And what opinion did you form as a result of your examination?"

"I formed the opinion that this entry is not part of the original diary, but has been interpolated at some later date."

"Can you give us your reasons for forming that opinion?"

"My principal reason is that there is a slight difference in colour between this entry and the rest of the writing on this page, either preceding it or following it. The difference is hardly perceptible to the naked eye. It is more perceptible when the writing is looked at through a magnifying lens, and it is fairly distinct when examined with the differential microscope."

"Can you explain, quite briefly, the action of the differential, or Comparison Microscope?"

"In effect, this instrument is a pair of microscopes with a single eyepiece which is common to both. The two microscopes can be brought to bear on two different letters or words on different parts of a page and the two magnified images will appear in the field of the eyepiece side by side and can be so compared that very delicate differences of form and colour can be distinguished."

"Was your opinion based exclusively on the Comparison Microscope?"

"No. On observing this difference in colour, I applied for, and received the permission of the court to have a photograph of this page made by the official photographer. This was done, and I have here two sets of the photographs, one set being direct prints from the negative, and the other enlargements. In both, but especially in the enlargements, the difference in colour is perfectly obvious."

Here Thorndyke produced from his portfolio two sets of photographs which he delivered to the usher, who passed one
pair up to the judge and handed the remainder to Mr. McGonnell and the other interested parties, including myself. The judge examined the two photographs for some moments with profound attention. Then he turned to Thorndyke and asked:

"Can you explain to us why differences of colour which are hardly distinguishable by the eye appear quite distinct in a photograph?"

"The reason, my lord," replied Thorndyke, "is that the eye and the photographic plate are affected by different rays; the eye by the luminous rays and the plate by the chemical rays. But these two kinds of rays do not vary in the same proportions in different colours. Yellow, for instance, which is very luminous, gives off only feeble chemical rays, while blue, which is less luminous, gives off very powerful chemical rays. So that a yellow device on a rather deep blue ground appears to the eye light upon dark, whereas, in a photograph, it appears dark upon light."

The judge nodded. "Yes," said he, "that makes the matter quite clear."

"In what way," Anstey resumed, "does this difference in colour support your opinion that this passage has been interpolated?"

"It shows that this passage was written with a different ink from the rest of the page."

"Is there any reason why Josiah Pippet should not have used a different ink in writing this particular passage?"

"Yes. In 1842, the date of this entry, there was only one kind of black ink in use, excepting the Chinese, or Indian, ink used by draughtsmen, which this is obviously not. The common writing ink was made with galls and copperas—sulphate of iron—without any of the blue colouring which is used in modern blue-black ink. This iron-gall ink may have varied slightly in colour according to whether it was freshly made or had been exposed to the air in an ink-pot. But these differences would disappear in the course of years, as the black tannate and gallate of iron changed into the reddish-brown oxide; and, there being no difference in composition, there would be no difference in the photographic reaction. In my opinion, the difference shown in the photographs indicates a difference in composition in the two inks. But a difference in composition is irreconcilable with identity in the date of this passage and the rest of the page."

"Would the difference of composition be demonstrable by a chemical test?"

"Probably, but not certainly."

"You do not question the character of the handwriting?"

"I prefer to offer no opinion on that. I detected no discrepancy that I could demonstrate."

"And now, coming from matters of opinion to demonstrable fact, what are you prepared to swear to concerning this entry in the diary?"

"That it was written with a different ink from that used in writing the rest of the page."

Having received and noted down this answer, Anstey turned over a leaf of his brief and resumed his examination.

"We will now," said he, "pass on to an entirely different subject. I believe that you have made certain investigations in the neighbourhood of Winsborough. Is that so?"

"It is."

"Perhaps, before giving us your results, it might be well if you were to tell us, in a general way, what was the object of those investigations and what led you to undertake them."

"It appeared to me," Thorndyke replied, "when I considered the story of the double life of Josiah Pippet and the Earl, George Augustus, that, although it was not impossible that it might be true, it was highly improbable. But it also seemed highly improbable that this story should have been invented by Josiah out of his inner consciousness with nothing to suggest it or give it a start. It seemed more probable that the story had its origin in some peculiar set of circumstances the nature of which might, at some later time, be entirely misunderstood. On further consideration, I found it possible to imagine a set of circumstances such as might have given rise to this kind of misunderstanding. Thereupon, I decided to go down to Winsborough and see if I could ascertain, by investigation on the spot, whether such circumstances had, in fact, existed."

"When you went to Winsborough you had certain specific objects in view?"

"Yes. I sought to ascertain whether there existed any evidence of the birth of Josiah Pippet, as a separate individual, and whether he was, in fact, born at the Castle, as alleged. Further, as subsidiary question, I proposed to find out, if possible, whether there was, in the neighbourhood, any ancient inn of which the sign had been changed within the last eighty years."

As Thorndyke gave this last answer, the judge looked at him with a slightly puzzled expression. Then a slow smile spread over his face and he settled himself comfortably in his chair to listen with renewed attention.

"Did your investigations lead to any discoveries?" Anstey asked.

"They did," Thorndyke replied. "First, with regard to the inns. There are two inns in the village, both of considerable age. One has the sign of the Rose and Crown, which is probably the original sign. The other has the sign of the Earl of Beaconsfield; but, as this house bears the date, 1602, and was evidently built for an inn, and, as Benjamin Disraeli was created Earl of Beaconsfield only in 1876, it follows that the sign must have been altered since that date. But I could find
nobody who knew what the sign had formerly been.

“I next turned my attention to the church register, and first I looked up the entry of the 9th of August 1794. On that day there were born in this small village no less than three persons. One was George Augustus, the son of the Earl of Winsborough, born at Winsborough Castle. The second was Elizabeth Blunt, daughter of Thomas Blunt, carpenter, and third was Josiah Bird, son of Isabella Bird, spinster, serving-maid to Mr. Nathaniel Pippet of this parish; and there was a note to the effect that the said Josiah was born in the house of the said Nathaniel Pippet.

“I followed the entries in the register in search of further information concerning these persons. Three years later, on the 6th of June, 1797, there was a record of the marriage of Nathaniel Pippet, widower, and Isabella Bird, spinster. Two months later, on the 14th of August, 1797, there was recorded the death of Nathaniel Pippet of this parish, inn-keeper; and three months after this, on the 8th of November, 1797, was an entry recording the birth of Susan Pippet, the posthumous daughter of Nathaniel Pippet deceased. This child lived only four days, as her death is recorded in an entry dated the 12th of November, 1797.

“As none of these entries gave any particulars as to the residence of Nathaniel Pippet, I proceeded to explore the churchyard. There I found a tombstone the inscription on which set forth that ‘Here lieth the body of Nathaniel Pippet, late keeper of the Castle Inn in this parish, who departed this life the 14th day of August, 1797.’ As there was no other entry in the register, this must have been the Nathaniel Pippet referred to in the entry which I have mentioned. I took a photograph of this tombstone and I produced enlarged copies of that photograph.”

As he spoke, Thorndyke opened his portfolio and took out a number of mounted enlargements which he delivered to the usher, who handed one to the judge and passed the others round to the various interested parties. Looking round the court, I was amused to note the expressions with which the different parties regarded the photograph. The judge inspected it with deep interest and an obvious effort to maintain a becoming gravity. So also with Brodribb, whose struggles to suppress his feelings produced a conspicuous heightening of his naturally florid complexion. Mrs. Engleheart viewed the photograph with polite and unsmiling indifference; the young people, Mr. Giles and Miss Jenifer (who, for some reason, known only to the usher, had a single copy between them), giggled frankly; Mr. Gimbler and his two counsel examined the exhibit with wooden-faced attention. The only person who made no attempt to “conceal or cloak” his amusement was Mr. Christopher Pippet; who inspected the photograph through horn-rimmed spectacles and laughed joyously.

When the photograph reached me the cause of his hilarity became apparent. It happens often enough that the designs on ancient rural tombstones are such as tend “to produce in the sinful a smile.” But it was not the work of the artless village mason that was the cause of Mr. Pippet’s amusement. The joke was in the inscription, which ran thus:
"Here lyeth ye Bodey of NATHANIEL PIPPET late Keeper of The CASTLE INN in this Parish who Departed this Life ye 14th Day of August in ye Year of Our Lord 1797 Aged 58 years. He was an honest man and a good Inn Keeper who sold no Ale but ye Best.

He that buys Land buys Stones
He that buys Meate buys Bones
He that buys Eggs buys Many Shelles
But he that buys Good Beer buys Nothing Elles."

The verses were certainly unconventional and tended to engender the suspicion that the jovial Nathaniel might have embodied them in certain testamentary dispositions. But, however that may have been, the inscription was profoundly significant.

Having given time for the inspection of the photographs, Anstey resumed his examination.

“What inferences do you deduce from these facts which you have discovered?” he asked. But, at this point, Mr. McGonnell rose and objected that the witness's inferences were not evidence.

“The learned counsel is technically correct,” said the judge, “and I must allow his objection if he insists; though, in the case of an expert witness, where an investigation has been made ad hoc, it is customary to allow the witness to explain the
bearing of the facts which he has elicited.”

The learned counsel was, however, disposed to insist and the question was accordingly ruled out.

“Apart from any inferences,” said Anstey, “what facts have your investigations disclosed?”

“They have disclosed the fact,” replied Thorndyke, “that on the 9th of August, 1794, the day on which the Earl, George Augustus was born at Winsborough Castle, there was born at ‘The Castle’ at Winsborough an individual named Josiah whose mother subsequently married Nathaniel Pippet.”

“That fact is the sum of what you discovered?”

“Yes.”

“And what relation does that bear to the imaginary set of circumstances of which you have told us?”

“The circumstances that thus came to light were substantially identical with those which I had postulated theoretically.”

Anstey noted down this answer and then proceeded:

“You were present at the exhumation of the coffin of Josiah Pippet with the other persons who have been mentioned?”

“I was.”

“Did the appearances which you observed seem to you to agree with the conditions which were assumed to exist—that this coffin had lain undiscovered in this vault for eighty years?”

“No. In my opinion, the appearances were not reconcilable with that assumption.”

“In what respect did the appearances disagree with the ostensible conditions?”

“There were three respects in which the appearances disagreed with the conditions which were assumed to exist. The disagreements were concerned with the dust in the vault, the coffin, and the contents of the coffin.”

“Let us take those disagreements in order. First, as to the dust. Do you say that there were signs that it had been disturbed?”

“No. The dust that was there had not been disturbed since it was deposited. But it had not the characteristics of ancient dust, or of any dust which might have become deposited in a vault above ground which was situated in an open burial ground, remote from any dwelling house.”

“What are the distinguishing peculiarities of such ancient dust?”

“The dust which would be deposited in a vault over a period of eighty years would consist of very light and minute particles of matter, such as would be capable of floating in still air. There would be no mineral particles excepting excessively minute particles of the lighter minerals, and very few of these. Practically the whole of the dust would consist of tiny fragments of organic matter, of which a large part would be derived from textiles. As these fragments would be of all sorts of colours, the resulting dust would be of no colour at all; that is to say, of a perfectly neutral grey. But this dust was not of a perfectly neutral grey. It had a very faint tinge of red; and this extremely faint tinge of colour was distinguishable in the whole of the dust, not only in one part. I accordingly took two samples for examination, one from the coffin and one from the shelf on which it rested; and I have since made a microscopical examination of each of these samples separately.”

“And what conclusion did you arrive at as a result of your examination?”

“I came to the conclusion that the whole of this dust had been derived from a single room. That room was covered with a carpet which had a red ground with a pattern principally of green and blue with a little black. There was also in this room a cotton drapery of some kind—either a table-cloth or curtains—dyed a darkish blue.”

“Those are your conclusions. Can you give us the actual facts which you observed?”

“On examining the dust through the microscope, I observed that it consisted chiefly of woollen fibres dyed a bright red. There were also woollen fibres dyed green and blue, but smaller in number than the red, and a still smaller number of woollen fibres dyed black, together with a few cotton fibres dyed a darkish blue. In addition to the fibres there were rather numerous particles of coal and some other minerals, very small in size, but much too large to float in still air. I have here two samples of the dust mounted and arranged in small hand microscopes. On holding the microscopes up to the light, it is quite easy to see the fibres which I have described and also one or two particles of coal.”

He handed the two little instruments (in which I recognized the handiwork of the ingenious and indefatigable Polton) to the usher, who passed them up to the judge. His lordship examined each of them with deep interest and then returned them to the usher, by whom they were handed, first to McGonnell and then to the other parties to the case. Eventually, they came to me; and I was surprised to see how efficiently these little instruments served their purpose. On turning them towards the window, the coloured fibres were visible with brilliant distinctness, in spite of the low magnification. And their appearance, corresponding exactly with Thorndyke’s description, was absolutely convincing, as I gathered from the decidedly glum expression that began to spread over Mr. McGonnell’s countenance.

When the dust had been inspected, Anstey resumed his examination.

“Can you account for the presence of this dust in the vault?”
“Only in general terms. Since it was obviously not derived from anything in the vault, itself, or the immediate neighbourhood of the vault, it must have been brought there from some other place.”

“Can you suggest a method of procedure which would have produced the appearances which you observed?”

“A possible method, and the one which I have no doubt was employed, would be this: First, the sweepings from the room, or more probably the accumulations from the receiver of a vacuum-cleaner, would be collected and conveyed to the vault. There, the dust could be blown into the air of the upper part of the vault by means of a vacuum-cleaner with the valve reversed, or more conveniently by means of a common pair of bellows, the dust being fed into the valve-hole. If it were blown up towards the roof, it would float in the air and settle down slowly, falling eventually in a perfectly even manner on the coffin, the shelf, and the floor, producing exactly the appearance that was seen.”

“You are not prepared to swear that this was the method actually employed?”

“No; but it would be a possible method, and I cannot think of any other.”

“Well,” said Anstey, “the method is not important. We will let it go and come to another matter.

“You referred to three discrepancies in the appearances; the dust, the coffin, and the contents of the latter. In what way did the coffin disagree with the ostensible conditions?”

“The coffin was assumed to have been lying undisturbed in the vault for eighty years. That was not the case. If this was the original coffin, it had certainly been opened and re-closed since the year 1854.”

“How are you able to fix the date so exactly?”

“By the screws with which the lid was fastened down. These screws are in the possession of Detective-Superintendent Miller, who is now in court.”

Here the Superintendent rose, and, producing an envelope, handed it to the usher, who passed it up to the judge. He then evicted Thorndyke from the witness-box, and, taking his place, was duly sworn, and, in reply to a question from Anstey, declared that the screws in the envelope were the screws which had been extracted in his presence from the coffin of Josiah Pippet.

The judge opened the envelope and tipped the screws out into the palm of his hand. Then he remarked—in almost the very words that I had heard the Superintendent use—that he did not see anything at all unusual about them. “To my unsophisticated eye,” he concluded, “they look like the kind of screws that one could buy at any ironmonger’s.”

“That, my lord,” said Thorndyke—who had, in his turn, evicted the Superintendent and resumed his place in the witness-box—“is exactly what they are, and that is the fact which gives them their evidential importance. This coffin was supposed to have been screwed down in the year 1843. But in that year you could not have bought screws like these at any ironmonger’s. There were no such screws in existence. At that time, wood screws were like metal screws, excepting as to their threads. They were flat-ended, so that, in order to drive them in, it was necessary to bore a hole as deep as the screw was long. But, about 1850, an American inventor devised and patented a sharp-pointed, or gimlet-ended screw, which would find its own way through wood, regardless of the depth of the hole. Later, he came to England to dispose of his patent rights, and in 1854 he sold them to Chamberlain and Nettlefolds, who thereupon acquired the virtual monopoly of the manufacture of wood screws; for, owing to the great superiority of the sharp-pointed screw, the old, blunt-ended screw went completely out of use. I am able, by the kindness of the Master of the Worshipful Company of Ironmongers, to show a set of the old type of screws, the date of manufacture being 1845.”

Here he produced a wooden tablet to which were secured six screws of various sizes with blunt, flattened ends like the screws still used by metal workers. The tablet was passed up to the judge, who inspected it curiously and compared the screws on it with those from the envelope.

“It is always easy,” he moralized, “to be wise after the event; but it does really seem astonishing that mankind should have had to wait until 1854 for so obvious an improvement.”

With this he returned the coffin screws to the envelope and handed the latter and the museum tablet to the usher, who proceeded to pass them round for inspection. I watched their progress with considerable interest, noting their effect on the different parties to the case. Particularly interested was I to observe the expression on Mr. McGonnell’s face as he compared the two exhibits. There was no question as to his recognition of their significance; and, by the flush that rose to his face, and the unmistakable expression of anger, I judged that Mr. Gimbler had not taken him into his confidence and that these revelations were coming to him as a very disagreeable surprise.

When the screws had been inspected by the principal parties, Anstey resumed his examination.

“When you stated the latest date at which this coffin could have been screwed down, you used the qualification, ‘If this was the original coffin.’ Did you mean to express a doubt that this was the original coffin?”

“Yes. My opinion is that it is not the original coffin, but a new one to which the brass name plate and other metal ‘furniture’ from the original coffin have been screwed. The plate and handles appeared to me to be the original ones, and they appeared to be fastened on with the original brass screws. The slots of those screws showed clear indications of their having been unscrewed quite recently.”

“What were your reasons for believing that this was a new coffin rather than the old one, opened and reclosed?”
“There were several reasons. First, there were the screws. These were modern screws, apparently artificially rusted. At any rate, they were rusty. But if the original coffin had been opened and re-closed, it would be natural for the screws which had been extracted to be used to fasten down the lid. There would be no object in obtaining rusty screws to use in their place. Then the coffin did not look old. It was much discoloured; but the discolouration did not look like the effect of age but rather like that of staining. Further, the coffin was covered, both inside and out with a thick coating of mildew. But there was nothing to account for this mildew. The wood was not damp, and it had the character of new wood. The mildew had the appearance of having been produced artificially by coating the surface with some substance such as size, mixed with sugar or glycerine. Moreover, on the assumption that some substitution had been made—which all the appearances indicated—it would obviously be more convenient to use a new coffin than to open and remove the contents of the old, particularly if the old one should have contained a body. But that is a matter of inference. Taking only the appearances observed, I consider that they indicated that this was a new coffin.”

“Then,” said Anstey, “we now come to the third set of disagreements, the contents of the coffin. What have you to tell us about those?”

“The contents of the coffin,” Thorndyke replied, “were, according to the traditional account, a roll of sheet lead and some plumber’s oddments, which had been left over from some repairs. Now, sheet lead, removed in 1843, or earlier, from the roof of a house, would, even then, be old lead. It would certainly be cast sheet—cast upon a sand casting table; and it would certainly contain a considerable proportion of silver. But the sheet of lead which was found in the coffin was the ordinary milled sheet which has, in recent times, replaced the old cast sheet. As to the amount of silver that it contained, I could form no opinion. I therefore suggested that an assay should be made to ascertain the silver content. This proposal was contested by Mr. Gimbler on the ground that we had no authority to make an assay, and by Mr. McGonnell on the ground that the evidence was of a kind that would not be taken seriously by the court. And Mr. Brodribb objected, apparently on the ground that the proceeding would seem to throw doubt on the good faith of the applicant. Accordingly, I did not press my proposal, but I made a careful examination of the contents of the coffin, with very surprising results. In addition to the sheet lead, the coffin contained four hemispherical lumps of metal which had apparently solidified in a plumber’s melting pot, which we may call pot-leavings. There were four of these; one large and three smaller. The large one had the appearance and all the visible and palpable properties of lead, and I had no doubt that it was lead. The other three were evidently not lead, but had the appearance and properties of an alloy of lead and some other metal.”

“Bid you form any opinion as to the nature of the other metal?”

“I did, but with the reservation that the inference seemed so incredible that I was doubtful about accepting it.”

“What was the opinion that you formed as to the nature of these lumps of lead alloy?”

“I was forced to the conclusion that they were composed of an alloy of lead and platinum.”

“Platinum!” exclaimed the judge. “But is not platinum a very rare and precious metal?”

“It is always a precious metal,” Thorndyke replied, “and since the war it has become extremely scarce and its value has gone up to an extravagant extent. At present, it is several times more valuable than gold.”

“And how much platinum did you consider to be present in these lumps of alloy?” the judge asked.

“I estimated the weight of the three lumps together at about a hundredweight, and, about half that weight appeared to be platinum.”

“Half a hundredweight of platinum!” exclaimed the judge. “It does indeed seem incredible. Why, it is a fortune. What do you suppose the value of that amount would be?”

“At the present inflated prices,” replied Thorndyke, “I should put it at anything from fifteen to seventeen thousand pounds.”

“It is beyond belief,” said the judge. “However, we shall see,” and with this he sat back in his chair and glanced at Anstey.

“As this opinion seems to be so utterly incredible, even to yourself,” said Anstey, resuming his examination, “perhaps you might explain to us how you arrived at it.”

“It was principally a question of weight,” Thorndyke replied.

“But,” said Anstey, “have you had sufficient experience to be able to detect platinum in an alloy by the sense of weight to the hand?”

“No,” Thorndyke answered, “but it was not a case of absolute weight, or I should have been still less confident. There was a term of comparison. When I picked up the big lump, it felt just as I should expect a lump of lead of that size to feel. But when I then picked up the first of the smaller ones, I received a shock; for, though it was little more than half the size of the big one, it was nearly as heavy. Now, there are not many metals that are much heavier than lead. For practical purposes, ignoring the rare metals, there are only two—gold and platinum. This did not look like gold, but it might have been; a mass of gold, for instance, with a lead casing. On the other hand, its colour—a faint, purplish grey—was exactly that of a lead-platinum alloy. So there seemed to be no escape from the conclusion that that was what it was.”

While this evidence was being given, I kept my eyes on Mr. Gimbler and his leading counsel. The latter listened in undisguised astonishment and little less disguised displeasure. Obviously, he had begun to smell a rat; and, as it was not
his rat, he naturally resented its presence. But even Gimbler failed to maintain the aspect of wooden indifference that he had preserved hitherto. This disclosure had evidently sprung on him a complete surprise; and, as I looked at him and noted the dismay which he struggled in vain to conceal, I found myself wondering whether, by any chance, the expression of consternation on his face might have some significance other than mere surprise. But my speculations were cut short by Anstey, who was continuing his examination.

“Have you anything more to tell us about the contents of this coffin?"

“No,” was the reply. “That is all the information that I have to give.”

On receiving this reply, Anstey sat down and McGonnell was rising to cross-examine when the judge interposed.

“Before we pass on to other matters,” said he, “we ought to be a little more clear about the nature of this metal which was found in the coffin. That is a question which is highly relevant to the issues which are before the court. But it is also relevant to certain other issues concerned with public policy. Dr. Thorndyke is not prepared to say definitely that this is actually platinum; but he is evidently convinced—and on apparently sufficient grounds—that it is. But the question cannot be left at that. It can be settled with certainty, and it should be. Do I understand that this metal, worth, possibly, many thousands of pounds, is still lying in that coffin?”

This question was addressed to Thorndyke, who accordingly replied:

“No, my lord. As my proposal of an assay was rejected, and in view of the questions of public policy to which your lordship has referred, I informed Mr. Superintendent Miller that, in my opinion, an examination of the pot-leavings would yield information of great importance to the police. The Superintendent thereupon took possession of the whole of the contents of the coffin and conveyed them to the premises of Mr. Daniels, the eminent assayist, and left them there for an assay to be made.”

“And has an assay been made?” the judge asked.

“I believe it has, my lord, but I have no information as to the result. Mr. Superintendent Miller is now in court.”

Here the Superintendent rose and approached the solicitor’s table carrying a small but obviously heavy box, which he laid on the table.

“I think,” said the judge, “that what the Superintendent has to tell us should go in evidence.”

Accordingly, Miller once more evicted Thorndyke from the witness-box, and the judge continued: “You have already been sworn, Superintendent. Will you now give the facts, so far as they are known to you, concerning the contents of this coffin?”

The Superintendent stood at “attention” and delivered himself of his evidence with a readiness born of long practice.

“In consequence of certain information communicated by Dr. Thorndyke, I took possession of the contents of the coffin alleged to be that of Josiah Pippet deceased and conveyed them forthwith to the premises of Mr. Daniels in Bishopsgate and delivered them to him with instructions to make a trial assay and report to me what he found. On the same evening, I received a report from him in which he informed me that he had ascertained the following facts:— the roll of sheet lead was practically pure lead almost completely free from silver, and was probably of recent manufacture. The large pot-leaving was also pure lead of the modern silver-free type. The three smaller pot-leavings were composed of a lead-platinum alloy, of which about half by weight was platinum. On receiving this report, I directed Mr. Daniels to recover the whole of the platinum in a pure state and deliver it to me. He did this, and I have here, in the box on the table, the platinum which I received from him and which he assured me is practically the whole of the platinum which was contained in the pot-leavings. It amounts, roughly, to just under half a hundredweight.”

As he concluded, he stepped down from the witness-box, and, approaching the table, unlocked a small padlock of the Yale type by which the hasp of the box was secured and opened the lid. Then, from the interior, he lifted out, one after another, eight little bright, silvery-looking bars, or ingots, and laid them in a row on the table. Picking up the end one, he handed it up to the judge; who weighed it in the palm of his hand, looking at it with a faint smile of amusement. When he received it back from the judge, Miller carried it round the court and allowed each of the interested parties to take it in his hand; and, when it came to my turn, and the Superintendent handed it to me (with something exceedingly like a wink, and a sly glance at Thorndyke), I understood the judge’s smile. There was something ridiculous in the monstrous disproportion between the size of the little bar and its weight; for, small as it was, it had the weight of a good-sized iron dumbbell.

When Miller had returned the bars to the box and locked the padlock, he went back to the witness-box to await further questions or cross-examination; but, as neither of the counsel made any sign, the judge dismissed him and then announced the adjournment of the hearing. “I regret,” he added, “that, in consequence of other and more urgent business, it will have to be adjourned for a week. The delay is unfortunate; but,” here he glanced at McGonnell with a faint smile, “it will have the advantage that learned counsel will have time to consider their cross-examination of Dr. Thorndyke.”

Hereupon the court rose and we all prepared to take our departure. Glancing at “the other side,” I observed Mr. Pippet looking a little wistfully in our direction as if he would have liked to come and speak to us. But apparently his native wisdom and good sense told him that the occasion was inopportune, and, after a momentary hesitation, he turned away with a somewhat troubled face and followed his legal representatives out of the court.
XV. — A JOURNEY AND A DISCUSSION

“THIS adjournment,” remarked the Superintendent as he attached a strong leather rug-strap to his precious box, “is a piece of luck for me—at least I am hoping that it is. You’ll have tomorrow free I suppose, Doctor?”

“I have got plenty to do tomorrow,” Thorndyke answered, “but I haven’t any appointments, as I expected to be here. Why do you ask?”

“Because,” replied Miller, “I have had a bit of luck of another sort. I told you that the suspected yacht was laid up in Benfleet Creek with her hatches sealed and a local boat-builder told off to keep an eye on her. Well, it seems that this man—his name is Jaff—spotted some Johnnie trying to break into her in the cool of the evening, about eleven p.m. So Mr. Jaff collared the said Johnnie after a bit of a tussle, and handed him over to the local police.

“Then the police had a brain-wave—quite a good one too. They phoned down to Southend for the Customs officers who had rummaged the yacht when she arrived from her voyage. So the Preventive men—there were two of them—hopped into the train and came over to have a look at the chappie who had been nabbed; and they both recognized him, at once, as one of the three men they had seen on board the yacht when they rummaged her. And one of them remembered his name—Bunter; and when it was mentioned, he didn’t deny it, though he had given a false name, as the police had already assumed, when he said it was John Smith. Of course, there are people in the world named John Smith. Plenty of them. But the crook is apt to exaggerate the number.

“Well, when we got notice of the capture, we thought at first of having him sent up to the Yard to see if we could get a statement from him. But then I thought it would be better for me to go down and have a talk with him on the spot and just have a look at the yacht at the same time. And that’s where you come in; at least I hope you do, as you seem to be like one of those blooming spiders that I’ve heard about that have got eyes all over them. What do you say? I think you would find it an interesting little jaunt.”

Thorndyke appeared to think so, too, for he accepted the invitation at once and included me in the acceptance, as I also had the day at my disposal. Accordingly, we settled the program, much to the Superintendent’s satisfaction, and, having arranged to meet on the following morning at Fenchurch Street Station, we escorted Miller, with his precious burden, to his car and bade him au revoir.

“I agree with Miller,” said I, as, having achieved the perilous crossing of the Strand, we strolled towards the Temple Gate. “This is a bit of luck. A nice little trip to the seaside instead of a day in that stuffy court. And it will probably be quite amusing.”

“I hope it will be more than amusing,” said Thorndyke. “We ought to be able to pick up some useful facts. We want them badly enough, for there are a lot of gaps that we have to fill up.”

“What gaps are you referring to?” I asked.

“Well,” he replied, “look at our case as it stands. It is a mere collection of disconnected facts. And yet we know that those facts must be connected, and that we have got to establish the connexion. Take this platinum, for instance. It disappears from the cloak room and is lost to view utterly. Then it reappears in the coffin; and the problem is, how did it get there, where has it been in the interval, and what is Gimbler’s connexion with it?”

“Aren’t we rather guessing about that platinum?” I objected. “We all seem to be assuming that this platinum is the platinum that was stolen.”

“And reasonably so, I think,” said Thorndyke. “Consider the probabilities, Jervis. If it had been a case of an ounce, or even a pound, there might have been room for doubt. But half a hundredweight, at a time when every grain of platinum is precious and worth many times its weight of gold, and at a time when that very weight of platinum has been stolen and is still missing—well, we may be mistaken, but we are justified in accepting the overwhelming probabilities. And, after all, it is only a working hypothesis.”

“Yes,” I admitted, “I suppose you are right; and we shall soon know if you are on the wrong track. But you are also assuming that Gimbler has some connexion with it. You haven’t much to go on.”

Thorndyke laughed. “You are a regular Devil’s advocate, Jervis,” said he. “But you are right, so far. We haven’t much to go on. Still, I suppose you will agree that we have fair grounds for assuming that Gimbler has some connexion with that bogus coffin.”

“Yes,” I was forced to admit, “I will concede that much, as the coffin appears to have been planted there to furnish evidence in support of his case. But I am not so clear as to the connexion between Gimbler and that platinum. He seemed mighty surprised when you mentioned it.”

“He did,” Thorndyke agreed; “and there is certainly something extremely odd about the whole affair. But you see the position. Gimbler arranges for a dummy coffin to be planted, and that dummy coffin is found to contain the proceeds of a robbery. There is thus established a connexion of some sort between Gimbler and this stolen property. We cannot guess the nature of the connexion. It may be of the most indirect kind. Apparently, Gimbler had no suspicion of the nature of the metal in the coffin. But some kind of connexion between that loot and Mr. Gimbler there must be. And it is not impossible that the platinum may eventually be the means of pointing the way to some unguarded spot in Gimbler’s defences; for I
take it that there will be considerable difficulty in getting direct evidence of his part in the planting of the coffin.”

His conclusion brought us to our doorstep, at which point the discussion lapsed. But I felt that it was only an adjournment; for something in the Superintendent’s manner had suggested to me that he, also, had certain questions to propound.

And so it turned out. On our arrival on the platform at Fenchurch Street, I perceived the Superintendent doing “sentry-go” before the door of an empty first-class smoking compartment, and I suspected that he had made certain private arrangements with the guard. At any rate, we had the compartment to ourselves, and when we had passed the first few stations in safety, he proceeded to fire his first shot.

“I’ve been puzzling my brains, Doctor, about those pot-leavings.”

“Indeed?” said Thorndyke. “What is the difficulty?”

“The difficulty is how the deuce they became pot-leavings. I have always understood that platinum was almost impossible to melt. Isn’t that so?”

“Platinum is very difficult to melt,” Thorndyke agreed. “It has the highest melting-point of all metals, excepting one or two of the rare metals. The melting-point is 1710 Centigrade.”

“And what is the melting-point of cast iron?”

“1505 Centigrade,” Thorndyke answered.

“Then,” exclaimed Miller, “if it takes about two hundred degrees more to melt platinum than it does to melt iron, how the devil was it possible to melt the platinum in a common plumber’s melting-pot which is made of cast iron? It would seem as if the pot should melt before the platinum.”

“So it would, of course, if the metal had been pure,” Thorndyke replied with a smile that suggested to me that he had been expecting the question, and that something of importance turned on it. “But it was not pure. It was an alloy; and alloys exhibit all kinds of queer anomalies in respect to their melting-points. However, with your permission, we will postpone the discussion of this point, as we shall have to consider it in connexion with certain other matters that we have to discuss. You have not told us whether those clothes from the two dead men yielded any information.”

“They gave us the means of identifying the two men, as you will have learned from the reports of the inquest; and the names were apparently their real names, or at least their usual aliases. The murderer, Bassett, the skipper of the yacht, was a local man, as you guessed. He lived at Swanscombe, and seems to have been a Swanscombe man, which accounts, as you suggested, for his knowledge of the dene hole. The man he killed, Wicks, was living at Woolwich at the time, but he seemed to be a bird of passage. That is all that I got out of the clothes excepting the name and address of a man called Samuels, who describes himself as a gold refiner and bullion dealer, but who may be a fence. We know him by name, but we haven’t anything against him, though we bear him in mind. These small bullion dealers have to be kept in view, as they have so many facilities for getting rid of stolen jewellery and plate.”

“Yes,” Thorndyke agreed; “and, in the special circumstances, any refiner and bullion dealer is of interest to us. It seems likely that Bassett intended to approach this man, Samuels, on the object of the disposal of the platinum, if he hadn’t already made some arrangements with him. You’ll have to continue to keep Mr. Samuels in view. But now tell us a little more about this present business.”

“There isn’t much more to tell you,” said Miller. “It seems that Mr. Jaff, the boat-builder gent, was cruising about Benfleet Creek in his dinghy—he lives afloat, himself—when he saw our friend, Bunter, trying to prise open the yacht’s fore scuttle; whereupon, having a natural prejudice against people who break into yachts, he pulled alongside, stepped on board, and, creeping silently along the deck in his rubber mud-boots, grabbed Bunter and hauled him into his dinghy, where they seem to have had a mighty scrap until another mariner came along and lent a hand. Then they got him ashore and handed him over to the local police as I have told you.”

“What do you suppose could have been his object in trying to break into the vessel?” I asked. “There wasn’t anything of value left on board, was there?”

“There was not supposed to be,” said Miller, with a knowing look, “but I have an idea that there may have been. My notion is that there may have been more platinum than we thought, and that he had come to snap up what was left. What do you say, Doctor?”

Thorndyke shook his head. “I don’t think so, Miller,” he replied. “You have recovered practically all the platinum that was said to have been stolen. My impression is that, as our friend Mr. Pippet might express it, you are barking up the wrong tree.”

“Am I?” said Miller. “Then if you will point out the right tree, I’ll bark up that. What do you think was his object in trying to break in?”

“My idea is,” Thorndyke replied, “that he supposed that the whole of the platinum was still on board.”

“But,” protested Miller, “how could he? He knew that Bassett had carted the bulk of it away.”

Thorndyke chuckled. “My impression is, Miller,” said he, “that it was at this point that the chapter of accidents began;
and it is here that the answer to the question that you raised just now comes in.

"About the melting-pot?" demanded Miller.

"Yes. I have a theory that the whole mystery of the murder and the appearance of the platinum in the coffin hinges on that question. Perhaps, as we have some time at our disposal, there would be no harm in my giving the reins to my fancy and sketching out my hypothetical scheme of the events as I believe they occurred."

"Do, by all means," Miller exclaimed, eagerly, "for, if your imaginary scheme satisfies you, it is likely to satisfy me."

"Then," said Thorndyke, "I will begin with what I believe to have been the hiding-place in which the platinum was concealed on the yacht."

"But, good Lord, Doctor!" Miller exclaimed, "you've never seen the yacht!"

"It wasn't necessary," Thorndyke replied. "I had your description of the yacht and of the search made by the Customs officer, and they seemed to me to indicate an excellent hiding-place. When you described how that officer crept down into the hold and found it all perfectly clear and empty with the exception of the lead ballast-weights, it occurred to me that it was quite possible that the platinum was staring him in the face all the time. Remember that he was not looking for platinum but for tobacco."

"Do you suggest that the platinum was hidden in the ballast-weights?" Miller demanded.

"That is exactly what I do suggest," replied Thorndyke; "and I will describe to you what I believe to have been the method used in concealing it. You will remember that these weights were proper yacht's ballast; lead weights cast to a correct shape to fit the timbers and sits comfortably along the kelson. Each would probably weigh about half a hundredweight, that being the usual and most convenient weight. Now, my theory is that our friends took with them a mould of the ballast-weights—an ordinary sand-flask would do, though a fireclay mould would be more convenient—so that they could cast new weights whenever they might want them. Possibly they also took some spare lead with them.

"Now, as soon as they had got possession of the platinum—which, you will remember, was in thin sheets—they cut it up into suitably sized pieces, or rolled or folded it up to a size that would go easily into the mould. They put the pieces into the mould, probably propping them up a little with some pieces of lead to keep them off the bottom, so that the platinum should not be visible on the surface. Then they melted some spare lead, or one of the ballast-weights and poured the molten lead into the mould. When the lead set solid, there would be a quite ordinary-looking ballast-weight. Then they did the same with the rest of the platinum, producing a second ballast-weight; and the two could be laid down with the rest of the weights alongside the keel. If there was any lead left over, that would be thrown overboard together with the mould."

"Yes," said Miller, "that sounds quite convincing. Deuced ingenious, too. Uncommonly neat. That's how they were able to walk past the customs in the way they did. But where does the chapter of accidents come in?"

"It came in at that point," said Thorndyke. "Somebody had made a trifling miscalculation. I don't say that Bassett made the mistake, though I suspect that he did. But someone did. You know, Miller, as well as I do that people who embark on a fake of any kind need to have a good deal of knowledge. And usually they haven't. Our friend, Gimbler, didn't know enough about dust; and the craftsman who made the bogus coffin didn't know enough about screws. And I suspect that the downy bird who invented the ballast-weight dodge didn't know enough about platinum.

"The rock, I think, on which these gentry split was this: most people know, as you know, that platinum is one of the most insufible of metals. It cannot be melted in any ordinary furnace. Only a very special furnace, or the most powerful type of blowpipe will melt it. Now, to a person who knew that, and no more, it would naturally seem that platinum, put into a mould and then covered up with melted lead, would simply be imbedded in lead. And, since lead is very easily fusible—it melts at the comparatively low temperature of 325° Centigrade—it would naturally seem that, when it was required to recover the platinum, all that would be necessary would be to melt the lead weight and pick out the platinum."

"Yes," agreed Miller; "that seems perfectly feasible. What's the snag?"

"The snag is," replied Thorndyke, "that platinum has one most singular property. Everyone knows that you can melt lead in an iron ladle or pot; and it would be quite natural to infer that, since platinum is more difficult to melt than iron, it would be equally easy to melt lead in a platinum ladle or pot. But the inference would be quite wrong. If you were to try to melt lead in a platinum pot, the bottom of the pot would drop out. In spite of its enormously high melting-point, platinum dissolves freely in melted lead."

"The deuce it does!" exclaimed Miller. "That is most extraordinary."

"It is," Thorndyke agreed; "and it is a property of the metal that would be totally unexpected by anyone who did not happen to know it. And now you will see how this curious fact affects our problem. Supposing the platinum to have been put into the mould as I have described, and the melted lead poured in on top of it; and supposing the thieves—or some of them—to be unacquainted with this property of the metal. They would expect, as I have said, that when they wanted to recover the platinum, all they would have to do would be to melt the lead weight and pick out the platinum with tongs.

"Now our friend Wicks, who made the exchange at the cloak room was evidently 'in the know.' He knew what was in the case that he stole; and he had come to get that case. The relic that he left in exchange was, I feel sure, merely a by-product. It may even have furnished the means or the suggestion for the exchange. Obviously, he had the thing on his hands, and it was the kind of thing that he would naturally wish to get rid of; and, if he was able to get a suitable case, as he evidently
was, the exchange was a quite masterly tactical plan. But I think we may take it that it was the case—worth fifteen thousand pounds—that he had come for.

"We will assume that he knew the platinum to be concealed in the lead weights. It is practically certain that he did. He was one of the yacht’s crew, or gang, and the thing must have been known to all of them. Probably he had seen the job carried out; but, at any rate, he knew what had been done. Accordingly, as soon as he had got his booty into a safe place, he proceeded to melt down the lead weights to get at the platinum.

"And then it was, I suggest, that the fatal mistake occurred. As the weights melted, he looked for the platinum to appear. Apparently, he fished for it with a ladle and then transferred the molten metal by degrees to some empty pots. But when he had laddled the whole of it into the other pots, there was still no sign of the platinum. To his eye, the pots contained nothing but melted lead.

"Now, what would he be likely to think, under the circumstances? He might have thought that Bassett had made a mistake and put the wrong weights into the case; but more probably (seeing that he had tried to rob the gang and snatch the whole of the booty for himself and the confederate who had helped him to carry off the case) he would think that he had been suspected and that ‘the boss’ had deliberately laid a booby-trap for him by planting a couple of the plain lead weights in the case. At any rate, he had, apparently, got nothing but a quantity of lead. What did he do with that lead? We have no means of judging. He may have thrown it away in disgust or he may have sold it to a plumber for a few pence. But, if we accept this hypothetical construction of the course of events, we can see how these lumps of lead-platinum alloy came into being."

"Yes," Miller agreed, "it all fits the facts perfectly, even to the murder of Wicks. For, of course, each of these two rascals, Wicks and Bassett, thought the other had nobbled the whole of the swag. My eye! What a lark it is!" He laughed grimly and then added: "But I begin to have an inkling of the way you dropped on that deniere hole so readily. You’d been keeping an account of the case all along. I wonder if you can make any suggestion as to how that stuff got into the coffin, and who put it there."

"I am afraid not, Miller," Thorndyke replied. "You see that the hypothetical sketch that I have given you is based on known facts and fair probabilities. But the facts that we have do not carry us much farther. Still, there is one fact that we must not overlook."

"What is that?" Miller demanded, eagerly.

"You will admit, I think," said Thorndyke, "that the faking of that coffin must have been carried out on the initiative and under the direction of Gimbler. There is really no reasonable alternative."

"Unless Mr. Pippet did the job himself; which doesn’t seem at all likely, though he may have been a party to it. But I agree with you. Gimbler must have been the moving spirit, and probably Pippet knows nothing about it."

"That is my own view," said Thorndyke. "Tippet impresses me as a perfectly honest man, and I have no doubt that the planting of the coffin was exclusively Gimbler’s scheme, carried out by certain agents. But one of these agents must have had these lumps of alloy in his possession—unconscious, of course, of their nature. But that agent must have been in touch, directly or indirectly, with Wicks. Now, it ought not to be impossible to discover who that agent was. There are several ways of approach to the problem. One of them, perhaps, is Mr. Bunter. Since Wicks was not on board the yacht when Bassett took away the case of platinum, he must have had a confederate who was. Now, there were only two men left when Bassett had gone—not counting the man whom the Customs officer saw, who seems to have been a stranger who had probably taken a passage on the yacht, and is not really in the picture at all. As Bunter was one of those two, there is, at least, an even chance that he was Wicks’s confederate; and, when you come to have a talk with him, you must bear in mind that he, also, may be assumed to be unaware of the change that the platinum would undergo when the melted lead was poured on to it."

"Yes, by Jove!" Miller agreed. "I begin to hope that we may get something really useful out of Mr. Bunter, if we deal with him tactfully. But Lord! What a stroke of luck it was for me that you were able to come with me on this jaunt. If it hadn’t been for what you have just told us, I might have missed the whole point of his story, even if he was prepared to tell one. I shouldn’t have known any more about it than he did."

As Miller concluded this frank and generous acknowledgment, the train began to slow down and presently drew up at Benfleet Station. A sergeant of the local police was waiting on the platform; and, when we had introduced ourselves, he took us in charge and conducted us out of the station. A few steps took us to the waterside, where we halted to survey the interminable levels of Canvey Island and the winding creek, now full of water, with its amazing assemblage of house boats and floating shacks of all kinds.

"That’s the Cormorant," said the sergeant, pointing to a sturdy-looking, yawl-rigged yacht that was moored some distance down the creek. "I suppose you will not be wanting to go on board her?"

"Not at present," replied Miller, "and probably not at all. But we will hear what Bunter has to say."

"I’m afraid, sir," said the sergeant, "you’ll find that he hasn’t very much to say. We haven’t found him particularly ready to talk. But perhaps he’ll let himself go a bit more with you."

We turned away from the water, and, under the sergeant’s guidance, entered the little town, or village, and headed towards the police station.
XVI. — THE STATEMENT OF FREDERICK BUNTER

“WELL, Bunter,” the Superintendent remarked, cheerfully, as the prisoner was brought into the little office and given a seat at the table, “here you are.”

“Yes,” Bunter agreed, gloomily, “here I am. But I don’t see why they wanted to run me in. I wasn’t doing no harm.”

“You were trying to break into a yacht,” Miller ventured to remind him. “That isn’t quite according to Cocker, you know.”

“I was trying to get on board,” said Bunter, “and I’m not denying it. But you seem to be forgetting that I was a member of the crew of that yacht. All I wanted was to get some of my kit what I had left behind. I’ve told the sergeant so.”

“That’s right, sir,” the sergeant confirmed. “He said he had left his pocket-knife behind; and we did find a pocket-knife on board—a big knife with a cork-screw and a marlin-spike in it, such as he had described. But he could have got it from us without breaking into the vessel.”

“Yes,” said Miller, “that’s so. Still, it’s a point in his favour. However, it isn’t the burglary that we are interested in. If everything else was satisfactory we might let that pass, as he didn’t actually break in and he has some sort of explanation. But you know, Bunter, what the real business is, and what we want to ask you about. It’s that platinum job.”

“What platinum job?” demanded Bunter. “I don’t know nothing about any platinum.”

“Now, Bunter,” the Superintendent remonstrated, “don’t be silly. We know all about that job, and we know that you were in it with Bassett and Wicks and the other man.”

As he spoke, he drew a packet of cigarettes from his pocket, and, taking one out, pushed it across the table with a box of matches. Bunter accepted the gift with a grunt of acknowledgment but maintained his unaccommodating attitude.

“If you know all about it,” said he, “there ain’t no need for you to ask me no questions.”

“Oh, yes, there is,” said Miller. “We know enough for the purpose of the prosecution. But there are certain matters that we should like to clear up for other reasons. Still, you are not obliged to say anything if you don’t want to. I suppose you have been cautioned. If you haven’t, I caution you now that anything you say will be taken down in writing and may be used in evidence at the trial. But I don’t want you to say anything that might make the case any worse against you. I want some particulars, as I told you, for other reasons. What you may tell us won’t do your two pals any harm, as they are both dead. And I think I may say that we are not inclined to be vindictive to you as no very great harm has been done to anybody, seeing that we have recovered the swag.”

At the moment when Miller made this last statement, the prisoner was in the act of striking a match to light his cigarette. But, as the words were spoken, the action became arrested and he sat with his mouth open and the unheeded match burning—until the flame reached his finger, when he dropped it with an appropriate observation. “Did you say,” he demanded, speaking slowly and in a tone of the utmost amazement, “that you had recovered the swag?”

“I did,” Miller replied, calmly, proceeding to fill his pipe.

“How do you mean the platinum?” Bunter persisted, gazing at the Superintendent with the same expression of amazed incredulity.

“I do,” replied Miller. “Pass the matches when you have lit up.”

Bunter lit his cigarette perfunctorily and pushed the match-box across the table.

“How did you get hold of it?” he asked.

“We got it,” Miller replied, with a twinkle of enjoyment, “from someone who had it from Wicks.”

“Get out!” exclaimed Bunter. “You couldn’t. Wicks never had it. You are fooling me. I don’t believe you’ve got it at all.”

“Look here, Bunter,” the Superintendent said, stiffly, “I am not bound to tell you anything. But, if I do tell you anything, you can take it that it’s the truth. I’m not in the habit of making false statements to prisoners, nor is any other police officer. I tell you that we have got all that platinum back, so you can take that as a fact and steer your course accordingly.”

“But,” persisted Bunter, “you couldn’t have got it from Wicks. I tell you he never had it.”

“Nonsense, Bunter,” said Miller. “Didn’t he pinch that case from the cloak room at Fenchurch Street? You know he did.”

“Yes, I know all about that,” rejoined Bunter, “and I know that he thought the stuff was in that case. But it wasn’t.”

“That’s what he told you,” said Miller, hardly able to conceal his enjoyment of this contest of wits, and the consciousness that he had the trumps securely up his sleeve. “But it was he that was doing the fooling. He meant to keep the whole of the swag for himself.”

“Now that’s where you’re mistaken,” said Bunter. “You think I am going on what he told me. But I ain’t. I know the stuff wasn’t in that case.”

“How do you know?” demanded Miller.

“That’s my business, that is,” was the reply.
“Well,” said Miller, “I don’t know that it matters so very much. We have got the stuff back, which is the important thing. But, of course, we like to fill in the details if we can.”

Bunter re-lit his cigarette and reflected. No one likes a misunderstanding or cross-purposes, and Bunter evidently felt that he was being misunderstood. Furthermore, he was intensely curious as to how the platinum could possibly have been recovered. At length, he said.

“Supposing I was to tell you the whole story, would you let the prosecution drop?”

The Superintendent shook his head. “No, Bunter,” he replied promptly. “I can’t make any promises. The man who makes a promise which he doesn’t mean to keep is a liar, which is what no police officer ought to be; and the man who keeps a promise that he oughtn’t to have made, in a case like this, is guilty of bribery. The English law is dead against compounding felonies or any other crimes. But you know quite well that, if you choose to help us, you won’t do yourself any harm.”

Bunter took a little more time for reflection, and eventually reached a conclusion.

“Very well,” he said, “I will tell you the whole blooming story, so far as it is known to me; and I look to you not to take advantage of me from what I have told you.”

“I think you are wise, Bunter,” said the Superintendent, obviously much relieved at the prisoner’s decision. “By the way, Sergeant, what time did Bunter have his breakfast?”

“About seven o’clock, sir,” was the reply.

“Then,” said Miller, “if he is going to make a longish statement, he won’t be the worse for a little refreshment. What do you say, Bunter?”

Mr. Bunter grinned and admitted that “he could do with a beaver.”

“Very well,” said Miller, “perhaps we could all do with a beaver—say, a snack of bread and cheese and a glass of beer. Can you manage that, Sergeant?”

The sergeant could, and, being provided with the wherewith in the form of a ten-shilling note, went forth to dispatch an underling in search of the materials for the said “beaver.” Meanwhile, Bunter, having been furnished with a fresh cigarette, lighted it and began his narrative.

“You must understand,” said he, “that this job was run by Bassett. The rest of us carried out orders, and we didn’t know much about the job than what he told us; and he didn’t tell us any more than we was bound to find out for ourselves. We didn’t even know that the stuff was platinum until Wicks spotted it by its weight. All that we knew was that we were going to lift some stuff that was pretty valuable; and I doubt if the fourth man, Park, knew even that.”

“How did you come to know Bassett?” the Superintendent asked.

“He came to my house—leastways my brother-in-law’s house at Walworth—and said he had been recommended to me by a gentleman; but he wouldn’t say who the gentleman was. Whoever he was, he must have known something about me, because he knew that I had been to sea on a sailing barge, and he knew about a little trouble that I had got into over some snide money that some fool gave me for a joke.”

“Oh!” said Miller, “and how did that trouble end?”

“Charge dismissed,” Bunter replied, triumphantly. “No evidence of any dishonest intent. Of course there wasn’t.”

“Certainly not,” Miller agreed. “Of course you explained about the practical joke?”

“Rather—at least my lawyer did. He talked to the beak like a father, I can tell you.”

“Yes,” said Miller, “I can imagine it. These Jew advocates are uncommonly persuasive.”

“He wasn’t a Jew,” Bunter exclaimed, indignantly. “No blooming sheenies for me. He was an English gentleman.”

“Oh!” said Miller. “I thought all the police court solicitors were Jews. What was this gentleman’s name?”

“His name,” Bunter replied, haughtily, “was Gimbler; and a first-class man at his business he was. Knew all the ropes like an A.B.”

“Yes,” said Miller. “But to return to Bassett; had Wicks known him previously?”

“No. Bassett called on him, too. Got his address from a gentleman who knew him. Same gentleman, I expect, as Bassett wouldn’t say who he was. But he knew that Wicks had been brought up as a waterman, and I think he knew a bit more about him—more than I did, for Wicks was a stranger to me, and he didn’t let on much as to what he did for a living. So there was four of us on the yacht; Bassett, Wicks, me and a bloke named Park, but he wasn’t really in the swim. He was a bawleyman out of Leigh; a simple sort of cove, but a rare good seaman. He wasn’t told nothing about the job, and I fancy he thought it was some sort of smuggling racket—nothing for a honest man to mind.”

“And what was the arrangement as to pay, or shares?”

“We all got monthly pay at the ordinary yachtman’s rate, and there was to be a bonus at the end of the voyage. Park was to have fifty pounds, and me and Wicks was to have two hundred each if we brought the job off and landed the swag.”

Here the “beaver” arrived, and Bunter was allowed to refresh himself with a glass of beer; which he did with uncommon
gusto. But the narrative proceeded without interruption, excepting such as was due to slight impairment of articulation when the narrator took an extra liberal mouthful; which we shall venture to ignore.

“I can’t tell you exactly how the actual job was done at Riga, as I was down below at the time. Bassett and Wicks did the sleight of hand on the quay, but I think it was done something like this: We had been in the habit of getting our provisions on board in a big hamper, and this used to be left about on the quay so as to get the people there used to seeing it. Now, on the day when the job was done, Bassett put into the hamper the little dummy case that he had got ready with half a hundredweight of lead in it. I don’t know how he got the particulars for making up the case, but I reckon he must have had a pal on the spot who gave him the tip. Anyway, he made up the dummy case and put it in the hamper wrapped up in a waterproof sheet. Then it was took up and dumped down on the quay close to where the cases of platinum was being dumped down by the men who brought them out of the van. Then, I understand, someone gave an alarm of fire; and, while everyone was looking at the place where the fire was supposed to be, the dummy was put out on the quay and the waterproof sheet flicked off the dummy and over one of the real cases, and the dummy was shoved nearer to the other cases. Then Bassett sat down on the case that he had covered with the sheet and lit his pipe. Then they waited until all the cases, dummy and all, had been put on board the ship. Then they lifted the case, still covered with the waterproof sheet, into the hamper and brought it on board the yacht.

“As soon as it was on board, Park and me was told to cast off the shore ropes and get the yacht out of her berth and put out into the bay; which we did, though, as it was nearly a dead calm, she crept out mighty slowly. When we had got the sails set, I left Park at the helm and went below to lend a hand; and then it was that I found out how the swag was to be disposed of—and a mighty clever wheeze it was, and it worked out to a T.

“You must know that our inside ballast was a lot of lead weights, all cast to the same size—about half a hundredweight each and forty of them, all told. Now, as soon as we was fairly under way, Bassett and Wicks lighted a big Primus stove and set a large melting-pot on it; and into the pot they put one of the lead weights from the hold. Then Bassett brought out of the lazarette a fireclay mould like the one that the weights had been cast in. It was an open mould what you just poured the lead in; and when it had set, you turned it over and the weight dropped out with the top surface rough as it had set.

“While the lead was melting, me and Bassett and Wicks opened the case and took out the platinum, which was in thin sheets about a foot square. We cut the sheets up with tinman’s snips into narrow strips what would go snugly into the mould. Then Bassett put a bit of cold lead into the mould for the strips of platinum to rest on, and then we laid the strips in the mould, fitting them in carefully so as to get as many in as possible. Then, when we had got them in and the lead in the pot was melted, Bassett takes a ladle, dips it into the pot and pours it into the mould. He had made the lead a bit extra hot, so that it should not be cooled by the cold platinum. Well, when we had filled up the mould and covered up the platinum, we had to wait while it was setting; and Bassett put another ballast-weight in the pot to melt. When the lead in the mould was set, we turned it out, and there was an ordinary-looking ballast weight what you wouldn’t have known from any other ballast-weight.

“We did the same with the rest of the platinum, and that just made up another weight. Then we marked the numbers on them with punches—all the ballast-weights were numbered and laid in their regular order, 1 to 40. These two weights were numbered 22 and 25; and when we had marked them, we laid them down in their proper places in the hold. Then we cleaned up. The lead what was left over we chucked overboard, and the fireclay mould went after it. The case what the platinum had come in, we broke up and shoved the pieces in the galley fire; so now there was no trace left of this little job, and we didn’t mind if the police came on board and rummaged the ship. There wasn’t nothing for them to find. So we sailed back to our berth and made fast; and there we stayed for five days to give them a chance to come on board and rummage if they wanted to. But they never came. Naturally. Because nothing had been found out. So, on the sixth day, we put to sea for the voyage home.

“But we didn’t come straight home. We kept up the appearances of a cruising yacht. You won’t want particulars of the voyage, but there is one little incident that I must mention. It was at Rotterdam, our last port of call, on the morning when we started for home. We had got the sails loosed and was just about to cast off, when a cove appeared on the quay and hailed Bassett, who was on deck giving orders. Bassett replied as if he had expected this bloke, and reached up and took the man’s luggage—a small suit-case and a brown-paper parcel with a rug-strap fastened to it—and helped the covey down the ladder. Then we cast off and put out to sea; so we could see that this stranger had arranged with Bassett for a passage to England.

“Shortly after we had started, Bassett sends me to the fore peak for one of the empty cases what our provisions had been stowed it. I took it to the cabin, but I didn’t know what it was wanted for until I saw the passenger stowing it in the locker what belonged to his berth. Later, I found the brown paper from the parcel and a big bit of oiled silk which seemed a bit damp and had a nasty smell; so I chucked it overboard. I don’t know whether Bassett knew what was in that parcel, but none of us ever guessed.

“Now, when we was about abreast of the Swin Middle light-ship, we met a stumpy barge what was bound, as it turned out, from London to Colchester. Bassett hailed her, and, when we was near enough, he asked the skipper if he would take a passenger. The skipper wanted further particulars, so Wicks and Park went off to the barge in the boat, taking the passenger’s case with them. Apparently it was all right, for Wicks waved his hand and Park started to row back to the yacht.”

“Had Wicks or Bassett told you anything about this business?” the Superintendent asked.
"No. Not a word was said at the time; but Wicks told me all about it afterwards, and I may as well tell you now. It seems that the passenger—his name was Sanders—had got Bassett’s permission to make an arrangement with Wicks to smuggle the case ashore and take it to Fenchurch Street Station and leave it in the cloak room. He gave Wicks ten pounds for the job and a pound for the barge skipper; and a rare mug he must have been to pay Wicks in advance. Well, the skipper took Wicks with him up the Colne and put him ashore, after dark, somewhere between Rowhedge and Colchester; and Wicks took a silk inland with his case and picked up a motor bus that took him into Colchester. He stayed there a day or two, having a bit of a beano, because he wasn’t due to dump the case in the cloak room until the following Monday, so that it shouldn’t be waiting there too long. But on Saturday evening he took the train to London and went straight to the house of my brother-in-law, Bert Wallis, where I was in the habit of living."

"Why did he go there?" asked Miller.

"Ah!" said Bunter, "that’s another story, and I may as well tell you that now. You must know that, after Wicks found out about the platinum, he got very discontented. He reckoned that the swag might be worth anything from ten to twenty thousand pounds; and he said we’d been done in the eye. Two hundred pounds apiece, he said, wasn’t anything like a fair share, seeing that we’d taken a equal share of the risk. And he was very suspicious of Bassett. He doubted whether he was a perfectly honest man."

"What a horrible suspicion!" Miller exclaimed with a grin.

"Yes," agreed Bunter. "But I believe he was right. He suspected that Bassett meant to clear off with the whole of the swag and not pay us anything. And so did I; so we arranged that I should keep an eye on Bassett and see that he didn’t get away with it.

"Now, when we had done with the Customs at Southend—of course they didn’t twig nothing—we ran up into Benfleet Creek and took up moorings. Then, on Saturday, Bassett said he was going to take the stuff up to a dealer what he knew of and wouldn’t be back for a day or two. So, in the evening, I helped him to carry the case, with the two doctored weights in it, up to the station and saw him into a first-class carriage and shut him in. But I didn’t go back to the yacht. I’d taken the precaution to get a ticket in advance, and given Park the tip that I mightn’t be back that night; so, when I left Bassett, I went to the rear of the train and got in. I travelled up to town in that train, and I followed Bassett and saw him stow the case in the cloak room. Then, when I had seen him out of the station, I nipped straight off home to Bert Wallis’s place at Walworth.

"It happened that I got there only a few minutes after Wicks had turned up. I told him what had happened, and we talked over what we should do to keep our eyes on the case of platinum. But, at the moment, Wicks was all agog to know what was in Mr. Sanders’s case. I pointed out to him that it was no business of his, but he said if it was worth all the money and trouble that had been spent on it, there must be something of value inside, and he was going to see what that something was, and whether it was worth while to take it to the cloak room at all.

"Well, I got him a screwdriver and he had the screws out in a twinkling and pulled up the lid. And then he fairly hollered with surprise and I was a bit took aback, myself. You know what was inside—a man’s head, packed in some of our old duds. I tell you, Wicks slammed the lid down and ran the screws in faster than he took them out. Then I asked him what he was going to do about it. ‘Do!’ says he. ‘I’m going to plant the damn thing in the cloak room tomorrow morning and get clear of it; and I’ll send the ticket on to Sanders at Benfleet Post Office as I promised. I’ve been paid, and I’m going to carry out my contract like a honest man.’

"But the sight of that man’s head seemed to have given him something to think about, for he was mighty thoughtful for a while. Then, all of a sudden, something seemed to strike him, for he turns to me and asks: What sort of case did Bassett pack them two weights in? ‘Why,’ I says, ‘one of the provision cases; same sort as that head is packed in.’ ‘Then, by gum,’ says he, ‘we are going to steal a march on that dishonest blighter, Bassett, if we can manage it. Do you know what marks there were on that case?’ Now, it happened that I did; for I had taken the precaution to make a copy of the label. I showed it to Wicks and he got a card like the one I had seen on Bassett’s case and wrote the name and address on it from my copy and tacked it on to Sanders’s case.

"And now,’ says he, ‘the question is how we are going to get that case here from the station. We might take a taxi, but that wouldn’t be very safe. We don’t want to leave no tracks.’ Then I thought of Joe Wallis, Bert Wallis’s brother, what had a shop a couple of doors off and kept a motor van for carting timber about.

"What is his trade?" Miller asked.

“He is a carpenter what does work for some small builders. He served his time as a undertaker, but he give that up. Said it wasn’t cheerful enough. He didn’t mind the coffins, but he couldn’t stick the corpses. Well, the end of it was that Wicks persuaded Joe to take on the job. I don’t know what story he told him. Of course, Joe didn’t know what was in either of the cases, but he is a big, strong chap and Wicks made it worth his while. Being Sunday, he put on a leather coat and a cap like a taxi-driver, for the sake of appearances.

“Well, Wicks got rid of Sanders’s case all right and posted the ticket off to Benfleet; and then, in the afternoon, he set off to do the more ticklish job of swapping Sanders’s case for Bassett’s. But he brought it off all right and got the right case safely to Bert’s crib. Being Sunday, Bert wasn’t doing nothing, so we had the run of his workshop to do our little job in."

“What is Bert’s trade?” the Superintendent asked.
"He is a plumber," replied Bunter. "That's what he is."

"Oh!" said Miller, with a sly look. "Doesn't do anything in the pewter and plaster mould line, I suppose?"

"I said he was a plumber," Bunter replied, haughtily; "and, consequentially, he'd got a workshop with a big gas ring and some melting-pots; which was just what we wanted.

"Well, we opened Bassett's case and there, sure enough, was the two lead weights. And they seemed to be the right ones, by the punch marks on them—22 and 25. So we took the biggest melting-pot, which was half full of lead, and, when we had tipped the lump of lead out on the floor, we put the pot on the ring and lighted up; and then we shoved one of the lead weights in it.

"'Now,' says Wicks, 'we are going to make our fortunes. But we shall have some difficulty in getting rid of this stuff. We shall have to go slow.' So he sat on a chair by the gas ring and watched the weight and made all sorts of plans for getting rid of the platinum. The weight was a long time before it showed any signs of melting; but, at last it began to slip down the pot, and me and Wicks leaned over the pot and watched for the bits of platinum to stick out. But we couldn't see no sign of them. We watched the weight as it slipped down further and further until it had crumpled up and was all melted. But still we couldn't see nothing of the platinum. Then Wicks got a iron rod and raked about in the melted lead to see if he could feel the bits of platinum. But he couldn't. Then he got a ladle and tried to fish out the bits that he couldn't see; and, I tell you, he was fair sweating with anxiety, and so was I for that matter. For nothing came up in the ladle but melted lead.

"Then I suggested that we should ladle out the whole of the lead, a little at a time, into another pot, and I got three small empty pots and set them alongside the big one; and Wicks ladled out the lead from the big one into the little ones. But still we didn't come to the platinum. And at last we come to the bottom of the pot; and then we could see that there wasn't no platinum there.

"By this time Wicks was nearly blue with rage and disappointment, and I was pretty sick, myself. However, we emptied the last drop of lead out of the big pot and started to melt the other weight. But it was the same story with that one. We ladled the lead out into the small pots, and, by way of doing the thing thoroughly, took the big pot up by its handle and drained the very last drop of lead out of it into the small pots. And there wasn't a grain of platinum to be seen anywhere.

"My eye! You ought to have seen Wicks's face when he had done with the second weight and tried it right out. His language was something awful, And no wonder. For you see it wasn't no mistake. The numbers on the weights was all right. It was a fair do. Bassett had deliberately sold us a pup. He'd got a pair of the plain lead weights, hammered the numbers out, and punched fresh numbers on them. It was a dirty trick, but I suppose he must have suspected Wicks and got this plant ready for him. At any rate, Wicks saw red, and he swore he would do Bassett in. We'd got Bassett's address at Swanscombe, because we had got to go there for the money that was owing to us when the swag should have been disposed of; and, on the Tuesday, Wicks went off to see if Bassett was at home, and, if he was, to have a few words with him. And that was the last I ever saw of Wicks. When he didn't come home, I supposed he had made himself scarce on account of the hue and cry about the head in the case. Now I know that he must have tried to do Bassett in, and Bassett must have got his whack in first. And that's all I know about the business."

"Good," said Miller. "You've made a very straightforward statement, and I can tell you that you have not done yourself any harm and what you have told us will probably be quite helpful to us. I'll write it out presently from my notes and you can read it, and, if you are satisfied with it, I'll get you to sign it. In the meantime, I want to ask you one or two questions. First of all, about this man Sanders; can you give us any description of him?"

"He was a tall man," replied Bunter; "a good six foot if he had stood up straight—which he didn't, having a stoop at the shoulders. I should put his age at about fifty. He had dark hair and beard and he wore spectacles."

"What kind of spectacles?" Thorndyke asked.

"I dunno," replied Bunter. "Spectacles is spectacles. I ain't an optician."

"Some spectacles are large," said Thorndyke, "and some are small. Some are round and some are oval, and some have a line across as if they had been cracked. Would his fit any of those descriptions?"

"Why, yes, now you come to mention it. They was big, round spectacles with a sort of crack across them. But it couldn't have been a crack because it was the same in both eyes. I'd forgotten them until you spoke."

I noticed that Miller had cast a quick look at Thorndyke and was now eagerly writing down the description. Evidently, he "smelt a fox," and so did I. For, though Thorndyke had not really put a "leading question," he had mentioned a very uncommon kind of spectacles—the old-fashioned type of bi-focal, which is hardly ever made now, having been superseded by the cemented or ground lunette. I had no doubt, nor, I think, had Miller, that he was describing a particular pair of spectacles; and this suspicion was strengthened by his next questions.

"Did you notice anything peculiar in his voice or manner of speaking?"

"Nothing extraordinary," replied Bunter. "He'd got a squeaky voice, and there's no denying it. And he didn't speak quite proper English, like you and me. Seemed to speak a bit like a Dutchman."

I surmised that Mr. Bunter used the word "Dutchman" in a nautical sense, meaning any sort of foreigner who was not a "Dago"; and so, apparently, Thorndyke interpreted it, for he said:
“He spoke with a foreign accent? Was it a strong accent, or only slight?”

“Oh, it was nothing to notice. You’d hardly have taken him for a foreigner.”

“Did you notice his nose?”

“You couldn’t help noticing it. Lord! It was some boko. Reminded me of a parrot. And it had got a pretty strong list to starboard.”

“You would say that he had a large, curved, or hook nose, which was bent towards the right. Is that so?”

“That’s what I said.”

“Then, Superintendent,” said Thorndyke, “I think we have a working description of Mr. Sanders. Shall we take a note of Mr. Bert Wallis’s address?”

“I don’t see what you want with that,” Bunter objected. “He didn’t have nothing to do with the job. We used his workshop, but he didn’t know what we wanted it for.”

“We realize that,” said Thorndyke, “and we have nothing whatever against him. But he may be able to give us some information on some other matters. By the way, speaking of that lead that you ladled out of the pot; what did you do with it?”

“Nothing. It wasn’t no good to us. We just left it in the pots for Bert, in case he had any use for it.”

“And Bert’s address is—?”

“Sixty-four Little Bolter Street, Walworth. But don’t you go worrying him. He don’t know nothing what he didn’t ought to.”

“You needn’t be afraid of our giving him any trouble,” said Miller. “We may not have to call on him at all, but, in any case it will only be a matter of a few questions which he won’t mind answering. And now, perhaps you’d like another fag to smoke while I am writing up your statement.”

Mr. Bunter accepted the “fag” readily and even hinted that the making of statements was dry work; on which Miller directed the sergeant to provide him with a further half-pint. Meanwhile, Thorndyke and I, having no concern with the formalities of the statement, went forth to stretch our legs and take a more detailed survey of the waterside. When we returned, the statement had been transcribed and duly signed by Mr. Frederick Bunter. And this brought to an end a very satisfactory day’s work.
DURING the return journey, the Superintendent showed a natural disposition to discuss the bearings of what we had learned from Bunter and reckon up his gains in the matter of evidence.

“It was a pleasant surprise to me,” said he, “to hear Bunter let himself go in the way he did. I was afraid, from what the sergeant said, that we shouldn’t get much out of him.”

“Yes,” said I, “he was rather unexpectedly expansive. I think what started him was your insistence that Wicks had got possession of the platinum, when he knew, as he supposed, that Bassett had planted the wrong weights. He was mightily staggered when you told him that the swag had been recovered. Still, we’ve a good deal more to learn yet before we shall know exactly what did happen.”

“That is true,” agreed Miller. “We’ve learned a lot from Bunter, but there is a lot more that we don’t know, and that Bunter doesn’t know. The question is, how much do we know? What do you say, Doctor? I should like to hear you sum up what we have gained by this statement, and tell us exactly how you think we stand.”

“My feeling,” said Thorndyke, “is that we have advanced our knowledge considerably. We have shortened the gap between the two parts of the problem which are known to us. When we came down, our knowledge of the platinum ceased with its disappearance from the cloak room and began again with its reappearance in the coffin. That was a big gap. But, as I have said, that gap is now to a great extent filled up. The problem that remains is to trace those lumps of alloy from Bert Wallis’s workshop to the false coffin; and I don’t think that we shall have much difficulty in doing it. But, before we proceed to count up our gains, we had better consider what it is that we want to know.

“Now, I remind you that there are two distinct problems, which we had better keep quite separate: the platinum robbery and the substituted coffin. Bunter’s statement bears on both, but we must not get them confused. Let us take the robbery first. My impression is that we now know all that we are likely to know about it. We all have probably formed certain suspicions; but suspicions are of no use unless there is some prospect of confirming them. And I do not think that there is. But, after all, is there any object in pursuing the matter? The two visible principals in the robbery are dead. As to poor Bunter, he was a mere spectator. He never knew any of the details.”

“He was, at least, an accessory after the fact,” said Miller.

“True. But is he worth powder and shot? Remember, this robbery was committed outside British jurisdiction. It will be an extradition case, unless you charge Bunter with complicity in the theft from the cloak room. It will be for the Latvian police to make the first move, which they probably will not, as the property has been recovered and the principal offenders are dead.”

Miller reluctantly admitted the cogency of this argument.

“Still,” he insisted, “there is more in it than that. Didn’t it strike you that certain parts of Bunter’s statement seemed to suggest the possibility that the robbery had been planned and engineered by our friend, Gimbler?”

“It did,” Thorndyke admitted. “That was what I meant when I spoke of certain suspicions that we have formed. It would be possible, from Bunter’s statement, to build up quite a plausible argument to prove that Gimbler was probably the moving spirit in that robbery. But it would be a mere academic exercise; very entertaining, but quite unprofitable, since the principals are dead and Bunter knows less than we do. There are no means by which our suspicions could be put to the proof or our knowledge enlarged.”

“I expect you are right,” Miller agreed, gloomily; “but I should like to hear the argument, all the same.”

“It will be a waste of time,” said Thorndyke. “However, our time is not very valuable just now, and there will be no harm in assembling the relevant facts. Let us take them in order.

“1. Bunter had been defended on a criminal charge by Gimbler.
“2. Bunter was introduced to Bassett by ‘a gentleman,’ who must have, therefore, known them both.
“3. A gentleman—apparently the same gentleman—introduced Wicks to Bassett, and, therefore, knew Wicks.
“4. The said gentleman—assuming him to be the same in both cases—was, therefore, acquainted with three persons who are known to us as having been engaged in crime.
“5. One of these three persons—Bunter—was acquainted with Gimbler.
“6. The unknown ‘gentleman,’ who was acquainted with three criminals, took an active and helpful part in the robbery inasmuch as he introduced Bassett to persons who would be likely to agree to assist in the carrying out of a criminal enterprise.”

Those are the principal facts; and now as to their application. The appearance of this mysterious ‘gentleman,’ acquainted with criminals and apparently acting, at least as an accessory, strongly suggests someone in the background directing, and possibly planning, this robbery. This suggestion is reinforced by the fact that someone connected with the robbery must have had a substantial amount of capital available. The yacht, even if bought quite cheap, must have cost not less than a hundred pounds; and then there were the considerable out-goings in respect of the provisioning and fitting-out for the
cruise, and the payments of wages which seem to have been made, apart from the final ‘bonus,’ which might have been paid out of the proceeds of the robbery. Of course, Bassett may have had the money; but it is not probable. Persons who get their livelihood by crime are not usually capitalists. There is a strong suggestion that the ‘gentleman’ was behind the robbery in a financial sense as well as furnishing the brains and management. This is all reasonable inference—though of no evidential value. But when we try to give a name to this mysterious ‘gentleman,’ our inferences become highly speculative. However, let us speculate. Let us propose the hypothesis that the hidden hand behind this robbery was the hand of Mr. Horatio Gimbler, What is there to support that hypothesis?

“First, there is the coffin. It contained the proceeds of this robbery. Gimbler was not aware of the fact; but the circumstance that it was there establishes the fact of some sort of contact between Gimbler and the persons who were concerned in the robbery. The persons whom he dealt with in the preparation of the coffin had dealings with the persons who carried out the robbery.”

“There isn’t much in that,” I objected. “It might have been pure chance.”

“So it might,” he agreed, “and there is very little in it, as you say. But circumstantial evidence is made up of little things. I merely assert that some sort of connexion is established.

“The next point is that, of the three criminals engaged in this robbery, the only one known to us—Bunter—was acquainted with Gimbler. But Bunter was also acquainted with the unknown gentleman. There isn’t much in that, taken alone; but it points in the same direction as the other facts.

“And now let us consider how Gimbler fits the character of the hypothetical person who may have directed and financed the robbery.

“First, this hypothetical person must have had a somewhat extensive acquaintance with members of the criminal class in order to be able to select suitable persons to carry out this rather peculiar and specialized piece of work. Criminals with a practical knowledge of seamanship cannot be very common. But Gimbler has a very extensive acquaintance with the criminal class.

“The next point is that this hypothetical person must have had a modest amount of capital at his disposal, say two or three hundred pounds. We do not know much of Gimbler’s circumstances, but it would be very remarkable if he were not able to produce that amount to finance a scheme which was likely to yield a profit of thousands. But, as there must be innumerable persons in the same financial position, this argument has no significance. It is merely an argument.

“Finally, our hypothetical person must have combined considerable ingenuity with extreme dishonesty. Here there is undoubted agreement; but, unfortunately, Gimbler is in this respect far from unique.

“That is the argument; and, as you see, though it is enough to allow of our entertaining a suspicion of Gimbler, it is not enough to establish the most flimsy prima facie case. If Gimbler was the hidden director of this crime, he was extremely well hidden, and I think he will remain hidden. Probably, Bassett was the only person who knew the whole of the facts.”

“Yes,” Miller agreed, glumly, “I’m afraid you are right. Unless the Latvian police raise an outcry, it will probably be best to let the matter drop. After all, the robbery failed and we have got the stuff back. Still, I feel in my bones that Gimbler engineered the job, and I should have liked to lay my hands on him. But, as you say, he kept out of sight and is out of sight still. He always does keep out of sight, damn him!”

“Not always,” said Thorndyke. “You are forgetting the other case—the counterfeit coffin. That is an entirely different matter. There he is already in full view. A manifest fraud has been committed, and there are only two persons who could possibly be suspected of having committed it—Gimbler and Pippet. Actually, I suppose, no one suspects Pippet. But he is the claimant in whose interest—ostensibly—the fraud was perpetrated, and it is certain that Gimbler will try to put it on him, if it were not for Pippet, you could arrest Gimbler tomorrow and be confident of a conviction. As it is, direct evidence against Gimbler is a necessity, and it is for you, Miller, to secure that evidence. I think you will not have much difficulty, with the facts now in our possession.”

“No,” said Miller, “we seem to have got a pretty good lead from Bunter; but, all the same, I should like to hear your views on the evidence that we have.”

“Well,” said Thorndyke, “let us approach the problem from both ends. At one end we have four lumps of metal, one lead and three alloy, in the workshop of a plumber, Bert Wallis. At the other we have the same four lumps of metal in a coffin; and the problem is to bridge the interval between the two appearances.

“Now, the fact that those four lumps appeared together in the coffin is evidence that the interval was quite short. There were no intermediate wanderings during which they might have become separated. We may be sure that the passage from the workshop to the coffin was pretty direct; in effect, we may assume that the man who prepared the coffin got his lead from Bert Wallis. The next inference is very obvious, though it may be erroneous. But when we consider that a couple of doors from Bert Wallis’s premises were those of a man who had served his time as an undertaker, and who was, therefore, capable of making a perfectly correct and workmanlike coffin; who had a motor van and who was Bert Wallis’s brother; it is impossible to ignore the probability that the coffin was made by Joe Wallis. He had all the means of carrying out the substitution—you will remember that there was a cart shed adjoining the wall of the burial ground, in which a van could be conveniently hidden, and from which the coffin could be easily passed over the wall—and, if he had done the job, he would presumably have got his lead from his brother whose premises were close by. The only weak place in the argument is that
we are accusing a man, who may be a perfectly honest and reputable tradesman, of being concerned in a crime.”

“I don’t think you need worry yourself about that,” said Miller. “You heard what I said to Bunter on the subject of pewter and plaster moulds. He knew what I meant. There had been some suspicion that Mr. Bert Wallis occasionally turned his hand to the manufacture of counterfeit coin. It was never brought home to him; but the fact that Bunter—who lives with him when he is at home—had been charged with issuing counterfeit money (which I had not heard of before) gives colour to the suspicion. And Bunter, himself, as we know, is a decidedly shady customer. I don’t think we need have any scruples of delicacy in giving Mr. Joseph Wallis a little attention. I’ll call and have a friendly talk with him.”

“I shouldn’t do that,” said Thorndyke; “at least, not in the first place. It would be much better to make the initial attack on Bert. There, you have something definite to go on. You know that the metal was in his workshop. And, if he has not heard of the facts disclosed in the Probate Court, or has not connected them with the metal that he had, you will have a good opening for an inquiry as to what has become of certain valuable property which is known to have been in his possession. When he learns what the value of that metal was, I fancy you may look for an explosion which may give you the leading facts before he has realized the position. Besides, there is the possibility that he gave away or sold the metal without any knowledge of its origin.”

“So there is,” agreed Miller, leaning back to laugh with more comfort, “in fact, it is quite probable. My eye! What a lark it will be! I shall go straight on from Fenchurch Street. Couldn’t I persuade you to come with me and do some of the talking?”

Thorndyke required no persuading, nor did I, for the interview promised to be highly entertaining. Accordingly, the arrangement was made and the plan of campaign settled; and, on our arrival at the terminus, after a brief halt at the buffet for a sandwich and a glass of beer, we made our way to the tube railway, by which we were conveyed to the “Elephant and Castle.”

“By the way,” said I, as Miller struck out towards the Walworth Road, “I suppose you have got the address?”

“Yes,” was the reply, “I got it from Bunter when he signed the statement. It’s in East Street. I made a note of the number.”

He brought out his note-book and glanced at it as we threaded our way through the multitude that thronged the pavement. Presently he turned to the left down a side street and walked on with his eyes on the numbers of the houses.

“This is the show,” he said, at length, halting before a seedy-looking plumber’s shop, the façade of which bore the inscription, ‘A. Wallis.’ “Shop looks as if it was open.”

It was, technically, although the door was closed; but it yielded to a push, announcing the fact by the jangling of a bell, which brought a man out of the parlour at the back. Apparently, we had disturbed him at a meal, for his jaws were working as he came out, and he looked at us inquiringly without speaking. Perhaps “inquiringly” hardly expresses the kind of look that he gave us. It was a mere coincidence, but it happened that we were, all three, over six feet in height, and Miller, at least, looked a good deal like what he was.

The Superintendent opened the ball. “You are Mr. Bert Wallis, I think?”

Mr. Wallis nodded, chewing frantically. Finally, he bolted his mouthful and replied: “Yes, that’s who I am. What about it?

“My friend here, Br. Thorndyke, who is a lawyer, wants to make a few inquiries of you.”

Mr. Wallis turned to Thorndyke but made no comment, having, apparently, some slight arrears to dispose of in the matter of chewing.

“My inquiries,” said Thorndyke, “have reference to certain valuable property which came into your possession some time ago.”

“Valuable property in my possession,” said Wallis. “It’s the first I have heard of it. What property are you talking about?”

“It is a quantity of metal,” replied Thorndyke. “You had it from two men named Wicks and Bunter.”

Wallis stared at Thorndyke for a few seconds; and, gradually, the look of apprehension faded from his countenance and gave place to one of amusement. His mouth extended laterally until it exhibited an undeniable grin.

“I know what you are talking about, now,” he chuckled; “but you’ve got hold of the wrong end of the stick altogether. I’ll tell you how it happened. Them two silly fools, Wicks and Bunter, thought they had got hold of some valuable stuff. I don’t know what they thought it was, but they asked me to let them melt it down in my workshop. I didn’t much like the idea of it, because I didn’t know what stuff it was or how they had got it; but, as Bunter is my wife’s brother and I knew Wicks, I didn’t quite like to refuse. So I let them have the run of my workshop on a Sunday night when I was out, and they did the job. They melted down this here valuable stuff; and what do you suppose it turned out to be, after all?”

Thorndyke shook his head and waited for the answer.

“It was lead!” Wallis exclaimed with a triumphant giggle. “Just think of it! These two silly asses had put theirselves to no end of trouble and expense to get hold of this stuff—I don’t know how they did get hold of it—and when they come to melt it down, it was just lead, worth about twopence a pound! But, my aunt! Wasn’t they blooming sick! You ought to have heard the language that Wicks used!”
The recollection of this anticlimax amused him so much that he laughed aloud and had perforce to wipe his eyes with a handkerchief which might once have been clean.

"And what became of this lead?" asked Thorndyke. "Did they take it away with them?"

"No," replied Wallis. "It wasn't no good to them. They just left it in the pots."

"And is it in your workshop still?" asked Thorndyke.

"No, it ain't. I sold it to a builder for five bob, which paid for the gas that they had used and left a bit over."

"Do you know what the builder wanted it for?"

"Said he wanted some lead for to fix some iron railings in their sockets."

"Did he take the whole of it?"

"Yes; he took the whole boiling of it, and a small roll of sheet lead as well. But the sheet wasn't included in the five bob."

"Do you mind telling us the name of this builder?" Thorndyke asked.

Wallis looked rather hard at Thorndyke, and the slightly apprehensive expression reappeared on his face.

"I don't see as his name is neither here nor there," said he. "What's all the fuss about? You was speaking of valuable property. Lead ain't valuable property."

"For legal reasons," said Thorndyke, "I wish to trace that lead and see where it went to. And there is no reason for you to be secret about it. The transaction between you and the builder was a perfectly lawful transaction; but I should like to ascertain from the builder exactly what he did with the lead."

The plumber was evidently still a little uneasy, but the question was so simple and straightforward that he could hardly refuse to answer.

"Well," he replied, grudgingly, "if you must know, the builder what I sold the lead to was my brother, Joe Wallis, what lives a couple of doors further up the street."

"Thank you," said Thorndyke. Then, turning to Miller, he said: "That is all I wanted to know. Probably Mr. Joe Wallis will be able to help us a stage further. Is there anything that you want to ask?"

"No," replied Miller; "that seems to be all plain sailing. I don't think we need trouble Mr. Wallis any further."

With this, Thorndyke thanked the plumber for the assistance that he had given and we took our departure. As soon as we were outside, the Superintendent broke out into low-voiced self-congratulations—low-voiced—by reason of the fact that Mr. Wallis had taken his post at the shop door to observe our further movements.

"It was just as well," said Miller, "that you were able to get the information without letting the cat out of the bag. It has saved a lot of chin-wagging. But I expect we shan't have such an easy job with our friend Joseph. Bert had nothing to conceal; but Joseph must have been in the swim to some extent. This is his house."

The premises, which bore the superscription, "J. Wallis, Builder and Decorator," were divided into two parts, a carpenter's shop and an office. We entered the latter, and, as it was at the moment unoccupied, the Superintendent thumped on the counter with his stick; which brought out from some inner lair a very large youth of about eighteen who saluted us with an amiable grin.

"Dad in?" inquired Miller, making a chance shot; which was justified by the result, as the youth replied:

"Yes. What's it about?"

"This gentleman, Dr. Thorndyke, wants to see him on important legal business," Miller replied; whereupon the youth grinned again and retired. In about a minute he returned and requested us to "walk this way," indicating the direction by walking in advance. We followed him across a hall and up a flight of stairs to a door, which he opened, and, having seen us enter, once more departed.

The room was quite an interesting survival—a typical example of a Victorian tradesman's drawing room, with the typical close, musty smell. As we entered, I noticed that Thorndyke cast his eyes down and then took a quick glance at the window. But there was no time for detailed observation, for we were almost immediately followed by a man whom I judged from his stature and a certain family resemblance to be "Dad." But the resemblance did not extend to the amiable grin, On the contrary, the newcomer viewed us with an expression compounded of a sort of foxy curiosity and a perceptible tinge of hostility.

"Which of you is Dr. Thorndyke?" he inquired.

My colleague introduced himself, and the inevitable question followed.

"And who are these other two gentlemen?"

"This," replied Miller, indicating me, "is Dr. Jervis, also a lawyer; and"—here he produced a professional card and pushed it across an 'occasional table,' "that's who I am."

Mr. Wallis studied the card for a few moments, and the hostility of his expression became more pronounced.
Nevertheless, he said with gruff civility: “Well, you may as well sit down,” and gave us a lead by sitting down, himself, in an arm-chair.

“Now,” said he, “what’s this important legal business?”

“It is concerned,” said Thorndyke, “with certain property which came into your hands and which you had from your brother, Albert Wallis.”

“Property what I had from my brother Albert Wallis!” our friend repeated in obviously genuine surprise. “I haven’t had no property from him. What do you mean?”

“I am referring to certain pieces of metal which you bought from him about three months ago.”

Mr. Joseph continued to stare at Thorndyke for some seconds.

“Pieces of metal!” he repeated, at length. “I haven’t bought no pieces of metal from him, You’ve made a mistake.”

“The metal that I am referring to,” said Thorndyke, “consisted of a roll of sheet lead and some remainders from melting-pots.”

“Gawd!” exclaimed Joseph, contemptuously, “you don’t call that property, do you? I gave him five bob for the lot, and that was more than it was worth.”

“So I understood,” said Thorndyke. “But we have reasons for wishing to trace that metal. We have managed to trace it to you, and we should be greatly obliged if you would tell us what has become of it, supposing it not to be still in your possession.”

At this persistence on Thorndyke’s part, the hostility expressed in Joseph’s countenance became tinged with unmistakable uneasiness. Nevertheless, he answered truculently enough:

“I don’t see what business it is of yours what I do with the material that I buy. But, if you must know, I used that sheet lead for making a damp-course, and the other stuff for fixing some iron railings in a stone kerb.”

“Then,” said Miller, “somebody has got some pretty valuable iron railings.”

Wallis looked at him inquiringly, and from him to Thorndyke.

“Perhaps,” said the latter, “I had better explain. Some time ago, two men, one of whom was named Wicks, stole a case containing a quantity of platinum from the cloak room at Fenchurch Street. They took it to the house of your brother Albert, who, not knowing what it was, or anything about it, allowed them to melt it down in his workshop. But, when they had melted it down, they did not recognize it. They thought it was lead, and that they had taken the wrong case. So they left the lumps in the melting-pots for your brother to do what he pleased with. But he, also, did not recognize the metal. He, also, thought that it was lead; and he sold the whole consignment to you for five shillings. And I take it that you, like the others, mistook it for lead.”

Mr. Wallis had suddenly become attentive and interested.

“Certainly, I took it for lead,” said he. “And you say it was platinum. That’s rather expensive stuff, isn’t it?”

“The little lot,” said Miller, “that you bought for five shillings has been valued at just under eighteen thousand pounds.”

That “knocked him,” as they say in the Old Kent Road, For some seconds he sat speechless, clutching the arms of his chair and staring at Miller as if he had been some dreadful apparition.

“Eighteen thousand pounds!” he exclaimed, at length, in something approaching a screech. “Eighteen—thousand—pounds! And to think—”

“Yes,” said Miller, “to think of those iron railings. We shall have to see that you don’t go rooting them up.”

Mr. Wallis made no reply. As with the dying gladiator, “his thoughts were far away,” and I had little doubt whether they had strayed. I do not profess to be a thought-reader; but the expression on Joseph’s face conveyed clearly to me that he had, in that moment, decided, as soon as the night fell, to make a bee-line for Josiah Pippet’s vault. His reverie was interrupted by Thorndyke.

“So, Mr. Wallis,” said he, “you will understand our natural anxiety to find out where this metal went to.”

“But I’ve told you,” said Wallis, rousing himself from dreams of sudden opulence, “so far as I can recollect, that I used the stuff to plant some iron railings.”

As we seemed to have got into a blind alley, the Superintendent abruptly changed his tone.

“Never mind about those iron railings,” he said, sharply. “We want to know what you did with that stuff. Are you going to tell us?”

“I have told you,” Wallis replied doggedly. “You can’t expect me to remember what I did with every bit of lead that I bought.”

“Very well,” said Miller, “then perhaps it might help your memory if we were to do a bit of supposing. What do you say?”

“You can if you like,” Joseph replied, sulkily, “so long as you don’t ask me to help you.”
“Now, Wallis,” said Miller, “you’ve got to bear this in mind. Those two fools didn’t know this stuff when they had got it in their hands, and neither did you or Bert. But there were other people who knew what was in that case. Bassett, the man who murdered Wicks, knew, because he put the stuff in the Case. And there was another man, a very artful gentleman, who kept out of sight but who knew all about it. We mustn’t mention names, so we will just call him Mr. Rumbler, because he rumbled what had happened.

“Now, supposing this Mr. Rumbler, knowing where the stuff had been left by those two gabeys, had a bright idea for getting hold of it without showing his hand. Supposing he went to a certain undertaker whose place was close to Bert’s and pitched him a yarn about wanting a dummy coffin weighted with lead. Supposing he employed him to make that coffin, knowing that he would be certain to get his lead from Bert, and plant it in a nice convenient vault in a disused burial ground—say, somewhere out Stratford way—where he could get at it easily with a big skeleton key and a tommy to turn it with. How’s that? Mind you, I am only supposing.”

As Miller recited his fable, a cloud fell on Mr. Wallis’s countenance. The dream of sudden opulence was dissipated. The resurrection job was obviously “off.” But, glum as the expression of Joseph’s face became, the effect produced was not quite the one on which Miller had based his calculations.

“If you know where the coffin is,” was the natural comment, “why don’t you go and open it and take the stuff out?”

“But, a small matter, Miller replied, impressively, “the stuff isn’t there. Somebody has had the coffin open and taken it out.”

Even this did not answer. Wallis looked sulky enough, but he had not gorged the bait.

“I don’t believe there is any coffin,” said he. “You’ve just invented it to try to get me to say something.”

I detected an expression of grim amusement on Thorndyke’s face. Perhaps he was contrasting—as I was—Miller’s present proceedings with the lofty standard of veracity among police officers that he had presented to Bunter. But I was also aware of some signs of impatience. As a matter of fact, all these artful probings on Miller’s part were getting us nowhere. Moreover, we had really ascertained nearly all that we wanted to know.

“Perhaps,” said Thorndyke, “as I am not a police officer, I may venture to be a little more explicit with Mr. Wallis. We are not interested in the present whereabouts of this platinum. We know where it is; but we want to know exactly how it got there. As to the coffin, we have evidence that it was made by you, Mr. Wallis, and planted by you in the vault. But this coffin was made to some person’s order, and we want to know with certainty who that person is. At present, our information is to the effect that it was made to the order of a Mr. Gimbler, a solicitor who resides in the neighbourhood of Kennington. But Mr. Gimbler has managed to keep, to some extent, out of sight and put the whole responsibility on you. Even the dust that was found in the vault was your dust. It came from this very room.”

At this latter statement, Wallis started visibly, and so did Miller.

“Yes, by Jove!” the latter exclaimed, after a glance at the floor and another at the window, “here is the identical carpet that you described in court, and there are the blue cotton curtains.”

“So you see, Mr. Wallis,” Thorndyke continued, “you have nothing to conceal respecting the coffin. The facts are known to us. The question is, are you prepared to tell us the name of the person to whose order this coffin was made?”

“If you know his name,” was the reply, “you don’t want me to tell you.”

“Your evidence,” said Thorndyke, “would save us a good deal of trouble, and perhaps it might save you some trouble, too. Are you prepared to tell us who this person was?”

“No,” was the dogged reply. “I’m not going to tell you nothing. The least said the soonest mended. I don’t know nothing about any coffin, and I don’t believe there ever was any coffin.”

At this reply Miller’s face hardened, and I think he was about to pursue the matter farther; but Thorndyke calmly and civilly brought the interview to a close.

“Well, Mr. Wallis,” said he, “you must do as you think best. I feel that you would have been wiser to have been more open with us; but we cannot compel you to give us information which you choose to withhold.”

With this, he rose, and Miller reluctantly followed suit, looking distinctly sulky. But nothing further was said until, shepherded by our host, we had descended to the office and had been thence launched into the street. Then Miller made his protest.

“I think, Doctor,” said he, “that it is a pity you didn’t let me play him a little longer. I believe he would have let on if we had kept rubbing into him that he had been used as a cat’s paw by Gimbler to get hold of that platinum.”

“I don’t think he would,” said Thorndyke. “He is an obstinate man, and he evidently doesn’t like the idea of turning upon his employer; and we can hardly blame him for that. But, after all, Miller, what would have been the use of going on with him? We have got a complete train of evidence. We have got Bunter’s written and signed statement that he left the platinum in Bert Wallis’s workshop. We have got Bert Wallis’s statement, made before witnesses, that he sold the stuff to his brother Joe Wallis. We have got Joe Wallis’s statement, made before witnesses, that he bought the stuff from Bert. We know that Joe is a coffin maker, and that the stuff was found in a coffin, together with certain dust which came from a room which was identical in character with Joe Wallis’s drawing room. The agreement is complete, even without the dust.”
“So it is,” Miller agreed; “but it proves the wrong thing. We can fix this job on Joseph all right. But it isn’t Joseph that we want. He is only the jackal; but we want the lion—Gimbler. And if Joseph won’t talk, we’ve got no direct evidence against Gimbler.”

Thorndyke shook his head. “You are magnifying the difficulties, Miller,” said he. “I don’t know what you, or the Public Prosecutor, may propose to do; but I can tell you what I am going to do, if you don’t. I am going to lay a sworn information charging Gimbler with having conspired with Joseph Wallis to commit certain fraudulent acts including the manufacture of false evidence, calculated and intended to defeat the ends of justice. We have enough evidence to convict him without any assistance from Wallis; but I think you will find that Joseph, when he discovers that he is involved in a fraud of which he knew nothing, will be far from willing to share the burden of that fraud with Gimbler. I think you can take it that Joseph will tell all that he knows (and perhaps a little more) when we begin to turn the screw. At any rate, I am quite satisfied with my case against Gimbler.”

“Well, Doctor,” said Miller in a less gloomy tone, “if you see your way to a conviction, I have nothing more to say. It’s all I want.”

Here the subject dropped; and the effect of the sandwiches having by this time worn off, we agreed with one accord to seek some reputable place of entertainment to make up the arrears in the matter of nourishment. As those arrears were somewhat considerable, the settling of them occupied our whole attention for a time; and it was not until our cravings had been satisfied and the stage of coffee and pipes had been reached that Miller suddenly raised a question which I had been expecting, and which I had secretly decided to raise, myself, at the first opportunity.

“By the way, Doctor,” said he, “what about that head in the box? All these alarums and excursions in chase of that blooming platinum had driven it out of my head. But, now that we have done with the metal, at least for the present, supposing we have a word about the box. From the questions that you put to Bunter, it is clear to me that you have given the matter more attention than I had supposed; and it is obvious that you know something. I wonder how much you know.”

“Not very much,” replied Thorndyke; “but I shall probably know more when I have made a few inquiries. You are so far right that I have given the affair some attention, though not a great deal. But when I heard of the discovery in the cloak room, and afterwards read the account of the inquest, I formed certain opinions—quite speculatively, of course—as to what the incident probably meant; and I even formed a still more speculative opinion as to the identity of one, at least, of the persons who might be concerned in the affair. Bunter’s account of the passenger with the parcel seemed to agree with my hypothesis, and his answers to my questions seemed to support my identification of the person. That is all. Of actual, definite knowledge I have none.”

“And your opinions,” said Miller, a trifle sourly, “I suppose you are going to keep to yourself.”

“For the present, I propose to,” Thorndyke replied, suavely. “You can see, from what Bunter said, that the affair is of no importance to you. If a crime has been committed, it has not been committed within your jurisdiction. But leave the matter in my hands for a little longer. I believe that I shall be able to elucidate it; and you know that you can depend on me to keep nothing from you that ought, as a matter of public policy, to be communicated to you.”

“Yes, I know that,” Miller admitted, grudgingly, “and I see that the case is not what we supposed it to be. Very well, Doctor. Have it your own way, but let us have the information as soon as it is available.”

Thorndyke made the required promise; and, if the Superintendent was not as satisfied as he professed to be, it was only because, like me, he was devoted with curiosity as to what the solution of the mystery might be.

XVIII. — THE END OF THE CASE AND OTHER MATTERS
